On the Way From London to Port Said

We Catch Glimpses of Countryside in England, France and Along the Mediterranean

By Dr. J. G. LIPMAN

Editors' Note—Doctor Lipman, our staff contributor on soils and fertilizers, wrote this article while sailing the Mediterranean from Marseilles to Port Said on the Steamship Mantua. He is now in the Holy Land studying farm conditions for the purpose of making recommendations for the agricultural development of Palestine.

IT TAKES the fast boat trains less than two hours to reach London from Southhampton. After leaving the Leviathan we traveled thru well farmed country noted for its gardens, orchards and dairy farms. I recalled passing thru the same country in the late May of 1926. The season was then less far advanced. Great masses of rhododendrons were in full bloom in the hedgerows, cattle and sheep in great numbers were scattered in the dark green meadowe and the spring and winter grain had made a good start.

At this time the meadows were still green, but there seemed to be fewer sheep and one was struck by the occasional appearance of fields that looked very much like our run out timothy meadows. Somehow all recognized instinctively that British farmers were feeling the pinch of lean years as it is felt by many farmers in the United States.

Our stay in London was a short one. It was long enough, however, to remind us of former interesting visits. As on other occasions we saw thousands of American tourists on Regent Street, the Strand, Piccadilly, Pall Mall, Hyde Park and many other places. We saw them in "rubberneck wagons" at Westminster Abbey, the House of Parliament, the bridges cross the Thames, Saint Paul's Cathedral, the British Museum, Buckingham Palace and at other haunts of the tourist. Despite the high prices in the London shops they were buying all sorts of things including antique furniture and silver.

Leaving London in the early afternoon of August 11 we passed Orpington, a great poultry center, and hurried on thru beautifully farmed country to the English Channel at Folkestone. At four o'clock we were on our way to Boulogne on the French side of the Channel.

Recalls Memories of Journey in 1919

We then traveled thru Picardy and remembered a similar journey in 1919 when the havoc and destruction wrought by the war were still very much in evidence. White round spots marked the shell holes on the hillsides where the top soil had been blown away and the underlying chalk exposed to view. Trenches and dugouts were everywhere. Sites of army camps, buildings damaged by shell fire and airplane bombs and neglected fields told a tale of desperate fighting and of all but successful efforts of the Germans to break thru to the Channel.

Now life is at its normal again. Old houses have been repaired, new ones built and the gardens made as attractive and fruitful as they were in the pre-war days. But Picardy is not quite as of old. Large cement mills and various factories are giving it more and more the appearance of an important industrial region, of an intimate mixture of the urban and the rural, of the wide out-of-doors and of the noise, the dust and the stress of organized industry.

We passed thru Paris at night and did not see it. In the early morning hours we came to Lyons and watched with growing interest the broken topography of a limestone country. Erosion had done its worst to many of the hillsides and they looked bare and forlorn. In the olden days when Rome was still a world power the hillsides were wooded and their lower levels undoubtedly terraced.

Now many of the old terraces are gone as is the top soil of the hillsides. Still, there is much good farming being done in this region. We saw irrigation canals, gardens and fields being irrigated, olive orchards, rows of olive trees along the roadsides and extensive vineyards.

On the crests of the hills we saw the ruins of old castles and were led to recall as we passed thru Arles and Avignon and came to the magnificient harbor of Marseilles, the ancient and modern crusades. The same hills that saw the feudal lords marshall the hosts that were to wrest the Holy Land from the Saracens, saw in recent years American armies marching from Marseillies to the north.

(Continued on page 23)

Fertilize Wheat—But Why?

By H. W. WARNER

IN KEEPING with the "ask me another" spirit of the day, I recently compiled a list of questions and answers on a subject which, in a few weeks immediately following September first, should claim the interest and careful consideration of the growers of our daily bread, namely, the problem of fertilizing the 1928 winter crop.

The original list of questions was too long but it responded well to pruning until only six questions remained as all-important. A second trimming took all but four; a further weeding left only three; and a final operation found but two simple questions of the original list of two dozen or more. These were: "Why?" and "How?"

Someone has said that if a man knows why to do a thing he will soon learn how. If that be true then the long list of questions pertaining to the fertilization of wheat may almost be reduced to the one lone query: Why?

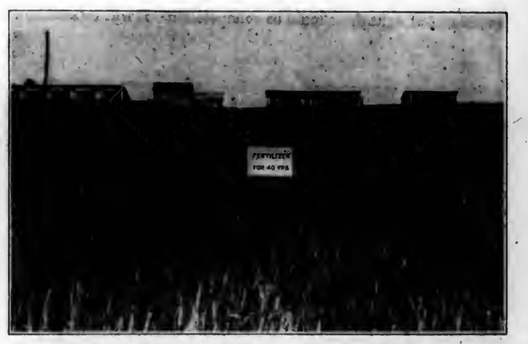
I made a trip thru most of the winter wheat states during late July and early August to learn more about the fertility problems and practices of those states. This trip afforded an excellent opportunity to learn from wheat growers themselves why they fertilize wheat. Nor were the questions asked only of farmers. My schedule called for stops at experiment stations and talks with county agents and extension workers along the way from Washington, D. C., to South Dakota, and return by a different route.

Now, anyone familiar with the use of fertilizer knows that the practice has its foundation solely on the question of profit. The simplest and plainest answer to the question, "Why do you fertilize wheat?" is in the words, "Because it pays."

But most of us are not satisfied with such an answer. We want to know why it pays. Is it because of increased yield? Is it thru better quality? Is it because of the effect of the fertilizer on clover seedings made in the wheat? Is it due to escaping the Hessian fly?

A tattered old pocket note-book, whose pages bear the soil marks of eleven middle (to page 24)

The unfertilized plot of wheat at the Pennsylvania State College.



A fertilized plot receiving only commercial plant food for more than 40 years.

Nothing worth while is lost by taking time enough to do it right.—Lincoln.

Comments on the Week's News

AGAIN letters come to us asking whether we advise selling potatoes when dug, or whether the price will advance later so as to justify holding them for a time. And again we answer, we don't know. The prospects are for a larger crop than last year, but the crop is not yet made, especially in the northern sections. The early potatoes now being dug and marketed are a good crop and the price is fair but not big. If nothing happens to the late crop the price is not likely to be much larger. But: IF late blight becomes serious, or IF an early frost catches them, either of which might seriously affect the final yield, the price would advance. There is one other factor to take into consideration: The buying power of consumers is gradually lessening so that fewer are able or willing to pay excessive prices for commodities.

♦ ♦ ♦

It is the privilege of American people to organize for or against any movement affecting their welfare. This includes the farmers who oppose the testing of cattle for tuberculosis. But agitation should be conducted in a fair, honest manner. Stooping to scurrilous attacks and the charging of unfair motives to the opposing side is a sign of weakness. The intimation that testers are in league with butchers to get the sleek, fat cattle from the dairy herds is a case in point.

♦ ♦ ♦

Very few, if any, people living in the United States can remember when there were no railroads. Yet, as time is measured, it is but a short time ago that the first railroad service for the movement of freight and passengers was begun by the opening of the Baltimore and Ohio Railroad. An extensive celebration is being planned by the officials of that road in commemoration of its beginning and one hundred years of service. It will be known as the "Fair of the Iron Horse," and will open in Baltimore on September 24 and continue two weeks. The Fair will include a complete exhibit of railroad development and allied industries.

♦ ♦ ♦

Politicians and political papers are strangely silent concerning presidential candidates. The eastern Republicans were hoping that President Coolidge would be a candidate and thus relieve them of the responsibility and danger connected with selecting a new man. The Democrats are as much at sea as the Republicans. In fact, both parties are sharply divided within themselves as to men and principles and the next year promises some lively times. The whole situation contains so much dynamite that politicians are afraid of it.

♦ ♦ ♦

The world do move. It is reported that the Long Island Railroad has opened their smoking cars to women. No longer will the fair sex be refused the privilege of entering the smokers in their journeys to and from New York in order to fortify their ragged nerves by inhaling the fragrant (?) cigarette smoke. Of course, some men still deny the equality of the sexes and will feel that they are losing the last retreat in being compelled to share the smoking car with women. But you can't stop the wheels of progress (?).

♦ ♦ ♦

Farm women may well take courage in the news put out by the Department of Agriculture. For half a century the farm homes have been impregnated at certain seasons of the year with odors other than those of roses; this is at the planting season when fertilizers are being applied. But there is hope. Research by the Bureau of Soils has discovered a fragrant fertilizer, derived from the by-products in the manufacture of cocoa and chocolate. It carries the pleasant aroma of a newly-opened can of cocoa. It is said to contain about four per cent of nitrogen.

Keep Fighting the Corn Borer

IT IS easier, cheaper and more effective to fight the corn borer at harvest time than it will be next spring. Reports show that the pest has spread into new territory, and that even the $10,00000,000 campaign of eradication was not wholly effective. Those who have seen the devastation of the corn crop in Canada have dire forebodings on the subject. If the corn crop of the United States is to continue to be the king of crops, every corn grower in the country must voluntarily and cheerfully cooperate in practicing such cultural methods as will tend to control it. Those who are careless, or who wilfully neglect to practice control measures in the hope of getting a dole from the government should be looked upon as undesirable citizens.

The work should be begun now. Corn, whether for silage or for husking, should be cut low,—down to the ground,—and the stubbles thoroly disced or plowed under at once. Corn stover should be shredded during the winter. Hibernating trash around the fields should be burned. All such work is good farm practice at any time, and is especially important now.

Time to Stop the Coal Strike

THE strike in the soft coal fields among the union miners has been dragging along since the first of April with little sign of settlement as yet. Thousands of men have been idle and are approaching winter with empty larders and no income. The non-union fields have had a bonanza, and their output has kept the industries going.

But the surplus stock is dwindling, and in this the miners see what they think is their chance. The 75,000,000 tons on hand when the strike began has been steadily reduced, and it is estimated that when cold weather comes this reduction will be increased to a million tons a week. The owners and operators do not feel justified, in the face of general slackening of the industries, in advancing the pay of miners. To do so, they claim, would be ruinous if prices and general business continue on the decline.

Editorial Sidelights

"THIRTEEN times and he isn't thru spraying yet!" That was the exclamation we heard when the potato tourists pictured below went to see how the champion potato grower of Pennsylvania obtains his phenomenal yields. We have a picture (Page 11) of the 16-row machine that makes spraying little more than an after-supper task on the Briggs farm.

Lest you have forgotten, Ray Briggs and Son grew 688 bushels of potatoes on one acre last year. This father-and-son firm has headed the 400 Bushel Potato Club in acre yields for the last three years.

DOCTOR LIPMAN ends with a promise the interesting letter written as his boat approached Port Said, at the Mediterranean end of the Suez Canal (Page 3). He has already fulfilled that promise with one of the most comprehensive reviews of the agricultural situation that we have read anywhere. It will appear in an early issue.

Members of the Pennsylvania Potato Growers'

These potato growers visited 31 counties of Pennsylvania on their annual tour this summer, visiting several of the famous members

MAY REVISE TARIFF

Deport Undesirable Aliens—Allow Canadian Milk Shipments—Will Confer on Farm Freight Rates.

Washington, D. C.

THE difficulty of securing production costs in foreign countries has led to a movement favored by the United States Tariff Commission for a revision of the tariff act, authorizing the commission to obtain foreign and domestic costs. It is said that this provision is unworkable, and that some other method will have to be provided as a basis for the commission's recommendations.

Many Aliens Deported

Many aliens are being deported from the United States. The government is now sending undesirable foreigners out of the country at the rate of 1000 a month. Last year 11,666 immigrants were deported. More than 5000 were deported because they had been smuggled into the country without the proper papers. There were 953 criminals among the number. Many of the deported were insane, or likely to become public charges. Some are being deported because of their outspoken utterances against our laws and country. It is indicated that the number of this class will be increased by the Sacco-Vanzetti incident. A strong demand will be made upon Congress this coming session for a more effective immigration law and better means of preventing immigrants from entering the country by stealth.

Ship Milk from Canada

Shipments of milk and cream from Canada to the United States are proceeding regularly under temporary permits in compliance with the federal import milk act passed by Congress last winter "to promote the dairy industry of the United States," the Canadian government assuming full responsibility for compliance with the provisions of the act.

Notwithstanding the embargo against the importation of milk from Canada, extending from March 27 to May 6, 1927, the total imports from January to July were heavier than during the same period of last year. This seems to indicate that instead of "promoting the dairy industry in this country" the federal milk import act is helping the Canadian milk producers by insuring the purity and standard quality of their milk and cream shipped to the American markets. It is probable that an attempt will be made to secure an increase in the tariff on dairy products.

Want Freight Rate Reduced

The recently granted reduction in thru freight rates on fruit from California points under the provisions of the Hoch-Smith resolution is being followed by requests from other sections of the country for reduction in freight rates on farm products.

The Interstate Commerce Commission announces that a conference will be held in Washington on livestock rates on September 20th. It will be particularly applicable to rates in the Southeast.

Apple growers in the Middle West are complaining that rates on apples in carloads from Missouri and Kansas orchards are unreasonably high and should be reduced. They say that present rates on apple shipments are ruinous to their industry.

With the New England milk producers beseiging the Interstate Commerce Commission for a reduction in rates on milk, and other parts of the country making similar requests, it is evident that the Interstate Commerce Commission will be compelled to make some effective readjustments in freight rates on farm products, under the Hoch-Smith resolution requiring the commission to take into consideration agricultural depressions in revising freight rates. In his incontrovertable brief filed with the Interstate Commerce Commission last winter, Dr. T. C. Atkeson, then Washington representative of the National Grange, proved conclusively that freight rates on farm products are comparatively higher than on other products, and that the farmers were paying an undue portion of the cost of maintaining the railroads.—E. R.

WILL KILL DEER

Game Season Will Start Soon—On Lookout for Pests—Audit Expenditures—Urged to Exhibit.

Harrisburg, Pa.

INDICATIONS are members of the State Game Commission will not change their plan of thinning out surplus deer this fall and that as requests come in for killing of animals which have become a nuisance skilled hunters will be sent out. Numerous petitions have been coming to the State Capitol asking that the plan be dropped or changed, but the commission is not likely at its coming meeting in October to do anything of the kind. For some time the members have been making inquiries of their own and looking into local situations. At the same time the offices have not been wanting for volunteers seeking the job of killing deer. The small game season will soon start and it is expected there will be plenty of birds. The state game law digest and booklet has made its appearance well ahead of time, a better record than for years.

Locust Trees Hard Hit

According to reports coming to the State Capitol the damage done by the locust leaf beetle has been extensive in the Susquehanna Valley. In the vicinity of the capital city there are thousands of trees on which the foliage has been ruined and fears are entertained that valuable timber may be endangered. Young locust trees appear to have been exceptionally visited by the pest. The state authorities are encouraging the plans for having young people watch for the pine blister rust which has been prevalent for some time in the northeastern counties.

Look for Worms

Complaints of worms in many of the peaches gathered this year have caused state agricultural officials to undertake some examinations. Many splendid specimens of the fruit have been reported here as showing worms when opened.

Looking into Corners

The Fisher administration is actively taking up its pledges of making audits of departmental and special expenditures. Half a dozen audits have been under way for some time and the results are now being conned. The object is to correct some practices and tighten up on expenditures.

More Reward Work

Over thirty projects to be constructed on the State Highway Department reward plan of building have been announced at the Capitol and in a number of instances bids will be asked soon, as much work as possible to be done this fall. Bids for the latest program of the department have all been on a scale justifying award of contracts. The manner in which work has been pushed by contractors this year indicates the 350-mile construction figure will soon be passed.

Offer Cash Prizes

The State Farm Products Show committee has made announcement that $10,000 will be offered at the show to be held in Harrisburg the middle of January, the premium list being now in the hands of the printers. State agents visiting county fairs are urging that winning exhibits be preserved for competition at the winter show.—T. C.

HUNT BETTER VARIETY

County Agents Hope to Find Hardy Alfalfa—Lower Shipping Rates—Awaken Interest in Cover Crops.

Trenton, N. J.

COUNTY agents in Burlington and Hunterdon Counties are putting out alfalfa demonstration plots this fall to determine the varieties that will withstand the climatic conditions of this state. Heavy winter killing and heaving last spring caused dairymen thousands of dollars' loss in a shortage of hay for this winter. It is the hope of County Agents Thompson and Gauntt to find a variety that will stand winter killing and soil heaving.

Reduce Freight on Potatoes

A reduction in freight rates on seed potatoes to New Jersey points has been ordered by the Interstate Commerce Commission. The rate of 70 cents to many points has been lowered to 60 cents,—the prevailing rate for Jersey City and Bayonne. The case was presented by the Aroostook County Chamber of Commerce, which body showed that rates to many points were unreasonable.

More Certified Seed Grown

A slight increase in the acreage of certified seed potatoes is found in New Jersey this year according to officials of the State Potato Association. About a 15 per cent increase is noted for the South Jersey area. The certification of tomato seed also shows a small increase, most of the gain being with the new Marglobe variety that has given such success in the state this summer.—A. K.

Stage Cover Crop Campaign

The cover crop campaign staged by the Camden County Board of Agriculture this summer has awakened considerable interest in the economical addition of nitrogen to the soil. Some 50 farmers in various parts of the county are cooperating with the county board and the state extension service has joined in the program. A novel feature of the campaign is the building up of an "Honor Roll," composed of farmers who have sown a certain proportion of their available ground to cover crops this summer or who will do so this fall. Most of the cooperators are those growing cash crops for the Camden or Philadelphia markets and who have need for the constant addition of nitrogen to their fields.

Affected by Interstate Milk Plan

More than 2000 New Jersey members of the Interstate Milk Producers' Association are affected by the basic quantity regulations put in force for 1928. The basic quantities will be determined by the average quantity shipped by each producer during October, November and December of this year, to which is added the present basic quantity of each producer and the sum divided by two. Every producer whose herd is tested for bovine tuberculosis during 1927 will be paid in accordance with his present basic quantity if he elects this method of determination. Any producer starting with the association after next January 1 shall establish a basic quantity for the year according to agreement with the association. The present basic quantity will prevail in making payment for the remainder of 1927.—W.H.B.

STATE LEADER DIES

Department of Education Counsel Drafted School Laws—Milk Price Increase Will Take Effect Soon.

Ithaca, N. Y.

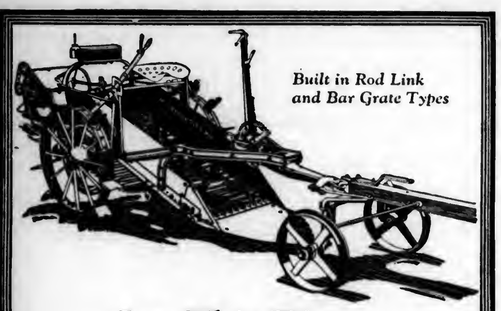
DR. FRANK B. GILBERT, counsel for the New York State Educational Department, is dead. He drafted practically all of the state's education law and was largely concerned in the drafting of the highway law and many others of the statutes of the state. He was a member of the famous "Committee of 21" which made possible revision of the rural school system of the state. Of that committee he said it was the hardest working committee he had ever known.

Milk Price Rise Expected

After a seven-day delay in putting into effect the raise of milk one cent a quart, the Dairymen's League has re-announced an increase in the price of milk. Sheffield Farms has reconsidered its stand of refusing to pay the increase. Their tardiness in the matter has cost the farmers $250,000. It is not difficult to guess that the unusual publicity given to their refusal may have been a factor in bringing a change of mind, combined with the League's refusal to raise against the very probable price-cutting that would follow, with consequent loss of city trade.—M. G. F.

Association While on Their Annual Tour

of the Keystone 400 Bushel Potato Club. This photograph was taken on the farm of Dr. D. D. Fritch, of Lehigh County. See Page 11.



Built in Rod Link and Bar Grate Types

Let This Digger Root 'em Out for You

USERS of McCormick-Deering Potato Diggers tell us that it is easier to pick up behind our digger than any other digger they have ever used. This is due to the fact that the McCormick-Deering shakes all the soil free from the potatoes and deposits them on top of the ground in compact rows, making it easy to get them. This feature is a great time and labor saver, and makes friends everywhere.

Another point in favor of the McCormick-Deering is its ability to lift potatoes out of the soil without bruising them. Everything else being equal, potatoes dug with a McCormick-Deering digger should bring a higher price on the market than those dug any other way.

The McCormick-Deering is designed to operate with light draft. This makes it possible to operate the digger at sufficient depth to make sure of getting all of the potatoes without overstraining the team or the machine.

McCormick-Deering Potato Diggers are available in types and sizes for the needs of every locality. Make it a point to see your favorite type and size at the store of the local McCormick-Deering dealer.

INTERNATIONAL HARVESTER COMPANY

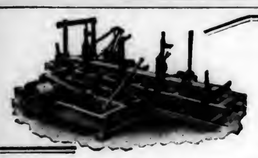
McCORMICK-DEERING POTATO DIGGERS



Cross Tie and Lumber Mills

The Farquhar No. 7 Mill is particularly well adapted for sawing Cross and Switch Ties. No matter how long or thick the ties, it does splendid work and is very rapid. Built strong and durable but light in weight, making it absolutely dependable for long, hard usage. Easily and quickly moved to new location. For ease of operation, rapid and accurate cutting, this Farquhar Mill is unsurpassed.

It is variously equipped to meet the needs in different localities but the new Geared Set Works is a crowning feature, both for speed and accuracy of cut. We also build larger Portable Sawmills for rapid, economic and accurate cutting of any kind of lumber. Farquhar Steam Rigs are quick and easy steamers. Boilers suited for burning wood, coal or oil. Write for descriptive Catalog of the Farquhar line of Sawmill Machinery. If you state capacity of Mill and horsepower of Engine, we will quote you our special rock-bottom price. Ask for Bulletins 426 and 626.

Full Weight, Galvanized—assures economy, utility and endurance!

And Apollo-Keystone Copper Steel RUST-RESISTING Galvanized Roofing and Siding

For lasting service and fire protection use metal roofing and siding—adapted to both rural and city properties.

APOLLO-KEYSTONE Galvanized Sheets (alloyed with copper for rust-resistance) gives maximum wear and satisfaction. Sold by leading metal merchants. KEYSTONE COPPER STEEL is likewise unexcelled for Roofing Tin Plates for residences and public buildings.

Use APOLLO-KEYSTONE Quality for roofing, siding, gutters, spouting, grain bins, tanks, culverts, flumes, and all sheet metal uses.

AMERICAN SHEET AND TIN PLATE COMPANY, General Offices; Frick Building, Pittsburgh, Pa.

AGAIN I was called to my old home in Clearfield County by a telegram. This time I went to attend the funeral of my mother. Seven months before father passed on. On this trip I realized what it means to be without parents, and how quickly that time comes for all of us, even tho it may seem to be a good while, in years. Comparatively few are privileged to have their parents live so long as did mine,—eighty-five and eighty-one years, respectively. But Father Time's clock ticks steadily on, bringing for each of us the final stroke.

✦ ✦ ✦

ONE does not talk or write much concerning the death of a mother. Memories seem too intimate and too sacred to speak much about. The long ride to the old home where she had lived for fifty-seven years gave time for reflection and the personal as well as the material developments of the age thru which she lived passed before my mind. And what a change has occurred! Her experience was typical of the times. She saw farm life in its primitive condition, and saw it progress thru its successive steps to have more than the most affluent had a generation ago.

✦ ✦ ✦

A WILLINGNESS to serve and sacrifice for others were outstanding qualities of mother. As long as I can remember, nothing was too difficult or too much trouble for her if she could help somebody else,—her own family first, then anybody, any place. Her energy and endurance were almost past belief. She was a product of the times which developed iron nerves and tender hearts, and I sometimes wonder whether our easier lives may not be tending to eliminate some of the qualities which made the passing generation so efficient and so kind.

✦ ✦ ✦

WHILE out in Clearfield County a company of us drove over to Gilbert Watts' place in Blair County. Mr. Watts is Contributing Editor for the Market Gardening Department of Pennsylvania Farmer and I was anxious to see his truck farm and roadside market. It is all and even more than I expected. Located on the state highway between Tyrone and Altoona, his roadside market catches a good trade from each place, being equi-distant, about seven miles, from each.

✦ ✦ ✦

MR. WATTS was away from home attending the Market Growers' Convention at Syracuse, N. Y. We were told, but the obliging young lady in charge of the market kindly gave us the keys to the place and we roamed at will. One of the most interesting features of the place is the commodious and well arranged packing house just back of the market. Here vegetables are washed and gotten ready for wholesaling as well as for the stand. Space will not permit a detailed description of this place. We drove out into the fields and saw several acres of splendid vegetables. Here, as well as at home, we found that the kind of weather which had afflicted us in the East has hindered best development in some crops also. But most of his crops are good, and his splendid cabbage shows that Gilbert is a true son of his father. I have never seen as fine celery on the kind of type soil of Mr. Watts' place as we saw here. I am fully convinced that our market garden editor is just the man for the work.

✦ ✦ ✦

CENTRAL Pennsylvania has no apples to speak of this year. What few there are in the average farm orchard are gnarled and lop-sided from scab. Pears are a pretty good crop. There are few corn fields in which ripe corn may be expected unless the season should be unusually long. Buckwheat is a good crop, but it will also need favorable weather to come to maturity.

'Say, that fellow over there looks just like your brother."

"Sure, he is my sister."

"Family ties," said the boy, as he borrowed some of his father's neckwear.

The Cheerful Plowman

He'll Go Later, for Sure

"I'LL run away!" sobbed Lyle McCray. "You will?" exclaimed his maw. "Well, while you're here it's very clear you must obey the law! Your brother Hugh was always true and did as he was told, and so did Frank, and Pete, and Hank, when less than ten years old! But you, my lad, are always bad, you're lazy, slow and slack; you disobey and love to stay for hours upon your back! Now speed a bit and use your wit, and use your head and arm, do try to be of use to me, some use upon the farm!"

"I'll run away!" sobbed Lyle McCray, "I have no fun at all! You scold and jaw, and so does paw, you scold, and jaw and bawl! No, nothing's right, and black is white, and everything is wrong, and slow or fast, I hear at last that same old dinging song!, I may be slow for all I know, but try to do my best; I milk the cow, I drive the plow, the same as did the rest; yet when I'm thru the tasks I do are found but poorly done and I am told about the gold in every other son!"

"You talk to me like that?" said she, "talk saucy to your maw? You'll go to court when I report your actions to your paw! Not once did Hank, or Pete, or Frank, or Hugh talk back to me; they were good boys without alloys, as good as they could be! This sauce must cease, we must have peace, so hurry with your chores, and when you're thru remember, too, I need some help indoors! When paw gets back you'll take the track out to the shed, I say, and you will find to be unkind and saucy doesn't pay!"—J. Edw. Tufft.

Successful Farms *Use* CHAMPION *Spark Plugs*

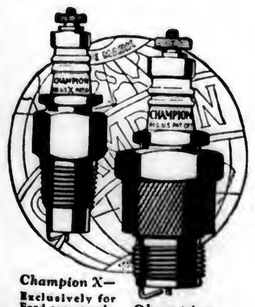
SUCCESSFUL farm owners will tell you that one of the important things to watch in engine-driven farm equipment is spark plugs.

That's why two out of three farms use Champions—known the world over as the *better* spark plugs.

For Champions with their exclusive sillimanite insulators which are practically unbreakable and strongly resist carbon formation—their two-piece, gas-tight construction making cleaning easy—and their special analysis electrodes which do not corrode assure greater dependability; better engine performance; longer life; and a saving in gas and oil.

Try Champions in your truck, tractor, stationary engine or your own personal car and learn why the majority of farm owners as well as millions of car owners always buy Champions.

CHAMPION
Spark Plugs
TOLEDO, OHIO



Champion X— Exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢

Champion— for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢

Friendly Talks

By EDGAR L. VINCENT

OUT back of the barn on our farm a little brook makes its way. At the head of a gully in a spring this stream finds its source, and when the spring is full, the brook always runs. In time of long rains it gets to be quite a creek.

Across this brook our boys used to build their dams, with mills equipped with string belts, tiny water wheels and buzz saws made out of can covers, with notches cut in the edge with an old pair of shears. Many a day the boys spent down at this brook. Especially in the spring of the year we were very apt to find them down there with their dams and their mills. And the foundation of all their machinery was the dam they threw across the brook.

One thing that interested me about the boys' dams was that just the moment the first row of sods was laid across the stream, that moment the water began to rise toward the top; and no matter how high the dam was built, the water would keep on climbing till it either spilled over the top or found a way around the end of the dam. No stopping the water from rising until it had conquered the obstacle.

Overcoming! That seems to be the way with all nature. Before now I have seen little trees which came up from under a stone. Feeling its way on, thru the darkness the tree would finally come out at the side of the stone and take a sharp turn upward. Overcoming! We find it with everything in nature. Something in the being of every living thing leads it to want to conquer.

We All Have the Urge to Overcome

It is just so with men. Where did we all of us get the determination to overcome that seems to be imbedded in our natures? It is in us; and upon the way we use that characteristic depends in great measure the kind of men we are. When we use this element in our souls in one way, it means a fight for the conquest, both over our fellows and over the things about us in nature. For we want our way; we will have it, if there is power enough in us to bring it about. Used for good, this will to overcome makes us masters of men in the best sense of the word. Properly employed it makes us ready and willing to help everybody that comes in our way. Used as the brute creation is apt to exercise it, it leads to war and trouble of every kind. Pushing this inclination to have our own way to the limit in bad ways makes us a menace to society, just as the dam if it is big enough may hold back water enough to flood the country and destroy everything in its path if it breaks over its bounds.

How Shall We Use This Power?

Overcoming! What shall we do with this pent-up power that is vested in every one of us? I tell my boys out at the little dam that in their hearts are sources of power a thousand times more potent than any they ever will find in a water dam. I try to show them how important it is that they shall learn to use this power in the right way if it is to make them happy, useful, good members of society. I point to the evils which unrestrained power brings to men and to nations. So many examples even in the life of the passing day come to the mind in proof of the great truth that we have no more important lesson to learn than that of mastering our own hearts and lives.

Are you a father? Tell your boys and girls what tremendous meaning is wrapped up in that word "overcoming." How shall we overcome evil? Not with fighting back with bad, but fighting with something better. If laws are bad, make better ones. If men are not good, conquer them with good statutes, exercised firmly but in a spirit of kindness.

Overcoming! Live as long as we may have no greater mission than to learn the true meaning of this word!

I can save you *money* on your fertilizer bill

I CAN *save* you money and help you *make* money with Swift's *high analysis* Red Steer Fertilizers. Here's the way successful wheat growers in my locality figure it:

It takes fewer sacks of *high analysis* fertilizer to give them the amount of plantfood they want. That means a saving on bagging, labor, freight and hauling.

Then, these farmers know the *right kind* of fertilizer gives them *more* wheat per acre and a better *grade* of wheat—also a good clover catch and more hay. That all means more profit.

They make sure of the *right kind* of fertilizer by using Swift's. They know the Swift name on any product means something—that for more than fifty years it has meant the best product of its kind.

Come in and we'll talk this over—from your standpoint. I know the best farmers here and how they use fertilizer. I co-operate with Swift & Company and keep informed on the work of our Agricultural College. Let me help you select the kind and amount of Swift's Red Steer Fertilizer to make you the most money on your next wheat crop.

P. S.: Come in *soon*—before the rush of planting time.

The famous Goodyear Pathfinder. Car owners have already bought nearly 5,000,000 of these lower-priced, standard quality Goodyears.

Benefits you may be missing

There's one other big factor in low-cost tire mileage besides the quality of the tire.

That's the care and attention the tire gets after it goes into use.

If you've been doing business with your local Goodyear dealer you know what we mean.

You know he picks out the right size and type of tire for your car, lets you *see* it before you buy, mounts it on the rim, fills it with air.

You know, too, that long *after* the sale he helps you give that tire the care it should have to deliver maximum results.

If you're sending away for tires you are missing the benefits of this service. They're worth having, for they cut tire bills down.

They are mile-saving results of the famous Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that the user can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced standard quality Goodyear Pathfinder

Logan Spring Farm

A Trip to the Vegetable Growers' Meeting Gave Me a New Outlook

THIS morning I spent three very profitable hours looking over a vegetable farm which I had gone over innumerable times before. However, I found a number of things which were extremely interesting. This particular farm happened to be my own farm. I had just returned from a trip to the Annual Convention of the Vegetable Growers' Association of America, this year at Syracuse, N. Y. Nearly a week had been spent in seeing vegetable farms, vegetable gardening machinery and in talking with growers from all parts of the country. And I know I saw my own farm somewhat as others must see it, more squarely and fairly than I can see it when on the job every day.

Job Was Run in First Class Order

Moreover, it is a satisfaction to go away for a few days, or a week, and to return finding that one's employes have gone ahead and run the job in first class order. I believe most of us tend to delegate too little rather than too much responsibility to our workers. I found the past week's sales up to what I could have expected had I been home. An acre of late peas which was picked for the last time Friday was plowed, harrowed and sown with a green manure crop before Saturday quitting time. Other things moved on apace.

In the competitive exhibits at the convention the Canadians ran away with things. Klose De Jong, of Winnepeg, took first in the cauliflower contest. Davis Brothers, of Ontario, led in celery, while Starkey Farms Co., of Morrisville, Pa., upheld the U. S. A. with an exhibit of beautiful asparagus.

Mr. Paul Work at the head of the committee working to secure simplification of vegetable variety lists reports increasing cooperation from investigators and seedsmen. A lot of work remains to be done and investigation will be required to set standards for definite varieties. In the meantime revised lists of "standard" varieties are being prepared on a state basis. I hope we will be able to publish these lists for some of the more important vegetables some time this winter.

Cultivation Overestimated

Prof. H. C. Thompson of Cornell University, Ithaca, N. Y., has been studying the effects of cultivation on several vegetables. Apparently the value of cultivating to conserve moisture has been overestimated. In fact, cultivation may increase the rate of loss of soil water under some circumstances. As I get it a rough conclusion from the practical gardener's standpoint would be that cultivation in excess of that required to keep weeds from becoming established is seldom justified. Celery and onions apparently are benefited more by frequent stirring of the soil than some other vegetables.

Some of our readers will be interested to learn that transplanting machines drawn by tractors with reduced gearing to give a speed of about 35 feet per minute have been used successfully in planting several considerable areas of celery. One grower, operating on a muck soil that becomes very loose and fluffy, reported that the water attachment on his transplanter enabled him to set celery when the time came even tho the soil was then very dry.

On some farms growers feel the Marglobe tomato is not so satisfactory as varieties they have been using. On the contrary some others are enthusiastic. Each one of us must find out for ourselves what is best for our soil and climate. Neither is it sound to base a decision on the results of one season's trial.—G.S.W.

Eastern State Fruit Growers Gather at Maryland Meeting

SEVERAL hundred fruit growers from Virginia, West Virginia, Maryland, Pennsylvania and New Jersey, together with the state entomologists of the northeastern states met at Hancock, Md., August 18 and 19 under the auspices of the Maryland Horticultural Society. Various types of spraying and dusting machinery were demonstrated in the orchard of A. J. Cohill by representatives of the commercial concerns. The use of the spray gun has become so general that many of the growers were interested in the work of a short rod, eight feet long, bearing four large disc nozzles. This is now used a good deal around Winchester, Virginia. It delivers 6½ gallons at 300 pounds pressure and 8 gallons at 400 pounds pressure. Winchester growers claim that it gives less spray burning than the gun. This is a reversion toward the rod and cluster of Vermorel nozzles, used fifteen years ago.

An Acre Dusted in a Few Minutes

A liquid duster in which the spray material is atomized by an air blast applied at the nozzle attracted much attention. It is light, since heavy machinery and high pressure are not necessary. It has a capacity of 6½ gallons a minute and seemed to have good coverage and penetration. An enormous duster was exhibited which poured forth a cloud that envelops an acre of orchard in a very few minutes.

The Tonoloway Orchard, owned by the American Fruit Growers, Inc., comprising 800 acres of apples, was next visited. It is carrying a good crop of apples, chiefly Yorks. This is mountain land so steep that it made New Jersey visitors dizzy. The Tonoloway Orchard has a rather exceptional record for productiveness. During the past seven years, when there have been a number of crop failures in the Cumberland-Shenandoah region, it has averaged eleven bushels a tree annually. The crop this year is estimated at 60,000 barrels. The orchard is in sod mulch and is nitrated heavily, from six to 15 pounds to a tree. It is also pruned very heavily; one grower remarked, "You could throw a bushel basket thru the tree, on any side, without touching a limb." This is stretching it some, but the tops are very open.

Fruit Brushers Demonstrated

At the immense packing house, said to be "the largest and best equipped packing house east of the Mississippi River," various types of grading machines, fruit brushers and packages were demonstrated by the manufacturers. A few years ago this was a strictly barrel territory. Now a steadily increasing proportion of the apples, even the Yorks, is packed in bushels, and a considerable quantity in half-bushel baskets. The visitors were particularly interested in the facing machines for bushel baskets; they appear to be far more efficient than hand facing. The fruitwiping machines, while not usually necessary here for the removal of spray residue, serve a very useful purpose in removing dirt, so that the fruit presents a neater appearance. This is especially true of the wiping of peaches, which was observed the next day; the removal of fuzz and dirt gave a much more attractive pack.

After a box supper on the attractive lawn of the Tonoloway Orchard manager, Dr. A. L. Quaintance, of the U. S. Bureau of Entomology, and Dr. J. R. Magness, also of the Federal Department, discussed the spray residue problem. As to methods of prevention, Dr. Quaintance stated that experiments to find a non-poisonous substitute for arsenate of lead were under way; also that emphasis should be laid, in this part of the country at least, on controlling the first brood, so that late summer sprays are unnecessary. He spoke of packing house sanitation, banding the trees and possibly trap lanterns as auxiliary methods of control.

Chemicals Clean Pacific Fruit

Dr. Magness stated that the present wiping machines remove only one-third to one-half of the spray residue, and are not satisfactory in that respect, but are fully justified as fruit cleaners. In California the growers find that it pays to wipe citrus, if only because of its better appearance, and consequently higher sale value. This year over one-half of the apples and pears shipped from the Pacific states will be chemically cleaned, not wiped, using a wash of one per cent hydrochloric acid (3 gallons of the 32 per cent commercial acid to 100 gallons of water). This is sprayed on the fruit, after which the fruit is sprayed with clear water, dried with an air blast or revolving brush, and then packed. Several types of washing machines are now on the market.

S. W. Frost, of the Pennsylvania Experiment Station, speaking for the entomologists, reported that no one effective measure for the control of the Oriental Fruit Moth has yet been discovered. Cultivation, nicotine spraying, bait pails and sanitary measures all help. The natural parasites of the pest seem to be increasing but there is no assurance, as yet, that they will keep it in check.

Unite on "Apples for Health"

J. W. Gorley, reporting on the "Apples-for-Health" campaign, stated that the Northwest has come in on the program almost unanimously. This is the first time eastern and western apple growers have united to advertise their product. It is proposed to raise $1,000,000 a year for four years. The Mills Advertising Agency has been employed to raise the money and direct the advertising. There will be forty men in the field within a month. The firm had charge of the nation-wide "Say it with Flowers" campaign, which has increased the sales of the florists by many millions annually. The company has just raised $6,000,000 for a laundryman's advertising program. It will do the business on a fifteen per cent commission. Growers will be asked not only to become members at $3.00 each, but also to contribute a certain sum per bushel of their crop. This will be one or two cents, as will be determined later.

A recent issue of the "Sunkist Courier," organ of the California Fruit Growers' Exchange, takes note of the progress of the "Apples for Health" campaign and proposes a modified form of an old apple slogan:

"An orange a day
Keeps the apples away."

This is gratifying evidence that the orange men are really concerned about the prospect in apple competition.—S. W. Fletcher.

Ask Better Apple Variety

Fruit growers in Burlington County have asked A. J. Farley, of the Horticultural Department, New Brunswick, to find them an apple to replace the Starr that has been grown so successfully in that county. In giving the order to Prof. Farley for the new apple, they asked that they find one as large as the Starr, one that ripens at the same time and does not bruise.

The whole family likes it

Facts about the De Laval Milker

1. 650,000 cows now milked the De Laval Way.
2. De Laval Milkers now in their eleventh year of use.
3. 93.27% of the users report average saving of 2 hrs. 12 mins. per day.*
4. 97.55% of the users say it agrees with their cows.*
5. 99.4% of the users say they get as much or more milk as by hand milking.*
6. 9.49% average increase in production per cow reported by those who have records.*
7. 94.80% of users say their De Laval is easy to keep in a clean and sanitary condition.*
8. Average bacteria count of all reporting, 14,542—64% report counts of 10,000 and less.*
9. 96.46% of De Laval users say their milker is "the best," "one of the best," or a "good" investment.*

*Based on reports from 1844 De Laval Milker users in all parts of the U. S. and Canada.

Father likes the De Laval Milker because it saves so much time, produces more and cleaner milk, and makes milking cows so much more profitable.

Mother likes it because there isn't so much help to care for.

Son likes it because it is so much fun to milk with it, and because it enables him to take the place of a man in milking.

The hired man likes it, too, because milking is so much easier, and he and the boss "trade off" milking every other Sunday, so that one has a full day off.

And best of all, the cows like it because of its regular, stimulating and soothing action—and prove it by giving more milk.

There are now more than 650,000 cows milked with De Laval Milkers. Sold on such easy terms that they pay for themselves while you are using them. See your De Laval Agent or write nearest office below for full information.

Box 40, Landisville, (Lancaster Co.,) Penna.

Try These Stores first

Thousands of little every-day items you need

If you could spend a whole day looking around in your local "Farm Service" Hardware Store you would be tremendously surprised at the thousands of little articles you would find there that would be of help to you in your everyday work.

Housewives should know more about the many kitchen specialties, the unusual things in kitchen utensils, the fine cutlery and silverware and the handy little things like can openers, meat grinders, pot and pan cleaners, and even casters, picture wire, handy pliers, small screw drivers and oil cans for household use. You will find dependable alarm clocks, every-day watches and such things there also.

Men are apt to find tools that they never knew existed, ones that are just the thing to do small odd jobs with. It is the place to select automobile supplies and to buy your oils and greases for automobile and other machinery uses.

Even the youngsters like the "Farm Service" Hardware Store because it is where they get the best in toys, fishing poles, hooks, sleds, guns, tennis rackets, baseballs and skates that are so dear to a youngster's heart.

Make it a point to visit your "Farm Service" Hardware Store often. You will be surprised at the low prices and the excellent values offered you and, the more you know about it, the greater will be your opportunities to save through the service and help that these "tag" stores offer you.

Nest Box Notes

IN TALKING chickens with one of my neighbors at the feed store the other day, he mentioned the fact that some of his pullets were not doing as well as he would like to see them. I suggested that he might find that intestinal worms were the cause and an examination showed that they were present. Now he is feeding two pounds of tobacco dust in each 100 of mash, as a control. This is the standard remedy for round-worms.

• • •

Very often at this time of year the ranges that have been run over all season have become more or less contaminated, and the soil contains worm eggs which the birds get with their feed. It seems to me that it is very good practice to include the tobacco dust in the mash for a time, especially if the young birds seem a little off condition or are not doing as well as could be expected. Of course, worms are not responsible for all poultry ills, but they often cause unthriftiness where their presence is not suspected. The tobacco treatment is cheap, effective and safe.

• • •

This has been a season much like last, with the rainy weather interfering with repairing roofs, building and painting. There is still time for such jobs, but they ought to be attended to before the fall rush of work starts. It's a safe bet that any one who has leaky roofs knows about it by now, with all the rain we've been having since harvest.

• • •

I have heard several people say that they have had good luck with rearing the young stock, and now have to build in order to accommodate the pullets. Others have pullets to sell. The sale of ready-to-lay pullets helps out a lot with the farm income at this season. It is also a good time for those who are short of birds to buy. I would rather purchase pullets that were just ready to lay than those that had been laying for some time, as they will stand the shock of moving better. I had a good example of this once when selling pullets. I named a man a price for the pick of a flock I had up, but advised him to take birds that were just ready to lay rather than the more forward ones. I guess the pullets with the big combs looked better to him, however, because he took mostly that kind, even lifting one bird off the nest. Some time later I asked how the pullets were laying.

"Say," he said, "when you told me to take the less developed birds I thought you were kidding me, but I wish I had taken them, because all the pullets that were laying dropped off and started to molt after I had them a while, but the others soon started and kept right on."

• • •

Our pullets that started to laf in August are doing well and coming right up in production. I am feeding to keep up the body weight and shall probably put the lights on them so that they will eat more pretty soon. It would be very nice if they would go right on without a molt.

BANKERS TOUR

Centre County Bankers Make Study of Farm Conditions

THE Centre County Bankers' Association held their first agricultural tour on August 25th. The bankers spent the entire day studying farm conditions in the county.

The tour was arranged by H. L. Ebright, of the First National Bank of Centre Hall in cooperation with County Agent R. C. Blaney.

The first stop was made at the Grange Encampment and Fair Grounds at Centre Hall where they met the State Bankers' Association on their state-wide tour.

The county bankers then adjourned to Kerlin's Grand View Poultry Farm at Centre Hall, Pa., and the state groups proceeded thru Penns Valley to Sunbury.

At the farm of Paul Bradford, at Centre Hall, Pa., they learned the value of producing a high protein dairy ration such as soy beans and alfalfa.

After a stop at the farm of W. F. Rishel, at Farmer's Mills, the bankers lunched at the Brockerhoff Hotel at Bellefonte. They visited the Sheffield Farms milk station there and later drove to the farm of Peters Brothers at Stormstown, Pa. The bankers inspected the dairy herd which is headed by an association bull whose dam has a record of 1143 pounds of butterfat in a year. They also looked over 75 head of purebred Poland China hogs, including two ton litters. Peters Brothers are operating their farm on a solid financial basis and have a complete farming accounting system.

The tour then proceeded to A. C. Kepler's farm at Pine Grove Mills where they looked over 26 acres of potatoes, three acres of strawberries and three acres of raspberries. The last stop was made at Alvin Corl's farm at State College where Earl Corl exhibited his Holstein heifer and told about the calf club of which he is a member.

He Keeps Them on Green Range

Part of P. J. Davis', Massachusetts, flock of turkeys which he raised in confinement. The brooder house, now their roosting house, is on runners and is moved frequently so the birds will have green range. Sometimes he broadcasts a few sunflower seed in his turkey forage runs so they will have shade in the hot months and feed later.—T. H. W.

Pennsylvania Potato Growers Make Their Annual State Tour

MEMBERS of the Pennsylvania Potato Growers' Association, county agents, extension specialists and others made a rapid survey of the state's potato industry during the week ending August 20th. Traveling in large buses and followed by a mess truck which provided meals en route, the tourists made one or two stops in nearly every important potato growing center. Canvas cots were carried along and set up in armories and fair buildings for the over-night stops. Dr. E. L. Nixon, famed State College plant pathology extension specialist, and Miles Horst, of the association, were in charge.

Assembling at State College the caravan started north on Monday, making the first stop at the farm of A. C. Kepler, Centre County. Mr. Kepler has been a member of the 400 Bushel Potato Club for some time, his record last year being 446 bushels on a measured acre.

The first night was spent in the Consistory Building at Coudersport and the next morning the tourists visited two leading Potter County seed potato growers, E. R. Bloss and Blough Brothers. Turning west to Warren County, the party stopped at the large farm of J. B. Moore and Son, and then at another father and son establishment in Butler County, that of Thomas Pennistop and his son, Lloyd.

Spraying Experiments Seen

The Pennistons were conducting several interesting experiments comparing different kinds of fertilizer and various spacing of seed potatoes in the row. They were also comparing soy beans with sweet clover as a source of organic matter for potatoes. Unsprayed check rows in their field were nearly dead while the rest of the crop was growing vigorously, demonstrating very graphically the value of spraying. Last year the Pennistons' 400 Bushel Potato Club record was 481.9 bushels.

The Patton farm in Lawrence County (484.8 bushels on an acre last year) was visited just before the tourists entered New Castle where they held an evening meeting with the Lawrence County Potato Growers' Association and spread their blankets for the second night's stop.

E. G. George, of Westmoreland County, who made a record of 407 bushels on an acre last year, was visited on Wednesday. The Charles M. Schwab farm in Cambria County and S. Blaine Lehman's place in Franklin County were seen Thursday. The latter produced 422 bushels of potatoes on an acre last year.

Friday's stops were at the farms of Amos Eberly, Lancaster County, (409 bushels on a measured acre in 1926); Louis R. Downing, Chester County; William Mendenhall, Chester County, (443 bushels in 1926); Jacob Wile, Montgomery County, (501 bushels in 1926); Dr. D. D. Fritch, Lehigh County, (467 bushels in 1926).

Lebanon County potato growers on their annual tour joined the group at Mr. Wile's farm for an open-air discussion meeting. J. B. R. Dickey, State College extension specialist, warned the growers against going home and following in detail the methods of any one of the experts who had been visited. Every part of the state has its own problems; no single set of rules holds good for all sections.

President Lohr, of the state association, Mr. Horst and County Agent Waltz, of Montgomery County, also addressed the meeting.

Mr. Dickey believed that where it can be grown sweet clover is generally to be preferred to soy beans as a crop to precede potatoes. He favored sowing sweet clover one spring and plowing it down for potatoes the next, as the clover takes little nitrogen from the air after the second year and is harder to cover when it has become tall and woody.

Fertilizer Applied When Seeding

Mr. Wile plants his crop in 30-inch rows, the seed pieces about nine inches apart in the row. The field is marked out and the fertilizer applied (1000 pounds per acre) in the same operation. The first cultivating is done with the two-horse cultivator. As the root system develops this machine is abandoned for the weeder, which is used both ways across the field until the plants are eight or ten inches high.

On Saturday the tourists saw the famous potato fields of Ray Briggs and Son, of Luzerne County. For three years in succession this farm has produced the highest potato yields on record in Pennsylvania. The prize yields on a surveyed acre have been; 637.6 bushels in 1924; 571.4 bushels in 1925; 688 bushels in 1926.

These champion growers plow 15 to 16 inches deep with a two-bottom plow and tractor. The field is heavily manured. A half ton of 4-8-7 fertilizer per acre is applied in the row. The rows are from 18 to 24 inches apart, seed pieces nine inches apart in the row, three to five inches deep. About 400 bushels of Michigan seed per acre are used, the seed pieces weighing from two to three ounces each. The field is harrowed three or four times as the plants come up and then is worked several times with a cultivator.

The 16-row sprayer used by the champion potato growers of Pennsylvania, Ray Briggs and Son. The tank holds over 200 gallons and the 15-horsepower engine will maintain a pressure of 500 pounds.

Covers Sixteen Rows at a Time

Ray Briggs and Son use a sprayer that covers 16 rows at a time. This large machine does the work quickly and with a minimum of damage to the vines. It has a tank holding over 200 gallons. A heavy pump and engine maintain pressure up to 500 pounds. The ends of the sprayer boom can be folded back so the machine is easily handled in narrow lanes.

The last stop of the tour was at the large potato farm of J. L. Reitz, Union County. The visitors were interested in Mr. Reitz's marketing methods. His potatoes enter one end of his grading house as they come from the field, go over the sizing machine, are carefully graded according to U. S. official standards, and leave for market at the other end of the building in bags marked with the growers' name and his own brand and trade mark.

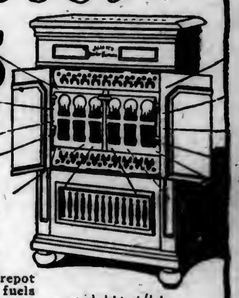
Burns WOOD!

ALLEN'S PARLOR FURNACE



EVERY country home should have this modern "above-the-floor" furnace. Heats the entire house by circulating, moist, warm air from room to room. Resembles a piece of beautiful, period furniture. The porcelain Allenamel finish in natural walnut effect is easily dusted.

Large double doors and oval firepot permit use of wood. All other fuels also burned with great economy.

Allen's Heat Radiating Fins

The new ALLEN fin construction increases radiating surfaces 100%. These fins strengthen the castings, save fuel and add greatly to the heating capacity. Only in the ALLEN can you get the great advantages of this improvement.

Oldtime Fireside Cheer

ALLEN'S Parlor Furnace combines the ruddy glow and cheer of the open fireside with the efficiency of a modern heating system. Only the patented ALLEN has this exclusive feature.

If there is no ALLEN Dealer near you, write direct for complete information.

Mercer Cow Testing Association Finishes Its Fifth Year

THE Mercer Cow Testing Association No. 3 finished its fifth year June 30, 1927, with 24 whole-year members. In addition two members were in the association part of the year. The total number of cows in the association during all or part of the year was 542.

The result for the whole-year members is as follows:

Average number of cows in the association	384.82
Avge. per cow: lbs. of milk	6809
Pounds of butterfat	279.7
Per cent of butterfat	4.1
Value of product	$249.50
Cost of pasture	10.30
Cost of roughage	31.55
Cost of grain	49.29
Total cost of feed	91.14
Value of product above feed cost	158.36
Return for $1.00 expended for feed	2.74
Feed cost per 100 pounds of milk	1.34
Feed cost per lb. of butterfat	.33

Following is a grouping of all cows producing more than 300 pounds of butterfat:

Group 1, above 500 pounds of butterfat, 3 cows; group 2, 400 to 500 pounds of butterfat, 21; group 3, 300 to 400 pounds of butterfat, 92 cows. Twenty-four cows produced more than 400 pounds of butterfat.

County agent, W. S. Hagar; assistant county agent, D. S. Keller; tester in charge, Forrest Haugh; figures compiled by I. O. Sidelmann.

Seven herds with five or more pounds of butterfat. A complete list cows exceeded an average of 300 follows:

Owner.	Average no. cows	Breed	Pounds Milk	Pounds butterfat
Ford E. Smith, Greenville	7.92	R. & G. J.	7429	431.7
C. C. Stoyer, Greenville	10.75	G. G	6638	372.3
H. B. Edeburn, Mercer	10.75	R. G.	6839	335.5
C. A. Gamble, Fredonia	9.50	R. & G. H.	8945	310.0
A. S. McCullough, Sharpsville	10.67	R. G.	6061	303.3
S. E. Uber, Greenville	13.42	G. G., G. S., & G. J.	6798	301.6
John McEwen, Fredonia	10.92	R. & G. H., G. J., G. G.	7480	300.0

Inter-State Milk Prices

THE f. o. b. Philadelphia price for milk in effect September 1, 1927, as announced by the Inter-State Milk Producers' Association, is as follows: For 3 per cent milk, basic quantity, $3.29 per 100 pounds, 7.1c per quart; August surplus price, Class 1, $2.14 per 100 pounds, 4.6c per quart. There is no Class 2 surplus for August. The differential is 4c for each tenth point and 2c for each half tenth point up or down in butterfat test.

A Correction

A misleading error concerning the Philadelphia milk price appeared in the August 20 issue of this paper. The quotation should have been: f. o. b. Philadelphia price for 3 per cent milk for August, basic quantity, $3.29 per 100 pounds, 7.1c per quart; July, Class 1, surplus price, $2.16 per 100 pounds, 4.65c per quart. There was no Class 2 surplus for July.

A New Book

MAKING YOUR OWN MARKET is the title of a book which should be in the hands of every producer who must market his own products. The book is a compilation of short articles written by the people who do the things they tell of in selling direct to consumers by means of roadside stands, selling around home, retail routes, selling specialities, and by direct-mail.

The book is full of practical suggestions. Signs, sales letters, packages and other sales devices which have brought success are illustrated, and it includes photographs of many of the growers whose story it tells. These experiences deal with almost every product including fresh and canned vegetables, fruits, eggs, cream, butter and cheese, meats, cut flowers, dogs and many others. No matter how small may be the producer, this book will be found helpful. It is prepared by Russel Lord and Thomas Delorhery, and is published by the MacMillan Company, New York. For sale thru Pennsylvania Farmer, 261 South Third St., Philadelphia. Price $1.25.

Clarion Holstein Men Exhibit Association Sires and Calves

THE First Clarion County Holstein Bull Association held its first picnic at Rimersburg on August 23rd. Altho the organization has been functioning only two years the members were able to make a good showing of calves from association sires. All four of the association bulls were also shown.

Among the guests and speakers at the picnic were S. J. Brownell, State College dairy extension specialist; Mr. Crissey, field representative of the Holstein-Friesian Association, and C. L. White, of Pennsylvania Farmer. Mr. Brownell and County Agent F. K. Miller, working with local dairymen, were responsible for the founding of this better breeding organization.

The members of the association are: W. G. Riner, president; C. A. McCauley, secretary; F. N. Fowler, C. L. Risher, W. P. Snyder.

The photographs show the four association bulls and some of their calves that were exhibited at the picnic.

Ayrshire Sets Record

SIR ROBERT'S ROMONA BELL, owned by the Pennsylvania State College, has set a world's champion Ayrshire record in the 305-day class.

Completing her year as a junior four-year-old, this Ayrshire champion produced 14,744 pounds of milk and 572.42 pounds of buttertat. This record wins a French cup.

When she was a junior two-year-old she produced 12,861 pounds of milk and 534.5 pounds of butterfat, winning a French cup in 1924 by producing more milk and butterfat than any other two-year-old that year.

Sir Robert's Romona Bell was presented to the college by the Masonic Homes farm at Elizabethtown.

College Buys Jersey

RALEIGH'S WARDER, purchased from Mrs. Halliday, Borden Homes Farm, Walkill, New York, is the new head of the purebred Jersey herd at the Pennsylvania State College.

This great sire was bred by Meridale Farms, Meredith, New York, who sold him to Mrs. Halliday. Some two-year-old daughters of this great bull have produced 500 pounds of butterfat a year on two milkings a day. Raleigh's Warder will be mated with daughters of the famous sire, St. Mawes Grandson Prisky, who was obtained by Penn State from the Oregon Agricultural College. Because of the fine production records made by offspring and the good show animals among the ancestors of the new sire, he is expected to produce wonderful results.

Plan Winter Show

PLANS are under way for holding an annual winter show and sale of purebred Aberdeen-Angus breeding cattle in the Amphitheater at the Union Stock Yards, Chicago, Illinois. The object of the show as announced by W. H. Tomhave, secretary of the American Aberdeen-Angus Breeders' Association, is to give breeders a chance to buy and sell a few choice cattle.

Genuine Cork Linoleum Rugs
in NEW—DIFFERENT—PRETTIER Patterns

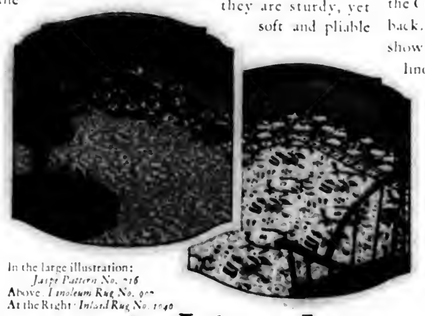
HOW often have you wished for a rug like this: pretty enough for the most tastefully furnished room, yet inexpensive . . . easy to keep clean, yet without that "hardness" sometimes associated with smooth-surface rugs.

Now you may have just such a rug. The new Armstrong's Jaspé Rugs are made of the same genuine linoleum with the lustrous wax finish that has made Armstrong's Jaspé Linoleum Floors so popular. They have the same wonderful wearing qualities, too, for the beautiful Jaspé graining runs right through to the burlap back. It can't "wear off." A light damp-mopping cleans the surface, an occasional waxing or polishing with a soft cloth or pad restores its wonderful lustre.

In rich blues, greens, grays, rose, tan, and taupe, with handsomely decorated borders, these new Armstrong Rugs offer unusual opportunities for home beautifying at little cost. Place one of them in any room in the house, and you have the beginning of a charming color scheme. For bedrooms, dining-room, living room, playroom or sewing room, there is nothing more suitable or practicable as a floor covering.

Properly waxed and cared for, Armstrong's Jaspé Rugs always look fresh and inviting. Because they are made of genuine cork linoleum, they are sturdy, yet soft and pliable and quiet to the tread. You may roll them and move them from room to room as often as you please . . . yet these rugs do lie flat on the floor.

Now you may have a smooth-surface rug with a lovely wax finish!



In the large illustration:
Jaspé Pattern No. 918
Above: *Linoleum Rug No. 900*
At the Right: *Inlaid Rug No. 1040*

When you buy a smooth-surface rug, bear in mind that these new Jaspé rugs are made only in genuine Armstrong's Linoleum, identified by the Circle A trade-mark stamped on the burlap back. Ask the salesman in the local store to show you the new Armstrong Rugs of Jaspé linoleum. If he hasn't the new patterns in stock he can get them for you.

"RUGS OF PRACTICAL BEAUTY"

This handsome booklet illustrates the new patterns beautifully in color. It will be sent to you free if you address your request to Armstrong Cork Company, Linoleum Division, 1019 Jackson Street, Lancaster, Pennsylvania.

INTENTIONAL SECOND EXPOSURE

My crowd all smoke P. A.

THAT doesn't mean I smoke it because the rest of the fellows do. I've got ideas of my own. If you pinned me down to reasons, I'd say I smoke Prince Albert *because I like it!* That's reason enough for me. But if you want details, I'll give them to you.

First of all, P. A. is delightfully fragrant. When you open the tidy red tin and that aroma bursts upon the air, you can hardly wait to taste such tobacco in your pipe. The smoke itself makes good on the advance notices broadcast by the fragrance.

Cool as an alarm-clock doing its stuff. Sweet as the recollection that you have the day off. Mild as the congratulations of the defeated candidate. So mild, in fact, that it never bites the tongue or parches the throat. Yet with plenty of rich, satisfying tobacco-body.

I don't know what brand you're smoking now, but I *do* know what you'll be smoking "from now on" when you try this cool, long-burning tobacco I've been telling you about. If you want to get the most out of your pipe, pack it with P. A. That's *my* advice.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

Italy's Cooperatives Aid Farmers

Loyalty Is the Key to Their Success

By H. G. NIESLEY

Agricultural Economics Extension Specialist, Pennsylvania State College

ONE-HALF million farmers representing 900 local organizations in all parts of Italy now look to Piacenza in northern Italy as a fountain for help and guidance in all cooperative matters. Piacenza, a city more than 3000 years old, and with a population of about 50,000, houses the headquarters of this interesting Farmers' Cooperative Federation. Located in the heart of the Po Valley in northern Italy it has a setting that represents the center of Italy's agriculture.

Upon reaching the city we were met by the president of the federation, President Mg. Emilio Marondi. He is a man with a full flowing beard and shows a kindly disposition and an eye that seems to be able to look far into the future.

Fortunately the day of our visit was the day in which the federation was acting as host to a group of foreign delegates from many European countries, who came to see at first hand the work of the Italian Federation, "Federazione Consoril Agrari" as it is called in Italian.

Immediately upon arrival I was greeted by Professor Edward Nassi, an employe of the federation in charge of all the seed certification work. Professor Nassi spoke English very well, having lived in Australia for 12 years.

An auto tour was arranged in such a manner that one's memory went back to good old Pennsylvania. Numbers on the cars and dusty roads surely brought to my mind fond recollections of days gone by in the Keystone State.

Local cooperation started in Italy in 1880, and in 1892 twelve local organizations joined to form the present organization. Senator Rainerl, who was a minister of agriculture for Italy for three terms, is given the credit of starting the organization.

Strength Based on Four Things

President Marondi, who now guides the organization has been its president and general manager for 27 years. His reply to my question, "What is the strength of your federation based on?" was: control of quality; makes possible credit for locals; stabilizes prices; prevents competition among locals.

The local organization comprising the province of Piacenza naturally has its headquarters there and thus offered an opportunity to see its operation. It has a membership of about 6000 farmers which represents about 30 per cent of the farmers of the province. The farmers join the local by paying 30 to 40 lyre (about $1.50 to $2.00 in U. S. money). This serves as payment for shares for which a membership certificate is issued. The local organizations in turn join the federation.

The local at Piacenza maintains a building which houses the offices, also a display room for farm machinery and seeds, of which they handle very much.

The traveling chair (county agent) as he is called in Italy also has offices in the building. He is a government employe but gets some financial aid from the province.

The local also maintains large feed warehouses and machinery repair shops. During the course of our trip we were shown thru a large fertilizer plant owned and operated by this local organization, where 30,000 tons of acid phosphate are made annually. The sulphuric acid is manufactured at the plant and rock phosphate imported, 20 per cent from America and 80 per cent from Africa. Super-phosphate, 15 per cent, cost 30 lyre per 100 pounds last spring (about $30 per ton). Copper sulphate, which is also handled, I found selling to farmers at about seven cents per pound.

Officer Gives Services

The chief business of the organization is handling products the farmer needs. However, cheese is the one exception we noticed. A large storage cellar is maintained for storing the cheese for the members. He is allowed or advanced about 60 per cent of the market value at the time of delivery and the remainder at the close of the business year.

Turning now to the federation. One wonders how so much is accomplished at such little expense but we soon learned that the spirit is placed first. The interest and loyalty of the officers is almost inconceivable. I was told by my interpreter that the president was a wealthy man (a big land owner) and would not need to do the work he is doing but his interest in agriculture and cooperation leads him to give his full time and services to the federation at a salary of only about 20,000 lyre per year ($1000).

This organization does an annual business yearly that represents a turnover of about 250,000,000 lyre ($12,500,000).

Its business consists of the following general lines in order of their importance: fertilizer, farm machinery, dairy feed, grass and farm seed.

In addition to the buying and selling business the Federation has scientific men employed to inspect and certify seeds of all kinds for its members. Sixty farms spread all over Italy serve as test plots where the seeds are grown and approved. The federation upon approval of the expert buys the seed from the farmer who has the test plot and sells some to the general membership.

Practically all of the propaganda work is done thru the weekly paper published by the federation and for which members pay 25 lyre per year ($1.25). Also, a monthly summary is published at a cost of 40 lyre (about $2.00).

Granted Loan on Moral Security

A few years ago the federation, thru its president, approached the president of a large bank in England for money. The bank president asked about security. Whereupon President Marondi replied, "Money security none — moral security as much as you like." He got the money.

Italy reached a climax in the cooperative field in 1919 when she undertook the erection of a large dam for irrigation purposes. Located about 30 miles from Piacenza, the dam is rapidly reaching completion. It will cost about 60,000,000 lyre ($3,000,000) and will provide water to irrigate a valley more than 30 miles long with an area of 10,000 acres or more. It was started by 386 farmers pledging their farm properties and with government support. The project is now well under way.

The water for irrigation purposes will be sold to members and others and thus by an amortization plan payment for the project will finally be completed. I was told that the capital necessary was provided by local banks and by the central bank of Rome.

It is undoubtedly a unique project for farmers but the enthusiasm that was manifested the day of the tour when we were shown the structure leads one to believe that in view of Italy's past experience in cooperation this enterprise will be a success.—H. G. Niesley.

Yours for the Asking

With the passing of the blacksmith shop from crossroads and villages, the farmer is experiencing difficulty in getting his horses shod. The only way that many farmers can keep their horses well-shod is to learn to do the work themselves. To assist them in learning to care for the feet of their work stock and to shoe their horses the United States Department of Agriculture has prepared an illustrated bulletin on Farm Horseshoeing, known as Farmers' Bulletin 1535-F.

Are you sure you are getting all the milk your cows can produce?

YOU may *think* so, but are you sure? Read this before deciding. Practically every user of Gold Medal Vitamin Dairy Ration has told us that before he changed to Gold Medal he thought his cows were producing all the milk they could, but that a trial of Gold Medal Vitamin Dairy Ration showed a remarkable increase. We have hundreds of letters like this from our satisfied users.

To you this merely means that you owe it to yourself to try Gold Medal Vitamin Dairy Ration. And we will let you make this trial at our risk.

Order a sufficient quantity from your dealer to give it a 30-day trial. If it does not prove satisfactory to you in every way, return the unused portion to your dealer and he will refund your money. We will repay him.

Gold Medal Vitamin Dairy Ration Scientifically Made—Perfectly Balanced

Gold Medal Vitamin Dairy Ration is a feed scientifically made to increase the quantity and improve the quality of your milk—and to increase your dairy profits.

Mr. F. W. Bade of Somerset, Wis., writes that it is the most economical and best feed he has ever used. A trial so well satisfied him that he used it exclusively last year.

The Kenosha County Farm at Pleasant Prairie, Wis., writes that at the end of a two weeks' trial of Gold Medal Vitamin Dairy Ration, the daily milk yield had increased 300 pounds—which resulted in an addition of $7.65 to the daily income.

Mr. Ed. Miller of Almena, Wis., says that he used Gold Medal Vitamin Dairy Ration after trying nearly every feed on the market. His Guernsey cows at once began giving more milk. He also states that this feed keeps his cows in fine shape—no more bowel trouble.

Make *your* trial now. Order from your dealer and remember that the reputation of the world's largest millers stands back of Gold Medal Vitamin Dairy Ration and the Gold Medal Guarantee. You run absolutely no risk.

GOLD MEDAL FEEDS

"Dairy-Tested"

My crowd all smoke P. A.

THAT doesn't mean I smoke it because the rest of the fellows do. I've got ideas of my own. If you pinned me down to reasons, I'd say I smoke Prince Albert *because I like it!* That's reason enough for me. But if you want details, I'll give them to you.

First of all, P. A. is delightfully fragrant. When you open the tidy red tin and that aroma bursts upon the air, you can hardly wait to taste such tobacco in your pipe. The smoke itself makes good on the advance notices broadcast by the fragrance.

Cool as an alarm-clock doing its stuff. Sweet as the recollection that you have the day off. Mild as the congratulations of the defeated candidate. So mild, in fact, that it never bites the tongue or parches the throat. Yet with plenty of rich, satisfying tobacco-body.

I don't know what brand you're smoking now, but I *do* know what you'll be smoking "from now on" when you try this cool, long-burning tobacco I've been telling you about. If you want to get the most out of your pipe, pack it with P. A. That's *my* advice.

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bit of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—no other tobacco is like it!

Italy's Cooperatives Aid Farmers

Loyalty Is the Key to Their Success

By H. G. NIESLEY

Agricultural Economics Extension Specialist, Pennsylvania State College

ONE-HALF million farmers representing 900 local organizations in all parts of Italy now look to Piacenza in northern Italy as a fountain for help and guidance in all cooperative matters. Piacenza, a city more than 3000 years old, and with a population of about 30,000, houses the headquarters of this interesting Farmers' Cooperative Federation. Located in the heart of the Po Valley in northern Italy it has a setting that represents the center of Italy's agriculture.

Upon reaching the city we were met by the president of the federation, President Mg. Emilio Marondi. He is a man with a full flowing beard and shows a kindly disposition and an eye that seems to be able to look far into the future.

Fortunately the day of our visit was the day in which the federation was acting as host to a group of foreign delegates from many European countries, who came to see at first hand the work of the Italian Federation, "Federazione Consorli Agrari" as it is called in Italian.

Immediately upon arrival I was greeted by Professor Edward Nassi, an employe of the federation in charge of all the seed certification work. Professor Nassi spoke English very well, having lived in Australia for 12 years.

An auto tour was arranged in such a manner that one's memory went back to good old Pennsylvania. Numbers on the cars and dusty roads surely brought to my mind fond recollections of days gone by in the Keystone State.

Local cooperation started in Italy in 1880, and in 1892 twelve local organizations joined to form the present organization. Senator Rainerl, who was a minister of agriculture for Italy for three terms, is given the credit of starting the organization.

"Dairy-Tested"

INTENTIONAL SECOND EXPOSURE

From Forum Members and Friends

Dear Cousin Ruth:—We received Pennsylvania Farmer today. I was reading the Forum page and I see Marie Rush, from Greene County, Pa., asks for a recipe for butterscotch candy. Here is mine.

BUTTERSCOTCH

1 cup sugar
¼ cup dark table molasses
1 tablespoon good vinegar
2 tablespoons boiling water
½ cup of butter

Boil ingredients until when tried in cold water the mixture will become brittle. Then take off stove and turn into a well-buttered pan and when slightly cool mark into squares with a sharp-pointed knife. —Mary Gummo, Clinton County, Pa.

Dear Cousin Ruth:—Once a carrier pigeon came to a neighbor's house. The colors of its feathers were green, red and black. I went camping this summer. We went to Watkins Glen, Niagara Falls and Toronto. It's a lot of fun to camp. Won't someone send a recipe for butterscotch patties?—Gretchen Sponenbergh, (X), Burlington County, N. J.

Here's another request for a recipe. I'm sure your Forum cousins will help you, Gretchen.

THE FORUM EDITOR.

Dear Cousin Ruth;—I received your letter and membership pin and thank you very much for it. I guess your letter has been all over the

TWO OF MY PETS
May Cass, (X), Bradford County, Pa.

world. I just received it. I am sending a picture of Ginger, daddy's hound, and myself.—May Cass, (X), Bradford County, Pa.

Dear Cousins:—I think boys ought to help their parents and help their sisters dry dishes. My little brother is nine years old and when sister was sick he helped with the dishes and did many useful things.

My brother has a pet crow. We call him Sammy and he comes when we call him by his name. We got him when he was very young. We feed it on bread and earth worms. He can fly now. You might not believe it but he can say, "Hello, Ma," "Pa," and many other words. When we get up in the morning, first thing Sammy says is "Hello."

Here is a dandy candy recipe. I've tried it.

CREAM CANDY

4 cups sugar
2 cups water
¾ cup of vinegar
1 cup rich cream or milk
1 teaspoon of vanilla
A pinch of soda

Let it boil until it cracks in water, then work very white and cut in inch-long pieces. It is very good. —Genevieve Weiss, eleven, Wyoming County, Pa.

Don't forget your promise, Virginia. I'll be looking for the picture.

Dear Cousin Ruth:—Here is a recipe for sponge cake. I have tried it many times and like it very well.

SPONGE CAKE

Two eggs beaten until lemon yellow, add pinch of salt and 1 cup sugar, 1 cup flour, 1 teaspoon baking powder, 1 teaspoon vanilla, ½ cup boiling water added just before putting in pans.—Philura Klippie, (X), Lackawanna County, Pa.

Dear Cousin Ruth:—I live on a large farm. I go in swimming almost every day. The water is about three and a half feet deep. For my pets I have a dog and three kittens. We have a large herd of cows and I help milk morning and evening.—Bessie Snyder, Lycoming County, Pa.

Dear Forum Editor:—I received my membership pin; thank you. I think it is very pretty. My grandmother gave me a small garden this spring. I like to tend my garden and I also like to feed the chickens and hunt the eggs.—Evelyn Ruth Rinehart, (X), York County, Pa.

Dear Cousin Ruth:—I have a pet dog and a pet cat. Every morning I take the little dog along to the other farm to give him some milk. School begins soon and I am glad. Every morning I must drive the cows to the other farm. We are building the barn just now. I helped to load the wheat this year.—Mabel Heffelfinger, Lebanon County, Pa.

Dear Forum Editor:—I received my membership pin, many thanks for it. I always help in the corn field and when we planted potatoes I helped. My little niece was here to visit last week and I had a good time playing with her.—Esther Doverspike, (X), Jefferson County, Pa.

Dear Cousin Ruth:—We have two cats, a black one and a gray one. We feed them milk and the black cat always waits for the foam from the strainer. We are raising a calf which is black and white.

This year a high-holder built its nest in the trunk of one of our cherry trees. They made a deep hole in the trunk then built a nest in it. There were six white eggs in it. They are larger than robin's eggs. We are raising about 250 chickens. They are two months old and are growing nicely. The roosters can crow.—Irene Eckel, Wyoming County, Pa.

OUR YOUNG PEOPLE'S FORUM.

How I Would Like to Spend My Spare Time

First Prize—Over Twelve

I WOULD like to use two weeks of my spare time this summer in camping. I would take five girl chums along with me. Think how delightful it would be to pack up the necessities needed and hike to a wooded spot beside a cool pond. A little ways from the pond would be a spring of fresh, pure water for the cooking and drinking.

After getting the tents up we would cut pine or hemlock boughs to lay on the ground, putting blankets over them to prevent any dampness.

We would then cook our supper over an open fire, wash dishes and put the camp in shape for the night, then go to bed and sleep with a blanket over us to keep away the cool night air.

In the morning we would get up feeling refreshed and full of life. After getting our breakfast, do the work and then for some sports.

We would fish in the morning while it was cool. After we caught a good mess of fish we would take a boat and row around on the pond. We would have boat races and other kinds of sports with the boats.

After having dinner we would all go for a hike, divide up in pairs and each pair go a different way. Go for about two miles and then return to camp by another way. We wouldn't say anything about our hike until after we had supper and finished the work. Then we would all gather around the fire and each pair tell the interesting things they saw.

We would all go to bed tired but happy after our first day in the woods. The days to follow would be spent in much the same way. We would swim, fish, row and hike.

But how good it would be to get back home to father and mother, sisters and brothers, and tell them of the happy times we had while camping.—Inez Vanderpool, (X), Bradford County, Pa.

First Prize—Under Twelve

THERE are so many ways in which I would like to spend my spare time I can scarcely tell you all of them. First, I would like to read the Forum page because I enjoy it better than any other magazine. Second, I would like to go out under a shade tree and read wonderful books such as "Uncle Tom's Cabin," which I always did enjoy very much. Also, "The Life of Abraham Lincoln, one of our most noted presidents, and also "The Life of Washington." Thru these books I've learned very much. I can't help but think how Lincoln, poor as he was, became president of the United States. But this shows that truthfulness, honesty and loving kindness lead to a great position.—Florence Eppley, (X), Cumberland County, Pa.

GROUP 1—OVER TWELVE

First—Inez Vanderpool, (X), Bradford County, Pa.
Second—Mary E. Kellar, (X), Jefferson County, Pa.
Third—Mattie A. Kanagy, (X), Mifflin County, Pa.

GROUP 2—TWELVE AND UNDER TWELVE

First—Florence Eppley, (X), Cumberland County, Pa.
Second—Clara Shepherd, (X), Chester County, Pa.
Third—Jonas Yingst (X), Dauphin County, Pa.

What Do You Like Best?

DEAR FORUM GIRLS AND BOYS:—Have you been waiting patiently to hear the results of the contest? On the page you'll find a list of the winners together with the essays that won first prize in the two groups. I'm afraid the title of the contest scared some of you, didn't it? I noticed that some of the girls and boys that enter the contests regularly failed to enter this one. I'll be glad to have you write and tell me the kind of contest you like best. You know this is your very own page and it may just as well be chock full with the stories, contests and puzzles you like best.

You'd be surprised if you could see our Letter Box—it's crowded with letters from almost every county in Pennsylvania, New York, New Jersey, Delaware and Maryland. If you haven't yet posted your letter you'd better make haste. Remember, I have a SECRET for the best letter received from Forum friends over twelve and also another SECRET for the best letter submitted by those under twelve. After the secrets are mailed (did you know we could mail secrets?) I'll tell you all about it.

THE FORUM EDITOR.

Answers to riddles printed on our page last week from Myrtle Steffy, (X), Lancaster County, Pa.

1. Nine cents.
2. The doctor.
3. To cover his head.
4. A barrel.
5. The letter "N."
6. Advice.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—If you will use the letters in the word at the top of the puzzle to make the words below, you will find a familiar saying which has something to do with that big word. For instance, the figure "6" stands for the sixth letter in "promptness," the figure "8" stands for the eighth letter, and so on. Once in a while I have left a blank space for you to fill in, because I think you will all be able to guess what the letter should be since I have given you some of the letters. When you have made out this sentence, send me your answer, either on a postcard or in a letter, so that it reaches me by September 17th. PLEASE TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND IN WHAT COUNTY YOU LIVE.

The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the August 20 issue (the one in which you told "what happened" by adding letters to missing words) is: A, AT, EAT, HEAT, CHEAT.

The prize winners are: Virginia Baker, age 11, Safe Harbor, Pa.; Robert C. Gay, age 10, Contesville, Pa.; Dorothy M. Harkleroad, age 10, Yatesboro, Pa.; Arlene Johnson, age 9, Kane, Pa.; Dot Price, age 9, Everett, Pa.; D. Mildred Sheppard, age 9, Elmer, N. J.; Irene Shunkweiler, age 12, Clearfield, Pa.; Edwin Wilson, age 9, New Sheffield, Pa.; Roberta M. Wilson, age 12, Meshoppen, Pa.; Ferris Woodruff, age 10, Powell, Pa.

Here's a note of welcome to the Little Folks who have just started in answering puzzles. We have even had answers from Ohio and Indiana in the last few weeks. I want to thank those Little Folks who send me such nice answers each week and tell me many interesting things. We can't of course, fill the page with lists of names but when I see familiar writing each week I always say: "Well, here's another of 'my little regulars'."

It's Not Too Good to Be True

Imagine Washing Dishes without Dishpan or Cloth!

WHEN I read of recent experiments with dishwashing methods, I decided to reform. I had long ago discarded the dishtowel as insanitary, using it only for glassware and silver. I poured quantities of boiling water over the dishes as they stood in the draining rack, and when I was sick argued with the hired girl to get her to do the same.

The dishmop was to blame for bacteria on perfectly clean-looking dishes. The offending mop must be boiled each time before using. Goodness, what a nuisance! Even after I was converted to the idea because I feared the spread of colds, sore throat, or even tonsilitis or influenza, I would forget that pesky dishmop. I hemmed pieces of old toweling and tried to keep one or two boiled up ahead of time, while I threw the used drying towels into the laundry bag.

Now I have a strictly sanitary dishwasher, and it cost only five dollars. I'll wager a bacteriologist could not find a single stray germ after I have treated the dishes to the cutting spray of boiling soapy water, then to clear hot water.

The silverware is put in the rack at the end of the wire drainer which is a part of the dishwashing outfit, and it is left to dry itself. A strong fibre brush attaches to the hose for cleaning cooking utensils, and since aluminum does not rust, they are merely rinsed with scalding water and drained also.

Attached to Any Faucet

This dishwasher slips on any faucet — its attachment is not a plumbing job. After using I slip it off, leaving the chain on the faucet, and turn it back over a nail above the sink. Then it is there ready for next time. It takes less than a minute to attach it. It is ideal, attached to the cold water faucet, for cleaning greens, and uses less water than the old way.

By holding the hose close to the dishes so that the spray strikes them edgewise, there is no splashing, and the spray is so diffused that it does not break the dishes.

I am quite in love with my new dishwasher, because it saves time and because it makes the dishes most sanitary.—Doris W. McCray.

Note:—Now here's another ray of sunshine for our Pennsylvania Farmer kitchens. Imagine washing dishes without a dish pan, a cloth, or even a grouch! No, it's not too good to be true, but it's too good to pass by without consideration. Mrs. McCray has given us a fine message, and recommends a method and outfit that will do your dishes quickly, easily and in a healthful way. Using this plan saves time, strength, hands and even dishes. If you are interested, but not entirely convinced, write me and I'll give you further information. If you are ready to buy, I'll tell you where you can see the method at work, and have a genuine demonstration.—Home Page Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Farmhouses— Then and Now

THERE was a time when farmers' wives led happy but humdrummy lives. Their bedrooms might be warm and dozy but scarcely up-to-date and cozy; their parlors were dark, stuffy places devoid of charm and tone and graces; they sat on stiff hair sofas, slippery, and had scant time for "frills and frippery." But all of this is different now; they beautify their homes—and how! No longer living as if blind, they leave town sisters far behind. They fill their homes with light and color and give no space to what is dull or—why even the rouser, mechanical rooster, alarm clock now isn't what you're used ter. With faces lifted, hands manicured, voices cultured, failings cured, alarms have been rejuvenated and had their figures recreated. Now barns are palaces, sties have styles, farmhouses are nests for glowing smiles.—R. C.

Think It Over!

WHEN a meal that is ten minutes late upsets your disposition for the rest of the day, when Tom's muddy tracks in the kitchen nearly make you lose your temper, when the household duties seem to pile up endlessly, it is time to take an hour or even a day off to rest, for it usually is tiredness that makes you cross and irritable, says the State College of Home Economics at Ithaca, N. Y.

But why not think it over to see if each day's work can be made easier? Perhaps a high stool in the kitchen will help by allowing you to take the weight off your feet a while. Such a stool can be used at the sink while preparing vegetables or washing dishes or even for the ironing. Just because you never sat down to such jobs doesn't mean that you can't begin now. Or move the work-table or cabinet and the supply closets nearer the sink and stove to save steps. Get a service-wagon or tray-on-wheels to cut down the number of trips between the dining-room and pantry.

Collect the mending bag, the darning, the sewing machine and all the rest of the sewing equipment in one room or in one corner of a room and keep it there so you will have just one place to go when you have a few minutes to sew. And train Tom to wipe his own muddy tracks, and the rest of the family to put away their own belongings—train them cheerfully, of course, but firmly just the same. Plan definitely so that you can take life a bit more easily and the wrinkles will begin to smooth out and the whole world will look brighter.

A spray of hot, soapy water, followed by clean, scalding water, makes the dishes spotless in no time at all.

A Disagreeable Task Made Easier

ONE of the important things that will give the desired spic-and-span appearance to our kitchen is a clean stove. But since cleaning the range is considered a disagreeable task, it is not always easy to achieve this perfection.

I find that an ounce of prevention is worth a pound of cure in caring for the kitchen stove. Before turning the grate, shaking down ashes or adding fuel to the fire, I open the draughts in the pipe and stove-top and close all draughts at the front of the stove. This carries away most of the flying ashes and smoke and keeps both stove and kitchen much cleaner than when I paid no attention to this rule.

The disposal of ashes is important. A tin or brick ash-shoot which carries the ashes directly from the grate to an ash-pit in the basement saves a great deal of cleaning. When this is impossible, I find an extra ash-pan indispensable because one can always be empty and ready to place in the stove before cleaning time each morning.

No Kerosene Used on Hot Stove

A stove can be kept in a presentable condition if it is thoroly cleaned once each day with a cloth and warm soapy water. Burned-on grease can be removed by rubbing with a cloth moistened in kerosene but this must never be done while the stove is hot as there is a possibility of such a cloth catching fire.

Subsequent cleanings during the day can be made by means of various methods. An old dustless duster is excellent for removing dust and crumbs. A crumbled oiled paper if used while the stove is warm imparts a clean polish. An old cotton stocking which has been moistened with kerosene and then dried and folded to a convenient size is fine for removing traces of dust and ashes.

All of us cannot have the expensive enameled stoves which are so delightfully easy to clean. But we often can make a great improvement by painting pipes and all parts of the stove except the top with fire-proof iron-enamel which gives a glossy hard finish that is easy to care for. It is possible to find at the hardware dealer's cleaning oils which prevent rusting and which should be used on the stove, especially in the oven and warming-closet, at seasons when the use of the range is largely discontinued.—Alice M. Ashton.

The Kitchen Cabinet

STUFFED SAVORY PEPPERS

Cut six or eight green peppers lengthwise, remove all seeds and if it is desired to have them milder in flavor parboil for five minutes. Mix together one pint cooked string beans, one chopped tomato, one small onion minced, four tablespoons finely minced bacon, four tablespoons grated cheese, and a seasoning of salt. With this fill the peppers, put in a shallow pan and sprinkle bread crumbs over the top. Add boiling water to a depth of a little more than an inch over bottom of pan and bake twenty or thirty minutes.

• • •

SALMON BAKED IN PEPPERS

Cut green peppers in half and remove the seeds. Parboil, drain, dip in cold water and drain again. Mix two cups salmon free from bones and skin with one cup bread crumbs, one teaspoon melted butter, one tablespoon sweet cream and one-half teaspoon salt. With this mixture fill the pepper shells. Put in a shallow baking dish, pour one cup boiling water into dish and bake until the peppers are soft and the fish brown.

• • •

GREEN PEPPERS WITH CHEESE

Remove the stem and seeds from two large green peppers and chop fine with one large onion and two small, not over-ripe tomatoes. Butter pan, pour in the pepper mixture and fry until tender and brown. Season with salt and paprika. Add 2 ounces of sharp cheese grated or cut in small pieces and cook until cheese melts, stirring constantly. Serve at once as cheese will harden and become tough if allowed to stand.

• • •

POACHED EGG IN PEPPERS

Remove stem end, seeds and coarse fiber from three green peppers. Cut them in half and cook in boiling salted water until tender. Drain and in bottom of each half put one tablespoon hot bread crumbs that have been browned in butter and over these one poached egg. Dust with salt and pepper and a bit of minced parsley and serve.

• • •

RICE AND GREEN PEPPER SALAD

Cut the stem ends from two green peppers and clip off as much of the green part as possible, cutting in small pieces. Mix these with two cups rice, one-fourth cup grated cheese, one teaspoon grated onion, two tablespoons French dressing and one-half cup mayonnaise. Remove seeds and white fibre from peppers from which ends were clipped and fill them with the mixture, pressing it in firmly. Set to chill. Line salad plates with lettuce leaves and with sharp knife cut each pepper into four rings. Place one ring on each dish, put one teaspoon of mayonnaise in center of each ring, scatter olive rings over it and serve at once.

• • •

GREEN PEPPER SANDWICH

Cut four green peppers in half, remove seeds and white portion, soak in cold water thirty minutes and parboil in hot water ten minutes. Drain, let dry twenty minutes and when cold mash thru coarse sieve. Mix together one-half pound grated cheese, one tablespoon olive oil, one-fourth teaspoon salt and juice of one lemon. Add the pepper mash and stir until all forms a smooth paste. Spread between thin slices of bread and cut in triangular shape.

• • •

MUSTARD FOR PICKLES

Three quarts good cider vinegar, 2 pounds sugar, 1 tablespoon salt, 1 cup flour, 12 tablespoons yellow mustard flour, 4 tablespoons tumeric powder. Blend the flour, mustard and tumeric. Then mix smooth in water enough to make a thin paste. Add to the vinegar, sugar and salt when boiling. Stir until well done. Have the vegetables ready, cooked as desired and drained. Add to the mustard while on the stove and let all heat thru well. Ready to serve in a few days.

Pocket Money Builds Character

CHILDREN like a bit of spending money all their very own. It is good for them to have it, and farm children are no exception.

Here are a few of the ways my youngsters like to earn money They have a nice cherry tree of their own. They control it entirely: pick the fruit, and sell it either at stores where we deal or among friends and neighbors. They help care for the home garden and all the surplus vegetables above family needs are theirs for sale. The green grocer in our small town is most anxious to buy whatever they have for sale.

All the farm nut trees belong to the children. They do the autumn chores with eager speed and are soon off to gather the nuts. Last year one tree alone yielded two bushels and the proceeds were ten dollars. This money was spent in happy Christmas shopping.

We have found that these responsibilities have developed good qualities in our children. Handling and spending their own money has increased their enjoyment of the work as well as the benefits derived. Let your children earn some pocket money—it helps build character.—Mayme O. Thomson, N. Y.

The Baby's Layette and Lingerie for Mother

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5697.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size will require 1⅞ yard of 36-inch material. To make shoulder straps of ribbon requires 1 yard. Pattern, 10 cents.

5031.—This outfit consists of a yoke dress, a night gown, a sack and a cap. Pattern is cut in one size. If made as illustrated, the dress will require 1⅞ yard of 36-inch lawn or nainsook and 2⅝ yards of edging 3½ inches wide for the ruffle. The gown will require 1⅞ yard of 27-inch material, the sack ⅞ yard of 27-inch material and the cap ⅛ yard of 18-inch material. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

If rose bushes are fertilized late in the season, they are likely to winterkill, because soft, succulent growth will develop and will not have time to mature before cold weather.

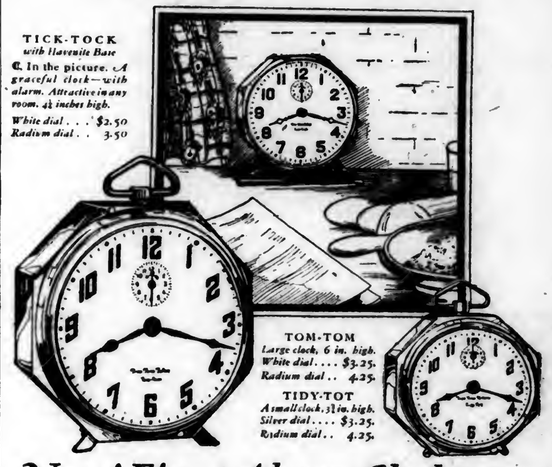
Stamped Ready to Embroider

FLYING fingers and simple stitches make a half hour snatched from a busy day profitable as well as restful. A bit of embroidery trims a charming little dress for the one-year-old, brightens an apron for mother or big sister, relieves the monotony of tea towels and forms the individual touch that makes the hand-made gift invaluable. Any housewife will appreciate a luncheon set or a silverware case.

The Handicraft Department offers the following articles stamped ready to embroider, some of which may fill those empty spaces on your Christmas list. It isn't too early to start Christmas gifts. Orders will be filled as long as the supply lasts. Please state number, first and second choice if more than one color or design is offered, and enclose price listed. All orders should be sent to Handicraft Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

1258—Child's dress with design stamped on fine voile. Collar and cuffs edged with lace. Peach, yellow or blue.....$1.25
1581—Apron stamped on sheer checked batiste. Pink, blue or yellow 75
3081—Apron stamped on unbleached muslin with pockets of blue chambray 59
1191—Child's apron, 12-year size only, comes made up Brown, pink or apricot 75
1795—Misses' apron, stamped on fast color, gray-green crash..50
1163—Silverware case for tablespoons, knives, forks or teaspoons, stamped on crash 50
1171—Tea towels stamped with knife and fork design or pitcher design 23
1642—Kitchen curtains stamped on striped dimity with edges bound in green 59
1092—Vanity set stamped on embroidery cloth.....15
1011—Buffet set stamped on Indianhead. Edges hemstitched..50
1421—Luncheon set stamped on Indianhead, cloth 36x36 inches, and four napkins 12x12 inches 75
1533—Luncheon set, cloth 36x36 inches, and four napkins 10x10 inches.....75

NEW HAVEN CLOCKS BEAUTIFY THE HOME
Distinctive Designs in Alarm Clocks



TICK-TOCK
with Ilavenite Base
C. In the picture. *A graceful clock—with alarm. Attractive in any room. 4½ inches high.*
White dial . . . $2.50
Radium dial . . 3.50

TOM-TOM
Large clock, 6 in. high.
White dial . . . . $3.25.
Radium dial . . 4.25.

TIDY-TOT
A small clock, 3¼ in. high.
Silver dial . . . . $3.25.
Radium dial . . 4.25.

New! Finest Alarm Clocks ever

Good housekeeping—good timekeeping go hand in hand. These New Haven Clocks fit right in—for they are so attractive they beautify the home, so reliable that they are first aids to punctuality. New Haven Clocks are made in a wide variety—not only alarms—but also chime clocks, tambours, and colonial models as well . . . . Beautiful clocks for every room in the home.

The superior features of the latest New Haven Alarm Clocks:

1 Distinctive beauty of design; artistic hands; ornate numerals.
2 Non-breakable *Krack-Proof Kryflal.*
3 Mellow-toned alarm with shut-off.
4 Aluminum non-rust bell on back.
5 Thin-model case, dust-proof; patented octagon design.
6 Full-vision dial.
7 Forty-hour movement.
8 Dependable timekeepers, all.

All True Time Tellers—See them at your dealer's!

NEW HAVEN CLOCKS
Made by the makers of Good Clocks *for more than five generations*

TIGHT BINDING

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

FROM weakness and surprise and gratitude, I found myself beginning to weep; and what was still more curious, was still too light-headed to care whether I did or not.

The Irishman put his hand on my shoulder gently.

"Your legs are weak yet and your stomach empty," he said. "A bit of broth will make a new man of you."

I managed to stammer a few words of gratitude.

"You would do the same for me," he told me. "Who's to help the poor if not each other?"

It is a sign of the depth to which my new experience had struck home that I thought of this as a wise and kindly saying. It was only a moment afterward that the part of me that had once boasted of being a gentleman of Philadelphia revived to wonder how far he had fallen to be able to receive aid on such terms.

My Irishman's name was O'Neill, I found. He and his wife and four children had come over from County Donegal three or four years before. He had just barely managed to get passage money together and landed without a cent. Farm jobs were open near Philadelphia, however, and he worked there one year. The next year he moved onto a farm farther west and worked for its Quaker owner until his wages amounted to the price of a yoke of oxen, a wagon, a plow and a few more tools. Now he was on his way to a country of cheap land. He had heard there was still good farm land for the asking in the valley of the Shenandoah. If not there, then certainly over on New River.

"You'll need a rifle over in that country," I suggested, "and perhaps one for your oldest boy. The Shawnees may not come this far again, but they are likely to lift hair on the over-mountain settlements."

IT WAS afternoon, and I was walking beside O'Neill as he prodded the oxen. He jabbed harder than usual as he answered. What difference did Shawnees make, he demanded? Any Irishman who had known British landlords and British soldiery could not be frightened of red-skins. Thieves and knaves all. It was the blessing of the country that the English were cooped up in the towns on the seaboard. It was its curse that these English and the English overseas were trying to make of the country another Ireland. He spoke of the Stamp Act and went on in a fury of language, with oaths in Gaelic, to talk of the Treaty of Limerick, the Test Act, and other matters which he said showed the black hearts of the rulers.

"There are some Englishmen here in the colonies that think much like you." I ventured, as I thought of the Sons of Liberty and their work.

O'Neill admitted there were good men among them, but doubted if there were enough. "When it comes to hard fighting," he insisted, "the gombeen men, the money lenders, the traders, in the towns like Philadelphia, will go with the English. This country will go into slavery like Ireland unless the Irish of the back country put a stop to it.

I suggested that some folks from the north of Ireland had as little sympathy for the English. To which O'Neill laid a curse on all Orangemen, Presbyterians and the like, and denied that he would ever be on the same side of a fight with them. Then he cooled down and began to consider the matter.

"It may be," he admitted finally. "The Scotch are a folk I would have little to do with, but they are not so bad at fighting and might come to be a little help. And this country has a way with it. An Orangeman in Belfast and one in Pennsylvania is two very different things."

I laughed and agreed. "And an Irish papist in Pennsylvania seems much less bad to an Orangeman than he did back in Donegal," I added.

"My father came from the north, my name is Craig, and I am a Presbyterian," I went on, "but I am sure that hasn't made me relish your broth any less."

He was slower to take this, but admitted it might be true. Ireland, he went on to say, would be the bane of England yet. England had wronged the Irish and they were migrating to America by the thousands; England had set the Scotch on the Irish as a plague to them and then been false to the Scotch, and the Scotch were sailing from the north of Ireland by the thousand.

"The old witch will pay for her sins yet," declared O'Neill between his teeth.

WE CAME into Chamberstown that afternoon, passed thru it and camped on the other side. It seemed odd to think this little town had been a last line of defense for the settlers in the war eight years before. This had been the frontier then. Now it was still frontier of a sort, but between it and the Indian country there were now hundreds of cabins and dozens of settlements where the savages would stop to burn and slay if another raid came this way.

To our fire that night came a stocky fellow who when he spoke showed a slight German accent. He was a new sort to me, not quite a farmer and not a forest runner. His clothes were of homespun, except for feet and head. On his feet he had a pair of stout moccasins, laced high over his ankles, and there was a coonskin cap on his head. He carried a long rifle and a small pack on his back.

He was alone on the road, he said, and had stopped for a few minutes of warmth and company. O'Neill promptly urged him to sleep beside the fire that night. Krafft—he told us his name—demurred and said he must push on. Yet the fire crumbled into coals and still he sat there.

"You are for the valley of Virginia?" I offered finally, more to make talk than for any other reason.

"Farther," he said.

My interest awoke. I put a question: "Carolina?"

He looked me over once more before he answered, the he had been studying me all evening. When he did speak, it was no answer, but another question:

"Is that where you are bound?"

I said it was.

"And from Philadelphia?"

But I had taken alarm. I liked the man's looks, but his persistence and his questioning had an ill air. On the spot I made up some story of an uncle near Reading, and of how I was journeying south from there.

KRAFFT said nothing, only his eyebrows drew together. But instead of watching me, took to keeping his eyes on O'Neill. When the Irishman left the fire a moment and had his back to us, Krafft turned swiftly to me, made a quick motion with his hand, and said something in a low voice.

I followed none of it and merely stared. No notion came to me of what the man was trying to convey.

"Keep it to yourself then," he commented and looked a trifle sullen, "but there are folks would tell you, if you asked how safe a man August Krafft is."

O'Neill was still a few yards away. Krafft looked again to see he was out of earshot and asked more casually.

"You say they robbed you up yonder? Of everything?"

Unconsciously my hand went to my throat, where the buckskin bag of Thomson's still dangled under my shirt. Krafft followed the gesture with his eyes and chuckled.

"Good enough," said he. "You still have it. Now let's pull our blankets around us and to sleep. There's many a hard mile before we get to where we are both going."

So, after a word of explanation to the Irishman, Krafft rolled up and was asleep and snoring in a few minutes. As for me, I stayed awake a long time, looking at the stars and wondering who this man was, whether friend or foe. That he was one or the other, I could not doubt. No casual passerby would have gone to the trouble he had taken to trap me into an acknowledgment, tacit tho it was, of my mission.

In the morning Krafft was still there. He tramped along with us that day. In the afternoon he paid for his lodging, such as it was by slipping away from the road and coming back with four wild ducks in his pouch. That seemed to make him feel entitled to another night by the fire, and he prepared to stay with us again.

It occurred to me as we sat around after the meal that he had a good deal better right than I had. After all, I had brought nothing to O'Neill save a lusty appetite. Krafft was paying his way. I felt that I must break away on the morrow and relieve the Irishman of the burden of my company.

THERE was a lot of talk that night about the fire. O'Neill laid his usual curses on the English, and wound up, also, as usual, by a final series of maledictions in what I suppose was Gaelic. It was not understandable, but it had an evil sound.

"Say all you please about them," Krafft put in at the end. "You'll say no worse than I think. My father came from the German Palatinate back fifty years ago. The English governor at New York promised to give the colony fair treatment and a good location. He put out people in the pine barrens and left them to starve. It was the Mohawks that saved us. After that we came down into Pennsylvania, but not without a deal of fighting and lawing with the English of New York. We do not like them, we Germans.

I changed the subject by asserting that next day I must push on. To O'Neill I expressed what gratitude I could and told Krafft frankly what he had done for me.

"It was well done," commended the German. "You are the kind for the frontier. But as to pushing on, let us stay together a bit longer. Shortly we come to Mecklenburg and the ferry there. Let us wait till we get into Virginia before we talk of leaving each other."

Because I had no real wish to leave, I was easy to convince. O'Neill was glad of Krafft's presence. He had heard there were some difficulties at the ferry at times, and Krafft had assured him he had made the trip before and knew the ropes.

So we went on together, thru the rolling country between the Blue and the South mountains, till finally we came to a place where the hills began to grow steeper, and instead of walking in a valley between two ridges, we found ourselves working up toward a line of hills that lay across our route to the south. It was late in the second afternoon that we wound around the last hill and came down to a river wider than any I had yet seen on the trip. As we approached the ferry boat landing, we could see across the half mile a cluster of log houses under the flank of a huge hill, whose bare sides ran straight up into the sky.

"Mecklenburg," announced Krafft, and hurried us down to meet the ferry boat, which was landing a party from the Virginia shore.

We got the oxen on with some trouble. O'Neill looked troubled at the fee and wanted to swim them over. Krafft swore that the river was too high for fording and that it was better to pay a fee than be drowned. To which O'Neill observed to me under his breath that the ferryman also had a German accent, and that countrymen are often observed to stick together.

AS OUR ferryman pulled at the sweeps, I went to the bow and studied the land I was coming to. It had a wilder, more mountainous air than any I had seen before. It struck me I must be coming to the real frontier, and I wondered if it would be kinder to me than the back country I had just passed thru.

"Himmel!" cried Krafft at my elbow, and threw out a hand at the landing we were approaching. "Look there! What happens now?"

I made out several figures in uniform on the bank. They seemed to be awaiting our arrival. For a moment, the sight made no impression on me. It did on Krafft.

"What us these soldiers for?" he roared at the ferryman. "Must we have passports now to go from Pennsylvania to Virginia?"

The ferryman's answer struck me cold.

"No passports August, but many questions to answer. The governor has sent these men up here. Some are at the other ferries, I hear."

"But why, Dummopf?" Krafft demanded.

"How should I know?" said the ferryman. "Folks say, tho, that there is a great murderer or thief trying to steal out of Pennsylvania, and that these soldiers are to watch the ferries until he comes and then take him back to Philadelphia to be hanged."

For a moment it seemed as if I could do nothing to prevent disaster. My imagination raced like the wind, while my body stood paralyzed. I saw my discovery and seizure, the return to Philadelphia, the trial—

Krafft shook me. "Wake up!" he cried. "We must think of something."

The strip of water between the boat and the shore was narrowing. I could count the men who waited, three of them. Their lounging postures showed that the business bored them. The sight of their indifference somehow nerved and encouraged me.

"Tell your friend to go slow," I told Krafft. "We need more time."

In the emergency I was accepting him as a friend and ally. I had forgotten that he knew nothing, or should have known nothing, of who I was or why soldiers might be watching for me. His attitude of alarm and sympathy had placed him on my side.

O'Neill was frankly puzzled. He looked from one to the other of us and shook his head.

"I've never given a man up to the troopers yet," he declared. "You're safe with me, but if you want to be safe from them yonder, you had best be quick."

After all, it was Krafft who found out what to do. Before I knew what was happening, he dragged me around behind the wagon, out of sight of the shore, and there began to rip stockings and boots off me.

"Get rid of them quick," he urged. You must have naught but a shirt and breeches. Chuck everything else in the wagon, under the blankets."

I DID it, and turning back from hiding that surplus, was met by a splash of water in the face. As I gasped and protested, Krafft sluiced water over my bare arms and legs. Give me a couple of clods off the wheel," he ordered sharply, and I handed them to him. These dried cakes of mud, remnants of our struggle thru the last chuck hole, he rubbed over my face, hands, legs and feet. Then he stood back.

"Not quite dirty enough," he commented, "but it may do."

And to O'Neill:

"This is your oldest boy."

The O'Neill children set up a laugh. So did the Irishman himself after a moment. I looked sheepish.

Krafft scowled. "It will save you some trouble if you look a trifle less Scotch," he declared. "Watch yourselves, for here we are."

The ferry touched the shore. The O'Neill tribe swarmed forward to loosen the oxen heads, to take away the blocks under the wagon wheels to start the load to shore. I went with them and toiled somewhat perfunctorily at a wheel as the oxen pulled up the first slope.

Out of the corner of my eye I saw an officer of the militia approach. He beckoned O'Neill and Krafft. At the rest of us, he gave a casual glance, but no more. I heaved vigorously on the wheel.

While the three talked, the wagon pushed on. The town was more of a place than I had expected. There was a sturdy stone house, fit to be used as a fort. I learned afterward it had been. There was a mill, a tannery, a blacksmith shop, and a score of log homes, all climbing helter-skelter over the broken ground, and one or two perched high up on the cliff overlooking the river.

WHEN we were fifty yards ahead, O'Neill and Krafft came after us, hot-foot.

Krafft was grinning.

"Drive on, lazy ones!" he shouted when he was half way to the wagon. "O'Neill, tell that oldest gossoon of yours to use the prod on the off ox."

I glanced behind. The officer was going back to his seat. The two soldiers had resumed their lounging position. Evidently I was to go free.

"Push on, lad, push on," cried Krafft in a tone of real concern, as he came up. "Don't give those fellows yonder anything to stare at."

I gave a shrill, silly laugh. At the moment the whole thing appeared to me as a huge joke. Here I was, a person of gentility, in nothing but a shirt and small clothes, daubed with mud, and rejoicing because I had escaped arrest. Was I mad, or was the world mad? I laughed again.

At that Krafft gripped me by the shoulder and his eyes blazed. Before I knew what he was doing, he struck me flat-handed on the jaw and hard enough to throw me up against the wagon wheel.

"Be still, you fool," he stormed. "Are we to lose good men's lives because you cackle like a woman? Now help with the wheel and be quiet."

Forced by his urgency, I did lay hold of a hind wheel and again heaved with the other lads to bring the wagon over a rocky bump. We were going along the side of that hill I had seen from across the river, and were just starting a long climb that I supposed would take us eventually over the ridge. The road ahead turned and twisted like a snake, and at the first turn I made sure that we were out of sight of the soldiers and then went back to where Krafft was walking with O'Neill.

(To be continued next week)

Pennsylvania Bankers Review Farms During Three-Day Tour

A PARTY of fifty members of the Pennsylvania Bankers' Association completed a three-day tour thru farming communities of Pennsylvania on August 27th. The tour, under the direction of W. S. McKay, chairman of the committee of agriculture of the Pennsylvania Bankers' Association, started from State College Thursday morning and concluded at the National Farm School, Doylestown, Saturday night.

Visits were made at farms, orchards and nurseries in the following counties: Centre, Union, Northumberland, Snyder, Perry, Dauphin, Lebanon, Lancaster, Berks, Lehigh, Northampton and Bucks.

Represent Large Capital

The Ontelaunee Orchards, near Leesport, in Berks County, and the Peerless Fruit Farms, at Hamburg, were examples of farm enterprises which represent large capital investments. Under the guidance of Otto Olson, the bankers were able to get some idea of the importance of tobacco in Lancaster County and of the research work being conducted with this crop. On the farm of W. A. Hilstop, near Doylestown, and the Feltch farm at Macungie, in Lehigh County, prospective 400 bushels per acre potato crops were inspected.

Other farms visited on the trip were those of John S. Wehr, Mifflinburg; L. J. Reitz, Lewisburg; Mertz Brothers, Northumberland; R. L. App, Selinsgrove; John Richter, Clarks Ferry; Elam Hershey, Annville; General H. C. Trexler, near Trexlertown; J. H. Fulmer, Nazareth, and C. D. Werkheiser, near Easton.

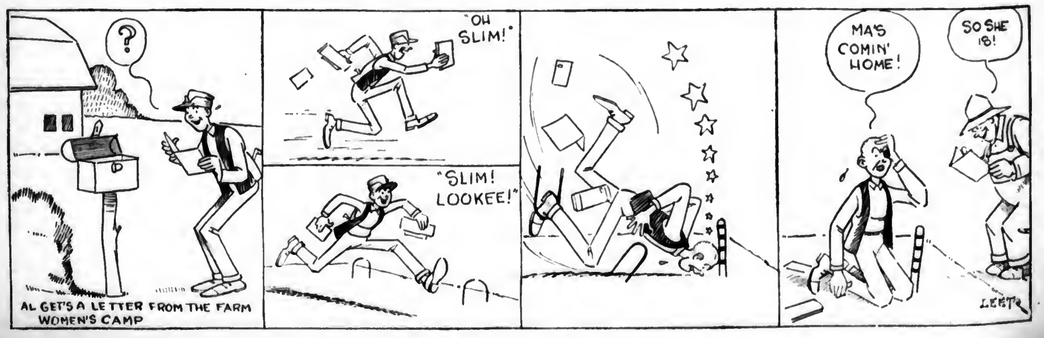
At the Hershey farm, at Annville, six boys displayed to the visitors six Herefords, each weighing around 925 pounds and less than one year old. Under the care of the boys the beeves are putting on weight at the rate of two and one-half pounds a day.

Seven members of the board of directors of the National Farm School escorted the party over the more than 1200 acres of land owned by the school.

At Hershey in Dauphin County, the party witnessed an excellent exhibition of horsemanship and marksmanship by members of the graduating class of the State Police training school.

It was decided at the close of the tour that next year the committee and its representatives in each county engaged in the work and known as "key-men" would go to State College for three days and receive more intimate knowledge of the work of the institution and its county agents.

Activities of Al Acres: *Al takes a "wicket" tumble* : : : : : : *By Leet*



Did you ever hear this one?—

Tenting Tonight

Many are the jars that are opened tonight,
Covered with evening dew;
Many are the kids that are howling tonight;
Many are the black flies, too.
For we're
Tenting tonight, tenting tonight,
Tenting on the old camp ground!
There's a pup in the midst of the apple pie,
And Grandmother's knickers are torn,
Oh, the back tire's flat, and the gas tank's dry,
And we wish that we'd never been born!
Tenting tonight, tenting tonight,
Tenting on the old camp ground!
Oh, the girl in the car from Calumet
Is flirting with poor Uncle Will.
Oh, the canned heat's gone and the beds are wet
But we're saving a hotel bill!
For we're
Tenting tonight, tenting tonight,
Tenting on the old camp ground!

Cagy

As a tall man entered the theater, the whole audience rose and applauded.

"A popular hero?" asked a stranger of his neighbor.

"Yes," was the reply. "He distinguished himself when the circus was here."

"In what way?"

"A lion escaped, and when everybody was yelling and trying to get away he walked quietly into the lion's cage and shut himself inside."

Extra Profits

Mike Murphy, who lived on a farm, sent his friend, Jimmy O'Brien, in town a crate of chickens.

"Did ye get the chickens?" asked Mike the next time he saw Jimmy.

"Some of 'em," answered Jimmy. "After I got 'em from the station they got out av the crate and I wuz two hours scourin' the neighborhood an' thin only got tin."

"Sh-sh-sh, Jimmy, not so loud. I only sint ye six."

A Los Angeles couple were staying recently in China. One day they were served with an excellent dinner, the composition of which they knew nothing about. When the Chinese cook came to clear the table the wife asked him in fun, "I hope you didn't kill a stray dog from the road to make our dinner, Chang?"

"No killee dawg," answered Chang. "Him a'ready dead when I picked him up."

It was at the seaside, and Sandy had just stretched himself on the beach when Mac came up. "Will you come for a sail, Sandy?" he asked.

"No, I've just had a guid dinner for twa-and-six-pence, and I'm no takin' the risk."

"I've had a terrible warning of approaching death."

"No, really?"

"Yes, I bought one of those life-time fountain pens, and it's broken."

The Wrong Store

"I want a bottle of iodin."

"Sorry, but this is a drug-store. Can't I interest you in an alarm clock, some nice leather goods, a few radio parts, or a toasted cheese sandwich?"

The man who has no troubles is not lucky. He's dead.

Markets

September 2, 1927.

Editors' Note:—Due to the interruption in trading occasioned by the Labor Day holiday we are unable to present in this issue our usual comprehensive review of the markets. However, the prices and trends cited on this page reflect the general trend of the market for the week.

PITTSBURGH MARKETS

PRODUCE

Vegetables (wholesale prices)—CABBAGE, bulk, bbl, Penna and N Y, $2@2.25; carlots, ton, $25. CELERY, Mich, high-balls, 90c@$1.10; N Y, 2-3 crate, $2.50@2.75. CUCUMBERS, N Y, bu bskt, $2.25@2.50. LETTUCE, Colorado and Calif, Iceberg, crate, $3@3.50; N Y, Big Boston, crate, 75@90c. ONIONS, crate, Mass and N Y, 100-lb sack, No 1 yellow, $1.50@1.75; poor stock low as $1; Indiana, 100-lb sack, No 1 white, $2@2.25, mostly $2. PEPPERS, bu hmpr, N J, 50@85c. POTATOES, 150-lb sack, No 1 Cobblers, N J and Long Island, $3.15@3.25; W Va, $3@3.25; 120-lb sack, Minn, early Ohios, $2.25. TOMATOES, Ohio, 20-lb bskt, $1.50.

Home-grown Vegetables—BEANS, bu bskt, $2.50@3. BEETS, doz bchs, 20@25c. CABBAGE, bu bskt, 50@75c. CARROTS, doz bchs, 20@25c. CORN, bu bskt, white, $2.50@3; yellow, $3@3.50. EGGPLANTS, 10-qt chip basket, 75c. LETTUCE, leaf, box 2 doz, 50@75c. ONIONS, bundle 2 doz bchs, 15@20c. PARSLEY, doz bchs, 20@25c. SPINACH, bu bskt, winter, $1@1.25. TOMATOES, 10-qt chip basket, $1@1.25.

Fruits—APPLES, bu bskt, Va and W Va, Wealthies, $1.50; Lowells, $1@1.25; N Y, Duchess, $1.15@1.25; N J, Maiden Blush, $1.25@1.50. CANTALOUPES, Calif, Turlock section, crate, jumbo, $2.50; standards, $2; Del and Md, crate, jumbos, 75c@$1; standards, 50@75c; flats, 25@50c; Colorado, crate, flats, standards, 50@75c; jumbos, $2.50@2.75. GRAPES, Calif, table, crate, Malagas, $1@1.25; Thompson Seedless, 75@90c; lugs, Malagas, 90c@$1.15; Juice, lugs, Thompson Seedless, 65@75c; Missouri, 4-qt bskt, Concords, 20c; Del, 2-qt bskt, Moores Early, 20c. PEACHES, bu bskt, Del and Md, Elbertas, fancy, large, $2@2.25; medium, $1.50@1.75; Penna, Elbertas, fancy, large, $2.25@2.50; medium, $1.75@2. PEARS, bu bskt, Clapp's Favorite, N Y, No 1, $1.85@2.25; Calif, box, Bartletts, $2@2.50.

LIVESTOCK

Hogs—Active; mostly 25c higher; top, $11.75; weights above 250 lbs, $11 downward; 210@250 lbs, $11@11.50; bulk, 160@210 lbs, $11.50@11.75; most 150@160 lbs, $11@11.25; other light lights, $10@10.75; pigs mostly $11 down; packing sows, $8@8.50.

Calves—Choice vealers, 50c higher; top, $17.

Sheep—Lambs, 50c higher; top, $14.25; aged wethers mostly $8.25.

PHILADELPHIA MARKETS

HAY AND GRAIN

Baled Hay and Straw—Timothy hay, No 1, $18@19; No 2, $16.50@17.50; No 3, $15@16; timothy, clover mixed, No 1, $16.50@17; No 2, $15@16. Straw, straight rye, $19@20; wheat straw, $13@14.

Wheat—Car lots, in export elevator, No 2 red winter, $1.42@1.43; No 2 red winter, garlicky, $1.36@1.37; lower grades selling at the usual trade discount.

Oats—Car lots, as to location, No 2 white, 56@57c; No 3 white selling at a discount of 1@2c from No 2 white.

DAIRY MARKET

Butter—Solid-packed creamery, in tubs, higher than extras, 46½@49½c; extras, 92 score, 45½c; 91 score, 43c; 90 score, 41½c; 89 score, 39c; 88 score, 38c; 87 score, 37½c; 86 score, 37c.

Cheese—New York, whole milk, flats, fresh, 27c; longhorns, round lots, 26½@27c; jobbing, small lots, 28@29c; single daisies, fresh, 26½@27c.

NEW YORK MARKETS

PRODUCE

Butter—Strong; creamery, higher than extras, 45@45½c; creamery, extras, 92 score, 44½c; creamery, firsts, 88@91 score, 39½@43½c; packing stock, current make, No 1, 33½c; do, No 2, 32@32½c.

Eggs—Steady; fresh gathered firsts, 29@30c; do, seconds and poorer, 25@25½c; nearby hennery whites, closely selected extras, 48@51c; nearby and nearby western hennery whites, firsts to average extras, 34@47c; nearby pullets, 29@32c; nearby hennery, browns, extras, 40@45c; Pacific Coast whites, extras, 46@49½c; do, firsts to extra firsts, 41@46c.

LIVESTOCK

Cattle—Steady. Steers, $9@12.60; state bulls, $4@7; cows, $2.50@6.25.

Calves—Steady; veals, common to prime, $9@17.50; lightweight culls, $10.50@11.50; buttermilks and fed calves, $7@9.00.

Sheep and Lambs—Steady. Sheep, $2.50@7; culls, $2.25@3.50; lambs, choice to prime springs, $13.75@14.75; spring mediums, $11@12; spring culls, $11@12.

Hogs—Steady. Light to medium weights, $11.25@11.50; pigs, $11.50@12; heavy hogs, $10.50@11.25; roughs, $7.75@8.25.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, September 1, 1927.

Clover, cash, imported, $14.50; October, $17.25; December, domestic, $17. December, imported, $14.55 bid. Alsike, cash, $15.00; December, $15.50; January, $15.65. Timothy, cash, $1.65; December, $1.75; March, $1.95.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

DEAR SIR:—We are large shippers of peaches and being in the middle of our peach shipping season, we are naturally very much interested in the market situation.

For our information we would appreciate receiving your idea for the recent demoralized condition of the market. In other words the causes for the low prices during the past two weeks when all indications pointed to higher prices based on the Government Crop Reports.—R. C. D., New Jersey.

The comparatively low peach prices during the past few weeks were not due to any one cause but to a combination of causes. Perhaps the most important is the large quantity of California peaches which have been arriving on the eastern markets. Prices on this California stock have dropped below the cost of production and in some cases have been as low as 75c per crate. This naturally has affected the market for home-grown fruit. In normal years the great majority of the California crop is canned or dried and does not enter into competition with the home-grown crop to such an extent. Disagreements between canners and growers are said to be the cause of the heavier shipments this year. New York received the largest amount of these California peaches, but they also appeared in Boston and Philadelphia. This cut down the outlet for New Jersey peaches to some extent.

Another cause for low prices is the fact that many of the home-grown peaches are rather watery and of poor flavor. The cool rainy weather is largely responsible for this. There has been considerable brown rot in the stock offered in Philadelphia and this is discouraging to buyers who wish to ship to points outside of the city. It is likely that the poorer quality has had some influence on consumption. Perfect peaches that are highly colored, such as the Hale, are still selling at fairly high prices. I believe one reason that the consumer does not buy more peaches is because it is so difficult to get tree-ripened fruit at the retail store. In most cases it has been picked green and does not have the fine flavor of ripe fruit.

The early peaches this season brought rather high prices, in fact they were more satisfactory than they have been in a number of years. These early varieties are not of high quality. When they are picked for shipping they are tasteless and even when ripe they could hardly be termed delicious. This year they brought good prices and I wonder if the consumer hungry for home-grown peaches who bought Greensboro or a similar variety has been a very active buyer since the really good varieties have come on the market. This may not be very scientific reasoning but I believe it has something to do with the lack of demand for the later varieties.

The home canning of peaches in the large cities and even in the smaller towns is becoming less common every year. This means that peaches are now used chiefly for slicing, in pies or other desserts. I remember when my mother used to put up fifty to one hundred jars of peaches each summer and that was not such a great many years ago. Now among my friends I know of no one who cans that many. Retailers say this is a common condition which puts the peach in a new class and brings it into competition with other products.

Buy Grapes Instead of Peaches

Eastern and western table grapes come on the market at this time and since the housewife has peaches available from June when Georgia begins to ship, she is tired of them and buys grapes instead. The production of table grapes has increased greatly in recent years and they are becoming a more active competitor. Other fruits that are plentiful and attract the housewife at this time are cantaloupes, Hartlett pears, honey dew melons and the large western plums.

Another cause for low prices of home-grown peaches was the marketing of green, immature fruit. When peach prices began to rise some growers became over anxious to cash in at these high price levels and dumped carloads of this green fruit on the market. Consumers and dealers refused to buy this stock and prices dropped sharply. After such a drop in prices it is practically impossible to bring them back to satisfactory prices. All these causes that I have mentioned have undoubtedly contributed to the drop in peach prices at a time when crop reports indicated a very favorable season.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .44½	$ .42½	$ .40¾	$ .43¾
Eggs, fresh gathered extra firsts (N. Y.)	...	.32½	.29	.36¾
Steers, good to choice (Lancaster)	...	11.62½	11.62½	...
Hay, Number 2 timothy, baled (Phila.)	17.00	17.00	18.00	22.50
Wheat, No. 2 red winter (Philadelphia)	1.42½	1.45	1.42	1.37½
Oats, Number 2 white (Philadelphia)	.56½	.58¾	.61¾	.50¾

Potato Market Continues Steady

Review of the Week Ending September 3

EGGS—The New York market was firmer on the better grades of fresh eggs during the early part of the week. Average qualities, however, were slow and difficult to sell, because of their similarity with the better grades of eggs out of storage. Storage eggs were steady with a moderate demand. The market for nearby Pennsylvania and New Jersey white eggs was irregular due largely to the wide range in quality.

POULTRY—The New York live poultry market was irregular with a moderate demand for fancy fowl and chickens. The poorer grades moved very slowly. Leghorn fowl were dull but chickens sold readily. Old roosters were steady to firm while ducks met a good demand. Fresh killed fryers were in heavy supply and lower while chickens showed a weaker tendency. Large roasting chickens were scarce and in demand.

POTATOES—The potato market at large eastern consuming points was about steady but the demand was generally slow. The New Jersey shipping point markets were dull with a limited demand and slightly lower prices. New Jersey potato shipments up to the last of August totaled 5175 cars compared with 3455 last season to that date.

BUTTER—A further advance in prices was experienced during the early part of the week, despite the fact that storage holdings are considerably higher than at any time on record. There is at present a strong undertone on the market for fine butter due to the rapid falling off of the make and receipts at terminal markets. It is probable that further advances will for the time being come more slowly as many operators are showing an inclination to withdraw storage butter that shows even a slight margin of profit, feeling that the heavy warehouse holdings may result in a break in the market late in the season. The demand for fresh butter naturally will show some restriction as storage goods are withdrawn.

LIVESTOCK—The Chicago hog market was firmer than last week with prices of top hogs about 10c higher. Beef steers, stockers and feeders were steady while vealers and heavy calves dropped sharply. Fat lambs were slightly stronger with fat ewes lower. Yearling wethers were irregular and feeding lambs steady.

GRAIN—Better weather conditions in Canada and Europe resulted in a weaker wheat market and prices dropped about 5c from last week. Corn was lower with reports of better weather in the Corn Belt while larger receipts caused oats prices to drop about 2c. Inspections of soft red winter wheat in Philadelphia were lighter and about half of the cars were garlicky and half of these contained smut. The heaviest receipts of garlicky and smutty wheat were from Maryland and Delaware. Reports from many Pennsylvania counties indicate that much of this year's crop is unfit for seed on account of garlic, smut and weed seeds.

HAY—The markets were generally quiet with a fair demand for good hay. Heavy receipts resulted in a limited demand at Boston and Cincinnati, but New York and Chicago reported an active demand for the best hay. The better grades of alfalfa hay sold readily at Chicago but poorer grades were dull.

FEED—The feed markets were generally weaker. Wheat feeds were more plentiful and slightly lower than a week ago. Cottonseed meal showed little change in price while gluten feed was slightly lower. Hominy feed was also slightly weaker and tankage about steady.

Wheat Market Situation

CONTINUED favorable developments of the Canadian spring wheat crop and improved harvesting conditions in Europe weakened the wheat market during the past week, according to the Pennsylvania and Federal Bureau of Markets.

Mill demand has continued good for dry, high protein types of hard winter wheat and for good milling qualities of soft red winter wheat. Low protein types of No. 2 hard winter wheat were quoted at Kansas City at the close of the market August 31 at $1.25 to $1.31 per bushel, while the same grade with 13 per cent protein was quoted at $1.41 to $1.44 per bushel, compared with No. 2 red winter at $1.35 to $1.38.

The supply of good mill quality of soft red winter wheat is becoming smaller in the central western markets, particularly at St. Louis, where prices are relatively higher than at Cincinnati or Toledo, but are in line for shipments of soft white winter wheat from the Pacific Northwest to that market.

The heavy movement appears to be over at Cincinnati where receipts are very light. A good mill demand has advanced prices of No. 2 red winter to $1.36 per bushel, which is above the export basis. The supply at Richmond is reported moderate with demands slow and No. 2 red winter, western, quoted at $1.47 and locally grown at $1.42 per bushel.

State Potatoes on Sale

THE first potatoes of the season from Pennsylvania were reported on the Philadelphia market August 30th. This stock was of the Green Mountain variety and topped the market at $2.00 per 90-pound sack. New Jersey Cobblers brought $3.00 to $3.15 per 150-pound sack and 65c to 75c per five-eighths basket, according to the Pennsylvania and Federal Bureau of Markets.

What About Future Hog Prices?

By GILBERT GUSLER

A DISPENSER of free advice to farmers once told them that they "would be better off if they raised more hogs and less h—l." Periodically that counsel is followed, at least in the matter of raising more hogs. One of these recurring periods of greater production has developed in the past twelve months and, as a result, hog prices have fallen in the trough of the cycle.

Farmers sold 115 hogs in 1927 from March to June, inclusive, for every 100 sold in the same months of 1926. The 100 head sold last year weighed 24,100 pounds and cost packers about $3145. The 115 head sold this year weighed about 27,100 pounds and cost packers $2710. In short, 15 per cent more hogs were bought for 14 per cent less money than was paid out last year.

Series of Events Lowered Price

Other things besides the increase in production contributed to the fall in prices. Chief of these was the shrinkage in export outlets caused principally by the fact that foreign farmers also raised more hogs. Then, the rise in feed costs, starting in Europe last winter and in the United States in May, coupled with the decline in hog prices, forced hogs to market and accelerated the drop in the hog market. Another influence was the British embargo on shipments of fresh pork from the Continent, effective since June, 1926, which forced the Netherlands to turn its hogs into bacon, thus increasing the competition for Danish, Canadian and American bacon. Still another was the big cotton crop in 1926, which resulted in cheap oil for conversion into lard substitutes, while the low price of cotton diminished the ability of the South to buy hog meats. It is hardly surprising that the hog market succumbed to this succession of unfavorable events.

What about future hog prices? The June pig survey of the United States Department of Agriculture indicated that the 1927 spring pig crop in the United States was 3.5 per cent greater than a year previous. In the Corn Belt, which furnishes most of the commercial supply, the increase was 2 per cent.

The increase in the Corn Belt amounts to about 700,000 head. A corresponding gain in market receipts from October to March next is to be expected, plus a further gain if cholera losses are not severe this fall. Altogether, it will not be surprising if the number of hogs marketed during the coming fall and winter is 2,000,000 head greater than a year previous. This would be an increase of about 10 per cent.

Ratio Between Hogs and Corn

Owing to the prevailing ratio between hogs and corn and the poor corn crop outlook, the early fall months are likely to witness a heavy movement of light hogs to market. This will accelerate the usual seasonal decline in prices at that time. Marketing at light weight will reduce the poundage of pork, however, and offset much of the prospective increase in numbers.

The market is now undergoing a seasonal rally from the extreme low point reached early in June. This strength may last until mid-September, but the autumn drop is likely to carry the market lower than in June. The low point in hog prices for this cycle is quite likely to be seen some time this fall or winter.

The June pig survey indicated that farmers were planning for a larger crop of fall pigs than in 1926, but the actual farrowings have always fallen far short of the intentions reports. These fall pigs will constitute the market supply during the late spring and summer of 1928, hence the probability that supplies next summer may be no heavier and they may be lighter than in the past summer.

Spring Crop May Be Reduced

If the corn-hog ratio remains unfavorable next fall and winter, as it seems quite likely to do, then the spring pig crop of 1928 is likely to be reduced and market receipts in the fall of 1928 will be smaller than in 1927. This points to the likelihood that hog prices will start their upward climb in the next cycle by the middle of 1928. The corn-hog ratio is likely to become favorable again before 1928 is over.

Foreign conditions also seem likely to work out in such a way as to favor higher hog prices in the latter half of 1928 than in the same period in 1927. The unfavorable feeding ratio will probably bring about curtailment of production and lighter market receipts. This will pave the way for larger exports just when supplies available in this country are diminishing and will enhance the upswing in prices.

Domestic demand should be well sustained. On the other hand, demand should be stimulated by lower retail prices for hog products and the probability of higher prices for beef.

Potato Growers Tour

(Continued from page 11)

Last year Mr. Reitz built a concrete common storage house with a capacity of 10,000 bushels of potatoes in crates. He says this storage house paid for itself the first year.

The following potato growers and other men interested in this subject made part or all of this year's potato tour:

Adams—I. H. Keller. **Allegheny**—E. D. Townsend. **Bucks**—County Agent W. F. Greenawalt, Harvey Baum, W. T. Bishop, H. W. Hallowell, John Yeagle. **Butler**—Lloyd Dennistan, Thomas Dennistan. **Centre**—R. U. Blasingame, J. R. R. Dickey, A. C. Kepler, R. S. Kirby, E. L. Nixon, Edwin Rohrbeck. **Chester**—J. B. Conner, Louis Downing, F. G. Evans, W. B. Evans, D. H. Gunsman, A. J. McCue, W. H. McNeal, Richard Markley, A. Schleiter, Frank Smedley, J. M. Spencer, Harvey Spencer, A. J. Yarnall.

Clarion—J. W. Hartman, J. M. Hindman, W. C. Moore, S. A. Zacherel. **Clearfield**—C. C. Dodd, John Smith. **Cambria**—County Agent H. C. McWilliams, A. J. Feighner, K. W. Lauer, W. A. Westrick. **Columbia**—County Agent F. G. Nissley, M. J. Grimes, Dewey Hartman, Eli Mc-Henry, A. S. Yoder. **Cumberland**—County Agent P. L. Edinger, J. L. Bashore, G. L. Strack. **Dauphin**—N. J. Bashore, J. E. Cassel, C. Landis.

Delaware—County Agent O. Wilcox, David Meredith, W. P. Smedley, Paul Willits. **Huntingdon**—R. J. Wigton. **Juniata**—County Agent D. R. Pheasant, G. W. Bender. **Lackawanna**—F. W. Smith. **Lancaster**—County Agent F. S. Bucher, Levi H. Brubaker, A. E. Conrow, Howard Grubbs, Monroe Grubbs, S. H. Nissley. **Lawrence**—County Agent H. R. McCulloch, Charles Bentfield, J. P. Buchanan, Hugh Coblentz, George Herb, Max Ludwig, Fred Reist. **Lebanon**—County Agent A. C. Berger, Miles Horst, Christian Kreider, E. H. Shaak.

Lehigh—County Agent A. L. Hacker, Solon Adams, Walter Baker, Adam Heninger, Reuben H. Ringer, Roy H. Ringer, A. J. Snyder. **Lycoming**—County Agent W. H. Van Sant, E. H. Antes, E. J. Walter. **Montgomery**—County Agent R. G. Waltz, A. S. Anders, W. A. Anders, Arthur Jarrett, T. E. Kirk, Clifford Otto, J. R. Park, William Pratt, G. W. Rex, W. G. Schultz, G. K. Wetfiel, E. W. Wisner. **Northampton**—T. S. Anthony, J. A. Jones.

County News and Notes

Berks County, Pa.—We had plenty of rain for some time and plowing is almost completed. Some have already done harrowing. The wheat and oats were all housed in good condition and the wheat that the farmers have to sell will be of a good quality. Most of it had been stored in barns and sheds. Corn has made good progress in the last few weeks and if early frosts will not harm it it will give promise of a good crop. Pastures is good all summer due to plenty of rain. Potato vines have lost most of their natural color. Some fields as far as the vines are concerned are ready to dig. Late blight is the cause. Not enough spraying being done due to the late season which kept farmers too busy with their other work. Most of the farmers will finish their threshing the next few weeks. Prices: wheat, $1.35; oats, 50c; potatoes, $1.50; sweet corn, 20c doz.; butter, 52c; eggs, 35c.—W. N. M., August 29.

Cumberland County, N. J.—Deerfield Street is in the lead with its potato crop. It has made larger shipments than other districts of the south. Rain hindered digging but kept prices steadier. They have ranged from $1.10 a hundred to $1.75. Other shipping places are Shiloh Crossing, Greenwich, Elmer, Woodstown, Daretown and Salem. W. L. Ninich, treasurer of the New Jersey Potato Association, announced the 25th as the closing date for seed potato growers who wish to enter for certification. Mr. Nunich is a member of the certification committee. The farmers' picnic held at Rivervlew Beach, Friday, broke all records. The manager said over 32,000 attended. The new tomato, Marglobe, which is being grown in this county, is proving to be very hardy and good for market. It is expected next year will see a larger increase in acreage. One of the outstanding features is the very little seed cavity. It is round and quite smooth but it must not be picked as soon as the outside appears red. It takes time to get red all thru. It is more hard than others and will keep after being picked, often for a week or two. The corn fields look fine. Special police protection given Del-Bay Farms at night to keep foreigners from stealing fruit from the orchards.—C. J. S., August 25.

Fulton County, Pa.—Farmers are preparing to seed. Ground mostly plowed and some harrowed. Threshing is nearly completed. Oats yielded very well; wheat was much below average. Pastures are excellent; potatoes looking well; clover seed is plentiful. Prospects are good for a large crop of buckwheat. Peach picking is at its height. Peaches are plentiful and are selling from $1.50 to $2.50 per bushel. Public schools open September 5 for a term of eight months. Market quotations are: milk, $2 per cwt.; butter, 35c; eggs, 28c; wheat, $1.30; corn, $1.60.—T. H. T., August 27.

Somerset County, Pa.—Farmers are busy cutting oats. Hay all made and a fine crop reported. We are having a lot of foggy weather and a good rain now and then. Cows holding up good in milk, pasture looking good. No second crop clover to cut. The clover was frozen in the spring; young clover looking good. Corn coming fine, also potatoes that were planted late. Prices of farm produce: hay in the field, $12 per load; oats, 60c; eggs, 30c; butter, 45c.—H. W. B., August 27.

On the Way from London to Port Said

(Continued from page 3)

Now we are on the Steamship Mantua bound for Port Said, Egypt. The Mediterranean is blue and the skies are bright. On Saturday we passed between the islands of Corsica and Sardinia, the former the birthplace of the "little corporal," Napoleon. The shores of these islands are steep but the industry of their inhabitants has made the vine and the olive thrive.

Yesterday we saw Stromboli with the steam and smoke rising from its crater. For more than an hour before we came to it we saw it as if rising from the sea, a cone-shaped mass, its side dented and scarred and apparently bare. There were small, rocky islands to the south of it, and a column of rock to the north. As we came nearer we saw the white houses of a fishing village on the south coast and a town of considerable size on the north coast.

Farms Climb the Slope to Crater

To our surprise we noticed orchards and vineyards reaching up the steep slope toward the crater, their owners seemingly unmindful of the threatening rumble inside of the volcano. It lies in human nature to hope, if not to forget.

East and north of Stromboli lies the mainland of Italy. You will recall the extreme end of the boot separated by a narrow channel from the island of Sicily. This channel is known as the Straits of Messina. The sun was low on the horizon when we came there. We were making in a bee-line for the rocky coast of Calabria. For the time being it looked to us like the bare, wrinkled hide of a great elephant. Later on we saw ravines and gulleys, impressive testimony of what time and water working together may do to rocks and mountains. Later still there came into view the stretch of water where the sea had broken thru and had made an island of Sicily.

Depend on Others for Bread

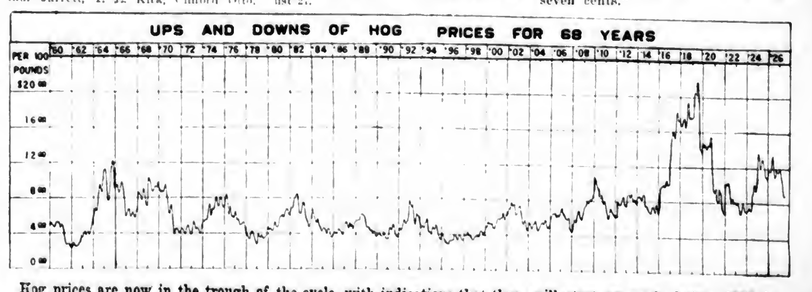
In the gathering dusk we saw the city of Messina, the terraced hillsides of Calabria, the road winding along the sea and the paths into the hills where men have found sites for their modest homes. The inhabitants are sure of their vegetables and fruit, but for their bread they must depend on the more level lands to the north, and on the more remote wheatfields of foreign countries. Before many weeks wheat recently harvested in North America will be unloaded at Genoa and Naples, and the Calabrians will have their share of it.

In another hour or two we shall see land again, after a full day of sky and sea. This time it will be the island of Crete lying north of our path to Egypt. In another letter I will tell you about the agriculture of Palestine, but before I do that I shall try to write you something about the crisis that British agriculture is now facing.

Mike—This is a great country, Pat."

Pat—An' how's that?

Mike—Shure, th' paper sez yez can buy a foive-dollar money order for seven cents."



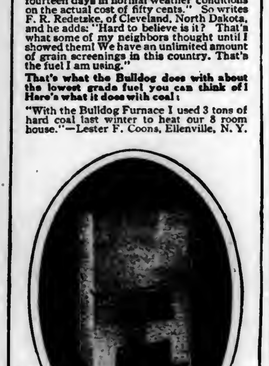
Hog prices are now in the trough of the cycle, with indications that they will start up again before 1928 is over. In the last 25 years the distance between peaks, or troughs, has averaged three and a half years.

Heats Home for 25c a Week!

"I can run my Bulldog furnace steady for fourteen days in normal weather conditions on the actual cost of fifty cents." So writes F. R. Redetzke, of Cleveland, North Dakota, and he adds: "Hard to believe is it? That's what some of my neighbors thought until I showed them! We have an unlimited amount of grain screenings in this country. That's the fuel I am using."

That's what the Bulldog does with about the lowest grade fuel you can think of! Hare's what it does with coal:

"With the Bulldog Furnace I used 3 tons of hard coal per winter to heat our 8 room house."—Lester F. Coons, Ellenville, N. Y.



Comes Completely Erected!
Fits Any Height of Basement
Goes Through Any Door
You Install It Yourself!

If you are even thinking of a pipeless furnace, or any furnace, write for our free catalog. The Bulldog is one furnace you MUST investigate. Comes completely erected, fits any height of basement, goes through any door, and you install it yourself!

No Money Down!
Small Monthly Payments

The Bulldog is sent you for *free* inspection. Then, if satisfied, you make only small monthly payments, at our amazingly low prices! Factory connections in both East and West. We ship from nearest point. Don't consider buying any furnace until you find out about the Bulldog. Write at once for our special offer and our free catalog together with the wonderful record of Bulldog success. Get ready for winter NOW! Mail this coupon TODAY!

"Better Than Ever"

Visitors Praise the New York State Fair

"A BETTER fair than ever," is the verdict on the New York State Fair at Syracuse, tho weather conditions were unfavorable to suitable attendance. A campaign for a two-week fair is under way with renewed vigor, due to the weather risks involved in putting on so great an exposition for a shorter period.

County exhibits attracted most attention of the purely agricultural exhibits. These were divided among farm bureau activities and those promoted for home and community life by the home bureau. Hours of study were necessary to absorb the lessons taught by these, tho the exhibits are simplified yearly, and very carefully placarded so that he "who runs may read."

Stress Labor-saving Devices

The mechanical side of farming was stressed most interestingly all over the huge grounds. The mechanical means whereby home life on the farm seems to be coming into its own in the many ultra modern electrical and other labor-saving devices shown, all adapted to rural conditions. Human interest features were never so strongly featured. Pride in country living was never so well justified as in the activities shown to be successfully carried on in many rural communities, while the retired farmer got a well-nigh irresistable pull to go back to the farm.

More cooperatives were shown than ever before, these exhibits covering the production and marketing of vegetables, fruits and farm crops. Containers, grading, pest control and actual products combined to make wonderful pictures that appealed both to the business instincts of the farmer and to the appetites of city consumers.

Floral showings included many new things, among them being a huge collection of real African and American desert plants of rare beauty and curiosity; a fine display of popular ornamental evergreens; a large showing of amateur flowers, including a dozen tables showing artistic table decorations; rare foliage plants, demonstration of stage decorations; frequent bee demonstrations; frequent demonstrations in vegetable judging; and the best exhibit of maple products in years, one that calls forth tentative promises for better exhibition accommodations in the future.

Exhibits Model Barn

A new model dairy barn was shown with feed room, cow stable filled with Guernseys, an ample tool and work room, with a modern creamery or milk room near by. In the stable a milking machine was in use and a modern bottling and capping machine with aerator and refrigerator which took care of the milk from the many dairy cows of the show and bottled it ready for consumption by the public on the grounds.

In this milk house was ample working and storage space, with a business office, which was used by the Guernsey breeders as their headquarters. The building was conconstructed of well-known building materials, the outer covering being of attractive diamond-shaped asbestos shingles. The equipment was of nationally-known fittings.

A public camping area was provided for those staying thru the fair. The best horse show in years was free to the public the first night.

History of agricultural activities played a big part in many exhibits and added great interest. For instance, the first tile drain, the first agricultural school, the first experimental farm, and the oldest beekeepers' association are claimed by Seneca County.

The log cabin and its pioneer industries claimed keen attention. So great was the interest centered here that a $100,000 appropriation to house an early pioneer exhibit of home and farm equipment seems likely in the near future. In the log cabin an old time cooper plied his trade; weaving on an old loom, spinning of woolen yarn and its making into apparel were shown; old time foods were sampled by the visitors; a shoemaker showed how his work was done, and similar home industries painted a picture that interested all. Frequent talks by state leaders in agriculture on appropriate topics, with demonstrations by 24 old time fiddlers rounded out a rich program.—M. G. F.

Fertilize Wheat But Why?

(Continued from page 3)

western and east central states, contains the answers to the question asked of from one to a half dozen men in each state.

A Pennsylvania wheat grower was one whose answer probably fits a great many farms in the older wheat-growing states. "We can't grow wheat here any more without it," he said. Then he pointed out that the cheaper and newer lands of the West and Northwest make it impossible for him to compete with wheat yields such as could be produced without fertilizer. Fertilizing wheat, therefore, becomes an economic necessity.

Reduces Winter Killing

"Well, it saves a lot of plowing-up in the spring," is the way an Indiana farmer answered the question. He explained that before people in his neighborhood started treating their wheat land, winter-killing reduced the stands so seriously that often the fields had to be plowed-up in the spring and planted to other crops with loss of seed, power and labor. Experience had shown that winter-killing could be reduced and usually completely eliminated by providing conditions favorable to vigorous fall growth.

Any number of men mentioned the "fly" as a reason for fertilizing wheat. One man's exact words, as I recall them, were "If we plant early, the fly gets us. If we plant late to dodge the fly, winter-killing gets us. There you are, between the devil and the deep blue! So we fertilize to cheat the fly and still get enough growth to go into the winter with."

"It insures a wheat crop," an old gentleman near Martinsville, Illinois, told me as he walked thru a splendid field of wheat in which was an unusually fine seeding of sweet clover. "Before we started on this field it grew only 8 to 12 bushels of wheat, about like that field over there," he said, pointing to a field not far away. "After liming to grow sweet clover and putting on 200 pounds of bone meal we are sure of a crop. It insures a crop that is always several bushels better than it would be without the fertilizer."

"It's about 50-50 with me—half on account of the wheat, and half on account of the clover," an Ohio wheat grower said. "In fact, I don't know which crop gets the most benefit from the fertilizer, but I always figure that the fertilizer put on for wheat does double duty as I never fail to get a stand of clover following it."

Fertilizing Wheat Means Profit

"Fertilizing wheat with me is about like the story I heard over the radio the other day," a Missourian told me on the train. Then he proceeded to relate the conversation of two colored farmers one of whom, Sam, had once fed out some pigs. Jim's questions about the pigs and Sam's answers were as follows:

"Sam, what yo' pay fo' dem pigs?"
"Fo' dollahs, Jim."
"How long yo' fed 'em?"
"Oh, 'bout six months."
"What yo' git fo' 'em?"
"Fo' dollahs."
"Huh, dat's jist what yo' paid fo' dem pigs!"
"Yep, dat's right."
"But dey ain't no profits in dat!"
"Nope. Quit feedin' pigs jist fo' dat reason."
"Wheat growing would be about like Sam's pigs if I had to get along with the yields we can grow without fertilizing," he said.

As might be expected several gave as their reasons for fertilizing wheat "lower production cost," "profit," and similar ones. It remained, however, for a farmer-banker-business man to express the same thing in a little different, but very effective way. I asked him why he fertilized his own wheat, and why he encouraged his bank customers to buy fertilizer for their wheat.

"Just this: to grow a few cheap bushels," he replied.

"Doesn't increased yield mean that all bushels are produced more cheaply?" I asked.

"Oh, I suppose so, but I like to figure that the bushels you grow without fertilizer cost about what you get for them on the market. The extra bushels you grow with the fertilizer cost just what you pay for the fertilizer and the extra twine and work. Now, take my own wheat this year. I got at least 5 bushels of wheat for $2.75 worth of fertilizer, so each of those extra bushels cost only 30 cents plus a few cents for twine, cutting and threshing. Now those 9 bushels are my money-makers. The other bushels only broke even or thereabouts, but on the increase I can see a long profit."

(To be continued)

Must Vaccinate Hogs

TO HELP in the control of hog cholera, regulations which became effective September first were adopted by the Bureau of Animal Industry, Pennsylvania Department of Agriculture. Two important features of the regulations are: All hogs coming into Pennsylvania for purposes other than immediate slaughter must be vaccinated. Likewise, all unvaccinated swine that have been in possession of livestock dealers or others for less than thirty days and are offered for either auction or private sale purposes other than immediate slaughter must be vaccinated.

These regulations have been made effective, not because of any present serious outbreaks of hog cholera within the state, but to give the swine industry every possible protection by preventing the introduction of the disease from other states and the spread of it within the Commonwealth.

MAKE BIG PROFITS with Chinchilla Rabbits. Real money makers. Write for facts. **Conrad's Ranch, Denver, Colo.**

GOATS

6000 milk goat, $45. **Fair World's Best** Pure White Saanens. Registered Nubians, prolific Toggenburgs, **$85.** Fine Buck, $35. **Lloyd Goldsboro, Manheim, Pa.**

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symptoms a farmer-stockman can obtain.

GARGET.—I have a Guernsey cow seven years old that about three months ago had one quarter of her bag swell up and give thick cheesy milk for three milkings. She did not have this trouble again until about two weeks ago when it came the same way in another quarter and before that one quarter was back to normal. It started a little in the third quarter. The quarter did not swell much and soon got better and her flow of milk was normal. She has this trouble again. She shivers as if she were cold. She eats in the barn but doesn't care to walk or eat grass when out. Can you tell me what is the trouble?—E. D., Honesdale, Pa. This is evidently a case of garget which has progressed from one quarter to the other. Evidently this is due to an infection that results in chills and fever. The hands should be washed in an antiseptic solution before and after milking. The cow should be stabled separate from the herd; fed a dry ration and milked frequently. Milking every hour at first is indicated. Bathe the udder with warm water for a sufficient length of time to be certain that the udder is thoroly warm. Give one pound of Epsom salts in a drench at the onset of the condition.

SOW KILLS LITTER.—We have a registered sow for breeding purposes. She killed all of her litter the first time. I made up my mind to try again to raise a litter and to watch her. She did not eat them, but was very nervous. Do you know of any cure?—H. M. D., Macungie, Pa. It is always advisable to allow the brood sow plenty of exercise before farrowing. This will keep her from getting too fat. She will be apt to show more nervousness and irritation under such conditions. A protein supplement such as tankage should be a part of the diet of the sow.

CAT HAS CONVULSIONS.—Our cat was afflicted with a sort of paralysis in one side. When she tried to walk she went in circles, was evidently in pain, and became wildly excited, floundering and trying to run and get away by herself. Can you tell me the cause of this trouble and suggest treatment?—E. B., Lancaster County, Pa. Take your cat to your nearest small animal specialist or to the local veterinarian for examination. It is probable that this condition is caused by a dietary disturbance or by parasites.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 5 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

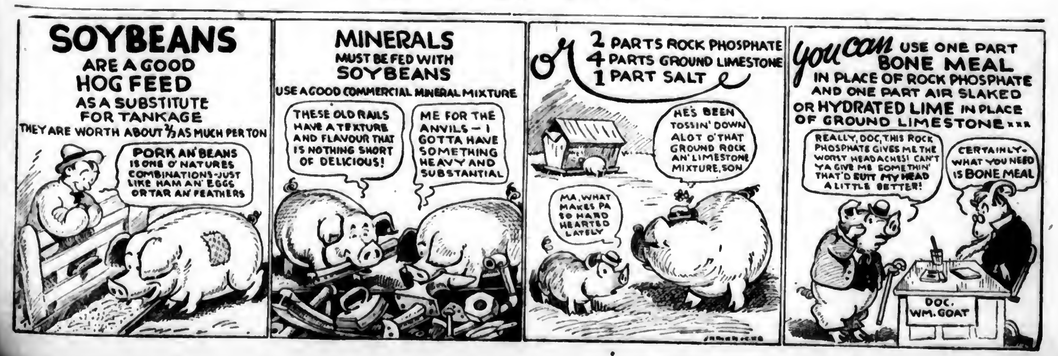
Herb the Handy Man Tells How—



SOYBEANS
ARE A GOOD HOG FEED
AS A SUBSTITUTE FOR TANKAGE
THEY ARE WORTH ABOUT 2/3 AS MUCH PER TON
PORK AN' BEANS IS ONE O' NATURES COMBINATION'S JUST LIKE HAM AN' EGGS OR TAR AN' FEATHERS
MINERALS
MUST BE FED WITH SOYBEANS
USE A GOOD COMMERCIAL MINERAL MIXTURE
THESE OLD RAILS HAVE A TEXTURE AND FLAVOUR THAT IS NOTHING SHORT OF DELICIOUS!
ME FOR THE ANVILS — I GOTTA HAVE SOMETHING HEAVY AND SUBSTANTIAL
OR
2 PARTS ROCK PHOSPHATE
4 PARTS GROUND LIMESTONE
1 PART SALT
MA, WHAT MAKES PA SO HARD HEARTED LATELY
HE'S BEEN TOSSIN' DOWN ALOT O' THAT GROUND ROCK AN' LIMESTONE MIXTURE, SON
You can USE ONE PART BONE MEAL
IN PLACE OF ROCK PHOSPHATE AND ONE PART AIR SLAKED OR HYDRATED LIME IN PLACE OF GROUND LIMESTONE
REALLY, DOC, THIS ROCK PHOSPHATE GIVES ME THE WORST HEADACHES! CAN'T YA GIVE ME SOMETHIN' THAT'D SUIT MY HEAD A LITTLE BETTER!
CERTAINLY, WHAT YOU NEED IS BONE MEAL
DOC. WM. GOAT

The GREATEST HELP that ever came to a FARM HOME —A MAYTAG

ANY Maytag owner will tell you that they never dreamed that washday could be so easy and pleasant until the Maytag came. The seamless, cast-aluminum, heat-retaining tub holds four gallons more than ordinary washers and washes big tubfuls faster and cleaner. It actually does away with all hand-rubbing, even on grimy overalls and the soiled edges of cuffs and collars.

Gasoline or Electric Power

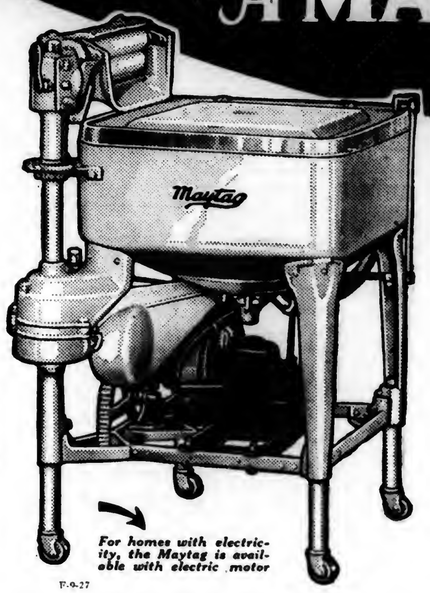
This marvelous washday help is available to every farm anywhere. Imagine a gasoline engine as simple and compact as an electric motor—that's the Maytag gasoline Multi-Motor. It is an inbuilt part of the washer—no line shaft or belts to line up and the housewife can start it and operate it herself.

Do you wonder that the Maytag has won world leadership in farm as well as city homes?

Deferred Payments You'll Never Miss

The Maytag Company
Newton, Iowa

Eastern Branch,
851-53 N. Broad Street, PHILADELPHIA, PA.



For homes with electricity, the Maytag is available with electric motor

F-9-27

Pay No Money *till you try it!*

Write or telephone any Maytag dealer listed below. He will gladly loan you a Maytag for a trial washing without cost or obligation. Do a big washing with it in your own home—it will only take an hour. If it doesn't sell itself, don't keep it.

PENNSYLVANIA FARMER

AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY

ESTABLISHED 1880 — PUBLISHED WEEKLY

Pittsburgh Market Edition

Vol. 96 — PHILADELPHIA, PA., SATURDAY, SEPTEMBER 17, 1927 — No. 12

Off for the deep woods.

A summary of conditions that will affect prices for the 1927 potato crop. Doctor Lipman reviews world agricultural conditions. *Page 3.*

"Didn't Believe It Could Be Done"

WHEN asked what he thought of the Oliver Big Base Corn Borer Plow one farmer said: "I think it is the most practical and most economical way of controlling the Borer. When I was told that this plow would cover every stalk and particle of trash in my field, I didn't believe it could be done, but they showed me. Now I am convinced that it is the practical economical way of controlling the Corn Borer."

Actual experience with the Oliver Big Base Corn Borer plow has opened the way to cleaner plowing for thousands of farmers in the Corn Borer infested territory. While many farmers bought this plow for combating the Borer, they are realizing more and more that it is ideally suited for general field plowing. It puts all of the trash down where cultivation does not drag it to the top. This makes a remarkable difference when cultivating—there is no trash and fewer weeds to interfere.

Farmers outside of the Corn Borer territory have been quick to recognize the value of the Oliver Big Base Plow and are using it for all plowing purposes.

Before doing your fall plowing investigate this plow. It can be furnished with horse or tractor power. We know you will like its wonderful work. See your Oliver dealer or write us for further particulars.

K-R-O
Kills Rats Only

Kill rats wholesale

Get rid of them *safely*. Here's a new sure way. K-R-O, a fine, non-poisonous powder, kills 'em off in a hurry. Made from squill bulbs, the new safe way urged by government experts.

Safe for poultry and pets

Actual tests proved that it killed rats and mice every time, but other animals and poultry were not injured by the largest doses. Think what that means to farmers and merchants.

Not a poison

Use K-R-O freely. Place it around your home, your barn, your granary or farmyard. Contains no arsenic, phosphorus or barium-carbonate. At your druggist, 75c. Large size 11 times as much $2.00. Or sent direct from us postpaid if he cannot supply you. Satisfaction *guaranteed*.

K-R-O Company, Springfield, Ohio.

NEED CLEAN-UP

Why Not "Junk the Junk" on the Farm and Help Appearances?

FARMERS frequently have been criticized because of the fact that machines are allowed to stand outside in all sorts of weather. The critic do not realize that often the machines they see in the fence corners are old and worn out, while the machines that the farmers have bought to take their place are properly protected in barns or machine sheds when not in use. The question immediately arises, then, as to whether farmers can afford to have such criticism directed toward them.

Isn't it a fact that a farmer will create the impression that he is thrifty when there is an atmosphere of orderliness and cleanliness about his place and that he may be considered careless and slovenly, when in reality he is decidedly not so, if old machines are left in the fields and barn lot?

Creates a Bad Impression

Many banks nowadays make close check as to how applicants for loans carry on their farming operations. Isn't it possible that a man's credit may be affected by the appearance of his farm? Won't farmers as a class have a better standing if there is a general clean-up of old machines, which prove such an eyesore when scattered all about the farms in view of every passerby?

There is another phase of this subject that is deserving of the serious consideration of farmers. Conservation of national resources is attracting the attention of many people these days. If the metal contained in worn-out equipment of all kinds, including farm machines and implements, could be returned to industry and remelted, the need of mining considerable quantities of ore would be eliminated. When a farm machine is allowed to stand outside year after year and veritably rust to pieces, valuable metals are being wasted.

Old machines not only are unsightly and create a bad impression when they are scattered about the farmstead, but they also take up valuable space. Weeds tend to grow where machines are allowed to stand and hiding places are provided for farm pests. The machines frequently also become hazards to barefoot children and livestock.

Get the Boys Interested

A splendid way for farmers to "junk the junk," as some one has happily phrased this project of ridding farms of worn-out machines, is to get boys interested in the job, just as Boy Scouts and boys in general thru the schools have been interested in periodical clean-up campaigns in various cities. If a farmer has a young son he can delegate the work of breaking up the machine to him and, as an incentive, can promise him part or all of the money he obtains for the metal as junk. This money might well be used as a starter for a savings bank account.

In knocking down the old machines, there will be some parts that farmers will want to keep for repairs or other purposes. If the boys are to do the work, the insistence that this material be properly sorted and cleaned and oiled will help wonderfully to drive home to the youngsters the idea of orderliness.—H.

Niesley Appointed Assistant Director

HOWARD G. NIESLEY has been appointed assistant director in the agricultural extension service of the Pennsylvania State College to succeed R. H. Heil, who resigned July 1 to become chief of the Bureau of Plant Industry at Harrisburg.

Mr. Niesley is head of the department of agricultural economics extension. He formerly was agricultural agent in Dauphin County where he served from 1917 to 1923.

May Be a Good Year for Good Potatoes

Conditions Indicate That Buyers Will Emphasize Quality

By W. R. WHITACRE,
Pennsylvania Bureau of Markets

LATE potato growers have had two profitable years, and now, with a new season at hand, there is considerable anxiety as to what the future holds. In general, there is a feeling of optimism despite the reports of a heavier crop, and that is worth something. Supply and demand are responsible for the rise and fall of prices, but there are times when prices are either higher or lower than conditions warrant. The mental attitude of growers and buyers has considerable effect. As the "burnt child shuns the stove," so does the dealer who has been burnt shun the market for certain commodities. The fire may be out and conditions improved, but he still hesitates to take a chance and touch the stove again.

There has been an outcry against speculation. It has been blamed for the low prices the farmers have received, but after all, it is upon this that a successful market is based. The buyer takes a long chance; he believes the market is going up and buys with the hope that he will take large profits. He is looking forward to the "killing" when he will reap his reward. He may just break even for an entire season and a week at the end will bring the situation he has been looking for and find him with a supply of low priced potatoes and a rapidly advancing market. This feeling of confidence is what makes a satisfactory market and a speculative element is practically always present when prices are rising.

Jersey Season Is Nearly Over

Present prospects indicate an average yield of 117½ bushels per acre, or 4½ more than last season for the whole country. The New Jersey Department of Agriculture states that yields in that state have averaged around 200 bushels to the acre. Growers who had good yields made some money this season, in spite of the fact that prices were decidedly lower than last year. During August, prices of potatoes at central Jersey shipping points ranged from $2.00 to $3.00 per 150-pound sack f. o. b. with the majority of sales around $2.50. Last season prices for the month ranged from $2.75 to $4.35 with comparatively few sales below $3.00.

The New Jersey season is almost over and will probably end around the last of September. Shipments up to September 3 from New Jersey totaled 5312 cars, as compared with 3936 in 1926. This does not tell the entire story as the truck movement this year was heavier than ever before and no statistics are available for this. At this writing there is a stronger tendency and prices have reached $3.50 per 150-pound sack f. o. b. shipping points, with dealers asking $3.75.

Late Blight May Cut Supply

The Pennsylvania season has opened and shipments so far have been slightly heavier than last year. Maine has begun to move her crop and is rolling over 25 cars a day.

The August estimate of production was 411,000,000 bushels and is 55,000,000 bushels greater than the 1926 crop. Many things may happen to cut down the estimated production such as frosts and disease. We have had unusual weather this year. Long range weather forecasters predicted a year without a summer and some of their predictions have come true. They forecast early frosts and there is always a chance that they may be right. It is not hard to see how such weather conditions would reduce the crop.

Another factor, that is likely to reduce the supply of salable potatoes, is disease. Late blight is reported in a number of sections that have been reasonably free from disease in the past. The Maine potatoes that have been received on the market so far have been described in the market reports as being "mostly poor to ordinary in condition," "fair quality" and in some cases the term "practically worthless" has been applied.

If This Man Is Right—

Based on the August estimate of 411,000,000 bushels, the crop approaches the record crop of 1924, but the population has greatly increased during the past three years. A report issued by the New Jersey Bureau of Markets quotes a leading financial writer as stating that the average per capita consumption of potatoes for table purposes during recent years has been two and two-thirds bushels. This figure was derived after subtracting from the total crop the amount needed for seed, cull potatoes, loss by shrinkage and decay. If the crop amounts to 411,000,000 bushels, the quantity available for human consumption may be only 70 per cent of this, or 287,700,000 bushels. This writer assumes the population of 119,000,000 persons by January and at the rate of two and two-thirds bushels they would consume 318,000,000 bushels. On this basis, there would be too few potatoes rather than too many.

Predictions are uncertain things. If they are right, the forecaster is called lucky. If they are wrong he is blamed for misleading the readers. The conditions stated above indicate a promising season for the grower with a satisfactory yield of GOOD potatoes, but many things may happen and one man's guess is as good as another's, as to what the market will be.

Will It Be Agriculture versus Industry?

Britain Faces the Problems That Perplex Farmers Everywhere

A letter from DR. J. G. LIPMAN

IN MY last letter I promised to write you about the depression in British agriculture. It is a condition that is not at all unique or exceptional, a part, evidently, of something that is troubling the farmers in the United States and in many other lands as well. The whole picture is not clear to any of us. Parts of it we can understand.

We know that much new land has come into production in the last ten or fifteen years. Our own Southwest with its enormous new cotton areas; our Northwest and its reclamation projects are but a part of the story. The wheatfields of Canada, the grain and cattle country of South America, the vast areas of former desert in Australia and in the Punjab now under irrigation are another part of the same story. Then there is the quickened exploitation of the tropics and the increasing volume of vegetable oils, oil cakes, sugar, fibres, fruits and rice; to say nothing of tea, coffee, spices and rubber. Science has pointed the way to the control of the dread parasites and diseases of plants, animals and man and has helped to make agricultural competition more severe.

New and improved methods of production have become common even in far away lands. Liquid fuel and mechanical power are important auxiliaries on the sugar cane plantations of the West Indies and of tropical Asia. Tillage, harvesting and transportation have been organized on a new basis. Ice is no longer a strange commodity in the tropics and artificial refrigeration has shortened the distance to the world's markets. Added to these is the marketing, if not the production in large volumes.

Altogether, then, the nearby producer has lost his monopoly of the home markets, and his advantages of location are overcome by the cheapness of the virgin strength of distant soils, by large scale production and the careful grading and standardization of agricultural products.

Industry Serves in Many Ways

We are living in an industrial age with the voting strength lessening in the rural districts and gaining in the cities. To be sure, industrial organization has relieved the farmer of many tasks which he formerly had to do. It grinds his grain and returns the mill by-products to him. It extracts the oil from cottonseed, linseed, soy beans, cocoanuts and what not, and furnishes to him rich protein feeds. It operates for him millions of spindles, makes his textiles and his clothing, builds his furniture, tans hides and makes shoes. It brings to him mechanical and electrical power, it lights many of his homes. It does a thousand other things for him, things that lighten his labors and brighten his home, things that bring to him voices from afar, distant melodies and the yearnings of a widening world. But it does it all for a consideration. It exacts, often, a fearful price for what it delivers.

Conscious of their own strength, modern industry and commerce have created monopolies; have built tariff walls; have possessed themselves of all natural resources; and, working hand in hand with organized labor, have interfered with the free flow of goods and services from place to place and from land to land. They have created false social values, have tinged the economic doctrines taught in our schools and colleges, have herded millions of men into narrow spaces and have done much harm to body and mind by the break-neck speed of modern life. Culture, learning, altruism, tolerance,—we find them all in the city, and we find also greed, selfishness, gross materialism and class interest. All of these are a part of the picture that we see as if thru a haze. Something is happening to agriculture and to humankind as a whole. Changing are the standards of living in city and country, changing our measures of social values, changing the foundations to which human society must anchor itself in the days to come.

British Farmers Are Pessimistic

We must think of all of these things when we try to diagnose the ills of British agriculture. The agricultural correspondent of the London Daily Mail has been traveling about England for some months and describing for his paper (to page 11)

"Men who know the least argue the most."

Comments on the Week's News

WITH only a fair crop of peaches in the East, everything pointed to a good season for eastern growers. But nothing shows better the progress in transportation than the ruinous slump in peach prices. California had a bumper crop and, not being able to come to agreement with the canners, is shipping them to eastern cities. Altho prices now are so low California growers cannot hope to receive profitable returns, the mischief has been done even tho no more come from there. Incidentally, eastern growers are partly to blame for the slump because some of them sent poor green peaches to market to get early high prices. The ability to ship successfully perishable products clear across the continent has changed the business of farming so that no section now has a monopoly of its markets.

✦ ✦ ✦

Reports continue to come to us concerning the damage deer are doing to farmers and fruit growers in some sections of the state. A great deal has been said and some ineffectual remedies have been tried, yet the annual loss to many individual farmers continues unabated. Farm organizations have protested against the unfair conditions and have tried to have the state act in this matter as individuals are compelled to do with their livestock, but the sportsmen's influence is greater than that of the agricultural people of the state. But as long as farmers fall over themselves in the rush to vote for town and city residents as law makers they need expect nothing else.

✦ ✦ ✦

The above note recalls to mind that several farmers are candidates for county commissioner in several of the counties. No more important office is found on the roster of public servants than county commissioner, yet in too many instances it is filled by professional politicians and unsuccessful business men. This is often the case even where farmers have a majority in the county. The increase in salary just made in Pennsylvania has unloosed a horde of candidates unfit for this office.

✦ ✦ ✦

Senator Borah says that farm relief will be the leading issue in the presidential campaign next year. He claims that the situation is more acute than ever despite the fact that city papers are printing columns of stuff intended to show that agriculture has come back and is more prosperous than it has been for years. The question promises to be one of the leading ones before Congress, and while some of the efforts will be for political effect only the country should not be misled into thinking that the smoke is all raised by politicians.

✦ ✦ ✦

The National Grange, always more conservative than some members would like to see it, has come out flat-footed for farm relief by proposing the adoption of a debenture plan. The Grange opposed the McNary-Haugen Bill, but while its plan is less cumbersome and difficult of operation, it is no less revolutionary. In arguing for equality in the principles of the tariff and immigration laws, National Master Taber makes the following statements:

"We find that taxes stand at 235 per cent above pre-war level, labor at 200 per cent, most manufactures at 160 to 170 per cent, and wholesale farm prices at only 140 per cent above that level, we can realize the disparity that is in part, at least, causing farm depression."

✦ ✦ ✦

A Professor of Sociology in Kansas Agricultural College, Walter Burr, has doped it out that we need bigger farms and fewer farmers in order to make agriculture more prosperous. The article appears in the "Nation's Business," a magazine for business men, and the logical conclusion is that if we had fewer men on bigger farms they could make more money and hence be able to buy more manufacturer goods. Well, part of the plan is in operation now. The number of farmers is steadily decreasing, but there is no indication that the remaining ones are buying bigger farms, and they probably will not until there is at least a reasonable inducement in the way of profits.

✦ ✦ ✦

There is little justification for the scare that has been "promoted" a few times in recent years concerning the danger of eating sprayed fruit. The extension entomologists of Pennsylvania State College, with the cooperation of the department of agricultural chemistry carried on an investigation with apples sprayed with arsenical sprays. Samples were taken from 33 orchards in 17 counties. The fruit was carefully picked so that no material was rubbed off, and all fruit gathered from lower branches where deposits were heaviest. The chemical analyses showed that in no case was there an equivalent of one one-hundredth of a grain of arsenic per pound of fruit, the stated British tolerance. When apples were picked in the usual way and put upon the market the amount of arsenic was reduced to a trace.

Attend to Home Interests

THE first and most important duty of home owners is to be home keepers and home makers. In these days of attractions and counter attractions, there is danger of neglecting this important phase of life. Sightseeing, show-tending, and even uplift work, are not good excuses for neglecting the work of home building. There are so many activities carried on in the name of "betterment" that there is danger of parents neglecting important work close at hand. Nothing in the world will take the place in a child's life of that which is furnished by a good, homey atmosphere where it is evident that father and mother consider the home the best place and its proper conduct the most important thing in the world.

Revolt of Middle-aged

A REVOLT of the middle-aged against the callous dictum of big business which judges a man past forty as too old to keep pace with the spirit of the times has been organized in New York. So strenuous has business become that many of the captains of industry hire no one over forty years of age, and in many instances are even discharging those already employed who have reached middle life. The idea seems to be that only young men in the full vigor of life can stand the pace and be sufficiently alert to meet the competition of the age. Without entering into an argument as to the truth or falsity of this theory, we may well ask what is to be the social result. What is to become of these men and their families? If the young enthusiast of twenty-five accepts a position in the belief that he will advance to greatness rapidly finds that he is kicked out as useless in fifteen years, will it not destroy the morale of such organizations? Very few can start on low salary and become independent in that time. What is society going to do with its worn-outs? This is only another sign that we need to make business less strenuous. However, we can but wonder whether it is the short, the busy, shop and office hours that burn people out, or, whether it is the dissipations of gay night life.

Editorial Sidelights

"A GOOD YEAR for good potatoes," predict the marketing experts (Page 3). Judging by fields we have been seeing the past few weeks there are going to be many good potatoes in Pennsylvania, and many poor ones. The late blight is taking a heavy toll in fields not properly sprayed. The odor of the dying vines has filled the air in some sections, but even in these worse-hit counties sprayed fields were growing after the others had turned black.

TODAY we must register if we are to vote in the primary election this fall. To register we must go to the same polling place we have mentioned before in these columns,—up a dirty alley, into the side door of a smelly saloon, down a dark hall and up creaky stairs to the room over the saloon. There we shall attempt to exercise one of our rights of citizenship in the city of Philadelphia.

There is little to remind one of an approaching election in the city. Not so in the country. Never have we seen such an amazing number of candidates' cards and pictures posted on buildings, telephone poles, barns, pigs pens, etc.

It is interesting to observe the caution of country storekeepers. Seldom does the store window display the card of a single candidate. Either the windows have no cards, or they are completely filled. Evidently storekeepers don't believe in playing favorites.

IN LINE with the paragraph elsewhere on this page in reference to large farms, we have just seen a news item telling how a group of farmers in Kansas have incorporated themselves. Six farm owners who have 5000 acres of wheat land under cultivation have capitalized themselves at $150,000 and have been granted a state charter, taking stock certificates for their farms and equipment.

FARM RELIEF ACUTE

Still Favor McNary-Hagen Bill —Hay Tariff Gives More Trouble—Considers Special Session of Congress.

Washington, D. C.

SENATORS, congressmen and other public officials are announcing their return to Washington from their summer vacations with statements on farm relief.

The farm relief issue is more acute than ever, notwithstanding the good crops and fairly good prices, says Senator Borah of Idaho, who has talked over the situation with many persons thruout the West, and has found them firm in the conviction that Congress ought to take some action to solve the agricultural problem this winter.

Divided on Relief Bill

There is by no means universal approval of the McNary-Haugen bill among western farmers, according to Senator Borah, altho the wheat farmers are quite generally for it. There is a general demand for some kind of farm relief, whether it be the McNary-Haugen bill or something else.

This relief, says Senator Borah, is largely a question of reducing cost of getting the farm products to market. He is considering the desirability of legislation which would provide a federal licensing system for dealers in farm products and enable the farmer to make his sales at the point of shipment instead of in distant markets.

May Pass over President's Veto

The McNary-Haugen bill will be passed during the coming session of Congress with enough votes in its favor to carry it over the President's veto, according to Senator Frazier, of North Dakota, who does not think that the McNary-Haugen bill goes far enough in extending aid to agriculture, but it is probably the best that can be obtained for the farmer from Congress.

Keeping an Eye on Meyer

It is rumored that emissaries of the Federal Farm Loan Board are at work trying to get members of the Senate pledged to support the confirmation of Eugene Meyer and other recently nominated members of the Farm Loan Board. It is also known that opponents of Mr. Meyer are equally aggressive in their efforts to defeat his confirmation.

The American Farm Bureau Federation is maintaining its attitude of watchful waiting to see what Mr. Meyer proposes to do with the Farm Loan system before voicing its opposition to him.

Farmers Clash on Hay Tariff

When the United States Tariff Commission meets around September 15, it is expected that a move will be started to induce Congress to revise the flexible provision of the tariff act of 1922. The proposed increase in the tariff on hay is giving the commission considerable trouble. The New England dairy farmers are objecting to any increase in the tariff that will cause them to pay higher prices for clover hay which they are importing from Canada in large quantities. The New York State hay growers insist that an increase in the tariff on hay is necessary to save their industry from the ruinous competition of Canadian hay.

Our Debt Is Only 18 Billions

The public debt was reduced to the extent of $83,286,956 during August, according to the Treasury Department. This leaves the total debt unpaid at $18,379,912,226 on August 31st.

May Call Special Session

The calling of an extra session of Congress is still under consideration by President Coolidge. It has been suggested by advisors of the President that a special session of the Senate be convened October 20 to dispose of the election contests which involve the seating of Frank B. Smith, of Illinois, and William S. Vare, of Pennsylvania.

Would Deport Anarchists

Alien anarchists and all other enemies of the American government should be deported. This is the belief of a steadily growing group of senators and representatives in Congress. Senator Trammel, of Florida, says the recent demonstration incident to the Sacco-Vanzetti case emphasizes the necessity for this country barring from its shores all such enemies of the American government and for the deportation of those now in the United States.

Knight Heads Chemistry Bureau

Dr. Henry G. Knight, dean of the West Virginia Agricultural College, has been appointed chief of the new Bureau of Chemistry and Soils in the Department of Agriculture. This new bureau combines three important research divisions, the old Bureau of Chemistry, the Bureau of Soils and the Fixed Nitrogen Research Laboratory. While each of these three groups maintains its identity, they will be associated in such a way as to facilitate the fullest cooperation and coordination of the research work.—E. E. R.

STUDY CONDITIONS

Prepare Information for Legislation—Stops Locust Ravages—Many Short Links of Highways Now Open.

Harrisburg, Pa.

THREE branches of the state government are studying conditions now existing to obtain information to be employed in preparing legislation for submission some sixteen months hence. The State Highway and Police Departments are observing traffic and the Department of Agriculture insect pest conditions. It is now recognized that to combat the several varieties of bugs which afflict Pennsylvania fields is going to require more money than anticipated and the basis is being laid for budget requests adequate to meet the demands. As the Japanese beetle season's work is winding up it is apparent drastic methods will have to be employed in some sections. The corn borer menace may cause enlargement of the quarantined area. State officials will meet with federal officers to discuss joint operations in 1928 before very long. The study of traffic, particularly trucks and dangerous drivers, is being made by direction of the Governor.

Peach Yellows Downed

The State Department of Agriculture has officially declared the peach "yellows" are no longer a danger to Pennsylvania orchards, altho by no means countenancing an abatement of precautions. When the work began almost eight years ago eight per cent of the peach trees had the disease. Now whole townships are free. It is the plan to continue inspection.

Spray Locusts

Recommendation that owners of locust trees may spray their trees in the spring to halt the insect which has ruined the foliage of thousands of fine trees and probably caused much loss by stunting growth of young trees has been made at the Capitol following the visit of some of the state's experts to areas where the locust trees are all brown. The ravages of the insect have been worse than ever known in the southern central counties.

New Roads Opened

Probably more short links of state highway have been opened this summer than in any year since Pennsylvania began to build good roads, chiefly as a result of the policy of the Highway Department to construct stretches to connect older improved portions. Over 350 miles of road have been built this year and the rate of completion is at a faster rate than at any other period of the year. In the 350 miles are over 46 miles of so-called "links."

Worried About Rabies

State officials here make no secret of the fact rabies has been a cause of concern in half a dozen rural counties. Figures gathered indicate cattle attacked by dogs and people bitten in instances where they tried to chase away animals. Aid of the public in control measures is urged. —T. C.

SELL GREEN FRUIT

Ask Bill for Prohibiting Sale of Green Fruit—To Celebrate Anniversary—Erect Large Cold Storage Plant.

Trenton, N. J.

LOW prices on shipments of late summer peaches containing an excessive amount of green fruit has brought a come-back from the better producers, who are up in arms against the growers who have been responsible for the lower trend of the market. A small group of the bigger peach men in central New Jersey has taken the matter to several of the farm organizations and indicate that they will take steps to have a bill introduced in the 1928 legislature to prohibit the offering for sale of fruit that does not show a certain state of maturity.

Estimates in the Hammonton section, for example, indicate that area lost $100,000 in one week during the height of the August shipping season because large amounts of green fruit were put on the market, with a subsequent drop in price of $1 per bushel.

Growers Figure Corn Costs

The Monmouth County Board of Agriculture, in conjunction with the State Extension Service, found that it cost $108.97 for their growers to produce an acre of sweet corn. The cost ranged from 71c to $3.54 per 100 ears. The average was $1.33. The average yield was 8169 ears per acre.—W. H. B.

Camden Pomona Celebrates

Camden Pomona Grange celebrated its fiftieth anniversary on September 6 at Haddonfield. About 400 Grangers, representing nearly one-half of the Pomonas of the state were present. State Master David Agans and State Lecturer W. H. Whitton, gave addresses in the afternoon. Members of Haddonfield Grange provided the dinner and in the evening a number of beautiful tableaus were presented portraying Grange history. A birthday cake, baked by Mrs. Alfred Bates, one of the oldest members in the Grange, was passed around so that everyone present could have a portion.

Start Work on Cold Storage House

Work has started on the erection of a big cold storage house and freezer in Camden, N. J. This plant will be seven stories high at a cost of approximately $2,000,000. It will be ready for occupancy early next summer in time for storing the fruit crop. It is being built at the water's edge on the site of the old Reading ferry and will have wharfage for the unloading of steamships from the Pacific Coast. It is understood to be the only storage house along the Delaware River with water-front facilities for loading and unloading without draying.

Oyster Men Retain Hughes

The New Jersey oyster growers have employed the law firm of Charles E. Hughes to carry on their fight for the removal of the ban on floating oysters. With an investment of $15,000,000 at stake, the oyster growers are taking every step possible to save their industry from heavy losses.—A. K.

WOMEN JURORS

Will Test Legality of Women on Jury—Hold Second Grange Session at Ithaca—Pests Attack Hemlock.

Ithaca, N. Y.

ALTHO the New York State law specifies that the names of male voters shall be selected for use on jury lists, an official committee in the township of Ithaca has placed the names of five women taxpayers on the jury list and the September term of the Supreme Court will test the legality of women as jurors if these names are included in those drawn. The act was done without consulting the women concerned in response to a demand for women in the jury service.

Grangers to Meet in Ithaca

The first annual convention of the Middle Atlantic States Grange lecturers was held this summer at New Brunswick, N. J. The meeting was so helpful that a second session will be held at Ithaca, N. Y., in August, 1928, at the College of Agriculture.

Hemlocks Attacked

Large areas of fine hemlock trees from Theresa to the St. Lawrence River are being attacked by a new and destructive pest. The plant pathology department at Cornell has taken for study specimens of caterpillars and butterflies believed to be the cause, and the forestry department has sent two experts to study the conditions. The leaves are stripped by the pest, leaving the tree denuded.—M. G. F.

County News and Comment

Armstrong County, Pa.—Aside from a threatened drought, September has started off with more favorable corn weather conditions than that afforded by August. The nights are still cool but the days are excessively warm. If frost holds off for two weeks some corn will be ready to cut and while away below a normal crop there are occasional areas that will make good. Seeding of wheat is just beginning and the acreage will be less than that of 1926. Most farmers have carefully prepared the seed bed and are filling liberally to assure a stand of clover. Potatoes are ripening up nicely and have come thru without blighting excessively. They promise a reasonable crop. Some rot showing. Threshing nearly all done and yields only commonplace. Wheat from 7 to 35 bushels per acre. Rye about 18 and oats from 20 to 70 bushels. Pastures are getting short. In fruit lines there were few cherries and berries, no peaches, a short crop of pears and on an average not 20 per cent of a full apple crop. Prices for fruit have been well maintained thus far. Apples of good cooking quality will bring from $1.25 to $1.60 per bu. There is an extraordinary demand for seed wheat of good quality. We expect to put out from this farm over 200 bushels. The dressed pork market will open soon and will start at 2c to 3c per pound below last years of 16½c, due, I think, to lower earning power on the part of users. Much straw and hay are being pressed and the demand is not at all urgent. Beef is higher and scarcer. The call for poultry is below that of last year and prices are likewise from 2c to 3c a pound less. The buckwheat crop is making a good showing but will be less than half of last year's crop. Much more than the ordinary amount of clover will be cut for seed and promises a good yield. The amount of fertilizer used on fall seeding will be away below that of last year on account of the sharp advance in price, especially acid goods. Prices: wheat, $1.25 for commercial grades to $1.50 to $2 for good clean seed; rye, $1.10; oats, 45@50c; corn, $1.10; hay, $18@20; straw, $12@14; potatoes, $1.25; cabbage, 2@3½c lb.; tomatoes, $2 bu.; butter, 40@45c; eggs, 35@40c; pork, 12@14c, dressed; beef, 14@16c; chickens, live, 25@27c.—W. M. P., Sept. 5.

Blair County, Pa.—Lots of cloudy weather this month with plenty of showers, making it very hard to get the oats harvested. Some threshing done and grain is none too good. Fruit is rather scarce just now. At present the farmers are busy hauling manure and plowing for wheat. On the 13th we had a very hard rain storm and some places hail destroyed the corn and gardens. Blair County was recently placed under quarantine for the corn borer. The wheat dealers are only offering $1.20 for wheat and not much is being sold yet. Eggs, 30c; veal calves, 12c, live; young chickens, 25c.—H. E. H., August 30.

Clearfield County, Pa.—Farmers here are now hauling in oats which is later than usual. Some sod land has been prepared for wheat. Threshing has not begun tho many will want their seed wheat soon. Corn is slow ripening and unless frost comes later than usual there will be but little fit seed and much of the buckwheat may not get time to mature; of this crop there seems to be an unusual seeding. Few potatoes have been dug and it is reported that a very ordinary yield is anticipated. At present there is a scramble between cow buyers in securing the bills for milk cows of the dairy type. Prices are high but there are not many farmers who care to sell the cows. There is a fair demand for lambs but is marked for old sheep. In our county the fruit crop is even lighter than estimated. Apples are very scarce and much marked by insect pests. There are a few pears but not sufficient for home demand. Apples sell at $2; potatoes, $1; turnips 50c; butter, 55@60c; eggs, 40c; young chicks

(Continued on page 25)

No more bothering with this!

What's happening here? They're capsuling a pig for worms. Will it do any good? Yes, but the capsuling will set him back about a week! And in a month, if it isn't all done over again, the worms will be right back!

JUST let Dr. Hess Improved Stock Tonic do the worming for you. Simply mix it in the feed or swill. Then watch your hogs begin to thrive, and forget about the worms. The Tonic takes care of them, as all our tests prove—and on full feed—no fasting.

Here is the common sense of it:

Hogs raised on infested ground will constantly become infested and reinfested with the ova (eggs) of worms. It is impossible to prevent these ova being taken into the system.

Then it takes these eggs only four weeks to develop into the real worms. That is why the average wormer must be repeated every four weeks if it is to be effective.

Dr. Hess Improved Stock Tonic means worm control. You give the worming dose the first ten days, and continue with the thrift dose. Worms are expelled and reinfestation is controlled.

But remember—Dr. Hess Improved Stock Tonic is not drastic. That's why it does not stunt your hogs. It does its work gradually but effectively. It keeps the worms moving through the system, undeveloped, and without interfering with the *thrift* of your hog.

You cannot judge the effectiveness of any treatment by the number of worms you see. Some will be too small to be seen with the naked eye. Others will disintegrate as they pass through the bowel.

The never-failing way to tell that Dr. Hess Improved Stock Tonic is doing the work is to watch your hogs thrive. Note the increased appetite, vigor and thrift.

Dr. Hess Improved Stock Tonic

Appetizer—Worm Expeller—and Mineral Balance —all combined in one product

Costs little to use. The first extra pound of pork a hog gains each month pays for the Tonic.

***Remember*—When you buy Dr. Hess Improved Stock Tonic, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.**

PRICES: 25-lb. pail $3.00; 100-lb. drum $10.00; 500 lbs. at 9½c; 1000 lbs. at 9c; ton lots at 8½c per lb.
Except in the Far West and Canada

Dr. Hess & Clark, Inc., Ashland, Ohio

WELL! Labor Day was on again, and is gone again. It was a real day of labor at Neshaminy Gardens. The first work was gathering the stuff and preparing it for the route in town which is covered three and four days a week. Gilbert (a nephew, not Gilbert Watts) has done this well and faithfully all summer. Then the roadside market was stocked and business opened. Buck Road fairly hummed with traffic all day long, and we did a rushing business. Our total sales on Labor Day two years ago were greater, but two-thirds of it was from the sale of cantaloupes, and they were not ready this year.

✦ ✦ ✦

WE KEEP gathering and bringing in stuff all day so that the supply is kept fresh. Most vegetables deteriorate rapidly in appearance and quality after gathering. That is the reason city people who buy in the regular market are surprised and delighted with good stuff taken directly from the farm and eaten. However, we often find a skeptical look in the eyes of some new customers. They will slow down, stop and look around at the growing crops, and say, "You grow your own stuff, do you?" When assured of that they begin asking prices, and almost invariably buy. Conversation reveals the fact that they have been "bitten" at roadside stands. In their innocence, they started out sometime in the past in the belief that everything sold in the country was freshly gathered and would be sold at reasonable prices.

✦ ✦ ✦

BUT when honest goods and fair dealing are once established, people will drive miles to trade at such a stand. Another thing they like is to meet real country hospitality. It is often said that a doctor's success depends upon his having a good bedside manner. So does the success of a roadside marketer depend upon a good roadside manner, and Mrs. Kester has it, naturally. The rest of us are trying to develop it.

✦ ✦ ✦

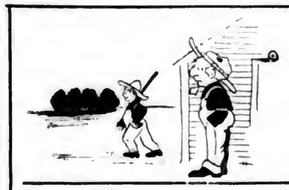
SUGAR corn is bringing unusually good prices this year, and will, no doubt, cause an over-planting of this crop next year. Good sweet corn has been bringing two and one-half to three and one-half dollars per hundred ears, wholesale, and has been retailing in the cities at sixty cents to one dollar per dozen. It is lucky for the city consumers that "horse corn" is so much of a failure and so late this year, else some farmers might, as in the past, find the temptation too great.

✦ ✦ ✦

BROWN rot has been developing at a great rate during the last few weeks. Many peach crops, altho fairly well sprayed, are going bad as they begin to ripen. The cloudy, rainy weather has been favorable to the development of the spores. Plum and cherry trees, and peach trees to some extent, are losing their leaves from this disease.

✦ ✦ ✦

THE school bells remind us again that summer is nearly over,—over before it really began. The little folks and the young folks quit their play and their work and take up the quest for an education,—some willingly, some not so much. If the theories concerning education brought the results claimed for it, it would be well worth while; but I have lost some of my early enthusiasm concerning it. When I was a teacher, I thought as a teacher, spake as a teacher, understood as a teacher, but when I went out into the world I put away many of those things. Education should make a boy or girl able and willing to do his or her share of the world's work, and do it well. It should put the fact into their heads that the world is not merely a playground, nor life an opportunity to get much and give little. A soured pessimist? All right; make the best of it.



The Cheerful Plowman

Boys and Guns

NICK RICKERT'S boy, Adolphus Ned, is on his back this month in bed with three big buck-shot in his head; you see he went out hunting hares with guns enough for hunting bears against his mother's earnest prayers. "He may get shot!" his mother cried, "full well I mind when Hiram died! Young boys shoot carelessly and wide!" "He loves to hunt," said father Nick, "and sissy youngsters make me sick! I think our Ned can do the trick! My father wouldn't let me shoot, and when I shot I got the boot, I grew up scared, a big galoot! I want my boy to be a man laid out on broad and able plan; we'll let him hunt, I know he can!"

Well, Ned went hunting right away, along with Frank and Pudgie Grey! My, he was careful for a day! The second day becoming bold he held his gun with looser hold, he felt at least as sure as gold! Another day, and bolder yet, without a tremor or regret, he slammed along thru dry and wet with gun hung dangling by his side, the muzzle swinging free and wide, like careless cowboys when they ride! The seventh day, and "Bang!" she went, and leaden balls election hent plowed thru his skin with seam and rent!

The kid's not badly hurt, oh, no, he'll soon be up and on the go, all well within a week or so; but Nick, his dad, has hid the gun; Ned's hunting days this year are done, Nick has new dictum for his son! "A boy's a boy," I hear him say, "and tho he's careful for a day his judgment still is curds and whey! A boy has just a youngster's head; his ma was right in all she said; no guns just yet, I see, for Ned!"—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

LIFE'S fiercest battles are fought on fields that no eye ever looked upon. No flags fly on these battlegrounds. No drums beat. No cannons thunder. The clash of arms never wakes the stillness on those fields. History gives them no place on its pages. And yet, these conflicts take the heart's best and call for a courage that never was equaled by soldiers marching to conquest under the guidance of skilful commanders.

"I Have Fought a Good Fight"

Not a day passes when these unrecorded struggles do not rage in the hearts of us all. Now and then we meet people who say that they have reached a plane of living where they never do anything wrong. Their lives flow on in an even stream, without a ripple, so they tell us, to show that passion has any grip on them. They are, it seems to them, perfect in their inner lives.

When I meet one of these people I feel glad in my heart of hearts, for I think it must be a most happy state of existence. But the most of us would deceive ourselves if we for a moment thought we were above the reach of sin and its contaminating influence. We have to fight every day, yes, every hour, lest we be swept away from our moorings by evil and go down a wreck on time's shore.

One of the world's best warriors after he had been battling on for years, feeling the thrill of the things he had accomplished, shouted triumphantly, "I have fought a good fight." And that was true. But it was not long afterward that this same stouthearted soldier set down his fear that after all his striving he was in danger of becoming a castaway. Who of us does not realize just what he meant in the moment of heart searching?

We Wage Heart Battles

How suddenly we are often plunged into the very thickest of these heart battles! It may be a very trivial thing which brings them on, the misdoing of some one of the farm animals; a word dropped by a busy-body who has heard an untrue story touching our conduct, the breaking of a rope when the day's work depends upon its holding—any one of a hundred little things coming to us in the course of the day's work, and we have a fight to wage on this unseen field of the heart.

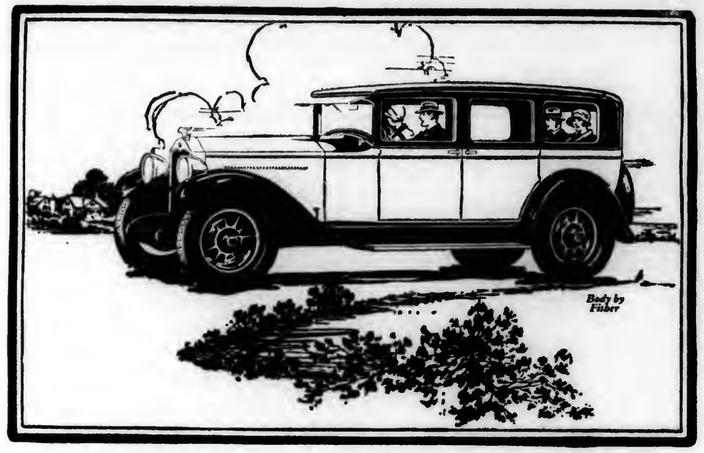
Sometimes we hear it said that life runs on in a dull, monotonous way on the farm, with nothing to disturb its peace and calm. Those who say that know nothing whatever about farm life as it really is. Not an hour passes scarcely, when you and I do not have to grill up the loins of our minds and do valiant battle with some enemy of our souls. Nobody else may know about it. Surely no one can help us in this struggle for the conquest of our own souls.

These Treasures Do Not Fly Away

And it is a serious question how we meet these battles that come to us a most moment by moment. For really upon their issue depends the success we make as men and women.

It is not so much a matter of the money we make as it is of the manhood we work out. All our striving for the things of this world do not weigh more than a pinch of dust in the balance which determines our eternal destiny. In a little while all the wealth we have laid by will seem so insignificant when compared with the treasures that do not fly away, laid up where thieves do not break thru and steal, or where moth nor rust can corrupt.

So the vital problem with every last one of us is, "How am I fighting these battles of my soul?" It will do us all good to sit down right here and now and answer that question in the light of eternity.



BEAUTY that surpasses all tradition

Buick for 1928 is *Beauty for 1928*—a de luxe presentation of new motor car styles by the world's foremost designers. Here is what Fashion decrees:

Graceful Bodies by Fisher, swung smartly low, without any loss of headroom or road-clearance and without resorting to smaller wheels . . . plus color harmonies, *inside and out*, endowing closed car interiors with the beauty of exquisite drawing rooms—and crowning all, a refreshing air of youthfulness.

Even brief inspection of the Buick line assures you there is no longer any need to delay purchase of your new car. Buick for 1928 is Beauty for 1928—and performance, luxury and value for 1928 as well.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Few Roadside Markets Are Attractive

WE HAVE been harvesting a remarkable crop of Full Measure green snap beans. These were drilled in 30-inch rows following transplanted lettuce. Before planting the lettuce this patch received 15 tons of manure per acre. This was plowed down, one ton of ground limestone and a ton of 7-10-7 fertilizer per acre were applied broadcast and harrowed in. The lettuce received in addition 400 pounds per acre of nitrate of soda. Of course, there was a surplus of plant food after the lettuce was harvested. The beans were planted without additional fertilizer. The way they have responded to this abundant supply of well balanced plant food has been a lesson. The yield has been enormous, quality has been high and picking costs have averaged much lower than with an ordinary yield.

Incidentally, many folks mistake the fine green pods of Full Measure for Kentucky Wonder. Full Measure is indeed a first rate variety. We have sold them, eaten them fresh and canned them. They are all right. One green grocer to whom we sell says they hold their condition longer than some other varieties. I wonder just which of the quality varieties of snap beans do hold up best.

We Visit Roadside Markets

I have heard much of roadside marketing in the Hudson River Valley. We drove home from the Vegetable Growers' Convention that way and were especially impressed by the efforts made to set up good displays, layouts designed to catch the eye of speeding motorists. All apparently realized the importance of this factor in marketing.

On the other hand, I was disappointed to see but comparatively few really attractive, artistic markets amidst inviting surroundings. Some which might have come up to this class were rendered thoroly ugly by innumerable placards shrieking in varied color everything from gasoline to soap. By way of contrast a simple awning stretched over a neat framework, surrounded by a lawn and trees, and sheltering a real display of fruits caused us to use the brakes more suddenly than one should. That grower captured Pennsylvania money. We ate Hudson River peaches, pears and apples all the way home.

Cold Water Is Big Help

Of course, we did not see them all but on a twelve-hundred-mile trip we did not observe one roadside market equipped with running water. Only by trial may a roadside marketer selling vegetables learn the value of abundant pure, cold water. Succulent vegetables may be kept in more perfect condition. Thirsty motorists are refreshened and buy. A tiny jet or fountain gives that note of motion, of activity so attractive in any display.

It has been contended that roadside marketing is a fad that even now has seen its best day. I agree that as a fad the roadside market is indeed a thing of the past. The successful roadside market operators of today are recognizing that to endure and increase they must render thoroly business-like service and that they must maintain dependable supplies.

It is Best to Fight the Corn Borer This Fall

THE Pennsylvania Department of Agriculture has issued the following suggestions as to what farmers in the corn borer area can do this fall to meet government inspection requirements next spring and help prevent the spread of the borer. Enforced clean-up was required in eight northwestern counties last year. Secretary Jordan and Director Bell say the chances are that additional counties will be affected next year.

Cut Low

1. If wheat is seeded in corn stubble without plowing, loose refuse should be picked up and no stubble should remain over two inches in height; otherwise spring clean-up will be required by the inspector.
2. Cut low (not over six inches) even where cornstalks are to be plowed, since all corn refuse must be turned under or otherwise destroyed.

Clean Up

3. Husking on the stalk is doubtful practice, because a thoro clean-up may make this an expensive and troublesome method.
4. When cutting for the silo all loose stalks should be picked up and put thru the cutter.
5. Fall plowing (for spring crops) has some advantages, since less trash will be brought to the surface by the harrow than if plowing is done in the spring.
6. Refuse from the canning and general home use of sweet corn, if not thoroly cooked, should be disposed of promptly by feeding to livestock, burying, or otherwise making sure it does not remain on the surface of the ground. Sweet corn fodder should be ensiled or fed as soon as possible.

Start in Time

The above suggestions are given at this time so that farmers may know in advance what they can do to lighten and make less expensive the work of combating the corn borer and to meet the quarantine requirements. The corn borer is with us and according to recent investigations is causing greatly increased damage this year. The public in general is due to suffer a heavy loss if this insect continues to spread as it now appears probable. The farmer, however, is bound to feel the brunt of this loss. He is urged, therefore, to follow these suggestions. Let our slogan be: "Cut Low, Clean Up. Start in Time."

Study Keeps Him From Getting Rusty

FOR retired farmers, the study of agricultural college correspondence courses "beats walking the pavement or loafing at the shop or store, according to V. D. Stoneroad, a Yeagerstown, Pennsylvania, farmer who has studied agriculture at home thru the Pennsylvania State College for 32 years, making him the oldest "student" of the institution.

Mr Stoneroad recommends that all retired farmers "keep from getting rusty" by taking up as a hobby the study of some farm subject with the State College. Writing to Professor T. I. Mairs, director of agricultural correspondence courses at Penn State, Mr. Stoneroad says:

"I am doing all I can to extend the usefulness of the State College

Mr. Stoneroad is Penn State's oldest student

reading courses, not only for the young but to the older man who has retired from the farm as well. If the retired farmer wants to enjoy life, he must keep his mind active, even if he is not so active in body as he once was. If he has the time, let him take up some hobby, flowers (this is my hobby), bees, small fruits or special vegetables. He need not overload, but take just enough to keep interested. It beats walking the pavement or loafing at the shop or store."

Mr. Stoneroad enrolled for the first "reading course" offered by the college back in 1892. His efforts in this direction aided him to become one of the most successful and best known farmers in Mifflin County. He has covered practically every subject offered in the free courses and recently had his daughter enrol.—C. D. B.

Rambles of a Pennsylvania Fruit Grower

XXII The Farm With a Million Dollar Mortgage

MOST of us see only what we are looking for. Passing thru the same territory at the same time, and even in the same car, a botanist sees the flora, an agronomist the farm crops, an animal husbandryman the livestock, a pathologist the plant diseases, an entomologist the bugs. Being a horticulturist I see the fruit, but out of the corner of my eye occasionally take in something else. This occurred in the Sacramento Valley.

The farming of the Sacramento Valley is unique. I was reminded of that part of the lower Mississippi Valley thru which we passed dry shod two months ago, now, unhappily, under fifteen feet of water. The highway is on top of a high, wide levee which keeps the waters of the Sacramento from inundating the rich bottom lands. It is "The Holland of America," according to the vernacious local Chamber of Commerce. The farm houses are below the levee, their roofs coming just to the level of the highway. The land immediately adjacent to the levee usually is in orchard, mainly pears with some cherries and prunes, and the general farming land is beyond. The danger of a break in the levee is not as great as in the Mississippi Valley but this catastrophe occurs occasionally. This is an irrigated region; the annual rainfall is around ten inches, none of which comes between May and November. Water for irrigation is turned on the land by siphon from the river or thru a headgate in the levee. The summer is windy and hot, that is, if you consider 100 degrees to 110 degrees in the shade hot.

Farms Are Heavily Mortgaged

The Great Valley of California, of which the Sacramento Valley is a part, is the home of the big ranch which numbers its acres by thousands rather than by tens. I spent several days on a ranch that, for the purpose of this story, may be called the Million Dollar Ranch. This name is appropriate since the ranch is mortgaged for a million dollars. It includes 5000 acres of an irrigation district of 8000 acres reclaimed from the river about forty years ago at a cost of $1,500,000. The levee was built with private capital; it is twenty-eight feet high and fifty feet wide at the base. Great pumps constantly raise water out of the drainage canals and pour it back into the river; in dry seasons, the process is reversed. The soil is a black alluvial loam which thus far has required no fertilizer.

This ranch, and practically all others in the valley, has made no money since the halcyon days (to the farmer) of the Great War. Land that would have been snapped up at $300 an acre in 1918 now cannot be sold at any price; there are no buyers. The banks have made loans up to $100 an acre but will go no higher. I was told that a majority of the farmers in the Sacramento Valley are on the verge of bankruptcy.

The Million Dollar Ranch has 4000 acres in sugar beets this year. Sugar beets are not the most profitable crop to grow on this land but they are the only crop that can be financed with money advanced by the factory, the banks having turned a deaf ear to requests for loans to finance the season's work. The factory has advanced $270,000 to the ranch already. The pay roll is $1000 a day. The labor is Mexican and the work is done by contract, with a bonus if the yield per acre exceeds a certain figure.

The beet harvest is from August to November, the seeding having been done at intervals. Yields of twenty to twenty-five tons an acre may be expected, under favorable conditions, and the price may be $7.50 a ton, perhaps more. The sugar content is eighteen to twenty-four per cent. Good luck means getting a fair stand, no visitation of pests, and good weather until the last ton is harvested. The cost of production, if all goes well, is around $50 an acre; but rarely does all go well. If it does, this man stands a chance of making two or three hundred thousand this year. He also stands a chance of losing just as much, and possibly the ranch itself. Last year the ranch lost $100,000 thru no fault of his.

This rancher is one of some hundreds of thousands in the West, and a not inconsiderable number in the East, who are hanging on by their teeth. I speak of him, not to call attention to the somewhat more favorable situation of farmers in the East, but to pay tribute to the courage and faith of farmers everywhere who have been fighting a losing fight for several years, yet are undaunted still. No other industry offers more inspiring examples of economic heroism. This is because the farm is not merely a business, it is also a home. A man will struggle harder and sacrifice more for his home than for his business.

My Sacramento Valley friend has been on this ranch since he brought his bride there, with high hopes, twenty-two years ago. He was flooded out in 1907 and burnt out in 1912. He carries a crushing financial burden. He works fifteen hours a day. It is make or break this year. He deserves to succeed. May 1927 be a "good year" with him.—S. W. Fletcher.

Stayman Popular

IN A SURVEY made during February and March, 1927, covering 291 retail stores in 10 cities of Pennsylvania, some interesting information was obtained on apple sales that should be of value to every commercial grower of the state.

Altho dealers reported that 23 different varieties of winter apples were being sold in these markets, only five varieties are sold in most stores.

Stayman surpassed all varieties in popularity, being handled by 286 stores. Jonathan ranked second and was sold in 243 stores; Baldwin was third being found in 236 stores; Delicious fourth, handled by 230 stores, and Rome fifth, sold in 224 stores. Grimes Golden, which was handled by 84 stores, was the next variety in popularity.

"Hoffman's Seed Wheat"

Here Is Sound Clean Seed—Harvested Right and Well-Cured

THIS year, with so much damaged wheat, you can't afford to take chances. Make a change of seed right now; your harvest fields will show the difference next season—5, 8, maybe 10 more bushels per acre than you can likely get with the best home-grown seed.

Right Varieties—Free From Weeds—Fair Prices.

This "Leap's Prolific" variety here offered is the most popular kind in all our 28 years at this business. A heavy-yielding variety. Grown on our fertile Lancaster County Soils. Cleaned right!

You will find this seed free from rye, garlic, cockle, cheat and other weed seeds. It's all wheat—sound, plump berries. Selected from crops that have shown no damage by smut. Cleaned and recleaned in the largest, most modern plant of its kind.

Order from this advertisement. Examine the Seed when it comes. If not fully satisfied, return it at once; we'll refund your money and pay round trip freight.

Hoffman's Seed Wheat does pay! You will be convinced by sowing it this year!

Leap's Prolific — Heavy-Yielding Variety

"Leap's Prolific" is one of the most reliable winter-wheats grown. It is a red wheat, long in the berry, with white, smooth chaff. Straw grows long and is stiff. It is early, hardy, vigorous, and **"Prolific"** indeed. It stands rough farming. Responds with big yields to careful culture and fertilization. Does not shatter easily—makes broad compact heads, filled with grain from base to tip. "Leap's Prolific" is a great stooler. 1½ bu. of this seed is enough to sow an acre—you need not sow any more. Really figures to just a very low cost per acre to buy this seed. "Leap's Prolific" is entitled to first place as a hardy, vigorous, prolific variety.

PRICES: 1 to 14 bushels @ $2.35 per bu.; 15 to 49 bushels @ $2.30 per bu.; 50 bushels and over @ $2.25 per bu.

"Forward" variety: Also a popular smooth-chaff winter wheat, and a good one, too. Heavy bearer, grows a good-size, hard grain of good milling quality. Good in the straw—liked for its length and stiffness. A reliable and profitable variety. Sow 1½ bu. per acre. PRICES: Same as those for "Leap's Prolific" printed above.

BAGS FREE—Freight Paid Offer:

Good cotton grain bags are used to ship your seed, and they cost you nothing extra. We pay the freight on your shipments of 5 bushels and over to any railroad station in Penna., Ohio, N. Y., N. J., Del., Maryland, Virginia, West Virginia, Mass., and Conn.

Order today, sending check, bank draft or Money Order. Here is an investment that will bring you good returns. No question about it. . . . Immediate shipment of your order guaranteed.

A. H. HOFFMAN, Inc., Box 40, Landisville, Lancaster Co., Penna.

HEATING Saves Crops from Frost

MARKET crops during "Frost years" command high prices. Make this money on yours. Scheu National Orchard Heaters have successfully protected apples, pears, apricots, cherries, prunes, cranberries, strawberries, nurseries, oranges, lemons, etc.

Write for your copy of "Frost Protection", a 56 page book that tells how to use heaters. It's free.

"Had 200 crates of strawberries on protected acre—less than 30 crates on unprotected piece adjoining", says a grower.

Offer Premium for "Vineland Eggs"

OFFICIALS of the Vineland Poultry Association have been approached by representatives of one of the leading chain stores with a proposition to handle the output of the entire area. It is understood that an offer of three cents a dozen above the top market quotations was made to the officials for the entire output thruout the year.

The offer was made to the association and other big producers who are now catering to the New York market. The representative of the big chain store told the officials that his firm would take 400 cases a week to start, with possibility of their taking the entire production of 3500 cases a week in a short time. The store chain has 3000 branches in the metropolitan area and this would mean just a little over a case per store per week.

May Erect Packing Plant

The Vineland area is now producing about 180,000 cases of eggs per year with an estimated value of two and a quarter million dollars. The three-cent premium offered would swell the total by $165,000.

It is thought that the company is planning to erect a big candling and packing plant at Vineland, where the eggs will be packed in cartons and sold on the market as "Vineland Eggs." The proposals as made to the representatives of the Chamber of Commerce were to the effect that all eggs would be in cartons bearing the words "Vineland Eggs."

At the present time 200 of the big egg producers are under contract with a group of eight New York brokers to handle the entire output of these farms on a premium of two cents per dozen. This contract still has eleven months to run. There are another two hundred or more egg farmers who could produce the quality eggs to supply the expanding market of the chain store if the satisfactory arrangements can be completed.—A. K.

Heavy Production Causes Mortality

In the last two weeks I have lost several hens. Their combs turn pale and they dump around a few days and die. I have been unable to find out what was wrong with them. They seem to be weak and wobble when they walk. Do you know what causes this and what I can do to remedy it? What is the best thing to give hens for liver trouble. I have lost quite a few this summer with liver disease. Postmortem examination showed that their livers were pale in color and were rotten. I have used calomel some but this does not seem to cure them. I am feeding my hens heavily and they are very fat, but they are Leghorns and I did not think heavy feeding would hurt them as I have forced them for production. I am feeding 100 lbs. cracked corn, 75 lbs. wheat for a scratch grain mixture. Mash mixture as follows; 100 lbs. bran, 125 lbs. corn meal, 50 lbs. white flour middlings, 50 lbs. standard middlings, 65 lbs. meat scrap, 50 lbs. alfalfa meal, 25 lbs. ground oats, 25 lbs. dried milk, 5 lbs. stock lime, 5 lbs. salt; protein, 19 per cent. Do you think this mash is too rich for them?—H. G., Wyoming County, Pa.

In feeding hens for heavy production they undergo an unnatural strain which manifests itself in a higher mortality rate than would be expected under different conditions. Various digestive disturbances are likely to be present, of which so-called liver trouble is one. Some authorities claim that an excess of carbohydrates in the ration is a cause of this ailment, and to tell the truth it is often present when hens are over fat. I believe that a good laxative condition will help to overcome liver trouble. Be sure that your flock is getting about five pounds per day of good, succulent green stuff per 100 birds. Right now pasture may be somewhat old, and if you have such materials as waste cabbage from the garden I am sure that you will find the hens relish it.

Your mash formula is very good. You will find that your egg yield will be helped if you feed two pounds of your mash and one pound of condensed buttermilk in the form of a moist mash to every 100 hens at noon. The buttermilk will also help with the other trouble. If your hens seem too fat, be sure that they are not getting above 12 pounds of grain per 100 birds a day. This is fed four pounds in the morning and eight at night, and you may even find that this quantity can be cut down. I presume that you have been culling regularly. As a rule, hens that have a hard accumulation of fat in the abdomen are turning their feed into fat instead of eggs, and might as well be disposed of.

As for the pale and wobbly birds, if they are light in weight look out for tuberculosis, which usually shows yellowish lumps in the lungs, liver or intestines. I have seen pale looking birds which were apparently suffering from anemia. The only thing to do with such is to let them go with the next bunch of culls.—R. L. S.-H.

Nest Box Notes

CARE of the Flock—Every bird in the laying flock should be a productive unit; all non-layers should be weeded out and disposed of. The degree to which flocks are culled will have a marked effect upon the average yearly production.

• • •

One should do all in his power to keep the birds in the pink of condition and thus reduce the amount of culling necessary and increase the efficiency of his plant. What are you doing to keep your birds eating a maximum amount of feed? These things help:

1. Adding fresh mash to the hoppers daily.

2. Watching scratch grain consumption closely and endeavoring to get a consumption of at least ten pounds to the 100 birds daily.

3. Giving a daily feeding of 4 to 5 pounds of green feed per 100 birds. Kale, cabbage, Swiss chard and rape are excellent for this purpose.

4. A small quantity of moist laying mash, 3 or 4 pounds per 100 birds daily, will help increase mash consumption.

5. Fresh water in liberal quantities at all times.

6. From September 1 to November 1 lights can be used as an aid to feed consumption. Turn them on at 5:00 A. M. and be sure that mash hoppers and water vessels are full.

• • •

This is a good time for making repairs and additions to the poultry plant.

• • •

Care of Young Stock—Pullets that are beginning to show red combs should be graded according to size and maturity and placed in the laying pens. Leghorns should be matured at 5½ months and weigh at least 3½ pounds. Filling the empty pens in the laying houses with developed pullets is one of the best steps toward plant efficiency. Unless the early pullets are housed as they become mature the greatest early hatching is lost.

• • •

Aim at heavy scratch grain consumption with the pullets. A little whole corn after the regular grain feeding might help to increase the grain consumed and will get the birds acquainted with this valuable feed. Barley can sometimes be secured and will make a fair substitute for corn if the birds do not relish the latter.

• • •

Excess tomatoes can be fed to the birds with benefit.—From N. J. Poultry Ext. Dept. Monthly Letter.

Agricultural versus Industry

(Continued from page 3)

the conditions as he found them among the farmers. In the first of the series of his articles he said, "Those who have inside knowledge of the farming industry tell me that there are now such large numbers of farmers in an unsound position that neither the bankers, merchants, nor auctioneers dare press their claims.

In describing his observations in the highly farmed grain growing sections he says, "It became a depressingly monotonous experience to me to examine accounts showing loans totalling four figures annually over a period running to five or six years. Today these counties virtually are being farmed by the banks and merchants."

This has a familiar ring, it serves to remind us of farm conditions in many of our own states. We are told further that "what is true of the corn lands (grain lands) of England is equally true of those of Scotland and Wales. Corn growing is not paying, and the land is being laid down, or in many cases being allowed to slip down, to grass. Only thus can the farmers cut their losses. It means ranch farming on an increasing scale, and that implies a minimum both of employment and productivity. High costs of production and low market prices crystallize the farmer's trouble."

It Is a Sad Picture

It is a sad picture, sad because the best and most skilful farmers are being driven to the wall. Land bought at high prices during and right after the war has depreciated in value. Taxes grow higher as the labor organizations insist directly or indirectly on lessened output per man, on unemployment wages (doles) and on cheaper food. Crop surpluses in North and South America bring disaster to farmers in Europe as they do to the home producers. And what is the remedy? Listen to the proposals made by the National Farmers' Union of England.

"Counter-availing safeguards to home production to meet bounty-fed competition from abroad."

"Provision to safeguard producers under the Empire settlement policy."

"Equality of treatment under the safeguarding of Industries scheme."

"Prompt dissemination thru the union's machinery of the result of scientific research."

"Revision of the incidence of local taxation."

"An equitable settlement of the tithe problem."

"Increased credit facilities."

"Amendment of the Housing Acts to provide greater facilities for the erection of cottages for farm workers."

"Special facilities in connection with the provision of electrical power in rural areas."

"Prohibition of the importation of skimmed condensed milk."

Here you have it, tariff-walls for home-grown agricultural produce, lower taxes, lower freight rates, better credit facilities, rural electrification, cheap housing for farm help, more liberal enforcement of pure-food acts, embargoes on certain agricultural products and better agricultural extension teaching. British farmers would like to sell in a protected home market. This must mean higher food costs, higher living costs, higher wages. What will manufacturers and labor organizations say to that? Theirs is the power in Parliament. Will the farmers prevail against them? Other European countries have similar problems. We have the same problems. What is to be the answer? Shall industry and commerce insist on the ruin of agriculture, or will they take the far look ahead and in a spirit of enlightened self interest help to conserve the great social and economic values of our rural life?

Editors' Note—Doctor Lipman wrote this letter aboard the Steamship Manitou in the Mediterranean en route to Palestine. He is now studying conditions there for the purpose of making recommendations for the agricultural development of the country. Letters about his observations and experiences in Bible Lands will appear in later issues.

NEW CHRYSLER "52"

Still Higher Quality—Yet Lower Prices

You need only to glance at Chrysler's latest product—the new "52"—*and at its astonishingly low prices*—to realize that again Chrysler Standardized Quality has yielded more to the buyer than money has ever been able to buy before.

Examine and note the full size and roominess of its staunch, handsome body of wood and steel. Enjoy its ample seating capacity for adult passengers. Delight your eye with its grace and trimness of appearance, its luxury of appointment.

Here are flowing lines, beautiful hardware, luxurious mohair upholstery and every refinement of detail—combined in a car you will be proud to own.

We are eager that you ride in it. We want you to see how easily and smoothly it gives you 52 unvarying miles and more per hour. Enjoy the snap of its pick-up, 5 to 25 miles per hour in 8 seconds. See how smoothly it out-performs all others with which you may contrast it.

After such a thorough test we are sure you will agree that, at such low prices, these Chrysler "52" advantages are obviously outstanding over all competition.

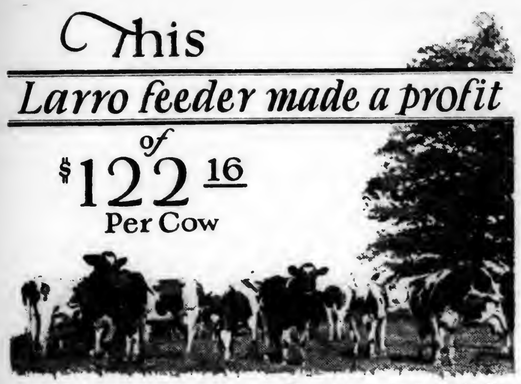
This *Larro feeder made a profit* of $122.16 Per Cow



Part of the dairy herd at Log Cabin Farm, owned by Ralph C. Jackson, Conneaut Lake, Pa.

Ask W. E. Mapous, manager of Log Cabin Farm, Conneaut Lake, Pa., if it pays to feed Larro Dairy Feed. He'll tell you what his Larro-fed pure bred Holsteins did in the Western Crawford County Cow Testing Association. The records for the year ending March 1, 1927 show a profit over all grain, roughage and pasture cost of $1862.99 or $122.16 per cow. The average production per cow was 10,248 lbs. milk, 359.4 lbs. fat, and the total feed cost $1542.03, or 99 cents per hundred pounds of milk.

Mr. Mapous knows that it's *profit*, not cost per ton of feed, that counts. During his fifteen years experience with Larro Dairy Feed he has proved for himself that it leaves the feeder more money, when all the bills are paid, than any other ration. It produces more milk for a longer period from any cow. It keeps the animals in fine flesh and condition, free from indigestion and udder trouble and when freshening time comes, their calves are strong and full of vigor.

Larro is always the same clean, wholesome ration—uniform in every respect. Its formula, quality, analysis and feeding value do not change. Put your herd on Larro now and every cow will pay you the biggest profit that she is capable of producing.

THE LARROWE MILLING COMPANY, Detroit, Mich.

Larro

FEEDS THAT DO NOT VARY
FOR COWS · HOGS · POULTRY

Exclusive standardizing processes insure uniform high quality and feeding value

Developed and constantly tested at Larro Research Farm

It is the Larro Policy to make only those rations which yield the feeder the greatest possible profit. That is why we make only one feed for each purpose, as only one can be most profitable.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry, Pennsylvania State College

This Dairyman Is Proud of His Jerseys

BEDFORD COUNTY is fast becoming a Jersey center. Two cooperative Jersey bull associations with eleven pureblood Jersey sires owned jointly by 31 members are doing their part to improve the producing capacity of the herds. In fact, some of the two-year-old heifers with first calf are producing from 50 to 100 per cent more milk and butterfat than their dams at full age. A cooperative cow testing association is responsible for better feeding methods and the culling out of low producers in the herds belonging to the association.

Mr. Eshelman

When the Bedford County Testing Association finished its second year last spring, out of 23 herds in the association a full year, ten completed the year with an average above 300 pounds of butterfat per cow. Each one of the ten included registered and grades as a part of the herd.

Mr. Allen Eshelman won first place in the association with an average yield for 14 cows of 8257 pounds of milk and 430 pounds of butterfat.

Meuranda Led the County

One of Mr. Eshelman's cows, Meuranda, an unregistered but purebred five-year-old Jersey also won individual honors by producing the most butterfat of any cow in the association during the year. Her record was 12,540 lbs. milk and 6843 pounds of butterfat. After the cost of her feed was deducted from the value of her product she had left a credit of $324.92.

Another exceptional cow in the Eshelman herd was a two-year-old registered Jersey named Victor's Golden Letty 615755, that produced 9535 pounds of milk testing 5.4 per cent fat. The yield of butterfat for the year was 513 lbs. and the cow gave a net return above feed cost of $222.92. She is not only a high producer, but also displays excellent Jersey type. Her sire is Sophie 19th's Victor 13th, one of the association herd bulls.

Mr. and Mrs. Eshelman did not attain such excellent results by an overnight, mushroom growth. They have been breeding for production for a long time and have kept a purebred sire on the farm for the last twelve years.

Good feeding has also played a part in achieving high production. High quality feeds have been supplied in as liberal amounts as the cows would properly consume. The feeding has also been done in a sanitary manner as the Eshelman's feel that a cow likes clean food just as well as a person. Considerable quantities of alfalfa are raised on the farm for dairy herd consumption. A commercial dairy grain feed is used. Liberal quantities of silage are fed, the cows getting from 35 to 40 pounds daily according to size. A constant supply of drinking water is at hand as individual cups are placed in front of each stall.

Records Point the Way to Profit

The Eshelmans believe thoroly in purebreds. There are now but four grades left on the farm, and these will be sold as soon as purebreds are matured to take their places.

The Eshelman herd has been accredited as free from tuberculosis for six years and has been in the cow testing association for three years. The records thus secured have been a great help in bringing up the average production. Then, too, it makes the work more interesting and puts the keeping of dairy cows on a business basis. The cow tester also gives a number of helpful suggestions about feeding.

Both Mr. and Mrs. Eshelman take a great pride in Jerseys and feel that they are the best breed of cows for the average farmer. Mr. Eshelman is a director in the Everett Jersey Bull Association, a director in the Pennsylvania Jersey Breeders' Association and president of the Bedford County Jersey Club.

Both the cows and the milk from the herd have won many prizes at county and state shows. At the State Farm Products Show at Harrisburg, milk exhibited by Mr. Eshelman has for the last two years won the silver loving cup awarded by the American Jersey Cattle Club for the highest scoring Jersey milk.

The success attained by Mr. and Mrs. Eshelman is a fine example of what can be done in developing a high producing Jersey herd of good type thru careful attention to breeding, feeding and record keeping and in the production of milk of the highest quality.—A. A. Borland.

Meuranda, owned by Allen Eshelman, Everett, Pa., was the highest producer in the Bedford Cow Testing Association the past year.

SHOW CATTLE

Grove City Community Does Much Toward Dairy Improvement

THE dairy cow held the center of the stage at Grove City, Pa., September 1 and 2 during the tenth annual exhibition held at the permanent grounds of the Grove City Accredited Dairy Cattle Sales and Show Association.

W. S. Hogan, county agricultural agent of Mercer County, and his assistants, W. B. Wingard and Donald Keller, were in general charge of the show. Over 200 head of dairy cattle were on exhibition. The Guernseys were judged by Professor A. L. Beam, of State College, and while fewest in numbers were unusually high in quality. A. S. McCullough, Mercer, captured grand championship honors with an outstanding Guernsey bull while the female grand championship among Guernseys went to Dickey Brothers, Grove City.

E. B. Fitts, of State College, judged the Jerseys and awarded A. M. King, of Mercer, grand championship on his Jersey bull and Isaac Clark, Fredonia, grand championship on his Jersey cow.

Judge Milk Production

The Holsteins, which were the largest show in numbers were placed by A. A. Borland, State College. M. M. King, Mercer, was the owner of the grand champion Holstein bull which was exhibited by Montgomery and Jack. This bull was an animal of fine type and was the sire of the first prize group "get of sire." Grove City exhibited the grand champion Holstein cow. She was a fine straight cow with big middle, level rump and square udder.

An interesting feature of the event was an exhibit of ten cows from the herd of Hugh Fergus, Slippery Rock. A prize of $25.00 was offered to the person who could place the ten cows correctly in order of production on the basis of their average yield for two years in the testing association. A multitude of estimates were recorded but the $25.00 still remains in the treasury, not a single guess being correct.

The Grove City Commercial Club, including farmers and townspeople alike, has been active in the development of the community. The Grove City National Bank provided the prize money for the Dairy Show and its cashier, E. B. Harshaw, has been a big factor in the dairy improvement work in the community. The First National Bank has been particularly active in sponsoring pig club work.

Country and Town Work Together

Another institution that has played a large part in the agricultural development of Grove City is the Government Creamery, which is operated on the cooperative basis. Beginning in 1914 with a mere handful of patrons it has developed until last year it was patronized by 273 farmers who delivered 3,150,000 pounds of milk and 585,800 pounds of cream and received $175,000 for their dairy products.

The cow testing association or dairy improvement association as it is now known has helped a lot in increasing the average production of the cows in the community and in making dairying more profitable.

The Grove City community may well be proud of its record in agricultural improvement and is an excellent example of what may be accomplished by country and town working together for the welfare of the community.—A. A. B.

Experience

Counsel—The cross-examination didn't seem to worry you. Have you had any experience in that line?
Client—Married three times.

"Did that patent medicine you bought cure your aunt?"

"Mercy, no! On reading the circular that was wrapped around the bottle she got two more diseases."

~when the crown stands or falls

"~You're *there* with a Crosley..."

The Crosley Radio Corporation:
Folks who buy radio are vitally interested in what they get for their money. Why don't you radio manufacturers stop talking like a lot of doctors and tell us what it's all about in one cylinder words. What's this "shielding" business anyway?"
Yours truly,
A Crosley Dealer.

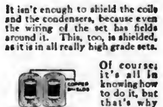
Shielding is necessary in a modern radio receiver. The more sensitive the set is, the more you need it. Some sets are merely housed

in a metal case. This helps to keep strong local signals from breaking through, but it is even more important to keep them where they belong after you get them the proper way from the antenna.

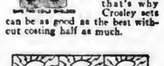
A set has tubes, condensers and coils. Here is a coil. The lines around it are the magnetic field. You know the earth's magnetic field will work a compass down in a mine, or up in a plane (it certainly worked for Lindbergh) and the fields around unshielded coils get all mixed up and the set howls and squeals and has to be choked off by turning down the filaments in the tubes.

Now if the coils are housed in copper shields the fields can't mess each other up, and the tubes can do a real job of amplifying. The coils in Crosley sets have these copper shields, and there isn't anything better.

Then there are the condensers and if it wasn't for the shield around them, the fields would act like those in the coils, and the results would be just as bad, or worse.



It isn't enough to shield the coils and the condensers, because even the wiring of the set has fields around it. This, too, is shielded, as it is in all really high grade sets.



Of course it's all in knowing how to do it, but that's why Crosley sets can be as good as the best without costing half as much.

CONDENSERS PROPERLY HOUSED

APPROVED CONSOLES
Selected by Powel Crosley, Jr., as ideal, acoustically and mechanically for the installation of the Crosley "Bandbox." Genuine Mahogany built in. Crosley dealers secure them from their jobbers through
H. T. ROBERTS CO.

Sales Agents for Approved Console Factories
Showers Brothers Company
The Wolf Mfg. Industries

Prices slightly higher west of the Rocky Mountains

The BANDBOX
A 6 Tube Receiver of unmatchable quality at $55

Many features of this set have been found heretofore only in the most expensive radio. Since Crosley is licensed to manufacture under nearly all important radio patents, this combination with Crosley leadership and experience, naturally produced an amazing radio, the remarkable value of which can be judged by the following features incorporated and by seeing it and hearing it at your dealers.

1. Completely shielded coils, condensers and wiring. 2. Acuminators for sharper tuning. 3. Completely balanced genuine neutrodyne. 4. Volume control. 5. Single tuning knob. 6. Illuminated dial. 7. Single cable outside connections. 8. Designed for easy installation in consoles. 9. Beautiful frosted brown crystalline finished cabinet.

AC model using new R.C.A. AC tubes and working directly from electric light socket through Crosley Power Converter is $65. Power Converter $60 extra.

Hear this wonderful new contribution to the enjoyment of radio. If you cannot find one of the 16,000 Crosley dealers near you, write Dept. 136 for his name and literature.

IMPROVED MUSICONES
Maximize improve the reception of any radio set. They are perfect acoustic instruments for Crosley Radios. A full-size model with brown mahogany finish stands 36" inches high, $7.50—16-inch Super-Musicone as pictured above with "Bandbox" $10.75—12-inch Ultra-Musicone, $9.75

FREE TO FARMERS

The Cutaway Harrow Company, Hizzanum, Connecticut, are sending free to farmers two well known books. The Soil & Its Tillage and the Clark "Cutaway" Catalog of disk harrows and plows. The first book contains much valuable information about modern farming methods. It tells how to get bigger and better crops with less time, labor and money.

The Clark "Cutaway" Catalog describes the "Cutaway" line of disk harrows from the Baby Cultivator and One Horse Harrow to the Double Action Tractor Harrows. It tells about special machines for special work such as the Push & Lug Plow and Harrow, Orchard Plows, Single Action Extension Harrows, Smoothing Harrows, and others. The catalog also explains why disks with edges HOLLOED sharp, a feature found only on genuine Clark "Cutaway" harrows, STAY sharp and do not crack, bend or chip.

Send for these two books today. A Postal will do. Address The Cutaway Harrow Company, 97 Main Street, Hizzanum, Conn.

Mrs. GERTRUDE S. STEWART

Without Health All Worldly Gain Is Worthless

SOLOMON said many years ago, "Get knowledge, get wisdom, but with all thy getting, get understanding." That advice has held good for all the ages and it is just as applicable today as it was then. For of what use is all wisdom and all knowledge without an understanding of the whys and wherefores?

In the matter of health everybody nowadays is becoming more and more intelligent. We understand that without health all efforts in the way of worldly gain and advanced civilization are of slight account. As we become more informed about modern methods of farming and animal breeding, so do we understand better how to bring up our children. Not so long ago plagues came and destroyed our crops or infections killed our livestock. So also they took our families in the prime of life. Now we try to catch early symptoms to prevent disease, and plagues are becoming quite out-of-date.

We, Too, Can Help

We have come to realize the importance of having clean homes, clean bodies, clean barns and working places and clean food. We know that flies breed in refuse, that mosquitoes come from stagnant water, that cattle with bovine tuberculosis can transmit this disease to human beings (and to animals) thru their milk. We know that neglected teeth are often the cause of serious sicknesses and that diseased tonsils and adenoids may affect other parts of the body.

In the less thickly populated sections of the country it is not always easy to introduce progressive methods for health and comfort. Yet thru magazines, newspapers and such agencies as women's clubs, church groups, Granges, societies of husbandmen and intelligent heads of families the general health conditions of farmers and agriculturists have been steadily improving. Public health nurses, traveling clinics, community playgrounds and county health officers are at work in many rural districts.

In the program for better health the teacher can do much in her classroom to interest boys and girls in understanding the need for practicing good health habits. The county health officer, also, who oversees such health measures as disease control, general sanitation of public places, schools and homes, malaria prevention, maternity hygiene and tuberculosis control, contributes the benefit of his experience and helps every interested member of his community.

Are You Neglecting Your Health?

It used to be said that people who lived in the country were more healthy than those who lived in the city. That is a question statistics only can answer. In New York State statistics show that while city and national mortality from tuberculosis has been practically cut in half since 1913, rural tuberculosis is declining very slowly.

A great reason for that is that many farmers neglect their health and allow their bodies to become run down physically. They forget that fresh air, rest, good food and relaxation are necessary to fortify against sickness. With plenty of fresh air all about farmers often keep their homes stuffy and airless. At night the windows are not opened to let in one of the best germ preventives known, namely, fresh open air.

The busy farmer often works too hard with insufficient rest. He eats his midday dinner hurriedly and his diet is often made up of fried foods, pastry, and too little variety of meat and fresh vegetables. He rushes back to work after his big dinner and allows no time for proper digestion. Then, because of the long hours of work the evenings or play times lack the sort of recreation that stimulates and lightens the mind and spirit. There is much truth in a new version of the old adage "All work and no play make Jack a sick boy." The bodily needs are apt to be neglected when hay time is on, or the crops must be gathered.

Profit by These Suggestions

"That's all very well," you may say, "but how can I with so little help do otherwise than work from sunrise to sundown?" Probably you will have to work harder at certain seasons but when the rush period is over you can make a business of taking care of your health. You can get back to the normal life again with its proper amount of rest and relaxation.

If you would follow the advice of Solomon you will find out what your community is doing to protect your health and take an individual interest in the progress being made to get the best of sickness. Since 1904 the National Tuberculosis Association and its state and local associations have been carrying on an educational campaign to control tuberculosis. Thru understanding how tuberculosis can be prevented (as well as cured when taken in time) by having plenty of rest, fresh air, exercise, nourishing food and a periodic physical examination to keep track of one's general health you can be a partner in their campaign.

Corn Recipes You'll Relish

Fried Corn:—

6 ears of sugar corn
½ teaspoon salt
¼ cup bacon drippings
1 green pepper

Cut the corn from the cob, add the finely diced green pepper. Heat the bacon fat in the frying pan, then add the blended corn and pepper. Cook 15 minutes, stirring frequently. —Betsey Ford, Md.

• • •

Corn Custard:—

5 ears of sugar corn (or 1 can corn)
½ teaspoon salt
1 cup milk
1 well beaten egg

Cut corn from cob, scraping out carefully from the cob. Add the salt, egg and milk. Pour into buttered casserole or baking dish and bake in moderate oven for one-half hour.

Did You Know That—

Electric toasters may be cleaned more quickly with a small dry paint brush than with a cloth.

Mattress covers made of unbleached muslin are easy to remove and easy to launder. They protect the mattress and save cleaning the whole thing.

A little kerosene in the washing water and a chamois will make it easier to do a good job on the windows.

If the fingers of washable leather gloves shink when washed, electric curling irons may be used to stretch them.

Canned Beans That Are Different

MY NEIGHBORS all can beans in this fashion and I have been delighted with the method which I now pass along.

Select freshly gathered string beans, either green or yellow wax. Prepare them just as you do for the table, stemming and breaking into pieces. Wash very thoroly and cook until tender with ham or bacon. They may be cooked in ham liquor if you are careful to dilute it so that there is not too much salt. Pack the cooked beans in hot sterilized jars, and cover to overflowing with the hot meat liquor. Seal immediately and test for leakage at once as the jars must not be left inverted. About an inch of ham fat will collect on top. When heated next winter, they are ready for use.—Betsy Ford, Md.

Cucumber Pickles

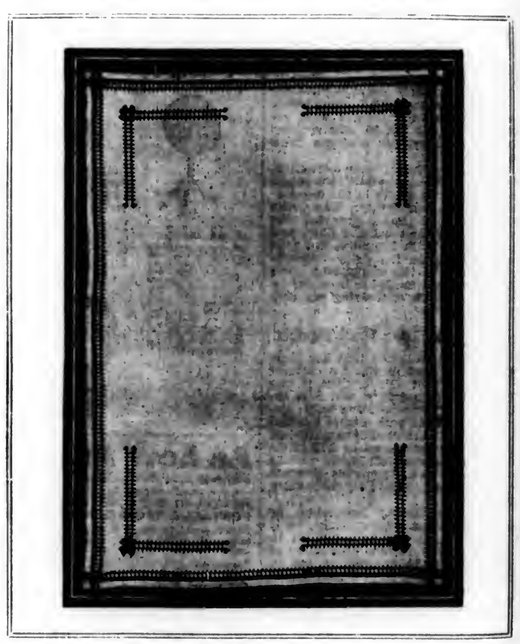
Thoroly wash and sort according to size the freshly gathered cucumbers. Pack in jars. To each quart add 1 teaspoon salt and 1 teaspoon pepper. Pour over them to overflowing, boiling vinegar which you have diluted to suit family tastes, and to which has been added prepared mustard and saccarine in the following proportions: to each quart of vinegar two tablespoons prepared mustard and one-quarter teaspoon saccarine. More saccarine may be used if a sweeter pickle is desired.

• • •

DELICIOUS BAKED HAM MADE MORE DELICIOUS

Did you know how much you can improve a baked ham by giving it a thoro rubbing with prepared mustard just before you pop it into the oven?—Rachel B. Taft, Pa.

A Scarf to be Coveted



IT WAS to illustrate the beauty of Italian hemstitching in even a very simple form that the tray cloth shown on this page was worked. It is made of a loosely woven linen which has not been bleached to a pure white but retains a little of the natural coloring but not enough to be called ecru.

Art Thread No. 50 in blue was used for the embroidery.

A hem one-quarter inch wide finishes all edges.

Two threads are drawn at the foot of this hem, the next four threads left and then two more drawn.

Skip three-quarters of an inch and draw two more groups of two threads to form corners as illustrated.

Finish ends where threads are cut with five buttonhole stitches making the center stitch longer than those at the ends. Wrap embroidery thread around groups of four threads which cross at corners leaving a tiny square of linen in the center.

A monogram may be added or this same idea used in making towels, scarfs, table runners or luncheon sets.

Save Miles, Minutes

HOUSEWIVES need convenient sewing rooms as well as convenient kitchens, says the State College of Home Economics at Ithaca, N. Y.

The college kept records of the time spent and the distance traveled by several women in making a simple apron, and found that when all the necessary equipment was arranged conveniently in one room, an average of four hundred feet less walking had to be done and 16 minutes were saved.

The experiments were conducted in typical, Madison County homes. One housewife had her equipment in six rooms, worked in three different rooms, walked 698 feet, and took more than an hour to do the job. When a compact sewing cabinet was installed, the same woman made a similar apron in less than three-fourths of an hour and traveled only 55 feet. The sewing cabinet contained a pressing board, flat iron, cutting table and other supplies.

It is not always possible to have an ideal sewing cabinet, but much time and energy can be saved in any home by arranging the sewing equipment conveniently in a room by itself or in a corner of a room

For the Young Girl and Younger Sister

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5903

5893

5903.—Three sizes: 2, 4 and 6 years. A 4-year size will require 2 yards of 36-inch material with ¼ yard of contrasting material for facing on collar, cuffs and legbands and for pockets. Pattern, 10 cents.

5893.—Three sizes: 16, 18 and 20 years. An 18-year size, if made as illustrated, will require 2¼ yards of 40-inch material with ⅝ yard of contrasting material 36 inches wide for facing on belt, collar and vestee. Pattern, 10 cents.

You'll Want To Try This

GRAPE APPLE COMPOTE

½ dozen firm tart apples
6 teaspoons sugar
½ cup water
½ cup grape juice
2 tablespoons sugar
2 tablespoons chopped nuts

Core and peel the apples. Lay them in a pudding dish close together; put a teaspoon of sugar in the opening left in each by the removal of the core; put over them the water to keep from scorching; cover closely and bake slowly until apples are tender. Take from stove, pour on grape juice, sprinkle with remaining sugar and nuts and set aside to cool. Serve with whipped cream.

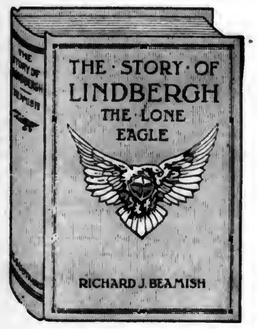
From the Plow to the Plane

Another farm bred boy gains eminence



You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8½ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

Kindergarten Proves Invaluable In Child Training

I WAS paying a week-end visit to an old classmate. I had looked eagerly forward to this visit as I had not seen my friend since her marriage and had never seen her little five-year-old daughter.

Immediately upon my arrival, the conversation turned upon Betty.

"Oh, I am so anxious for you to see her," said the fond mother. "She is playing in the sand now. I'll call her in a few minutes. I like to keep her out-of-doors when I am working, so that she is out of my way."

I glanced out of the window and saw a little figure bending over a sand pile.

Her mother went on, "You know Betty is a queer child, not at all like other children. I have quite a time disciplining her. She doesn't eat normally, and she never seems quite happy and contented."

"Does she have anyone to play with?" I asked.

"No, the other children of the neighborhood all go to kindergarten."

"And doesn't Betty go?" I asked.

I was shocked at her reply. "No, I haven't sent her yet and I'm not going to send her next year and perhaps not the next. She is all I have and I want her for companionship."

Companionship of Children Counts

I groaned inwardly at such self-confessed selfishness as this. "But," I remonstrated, "do you realize of what you are depriving your child? Do you know how much the companionship of children during these years will mean to her?

The lunch was ready. Betty's mother went to the door and called. No response from the little figure bending over the sand. She called a second and a third time. Then Betty raised her head. An annoyed look crossed her face, but she came. At her mother's reproof she answered a bit resentfully, "My pie was almost finished. I was just putting the raisins in."

"Well, never mind the pie now. Lunch is ready. Wash your hands. My, how dirty you have gotten yourself. How many times must I tell you to be careful?"

Betty opened her mouth to remonstrate but her mother silenced her.

The lunch was simple and appetizing. Betty had a plate and mug all covered with fluffy yellow chicks and a small knife, fork and spoon lay beside them. Everything was arranged to appeal to a child's taste and yet Betty sat idly playing with her food. Her mother coaxed, scolded and finally brought a ruler to the table and threatened to whip her if she did not eat. Even then Betty ate very little.

After lunch I suggested that she take me up to her play room and show me her toys. Here was a great wonderful house, lighted with real electric lights. There was a real bathroom with all of the fixtures and a kitchen with a gas stove and sink. Everything was as complete as in the best modern home. Betty demonstrated the lights and showed me all the things. Then she sat back and folded her hands.

Are Toys Simply Ornaments?

"Why don't you play with your house?" I asked.

"Oh, it isn't to play with; it's just to look at, Mother says."

"Would you like to make one that you can play with? If you will bring me an old shoe box and a pair of scissors, I'll show you how to make one."

Betty ran delightedly to her mother but came back crestfallen. "Mother says she doesn't want me to cut because I get scraps around."

Then I suggested that we play house and undress the doll and put it to bed but this, too, Betty said could not be done. Mother had washed the doll's clothes and dressed it to go on a trip the next day with Betty and it must be kept clean and tidy. And so I went on from one thing to another, trying to find something that the child could really do for herself but without success. There must be nothing to make the house or the child look untidy. If she did become interested for a moment in a picture book, her mother broke the thread of her thought by calling her to wash her hands. No wonder she was unnatural, hard to govern and did not eat. The companionship of children, activity directed into natural, child-like channels, and less adult interference would have done much toward making Betty a happy, contented and obedient child.

A Boon to the Country Woman

IF YOU (like me) have been hoping for electricity, and if your hopes are not near realization, then save your coins and buy for yourself one of the laundry helps which very many of our recent wash day letters emphasized. They do not cost much and are a wonderful boon to the country woman.

A gasoline iron like the one pictured here will more than pay for itself in the fuel saved during just one summer. Surely that's worth while, and you may keep the iron for many more summers and winters, too.

Do Your Irons Eat Up Time?

Now think of the time you save. Even if you are near the stove where the irons are heated, changing of irons eats up twelve minutes of each hour; time enough to iron a long linen tablecloth. With this iron, you need not leave your post, and a huge family ironing can be managed in one-half the time needed with "sad" irons, no matter how many you operate.

If you appreciate your feet, let's consider that angle. Pretty hard to sit and iron when jumping up every few moments to renew the heat. But you can be glued to your stool and keep at it if you operate a gasoline iron.

One of my cousins had a worn path on her linoleum, and she says it's from ironing day. And that is a foolish waste, isn't it? Yet the worst of all is the mother's spirit. That is a precious thing which affects the entire family—yes, the whole community. We cannot afford to let mother's spirits droop because of irons. No, a savings iron heads this week's shopping list.—G. S. S.

The household martyr doesn't realize that everyone else gets less joy than the martyr does.

Too many people think more about what they have to live on than about the way they live.

Fertilize Wheat?

(Continued from last week)

THE foregoing are reasons for fertilizing wheat expressed, for the most part, in the words of men who grow the crop. There is still another reason, or group of reasons, which I picked up here and there in county agent offices, at agricultural experiment stations and, in some cases, at fertilizer manufacturers' offices. I refer now to the hard, cold facts in black and white on the printed page of the experiment station bulletin. These pages represent 10, 20 and even 40 years of accurate field experimental work.

"The fertilizer cost is about $2.50 and the increase in crops is worth four or five times that sum," from a bulletin of the Missouri College of Agriculture. The value of the increase was due to average gains of more than five bushels of wheat and over a half ton of clover hay following the wheat.

In a report by the Indiana Experiment Station covering experiments on the Soils and Crops Experiment Farm I found: "On manured land, acid phosphate has been the most profitable fertilizer, returning $6.46 at a cost of $2.70 for the phosphate. Without manure, the use of 2-12-4 fertilizer on the wheat crop has been quite profitable, returning $12.71 at a cost of $4.94 for the fertilizer."

The "How" Is Quickly Answered

On the oldest fertilizer experiment plots in America, at the Pennsylvania Experiment Station, the average increase from fertilizer for more than a third of a century has been 12 bushels of wheat.

Add to the foregoing the results obtained in many other states and you will find more reasons why wheat is, or should be, well fertilized.

It doesn't take long to give a summary of the farmers' answers to the second question: How? Nearly all use the fertilizer-wheat drill. After the first or second year the better results secured from the drill method and the saving in labor as compared to the broadcast-before-seeding method influence most growers in favor of the drill.

In a few cases I found that a broadcast lime spreader had been used with fair success, the fertilizer being applied and disced in just before wheat-sowing. One man said he started by scattering the fertilizer by hand on a four-acre field. The next year he used the grain drill. Another put the fertilizer in the hopper with the wheat but found that the wheat and fertilizer went thru in varying proportions with a resulting uneven stand of grain.—H. W. W.

Holds First Record

JOHN H. RICHTER, of Dauphin County, is the first to pay the lid off the 1927 Keystone 400 Bushel Club. His record this year is 421.7 bushels on a measured acre.

Mr. Richter had 79 acres of Cobblers planted 13 by 33 inches. He used 16 bushels of seed per acre and planted the potatoes in the measured acre April 7th. Fifteen hundred pounds of fertilizer were applied and the vines were sprayed five times.

Golden Acre Best Variety

DEMONSTRATION tests in Cambria County by vegetable gardening specialists of the Pennsylvania State College prove Golden Acre to be a superior variety of early cabbage for that section.

The Golden Acre variety is earlier, smoother and more solid than Early Jersey Wakefield and Copenhagen Market, the other two varieties in the demonstrations. The results verify the recommendations of the Pennsylvania State College vegetable gardening extension service to growers during the past few years to plant the Golden Acre variety.

H A V E A C A M E L

On the heights of contentment . . .

MODERN smokers have in Camel such tobaccos and blending as were never offered in cigarettes before, regardless of price. Camels may be had everywhere—because they please the taste of smokers everywhere. Money cannot buy choicer tobaccos than you get in this famous cigarette, and the blend is so mellow and smooth that there is never a tired taste, no matter how many you may choose to light.

The producers of Camel, the country's largest tobacco organization, concentrate all their purchasing and manufacturing resources in this one brand of cigarettes. Into it goes their undivided pride and skill to produce such a smoke as the world has never known before.

The result of Camel's quality is its leadership among cigarettes. Modern smokers, won by its choice tobaccos, by its ever-dependable taste and fragrance, have awarded it first place. You're invited to modern smoking enjoyment.

"Have a Camel!"

OUR YOUNG PEOPLE'S FORUM

Winners In the Letter Box Contest

Over Twelve

Dear Forum Friends and Editor:—I am going to tell you about a camping trip five of my girl friends and I took a few weeks ago. Two of the girls and I started to hike from our homes at 7:30 o'clock for Bloomingquist Cabin, located on East Branch Creek, seven miles away. The other three girls rode over with the man who hauled our camping necessities. We arrived at the camp about 10:00 o'clock to find it scrubbed and as neat as a pin. The cabin was quite large with an open fireplace at one end. Not very far south of the cabin was an excellent swimming pool. A little ways up the stream was a rocky bank, around which the creek ran. Here we could try our skill at fishing.

After we rested awhile we had early dinner for the walk had made us hungry. The dinner was delicious, everything having a mild taste of wood smoke. After dinner we went fishing and caught 14 fish for our evening meal. Later in the afternoon we went swimming. After supper we went to a farmhouse about two miles away to call up our parents to tell them that we arrived safely and were having a delightful time. We returned to the cabin to retire for a good night's sleep.

Next morning we were awakened by the call of a whippoorwill. We went to the cabin door and looked out to see the sun peeping over the horizon. The crisp morning air was fragrant with the odor of the huge pines. The dew-drops sparkled like diamonds in the early sunshine. One could hear the gentle babbling of the water over the moss-grown rocks. It reminds one of Alfred Tennyson's poem, The Brook. "Men may come and men may go but I go on for ever."

We took our morning dip, altho the water was cold and then ate breakfast. After breakfast we walked down the creek till we came to the bridge. On the way back we saw a red fox hop into view and then quickly disappear, to be concealed by the thick undergrowth. After dinner we hiked to town, about five miles away, to get marshmallows for we planned to have a marshmallow toast that evening. The evening was spent in playing games and toasting marshmallows. Also telling ghost stories around the camp fire.

One incident I think none of us shall ever forget. Two of the young people almost stepped over a five-foot bank into the water below. Had it not been for some one standing there we would of had to care for two wet people. We had lots of marshmallows and every one declared they had a wonderful time.

Next morning, after packing our things, we bid farewell to Bloomquist Cabin which had made our summer vacation so much more interesting.—Mary E. Kellar, fourteen, Jefferson County, Pa.

Under Twelve

Dear Cousin Ruth:—In June, 1925, a little black kitty was given to me. Its fur was so black and shiny, with just a wee white spot under his chin, I called it his necktie. He had no tail at all. Not even a little bob tail. I named him Blackie. He grew fast and was a nice big cat by fall. He was so quick to learn and could do many tricks. Strange to me to know how a mere kitty could remember so much. I was very, very fond of him and spent many happy hours with him. He would let me wheel him in my dolly's coach, would jump thru my arms on to a chair, settee or couch. Sometimes he would jump close to five feet upon mama's ironing board where I would fix it for that purpose. He would run up any and all fruit and shade trees. Run out a limb, let his hind part drop, hanging by his front paws much like a monkey does. He had a mew for many of his wants. He just seemed to understand almost everything I said to him.

Every evening when I came from school he'd come up the road to meet me and give a soft mew, more like a loud purr, meaning, "How do you do?" I always said he always greeted me with that low soft voice. He loved to eat raw potatoes, you should have seen him coaxing for them. It was cute.

Well, on the evening of December 23, 1926, he wanted to go out. He had been playing with me, got tired, jumped up into the chair we called his, curled up and slept for a while. Finally he jumped down and asked to be out in his own way. I let him out. I waited a while for he asks always to be let in. He did not mew so I opened the door and called "Blackie, Come Blackie, Kitty Blackie." He didn't come. My parents, sister and I all called and called. He didn't come. We hunted and hunted for him all around the fields and woods. We asked our neighbors if they saw him. We hunted for him for over two weeks, but never found Blackie. Whatever became of him is a mystery. I was almost heart broken. We all missed him, oh! so much. From then until May I had no pet. On May 11, 1927, a neighbor gave me a little eleven-day-old motherless black and white kitten; a little, half-starved, helpless thing. It is here with me now. 'Tis very cute and nice but not any smarter than Blackie was.

When my mamma first saw this wee kitty she said it wouldn't live. How were we to feed it? She thought up a plan at last. She hunted up a small red rubber ear syringe, heated some cow's milk and put it in the syringe. We put the little end of the syringe in the wee kitty's mouth. Our puzzle was solved. It worked fine. The kitty is four months old now and just a wonder. We all love it almost as much as we did Blackie.—Clarabelle Chambers, ten, Chester County, Pa.

FEEDING THE CHICKENS
Alenna Rhine, (X), Juniata County, Pa.

From Forum Members and Friends

Dear Cousin Ruth:—We have been readers of Pennsylvania Farmer several years and I have always enjoyed reading the Forum letters. I have a small garden in which I have vegetables and flowers planted. The flowers are blooming very nicely. I like to watch the different plants grow.—Alice Goodyear, Lebanon County, Pa.

Dear Forum Page:—I have not written for quite a while as I have been busy. How many of the Forum friends have read Little Women and Little Men? They sure are fine.

I am sending a picture of myself. I am feeding the chickens. We had about 200 then. This was taken a year ago.—Alenna Rhine, (X), Juniata County, Pa.

Dear Cousin Ruth:—Our church desired to have a steak supper at the "Elms" on Friday evening. We drove about seven miles in our car and when we got there they had the steak almost broiled. For supper we had everything that you could think of.

Helen Stankay, of Erie County, Pa., wanted a recipe for cake icing. I am sending two that I put on most of my cakes.

WHITE OR COLORED ICING

1½ cups confectioner's sugar
2 tablespoons of hot milk
½ teaspoon butter
½ teaspoon vanilla extract

Add butter to hot milk, add sugar slowly to make right consistency to spread, add vanilla. Spread on cake.

For pink icing add one teaspoon strawberry or other fruit juices. For yellow icing add one teaspoon egg yolk and flavor with orange rind and one teaspoon lemon juice. For maple icing add 1 teaspoon maple flavor.

Another icing I also think is good:

JELLY MERINGUE

White of one egg
½ cup of currant or other jelly

Put white of egg and jelly together into a bowl and beat with an egg beater until stiff. Spread between layers or on top of cake.—Frances Bauman, (X). Bradford County, Pa.

Here's A Question

DEAR FORUM BOYS AND GIRLS:—This week I'm able to let you in on the secrets we've had so much discussion about. On the page you will find the prize winning LETTER BOX letters. During the next few days' time Mary E. Kellar and Clarabelle Chambers (the winners) will receive a SECRET thru the mails. Shall I tell you what this secret is? Well, the secret is going to be a school companion. Mary and Clarabelle will have started to school before the pencil boxes arrive but I'm sure they will find plenty of use for them during the school term.

I hope all our Forum friends have made a resolution to study diligently during the coming school year. You know our parents are making many sacrifices to give us an education and we should show them we appreciate all they are doing for us by making the best of our school days. By making the best of our school days I mean, of course, studying our daily lessons carefully. I wish each one of you success this term.

What kind of contest shall we have next?

THE FORUM EDITOR.

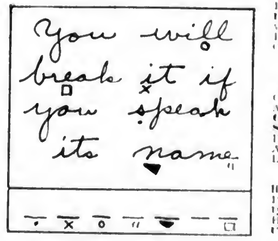
OUR LITTLE FOLKS' PUZZLE CORNER

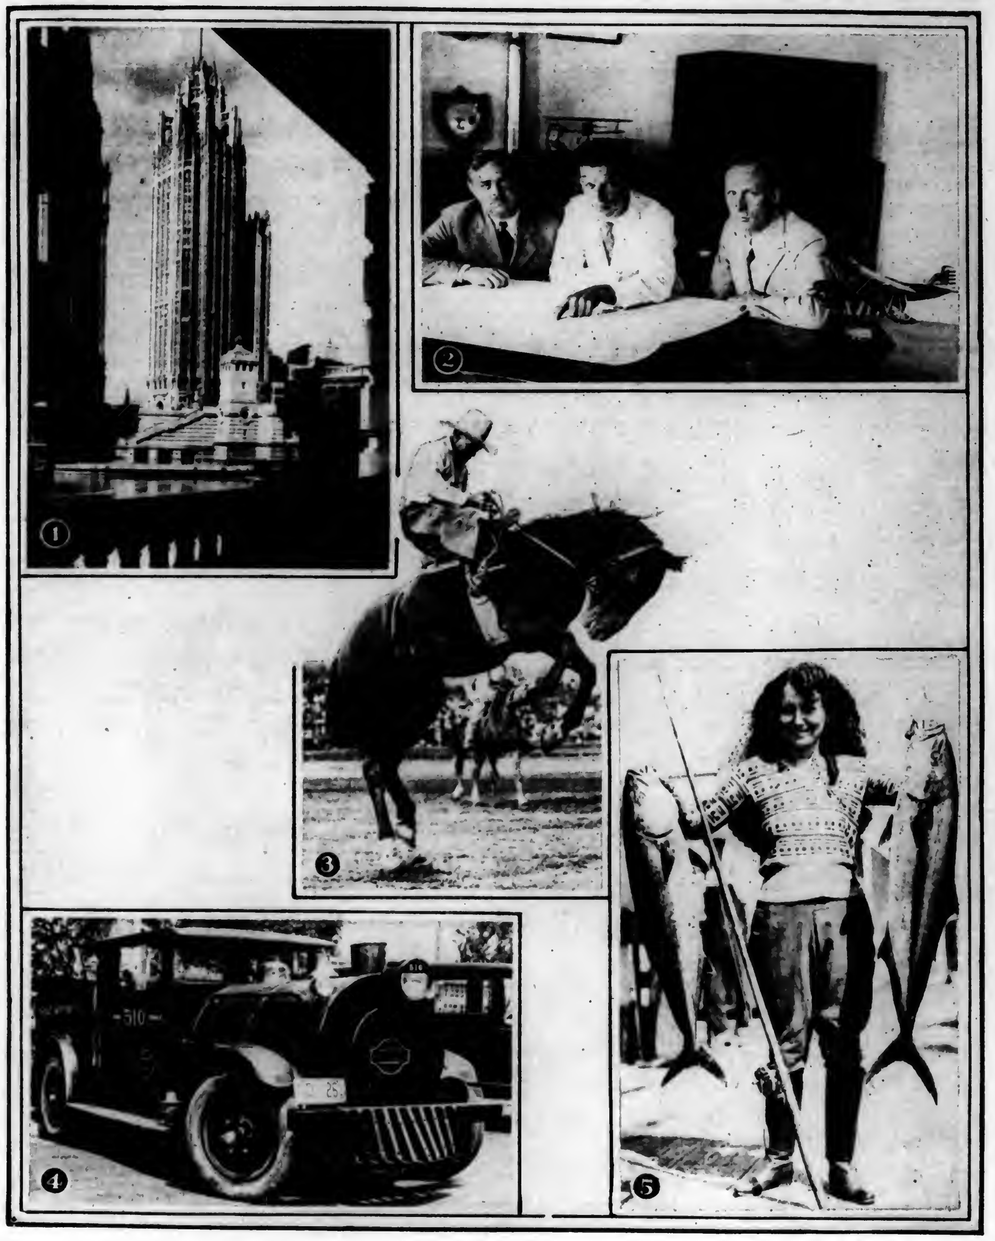
DEAR LITTLE FOLKS:—How'n school going by this time? Give "Teacher" my best regards, for surely you must all be nice youngsters to have in class. This strange "something" which you are going to find out about this week is a very mysterious thing. If you can learn to keep it at the right time you will find it a great help. But another queer thing about it is that sometimes you will be very glad if someone else keeps it. And there are times when you just naturally must smash it to smithereens. The way to solve this puzzle is to notice the strange little signs under certain letters in the written sentence. Place on the blanks the letter under which you find the sign which appears under the blank. One blank has no sign, but I'm hoping you will be able to figure out what that one missing letter is you need to spell this mysterious word. When you have found the answer, send it to me either on a postcard or in a letter so that it reaches me by September 24th. PLEASE TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. (Every week somebody forgets one of these things, or else somebody else wants me to guess names or addresses.) The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the August 27 issue (about that something of yours your friends use more than you do) is: YOUR NAME.

The prize winners are: Stefania Bittner, age 12, Bertha, Pa.; Russell Falconer, age 11, Curtisville, Pa.; Junior Keerbaugh, age 8, Hustontown, Pa.; John Little, age 7, Nottingham, Pa.; Bertha Miller, age 11, Greensboro, Md.; Harold Miller, age 8, York Springs, Pa.; Grace A. Roberts, age 10, Philadelphia, Pa.; Earl Shelly, age 8, Fountainville, Pa.; Goldie R. Stoner, age 8, Laurel, Pa.; Dorothy Stratton, age 10, Bridgeton, N. J.



PASSING EVENTS IN PICTURES



1.—A view of the Tribune Building, Chicago. This is the home of one of Chicago's leading newspapers.

2.—Edward F. Schlee (right) and William Brock (left) conferring with Lieutenant Lester Maitland, first to fly from the Pacific Coast to Hawaii. Schlee and Brock, round-the-world fliers, have completed half of their journey in the Pride of Detroit without mishap.

3.—"Home Brew," a "bucking broncho," warms up during training for the Pendleton Round-Up which will be held at Pendleton, Oregon, on September 14th.

4.—No, this is not a new type locomotive. It is only an oddly constructed auto wrecker built on an automobile chassis. It has head lights, a bell, and an air whistle. The exhaust goes out thru the smoke stack, and the wrecking crane is in the tender at the rear.

5.—Miss Myrtle Munson took advantage of the opening of the yellow-tail fishing season by hooking these two huge yellow-tails while fishing off the coast of Southern California. Each of these fish weigh nearly as much as Miss Munson does.

OUR YOUNG PEOPLE'S FORUM

Winners In the Letter Box Contest

Over Twelve

Dear Forum Friends and Editor:—I am going to tell you about a camping trip five of my girl friends and I took a few weeks ago. Two of the girls and I started to hike from our homes at 7:30 o'clock for Bloomingquist Cabin, located on East Branch Creek, seven miles away. The other three girls rode over with the man who hauled our camping necessities. We arrived at the camp about 10:00 o'clock to find it scrubbed and as neat as a pin. The cabin was quite large with an open fireplace at one end. Not very far south of the cabin was an excellent swimming pool. A little ways up the stream was a rocky bank, around which the creek ran. Here we could try our skill at fishing.

After we rested awhile we had early dinner for the walk had made us hungry. The dinner was delicious, everything having a mild taste of wood smoke. After dinner we went fishing and caught 14 fish for our evening meal. Later in the afternoon we went swimming. After supper we went to a farmhouse about two miles away to call up our parents to tell them that we arrived safely and were having a delightful time. We returned to the cabin to retire for a good night's sleep.

Next morning we were awakened by the call of a whippoorwill. We went to the cabin door and looked out to see the sun peeping over the horizon. The crisp morning air was fragrant with the odor of the huge pines. The dew-drops sparkled like diamonds in the early sunshine. One could hear the gentle babbling of the water over the moss-grown rocks. It reminds one of Alfred Tennyson's poem, The Brook. "Men may come and men may go but I go on for ever."

We took our morning dip, altho the water was cold and then ate breakfast. After breakfast we walked down the creek till we came to the bridge. On the way back we saw a red fox hop into view and then quickly disappear, to be concealed by the thick undergrowth. After dinner we hiked to town, about five miles away, to get marshmallows for we planned to have a marshmallow toast that evening. The evening was spent in playing games and toasting marshmallows. Also telling ghost stories around the camp fire.

One incident I think none of us shall ever forget. Two of the young people almost stepped over a five-foot bank into the water below. Had it not been for some one standing there we would of had to care for two wet people. We had lots of marshmallows and every one declared they had a wonderful time.

Next morning, after packing our things, we bid farewell to Bloomquist Cabin which had made our summer vacation so much more interesting.—Mary E. Kellar, fourteen, Jefferson County, Pa.

Under Twelve

Dear Cousin Ruth:—In June, 1925, a little black kitty was given to me. Its fur was so black and shiny, with just a wee white spot under his chin, I called it his necktie. He had no tail at all. Not even a little bob tail. I named him Blackie. He grew fast and was a nice big cat by fall. He was so quick to learn and could do many tricks. Strange to me to know how a mere kitty could remember so much. I was very, very fond of him and spent many happy hours with him. He would let me wheel him in my dolly's coach, would jump thru my arms on to a chair, settee or couch. Sometimes he would jump close to five feet upon mama's ironing board where I would fix it for that purpose. He would run up any and all fruit and shade trees. Run out a limb, let his hind part drop, hanging by his front paws much like a monkey does. He had a mew for many of his wants. He just seemed to understand almost everything I said to him.

Every evening when I came from school he'd come up the road to meet me and give a soft mew, more like a loud purr, meaning, "How do you do?" I always said he always greeted me with that low soft voice. He loved to eat raw potatoes, you should have seen him coaxing for them. It was cute.

Well, on the evening of December 23, 1926, he wanted to go out. He had been playing with me, got tired, jumped up into the chair we called his, curled up and slept for a while. Finally he jumped down and asked to be out in his own way. I

FEEDING THE CHICKENS
Alenna Rhine, (X), Juniata County, Pa.

let him out. I waited a while for he asks always to be let in. He did not mew so I opened the door and called "Blackie, Come Blackie, Kitty Blackie." He didn't come. My parents, sister and I all called and called. He didn't come. We hunted and hunted for him all around the fields and woods. We asked our neighbors if they saw him. We hunted for him for over two weeks, but never found Blackie. Whatever became of him is a mystery. I was almost heart broken. We all missed him, oh! so much. From then until May I had no pet. On May 11, 1927, a neighbor gave me a little eleven-day-old motherless black and white kitten; a little, half-starved, helpless thing. It is here with me now. 'Tis very cute and nice but not any smarter than Blackie was.

When my mamma first saw this wee kitty she said it wouldn't live. How were we to feed it? She thought up a plan at last. She hunted up a small red rubber ear syringe, heated some cow's milk and put it in the syringe. We put the little end of the syringe in the wee kitty's mouth. Our puzzle was solved. It worked fine. The kitty is four months old now and just a wonder. We all love it almost as much as we did Blackie.—Clarabelle Chambers, ten, Chester County, Pa.

From Forum Members and Friends

Dear Cousin Ruth:—We have been readers of Pennsylvania Farmer several years and I have always enjoyed reading the Forum letters. I have a small garden in which I have vegetables and flowers planted. The flowers are blooming very nicely. I like to watch the different plants grow.—Alice Goodyear, Lebanon County, Pa.

Dear Forum Page:—I have not written for quite a while as I have been busy. How many of the Forum friends have read Little Women and Little Men? They sure are fine.

I am sending a picture of myself. I am feeding the chickens. We had about 200 then. This was taken a year ago.—Alenna Rhine, (X), Juniata County, Pa.

Dear Cousin Ruth:—Our church desired to have a steak supper at the "Elms" on Friday evening. We drove about seven miles in our car and when we got there they had the steak almost broiled. For supper we had everything that you could think of.

Helen Stankay, of Erie County, Pa., wanted a recipe for cake icing. I am sending two that I put on most of my cakes.

WHITE OR COLORED ICING

1½ cups confectioner's sugar
2 tablespoons of hot milk
½ teaspoon butter
½ teaspoon vanilla extract

Add butter to hot milk, add sugar slowly to make right consistency to spread, add vanilla. Spread on cake.

For pink icing add one teaspoon strawberry or other fruit juices. For yellow icing add one teaspoon egg yolk and flavor with orange rind and one teaspoon lemon juice. For maple icing add 1 teaspoon maple flavor.

Another icing I also think is good:

JELLY MERINGUE

White of one egg
½ cup of currant or other jelly

Put white of egg and jelly together into a bowl and beat with an egg beater until stiff. Spread between layers or on top of cake.—Frances Bauman, (X), Bradford County, Pa.

Here's A Question

DEAR FORUM BOYS AND GIRLS:—This week I'm able to let you in on the secrets we've had so much discussion about. On the page you will find the prize winning LETTER BOX letters. During the next few days' time Mary E. Kellar and Clarabelle Chambers (the winners) will receive a SECRET thru the mails. Shall I tell you what this secret is? Well, the secret is going to be a school companion. Mary and Clarabelle will have started to school before the pencil boxes arrive but I'm sure they will find plenty of use for them during the school term.

I hope all our Forum friends have made a resolution to study diligently during the coming school year. You know our parents are making many sacrifices to give us an education and we should show them we appreciate all they are doing for us by making the best of our school days. By making the best of our school days I mean, of course, studying our daily lessons carefully. I wish each one of you success this term.

What kind of contest shall we have next?

THE FORUM EDITOR.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—How's school going by this time? Give "Teacher" my best regards, for surely you must all be nice youngsters to have in class. This strange "something" which you are going to find out about this week is a very mysterious thing. If you can learn to keep it at the right time you will find it a great help. But, another queer thing about it is that sometimes you will be very glad if someone else keeps it. And there are times when you just naturally must smash it to smithereens. The way to solve this puzzle is to notice the strange little signs under certain letters in the written sentence. Place on the blanks the letter under which you find the sign which appears under the blank. One blank has no sign, but I'm hoping you will be able to figure out what that one missing letter is you need to spell this mysterious word. When you have found the answer, send it to me either on a postcard or in a letter so that it reaches me by September 24th. PLEASE TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. (Every week somebody forgets one of these things, or else somebody else wants me to guess names or addresses.) The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the August 27 issue (about that something of yours your friends use more than you do) is: YOUR NAME.

The prize winners are: Stefania Bittner, age 12, Bertha, Pa.; Russell Falconer, age 11, Curtisville, Pa.; Junior Keebaugh, age 8, Hustontown, Pa.; John Little, age 7, Nottingham, Pa.; Bertha Miller, age 11, Greensboro, Md.; Harold Miller, age 8, York Springs, Pa.; Grace A. Roberts, age 10, Philadelphia, Pa.; Earl Shelly, age 8, Fountainville, Pa.; Goldie B. Stoner, age 9, Laurel, Pa.; Dorothy Stratton, age 10, Bridgeton, N. J.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

They both looked at me with some uneasiness. Krafft hastened to speak.

"I may have been a bit rough with you back yonder," he began, "—but no, hanged if I was. I know how it is. You get all excited over a narrow squeak of some sort, and do well thru it, then when it's over you cry or laugh or get drunk. Well enough if you wait till it's over. If you had waited until we got this far, you could have laughed yourself sick before I said a word. But to act the fool meant that those fellows would have been curious and a close look at you would have meant the game was up. Better admit I did you a good turn, tho in truth I look for no thanks for it."

Being young and foolish, and moreover being overwrought by the passage of the river and what followed it, all I had for answer was to hit Krafft on the mouth as hard as ever I could.

It was not much of a fight. Krafft was stronger and heavier than I. Moreover, to my pain and astonishment, he fought not in the fashion of the boxing ring, but of the backwoods. He used his feet when he could, butted me with his head at close quarters—this in addition to using his fists with a fair amount of skill.

IT WAS a blow from his left foot that finished me. I was rushing in at him, in an attempt to make fury and speed make up for strength, when he turned a quarter away from me, bent over sharply at the waist, drew up his left leg and let fly. His left foot with all his weight behind it caught me just below the chest. I felt my limbs go numb, endured a moment of excruciating agony and toppled over.

The wagon served to carry me again for the hours of the afternoon that yet remained. After I had gained strength, I fumbled for my clothes and got them on. Then I lay back again to gain energy for what I had to do.

By this time, I was beyond any thinking or reason. For the moment all my dislike of the frontier, of the road to Carolina, of hard living and hard men, was concentrated at my hate for Krafft. My pride was bruised raw, and the sound of the German's voice as he talked to O'Neill was salt on it.

Evening drew on, and finally after one long, hard pull, the oxen stopped. There were sounds that indicated camp was being made. This was the moment I had been waiting for. I slipped out.

As I came around the wagon, however, I found that I had been fooled. No signs of making camp were in evidence. The oxen were still hooked up and breathing hard. I perceived we were on the crest of that ridge we had been climbing since we left the river, and a few yards forward, where a slight knoll lifted itself above the brush land by the roadside, the members of the party were grouped together. They were looking toward the south.

As I came toward them, I could not help but follow that gaze. Below us the road dipped suddenly and ran right and left to seek for an easy passage. A little beyond, the land fell away even more suddenly and the eye plunged on to where hills smoothed themselves out to join the valley floor. That valley ran on to the south until it lost itself in the gray distance. To each side of me, steep hills covered with woods sucked a deeper darkness from the gathering twilight. Far to the right they merged and ran into something greater, and the faint light still in the west outlined for a moment a glimpse of far blue ramparts.

"The Valley of the Shenandoah," Krafft was saying, and there was satisfaction in his tone. "And one of our people, old Yost Hite, was the first man to start a plow in it."

A branch cracked under my foot. They turned. I addressed myself to O'Neill.

"You have been very kind to me," said I, "but I must not impose on that kindness longer. I am going on, and before going wish to pay you and your good wife the thanks that are due. I regret deeply that I cannot pay you in more than thanks."

They looked at me in silence. Then Krafft spoke:

"IF A good fight and a good licking makes a fool of you, then you are too soft for this country. Best stay with me. I know this country and am going your road."

"Sir, if we were in a civilized community or if you knew the meaning of the code of a gentleman, this matter of ours would end here," I declared with what I hoped was the proper note of cool anger. "With pistols or small swords, I am quite willing to meet you. I own myself not over perfect in the butting, kicking and gouging in which you seem to be expert."

If I had angered him, he did not show it. Instead, he took out a short clay pipe, lit it, and began to puff before he answered.

"We fight out here, not to fit rules, but to win. If you were one of Tryon's men, I would shoot you in the back from under a bit of brush and never give you a chance for your life. And neither would Fanning or any of them, if they were to catch me.

"But go on, if you must. Before you start, let me give you this warning. This play of yours of being poor and riding in an immigrant wagon was good enough. I wonder you thought of it. From now on it will do you no good and delay you. Buy yourself a good horse and a pair of pistols at Fredericktown."

To this I said nothing, but started to move away down the slope. Krafft followed me. When we were a little distance away, he came to my shoulder and said in a hoarse whisper: "There are Sons of Liberty in more places than Philadelphia or Boston. If you ever want help, I am still your man. My brother is down in Carolina. Fanning sold him out last year. We shall pay out the skunk in lead. Use your head, lad, or when you get down there I shall find you hanging on a gibbet and better men beside you."

At this, what I should have done was to turn around, make amends, and go with Krafft. It would have been the part of wisdom, for my own sake as well as for the safety of the message. Yet my anger was still too strong. Stronger still was my stubbornness, and having said I would go on, go on I must.

I went on down the hill, and in a few minutes Krafft's figure had blurred into the dusk. For a little longer, I marked O'Neill against the sky. Then darkness and a turn of the road shut him out. It was as if the whole party had never been. I walked in a world of my own, dark woods on one side, on the other the gray mist that filled the valley like a lake.

The hills were behind, and the east was gray when I finally stopped and hunted for a place to sleep. Once more, penniless and friendless, I was on the road to Carolina. Yet for that I slept no less soundly.

Perhaps I was bolder than I had been before; perhaps the people saw fewer strangers and were less suspicious. At any rate, I found a good breakfast for the asking and had no trouble finding another hospitable German about supper time.

This man, indeed, was more than hospitable. I had said something of my experience and mentioned the name of Krafft. My host was all alertness.

"You know August?" he asked. "Good; very good! And you come from Philadelphia?"

I said, and honestly, that altho Mr. Krafft and I were not at the moment quite the best of friends, he had been of much service to me. Indeed, it appeared likely that if it hadn't been for his help, I might not have been so far on my journey. This admission rather surprised me even as I said it. Truth was that I was beginning to be somewhat ashamed of my conduct of the day before and perhaps even to harbor an unwilling wish that I might find Krafft again.

"YOU will pardon me," my host suggested, "if I have a few words with Oscar. Oscar is but lately from the old country and does not understand the English well!"

This surprised me, because Oscar was the man I had addressed when I came up to the farm. He understood English enough to know what I wanted. Apparently something was to be said to him that I was not to hear.

"Tomorrow," instructed my host finally, "you will go to Fredericktown. There you will ask for Otto Beck. Otto will wish to see a friend of August, particularly if that friend comes from Philadelphia."

Tho I let him know I was curious, nothing more would he say on that subject. Instead, he insisted on talking about the non-importation agreements and the troubles up Boston way.

Three miles on the valley road brought me to Fredericktown, a pleasant little place on the frontier, more, penniless and friendless, I was with one long street and quite a cluster of houses down each side. As I came into town, I noticed the ruins of a fort over to one side of the road. It was Fort London, I was told, built during the Indian troubles and abandoned since.

I found Peck easily. By this time I was pretty well convinced that Krafft meant to be my friend, at least so long as I carried a message for the Sons of Liberty. His friends might therefore be of service.

A boy driving a couple of cows out to pasture was my guide. He threw a stone at his cows to warn them they were not to presume on his absence, and then pelted across the street to fling open the door of a small frame shack.

"Herr Beck!" he shouted within, and jerked a thumb back at me. Then, after a remark in German I could not fathom, he dashed off again after his herd.

Somewhat embarrassed, I followed his lead and stepped inside the door. The gentleman who rose to meet me was a short, fat man of around forty. He wore a skull cap of white linen, a square-cut coat, and, what struck me as odd, his garters were fastened below the knee-band of his breeches, and were, moreover, a bright green.

He looked me over very coolly, and, as it seemed, counted every hole in my breeches and every stain on my coat. I began to shrink into myself and wish I had not come.

"Well?" he asked.

"Herr Steiner, a farmer up the road, told me to see you," I began. "I don't know why."

Beck looked thoughtful. He suggested that we sit down. We did. He mentioned the sort of weather we had been getting, the immigration to the valley, the best crops for a new settler to plant, the proper yoke—

He broke off suddenly, leaned forward and snapped.

"When did you leave Philadelphia?"

I told him.

"Why?"

I was dumb. Then a thought occurred to me. Steiner might send on to this man two kinds of strangers, spies and scouts of the seaboard gentry and men allied with the Sons of Liberty. Beck was going to make no break until he found out which I was.

I thought it wise to help him.

"Krafft asked me the same," I replied and smiled. "Do you all use the same catechism?"

We got on better after that. To him I finally admitted more than I had to Krafft—namely, that I was carrying some word south to the Sons of Liberty of Philadelphia and Boston. I mentioned no names, but told him of Betharaba, the fort of the Moravians, was my aim.

"Be careful there," Beck suggested. "They are good people and in a way of my own country. Yet they love peace too well, I think, and bow very low to the powers that be."

When I made as if to go on, Beck would have none of it till he had bustled around, got me a pack to sling on my shoulders and some food and extra shirt and pair of stockings to put in it. All of which I welcomed, yet was somehow ashamed to take.

I was all ready to refuse to accept any money, when it became clear that I was not to be offered any. Beck was quite plain about it.

"These things are nothing," he said. "I would do this for any man who is with me, let alone one on an errand as important as yours. But money—it is a scarce thing to get hold of. If I get enough cash in hand to pay my taxes, I am lucky."

HE POINTED out the road I was to take, a road, he said, that had been marked by Indians for hundreds of years. Here came the men of the Five Nations from the valley of the Hudson, here the Shawnees from the Ohio, to carry war to the Cherokees. And up this same road, fifty years before, the Tuscaroras, driven out of North Carolina by settlers and Cherokees, had come to find refuge from the Sioux and to make the Five Nations six. In its years of settlement, the trail had been widened and tramped by wagons, oxen and horses, but in certain places I could see the old Indian trail itself, a slot not a yard wide, cut knee-deep in places. Traveling single-file, those war and hunting parties had made their mark on the earth itself. How many years, how many feet had it taken to make that great trace?

If Indians had made shift to go on foot down the valley for centuries, there was no reason why I could not do the same. Yet as I left Beck, I could not help wishing that the measure of his hospitality had extended to the loan of a horse. I remembered how my old mount would have clipped off the miles.

Yet tramping was getting easier for me. My feet stood up under twenty or thirty miles a day in good shape now. As for food and shelter, I had a list of names all the way down the valley, that made it seem I would have no trouble on that score. Beck had done well by me.

As I tramped that day, I began to wonder just where I belonged in this drama in which I found myself. In Philadelphia, I felt myself a king's man and a conservative. Out here I was classed as a fugitive from justice or a revolutionist. With my original views, could I stay with the party of my uncle? With the blood of Major Dunston on my hands, and with the record of performing a considerable service for the Sons of Liberty, could I find a place again with the conservatives of the seaboard?

AT THE bottom, of course, politics meant little to me. If I could somehow stay conservative and regain an income, it meant I could enjoy the plays, the dances, the civilized amusements of the seaboard. If I were forced to stay in the radical camp, then it meant a long future filled with nothing but the crudity and the hardships of life on the frontier. I was not yet ready to choose the second path.

It was two days later that I came upon Zion Alexander. The morning was warm for April, almost like midsummer, and there was little shade on the road. Indeed, for a time I had seen but few trees on the floor of the valley. Away in the hills thick forests waved, but where I walked was only a tangle of coarse grass and brush. I had been told that the Indians in the old days used to burn off these open spaces regularly so as to provide fresh pasture for the grass. Some of the settlers called these spaces "Indian meadows."

The sweat was pouring down me and I approached a clump of trees something short of noon with a great deal of pleasure. I had had my eyes on those trees for the last hour, and they looked greener and more comforting every minute.

As I came nearer I saw that there was a man sitting under the nearest. He was a long, gangly creature with an inordinately long jaw; his rusty clothes had a ministerial air.

"This is grateful," said I. "A man fairly fries out in the sun today.

"Let it be a foretaste of the fires of eternity, young man," said he severely, "and serve to warn you away from wantoness and sin."

I was silent and presently he went on:

"It is a fair land but the Lord hath knowledge of the corruption of its princes. Yea, there shall yet be a cleasing of its foulness; its sins shall be washed out in blood." And then to me suddenly:

"Where do you go, young man?"

"To Carolina," I told him.

"For the Regulation?"

I hesitated. Seeing this, he scrambled to his feet with greater alacrity than I had thought possible. He had a staff by him and now he grasped it half way down like a club.

"I am the humble servant of the Most High in these matters," he declared vigorously, "and it is laid upon me that I chastise with some severity those that I find not in the right way of thinking."

"Otto Beck send me on," I thought it best to be definite. "Does that mean anything to you?"

The man sighed and sat down again.

"Something lacking in zeal, but of the right sort," he admitted. "I am glad you are of the faithful. Otherwise we should have had to argue the matter out."

As we went on together that afternoon, I found out a number of things about Zion Alexander besides his name. It was laid upon him as a duty he told me, to preach the Regulation and the overthrow of Governor Tryon. Peter the Hermit had had a similar obligation and mission in years past. So Alexander ranged up and down the valleys preaching the righteousness of the revolt against the North Carolina government and occasionally carrying messages between different groups. I inferred that he had been on such a trip when I met him.

"It is coming to fighting soon," said he. "What we need now is muskets and men to shoot them, and not good wishes. A good man like you is worth all Husband's tracts. If I could only send fifty men down to Hillsboro from this valley in time for the fighting, I should be well content."

Because it was hot and also because his manner irritated me, I remarked shortly that those that did the fighting would more likely than not be shot or hanged for their trouble. What could a group of back country men do against the king's government?"

He took this better than I expected. After considering the matter a moment, he marked that the odds were heavy, and altho the Lord would punish the wicked in His own time that time might not be just now. And then he went on to show me that he had totally mistaken my meaning.

"YOUR belief that our people had better go to the over-mountain country and abandon this land has been mine at times. There is good land over on the New River, in the Green Brier country, and farther south, along the Clinch and the Holston, North Carolina would not bother us there—no, nor Virginia either. A new Exodus—that may be the way."

Of the troubles in North Carolina he talked more freely than any man I had yet met. The population and the business of the country had increased greatly, but the amount of money in circulation had not increased with it. Consequently money, hard or paper, was terribly hard to get. Most trade, in the back country at least, was by barter. But the back country folks had to pay their taxes in cash, and court fees also. This gave an opportunity for the harpies who had secured county jobs in the new section.

Call It a Push and Carry Combine

This might be called the "push and carry" type of combine. The eight-foot cutterbar is mounted directly in front of the tractor which carries the whole harvester-thresher mechanism and furnished power to operate the separator. Two combines of this type were used successfully in Pennsylvania this year. The one pictured above is owned by Irvin K. Kreider, of Lancaster County.

Did you ever hear this one?—

"Do you and your wife ever think the same?"

"When I'm late at the club we do. She keeps thinking what she'll say when I get home, and so do I."

In a will case the plaintiff, when his name was called, stood up in the jury box.

"Why, plaintiff," sad the judge, "what on earth are you doing there?"

"I was chosen, sir, to serve on the jury."

"But," said the judge, "that was a mistake, of course. Surely you must know that you can't sit on a jury and try your own case?"

"Well," admitted the plaintiff. ruefully, "I thought it was a bit of luck."

Crazy

Judge—But what evidence have you that these men are insane?

Officer—Well, your Honor, the Scotchman was standing on the curb throwing handfuls of money into the street and the Hebrew was picking it up and giving it back to him.

"Did you ever run across a fellow by the name of Gardner?" asked a friend of a motorist.

"I never stop to ask their name—I just let 'em lay," he replied.

There is no use to try to joke with a woman. The other day Jones heard a pretty good conundrum and decided to try it on his wife.

"Do you know why I am like a mule?" he asked her when he went home.

"No," she replied promptly. "I know you are, but I don't know why."

Daughter—This piano is really my very own, isn't it, pa?

Pa—Yes, my dear.

Daughter—And when I marry, I can take it with me, can't I?

Pa—Certainly, my child. But don't tell anyone. It might spoil your chances.

"A toast, fellers!" exclaimed the hobo, lifting his tomato can. "Here's to de holidays! Bless de bull t'ree hundred an' sixty-five of 'em!"

A Toss-up

A farmer had an Irish lad in his employ, says the Tatler, and, hearing that the previous day he had been attacked by a bull, the farmer went to find him.

"Hello, Pat," he said. "I heard you had an encounter with a bull yesterday. Who came off best?"

Pat scratched his head and grinned, "Sure, your honor," he said, "it was a toss-up."

"Seems to me that old Mother Nature has provided for every contingency."

"What prompts that moral reflection?"

"Look at the way she has placed our ears, yet a million years ago she didn't even know that we were going to hook glasses over them."

The thing that goes the farthest
Towards making life worth while,
That costs the least and does the most,
Is just a pleasant smile.

No Chance

Diggers—What was the excitement down in the hall? Did you have words with the landlady?

Roommate—I had words, Dig, ol' dear, but no chance to use them.

AMAZING Cigar Offer

100 IMPORTED, LONG FILLER, HAND-MADE, CORONA SIZE,

PACIFICOS

For Only **$1.95**

The regular retail price is 5 cents straight. Don't judge the quality by the price. Test them, with an open mind—at our expense.

WHY THIS AMAZING OFFER:

We are the sole American distributors for certain brands of one of the largest Manila cigar factories. We have contracted to sell several millions a year. To do this, we realize we must first interest individual smokers before we can expect dealer co-operation. Therefore, for the present, we will sell to smokers direct.

100 Pacificos $1.95

Is a true bargain. It's less than jobbers have to pay for like quality. Smoke 5 or 6 with a desire to be pleased. If you are not perfectly satisfied return the others and we will cheerfully refund your money.

More Facts About PACIFICOS

Mighty few Americans realize that the Philippines are producing grades of cigar tobacco second to none, in mildness, fine texture, pleasing flavor and appearance.

Many of our customers claim that they prefer PACIFICOS to the 5 and 10 cent Domestic cigars. If Pacificos were made of only 50% Cuban tobacco—which is no better—the duty alone would be $3.60 per 100.

Acquire the taste for Pacificos and you will be among our hundreds of customers saving 60% on their smoking expense. If you will smoke the first 100 you will appreciate their enticing flavor.

ORDER NOW

—as this advertisement will not appear again, unless the expenses justify the expense of another insertion. Fill in attached coupon and mail at once.

NATIONAL CIGAR CO., 1117-J
969 Broadway, Brooklyn, N. Y.

Send me 100 of your **Pacifico Cigars.** I will pay postman $1.95, plus postage. It is agreed that if the first 5 or 6 cigars are not satisfactory, I can return the others and get back my money.

NOTE—If you will send check or M. O. with your order, it will save delays, and 12c C. O. D. charges. If you are East of the Mississipi River send $2.20 ($1.95 plus 25c postage). If West of the Mississipi send $2.40.

We Make the Boys Hustle

TO THE EDITOR:—I noticed an article in the September 3 issue of Pennsylvania Farmer on Boys' Cooperative Marketing.

Whoever gave you this information misinformed you. It is a boys' and girls' club, I, myself, am president. Three other girls take a very active part in the work.

I thought you might possibly want to correct the mistake as it was unfair to the girls who will make the boys hustle to get first.

You might be interested to know that our marketing is coming along fine and, by the way, the girls make as good salesmen as the boys any day. We have had almost every kind of vegetable that we can grow.

We are having a garden tour on Saturday, September 3rd. We will begin with one garden and then the next, etc., in that way seeing what each one is doing. I think J. F. Kelm, assistant club leader, and Mr. Jessie Huffington, state supervisor, will be with us on that day.—Mary Brubaker, President, Spruce Villa Farm, Lancaster County, Pa.

Note:—The Editors regret that proper credit was not given to the girls in the above-mentioned article. The members of this garden club are pooling their vegetables and selling them in a market booth at Lititz.

The Checks Are Late

TO THE EDITOR:—I have your favor of August 30 regarding compensation for fight against the corn borer last spring. The man in charge in the district informs me that some checks have been received here, but I have been unable to locate them. We made a conscientious effort to eradicate this pest, but do not feel very much encouraged about continuing it under these conditions. More than four months have elapsed since the work was done but even the miserable two dollars per acre promised us has not been paid. If the farmers were not more prompt in the work than the Department is with the checks there would not have been much work done. Vouchers and all the other red tape requirements were fully complied with long ago.

Fighting the borer here is a different proposition than in a corn county. Here much of the corn is planted between the rows of young grapes in new vineyards when it is not possible to plow deep enough to turn the stubble under. Consequently, we were continually dragging and discing the stubble to the surface, making much hand gathering and burning necessary.

One aggravating feature in this neighborhood was when a large force of men and stubble burning equipment was used on a two-acre stubble lot two years old when the chance of destroying any borers was very slight. This particular piece cost the Department $40 to $50, which, being done by a paid force, was undoubtedly paid, while the same amount of money would have paid for 20 to 25 acres of clean-up on fresh (last year's) stubble.

Personally, I do not think any practical results are secured in destroying the stubble as the borer, in my opinion, seldom, if ever, gets that low down in the stalk.—M. Foye, Erie County, Pa.

Note:—The above letter was written by Mr. Foye in response to Pennsylvania Farmer's request for more information about the corn borer situation mentioned in the Erie County notes (See Page 25). Regarding the stubble burning equipment, the Pennsylvania officials now in charge of the clean-up campaign are known to be opposed to its use. They consider it too expensive to be practical under ordinary conditions. If F. understands that the state's stubble burner has been transformed into a high pressure sprayer for use in combating the Japanese beetle.—The Editors.

Ohio Grew 60 Bushels

TO THE EDITOR:—In last week's paper I notice an editorial (which goes to prove I read your paper) about a whale of a crop of wheat, and you ask the question whether 60.5 bushels has ever been exceeded. Yes, it has, and we have done it on two occasions at least in state contests in Ohio, not this year, but in 1926. Last year Urban Troeger, Defiance, Ohio, in the 10-acre contest supervised by the University, averaged 63.3 bushels and Mat Irmin, East Toledo, made 68.5 bushels per acre. We had a picture of him and his children recently. This year at the experiment station the highest yield was 58.5. I have heard of no yields above that in Ohio this year.—L. L. Rummell, Field Editor, The Ohio Farmer.

Note:—Mr. Rummell refers above to the record of 60.5 bushels of wheat grown on an acre by Milton Campbell on his farm near Easton, Maryland. (See P. F. for August 27). Let us hear from growers of high yielding wheat in Pennsylvania, New Jersey, Delaware.—The Editors.

Waging War on the Borer with Fire

This is one of the oil burners used in some sections in the battle against the European corn borer. The cost of operation prohibits its use except where all other methods of destroying corn crops are impractical (See letter on this page. A long hose carries the oil under high pressure from the tank truck to the burning carriage which is drawn across the field by hand. The intense heat kill the borers in the stalks.

Eastern States Farmers' Exchange

MONEY IN EGGS

Of course the reason why eggs are high in price in the fall and early winter is that most hens are laying only a few eggs if they are laying at all. To get the money out of eggs you have got to get the eggs out of the hen.

Proper feeding is one of the factors which make for profitable egg production. Good stock, properly housed, will lay most effectively if supplied with the right sort of feed. Hens need more than mash and scratch. They need these mixtures composed of quality ingredients properly blended. Because the Eastern States Farmers' Exchange is a farmers' cooperative owned only by the farmer Patrons served, it aims to give feeders who use its services just this—mash and scratch of quality ingredients properly blended—and at low distributing costs.

During the first 8 months of 1927 the Eastern States Farmers' Exchange distributed 4,556 tons more of poultry feeds than during the same period of 1926. This ever-increasing demand proves that the feeds are making good because the method of distribution is the same—cash at the car—and the feeds are the same—no cheaper feeds have been added to the line of Exchange rations to catch the price buyer and thus increase volume.

Where records are kept Eastern States Open Formula Feeds prove their worth.

For information on the Eastern States feed service for horses and cattle as well as poultry, the service which should not be confused with car door service offered by private manufacturers through dealers or groups of farmers, write the office.

Eastern States Farmers' Exchange
A non-stock, non-profit organization, owned and controlled by the farmers it serves.
SPRINGFIELD, MASSACHUSETTS

E. S. Farmers' Exchange, 1-23-27
Box 1482, Springfield, Mass.

Sulphur Controls Weeds in Gutters

QUESTIONS come now and then concerning the use of ground sulphur for the control of weeds on tennis courts and in gutters. The letter given below and the answer are printed for the benefit of the readers of Pennsylvania Farmer.

"We have been informed by an inquirer that you have recommended the use of ground sulphur to be spread over tennis courts for the purpose of eradicating all weed and grass growth, and advising the inquirers that by the use of sulphur they could keep down all weeds and grass growth from a period of six to eight years.

"We would be very much pleased to have you advise us if the above information is correct; also send us a bulletin if such is prepared on the use of sulphur for this purpose, at the same time, we would be pleased to receive information as to whether you recommend sulphur over the use of the liquid killer."—M. C. R.

Ground brimstone when mixed with the soil is changed by bacteria into sulphuric acid. This tends to make the soil sour and to prevent the growth of weeds or of any other plants if enough sulphur is used. We have done some experimental work on the subject and find that the quantity of sulphur required for accomplishing the purpose will vary with the character of the soil. The lighter the soil the less sulphur is required for the purpose, and the heavier the soil the more will be needed. In light sandy soils an application of 2000 to 3000 pounds per acre might be sufficient for producing soil sterility for several years. On the other hand for heavier soils as much as 5000 or 6000 pounds of sulphur per acre would be needed.

Change Is Gradual

The change of the sulphur into sulphuric acid is a gradual one. Hence, results may not be apparent for several weeks. However, if the sulphur is applied in July, and the area on which it is used is kept moist, the transformation is rather rapid. In the early spring and in the fall and winter bacterial activities are very much retarded and the change is a slow one. Should you desire to use sulphur on your tennis courts, it would be well to spread it uniformly and thoroly work it into the soil to a depth of 2 or 3 inches. I should add here that land so treated could be made quite productive again by the application of lime to neutralize the soil acidity. About 1 ton of lime will be required to neutralize the acidity produced by 1000 pounds of sulphur.

Is Used for Potato Scab

Most of our experiments with sulphur have had to do with the making of soils acid for the control of potato scab and also of scurf and soil rot of sweet potatoes. For these purposes the amount of sulphur required is relatively small, usually 200 to 500 pounds per acre. No systematic investigations have been carried on by us on the control of weeds by means of sulphur as described above, even tho enough work has been done by us to indicate that the use of sulphur for the control of weeds may be quite effective.

There are a number of preparations on the market for the control of weeds. The "liquid killer" to which you have referred is undoubtedly some salt of iron, copper or mercury used by dissolving in water and spraying on the weeds on the ground. Sodium cyanide, crude petroleum and a number of other preparations in liquid form have been recommended.—J. G. Lipman.

Mr. Billerton, the butcher, was a jovial soul. As he was cutting up an order of lamb chops for a lady customer she asked curiously: "Mr. Billerton, what led you to choose your present occupation?"

"Well, really, I don't know, ma'am," explained Mr. Billerton. "Maybe it was because I have always been fond of animals."

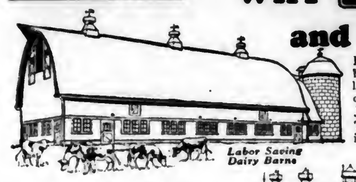
Build~Remodel
Ventilate or Equip
A Hog House, Dairy Barn
Horse Barn or Poultry
House Until You Get
Our Free Book

TELLS WHY **Jamesway** COSTS LESS

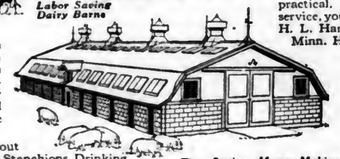


and Saves Costly Mistakes

If you are thinking of building, remodeling or ventilating a cow or horse barn, hog or poultry house, or if you are considering the purchase of labor and time-saving equipment for such buildings, by all means, fill out coupon in this advertisement and let us send you free our valuable Jamesway book.

This book will show you how you can save money and have your buildings planned and equipped so that they are most convenient and practical. If you will avail yourself of Jamesway service, you'll have the same gratifying experience as H. L. Hartly, Manager of Island Farms, Duluth, Minn. Here's what he writes:

"We very much appreciate the splendid architectural service you have rendered us. The ability you showed to adapt plans to meet results desired were a revelation to me. Your suggestions saved me considerable in material and time."



Our many years' experience in planning and designing farm buildings enables us to save you money on materials and construction—show you how every door, window and general arrangement should be to make buildings convenient.

This book also tells you all about Jamesway Equipment—Stalls, Stanchions, Drinking Cups, Litter Carriers, etc., for the cow barn. Troughs, Waterers, etc., for hog houses. Feeders, Nests, Incubators, Brooders for the poultry house—a complete line of every kind of labor-saving, money-making equipment for any farm building. Jamesway Equipment is better and costs less in the long run.

Mail coupon today. Tell us just what you are interested in—whether building, remodeling, ventilating or equipping cow barn, horse barn, hog or poultry house, and we will send you the book that tells you just what you want to know.

If You Raise Poultry Ask For Our Poultry Equipment Book

Shows our full line of Feeders, Waterers, Steel Nests, Coal Brooders, Baby Chick Supplies, etc.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .44½	$ .44½	$ .41½	$ .43⅝
Eggs, fresh gathered extra firsts (N. Y.)	.35½	...	.32	.40½
Steers, good to choice (Lancaster)	12.37½	...	11.62½	10.00
Hay, Number 2 timothy, baled (Phila.)	17.00	17.00	18.00	23.50
Wheat, No. 2 red winter (Philadelphia)	1.39	1.42½	1.45½	1.41½
Oats, Number 2 white (Philadelphia)	...	.56½	.61½	.52¾

Live Poultry Market Firm

Review of the Week Ending September 10

LIVESTOCK—The Chicago hog market was stronger with the top price of hogs 35c to 50c higher than last week. The better grades of fed steers were higher while lower grades were irregular. Heifers were steady but cows declined. Stockers and feeders were firm and somewhat higher while heavy calves held steady. Fat lambs, fat ewes and yearling wethers were slightly lower.

FEED—The mill feed market was unsettled and showed a weaker tendency. Bran prices were steady but middlings declined. Lower corn prices caused hominy feed to weaken but gluten was firm on account of limited supplies. Linseed meal was about steady but the lighter supply of cottonseed affected the market.

GRAIN—The market was irregular but less favorable weather and a good export demand strengthened the market at the close. Both cash and future prices of wheat dropped early in the week but advanced slightly toward the close. Corn was weaker and dropped 5c but was firm at the end of the week. Oats were about steady with a light demand.

HAY—The hay market was generally steady. Accumulations after the holiday sold slowly but lighter receipts improved the situation later in the week. Timothy and alfalfa prices held firm at most markets but shipping demand was limited.

BUTTER—The markets opened firm after the holiday with prices one-half to three-quarters of a cent higher than at the close of the previous week. Trading was generally satisfactory with receipts of fancy butter rather light. Later in the week the market declined one-half cent at most cities and at the close of the week the market was unsettled and rather unsatisfactory. The recent high price levels caused considerable of the storage butter to come on the market.

EGGS—The New York egg market was steady with a good demand for the best grades. Some of the poorer grades sold slowly as they came into direct competition with corresponding qualities of storage eggs. The best white eggs from nearby sections were scarce and prices held firm. This stock sold readily but the lower grades were hard to move.

POULTRY—The New York live poultry market was generally firm with a fair demand. Fancy fowl sold readily but the average run was slow. Broilers were firm and prices advanced. Chickens were in fair demand. Dressed poultry was in liberal supply and weaker. Fryers declined and small roasting chickens were more plentiful. The larger sizes of roasting chickens were still scarce and strong.

POTATOES—The potato market strengthened at both shipping and consuming markets. Prices at central New Jersey points advanced to $3.25 to $3.50 per 150-pound sack with dealers asking as high as $3.75 f. o. b. The movement from Pennsylvania increased and sold on about the same basis as New Jersey stock.

APPLES—The apple market in Philadelphia and New York showed considerable improvement. Fancy large fruit sold at somewhat higher prices and less ordinary stock was offered. Peaches continued dull on all except the best stock. Considerable stock has been placed in cold storage in anticipation of higher prices.

WOOL MARKET

Boston, September 10, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 42@46c; ¾-blood combing, 45@45½c; ⅝-blood combing, 44@45c; ½-blood combing, 44@44½c. Michigan and New York fleeces—Delaine, unwashed, 43@44c; ½-blood combing, 43@44c; ⅝-blood combing, 45c; ½ blood combing, 44@44½c. Wisconsin, Missouri and average New England—½-blood, 37@38c; ⅜-blood, 43@44c; ¼-blood, 42@43c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, September 10, 1927.

Cloverseed, cash, Imported, $14 bid; October, $16.35 bid; December, domestic, $16.25 bid; December, imported, $14.50 bid; March, domestic, $16.15 bid. Alsike, cash, $14 asked; December $15 asked; January $15.15 asked. Timothyseed, cash, $1.65; December, $1.77; March, $1.90.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, September 12, 1927. Quotations cover solid car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$35.00@35.50
Spring bran	33.50@34.50
Soft winter wheat bran	36.00@37.00
Hard winter wheat bran	35.00@35.50
Standard middlings	38.50@39.50
Soft winter wheat middlings	45.00@48.00
Flour middlings	42.50@52.00
Red dog flour	54.00@54.50
White hominy	43.75@46.00
Yellow hominy	43.00@43.75
Gluten feed	40.30
6 per cent cottonseed meal	45.00@45.75
41 per cent cottonseed meal	47.00@48.50
43 per cent cottonseed meal	49.50@50.50
24 per cent Pyseed meal	52.20

CHICAGO LIVESTOCK MARKET

Cattle—Grain-fed steers and yearlings, 25@50c higher; western and native grassers, including warmed low qualified natives, 25@40c lower. Extreme top long yearlings, $15.25; heavy $15.15; light yearlings, $14.90, mixed yearlings, $14.35; all new high prices for season; most grain-fed steers, $12.75@14.50; grass westerns and natives, $9@10.50; two loads of 1350-lb Montanas $12; most grain cows, $7.50 downward, grass heifers, $8.90 downward.

Hogs—Bulk packing sows, $9.35@9.60; sorted butcher sows upward to $10; extreme heavies downward to 45, estimated holdover, 3000 head.

Sheep—Bulk: Fat western lambs, $12.75@13.25; natives, $12.25@12.50; culls, $8.50@9.50; slaughter yearlings, $9@10; fat ewes, $5@6; feeding lambs, $12.75@13.65.

Pennsylvania Farmer

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

HOLIDAYS are a problem to the men who sell farm produce. They create uncertainty; almost anything may happen. To many farmers the holiday is just another day to work but in the cities, especially in summer, it means that thousands of people leave their homes for a visit to the shore, the mountains or elsewhere.

The usual summer holiday, such as Fourth of July or Labor Day, is usually preceded by a dull market with low prices. This is especially true when it falls on a Monday as both did this season. Dealers find themselves with a quantity of perishable products on their hands and only a short time to sell them. Counting Saturday afternoon there are two and one-half days when they can sell nothing. That means everything in a perishable line must be sold Saturday morning or be carried away as worthless.

Generally the day following the holiday is the one of greatest uncertainty. In most cases you will find that commodities such as peaches, that ripen and spoil quickly, will be unusually plentiful. This is somewhat dependent upon the weather but as a rule this is the case. Growers harvest those crops on the holiday and neglect others which will not suffer to as great an extent. This seems to be a very sound practice and yet sometimes the commodities they neglect will be less plentiful on the market and bring a comparatively higher price.

Holidays Change Demand

For instance, on the Tuesday following Labor Day there were light receipts of bunch beets in Philadelphia and prices advanced to a point higher than they had been since early spring, while the heavy supplies of peaches sold at rather low prices.

Some holidays bring an increased demand for certain products. There is practically always a good demand for fat poultry around the Jewish holidays and an opportunity to obtain good prices. Unwashed red beets in barrels are desired at certain seasons while there are other seasons when the people of foreign extraction in the cities want red or Savoy cabbage, dill and sour grass.

Christmas, New Year and Thanksgiving affect the poultry and fruit and vegetable markets and the farmer that is prepared to meet that demand profits. The grower who is in close touch with his market can discover these seasonal preferences. A good commission man will inform him of these opportunities and if he is selling direct to the stores or consumers he will soon learn about them if he is observant.

Quality Influences Price

I have been watching the price of sugar corn for some time and have been interested in the great irregularity in price. This morning I took time to question several dealers. One of them seemed to hit the nail on the head when he said, "There is just about as much difference in the quality of the corn as there is in the price. It is not a matter so much of better salesmanship at one store than another as it is of quality. Take this pile of bagged corn here for instance; the farmer said it was all Shoepeg and we have been getting a good bit more for that variety. A buyer comes in here and agreed to pay 3½c per ear and take the lot of 25 bags. I had the ticket all written out when I saw him dumping a sack on the floor. Well, there was supposed to be 100 ears to the bag and it counted out 87 and the bottom of the bag wasn't Shoepeg at all but some straight row corn. The buyer walked out without dumping any more sacks and now I'll be lucky if I get 2c for it."

"I have a couple of growers who have been shipping to me for over five years," the dealer continued. "They put the correct count in each sack, they pull off the dry and yellowed leaves, trim it up good and leave the nubbins and poorly filled ear at home. Do you know, that corn is sold every day before I receive it at about 1c or more over the market price. Yes, sir, there is always to be a wide spread in prices as long as there is such a variation in quality."

County News and Notes

(Continued from page 5)

ens, 18c; 2's, dressed lambs, 25c.—D. H. W., Sept. 1.

Erie County, Pa.—With all our hand work, the corn borer is worse than ever, especially near the lake. One farmer, and a very progressive one, too, is picking corn for market a week ago, found 32 dozen good ears and 85 dozen infested with the borer. Farmers have made a conscientious fight against the borer last spring. They expected at least partial reimbursement for their labor out of that ten million dollars appropriated by the government, but the months are passing and no money has been received. There will not be much enthusiasm in the fight next spring. Prices on the Erie market are high. Apples are retailing at $3 bu.; blackberries, 25c qt.; cabbage, 5c lb.; corn, 35c doz.; potatoes, $3.75; tomatoes, 10c lb.; cucumbers, 5c each; butter, 50c; eggs, 50c; dressed poultry, 40@45c.—T. M. F., August 22.

Frederick County, Md.—Weather the past week has been warmer and dry following an unusually cool August. Grass and late pasture is looking extra good. Corn is looking poor and will only be a part crop at best. The cool weather the first part of August has held it back and at present the ground is too dry. Threshing is almost completed. Fields are generally poor about 10 to 45 bushels of wheat per acre. Farmers are already sowing grain and preparing for the rush of silo filling and corn cutting. Beans planted for canning factories are exceptionally good. Tomatoes looking good but a little late. Wheat is selling around $1.25. Corn is almost impossible to find. Rye and oats also scarce with no set price. Fruit is a fair crop, prices reasonable. Potatoes are a better crop this year than for the last few years, selling around $1.50.—C. J. W., Sept. 5

The world of colors is yours to choose from in decorating your farmhouse inside or out. With durable lead paint made of Dutch Boy white-lead, which can be mixed and colored on each job specially for that job, you get exactly the tint you want.

COLOR is one of the most important considerations in painting and decorating your home. What colors to use, how to use them in getting distinctive painted finishes—these and other questions about painting are answered in our booklets—"Handbook on Painting" and "Decorating the Home" (printed in color). You should have these valuable booklets. Write to our nearest branch for them. You will receive also a decorator's data form to use if you desire the help of our Department of Decoration on any special painting problem about the farm.

Milk from Lenkerbrook Farms scores 99%

THE Lenkerbrook Farms, established by Dr. Jesse L. Lenker and William D. Lenker, is one of the most widely known Holstein farms in central Pennsylvania. At the State Farm Products Show held at Harrisburg from January 18th to the 21st, Lenkerbrook Milk—from Holsteins fed on Union Grains—carried off the first premium for the highest quality milk with the almost perfect scoring of 99%.

More and better milk is what every dairyman is after. The extra inch of milk in the pail—a point or two more butter-fat, mean a worth-while increase in profits. That's where Union Grains has proved its worth.

The great value of Union Grains is due to the fact that it derives its nitrogen from a variety of sources, thus providing the nutritive protein balance that has been proved necessary to meet the requirements of the high-producing cow. Its palatability, its ease of digestion, and the balance of its mineral salts are factors which keep the cows on a high plane with regard to health, reduce loss from garget and help maintain the animals on a regular breeding schedule.

To keep your cows in the best of health; to get maximum milk production and maximum profits —feed Union Grains.

Only All-Steel Hammer Mill.

Grinds any feed, dry, damp, wet or oily—to any fineness. Any roughage hay—Kaffir corn—fodder—snapped corn, husks on—leaves no sharp edges to cause sore mouths, as with bolt mills. No bulk in oats. No rats' nests in shock corn. No metal touched metal. No friction. Grinds the feed cool. No breakdowns. Always dependable. Biggest capacity. Lowest operating cost. UNEQUALLED as grinder—feed saver—money maker. Free feeding booklet, literature, etc. Stock in principal cities.

"JAY BEE"
HUMDINGER
Crusher Grinder Pulverizer

Yeoman Farms, Elgin, Ill., made better feed for less than $35 per ton with their HUMDINGER, than they bought for $60. So can you!

Over 7000 "Jay Bee" mills in daily use. There's a reason. It's the best mill—cheapest when work is done.

FEEDING METHODS CHANGE

Silage Ration Takes Place of "Lancaster Co." Method

REMARKABLE progress has been made during the past two decades in the method of beef production. Methods of cattle feeding that were considered modern and practical twenty years ago would be considered impractical today and result in financial ruin. Twenty years ago very little silage was fed to beef cattle. The prejudice that prevailed against the feeding of silage to beef cattle was because at that time the silage was made from immature corn and did not have the necessary food nutrients to give it high feeding value. Whenever it was fed, it was usually fed without a proper protein supplement.

Open Shed Gives Best Results

Many of the cattle feeders in the Lancaster district recall the method of feeding that was generally practiced in that section up to about 1915. The common ration consisted of mixed hay and corn stover as a roughage, while broken ear corn or corn and cob meal, oats and bran were fed as grain. This combination had been used for many years because these feeds were cheap in the early days. One of the main objects of feeding cattle was to utilize the roughage produced on the farm and to produce a large amount of manure for the tobacco field. As a rule, fairly heavy cattle were fed in order to convert a large amount of coarse feed into a finished product. The quality of the cattle that were fed was of secondary consideration.

The early feeding trials at the Pennsylvania Experiment Station were conducted to study the type of shelter required for cattle feeding. One lot of cattle was fed in a basement barn and one lot in an open shed that was cheaply constructed. The results of these trials demonstrated conclusively that cattle fed in an open shed made more economical gains and showed greater thrift than cattle fed in warm basement barns. The results of this experiment have changed the method of housing cattle in the eastern feeding district.

Later experiments were conducted to study the value of silage in beef production and the use of various kinds of protein supplements. The silage that was used was made from mature corn in order to secure the maximum feeding value. In the first experiments the amount of silage fed was limited. Even when fed in limited amounts the silage rations always resulted in larger daily gains than the non-silage combinations. The amount of silage fed was increased or in some cases constituted the sole roughage fed during the early part of the feeding period without grain being added during the first two months of a five-month feeding period. A concentrated protein supplement of linseed oil meal or cottonseed meal was fed with all silage rations. This method of feeding was found to be satisfactory, producing gains of better than two pounds per steer per day and also materially reducing the cost of gains.

During the period of high-priced corn it was found that a ration of corn silage fed in unlimited amounts properly supplemented with cottonseed meal or linseed oil meal produced an average daily gain of over two pounds per day and returned a greater profit than any group of cattle fed either a limited or full grain ration. For a number of years one lot of cattle was fed the so-called "Lancaster County" ration of mixed hay, corn stover, corn, oats and bran. The cattle fed this combination made lower gains than any of the silage lots and the profit per steer was usually $10.00 per head less than the other groups.

The results of these experiments were taken to the cattle feeders of Pennsylvania. Now nearly every cattle feeder who is rated as a successful feeder has a silo and uses a highly concentrated protein supplement of some kind.

Soy Beans Prove Profitable Feed

Several of the central western experiment stations have been conducting experiments during the past few years studying the value of soy beans for feeding cattle. The results secured indicate that soy beans can be used in place of either cottonseed meal or linseed oil meal. It was found more desirable to feed the soy beans whole than to grind them. There was less danger of getting the cattle off feed and the whole bean lot also made larger daily gain and cost less to produce. The soy bean oil meal also proved a very satisfactory feed.

With the results that have been secured in using soy beans as a protein supplement in cattle feeding, it is very likely that they will be used much more extensively in the future. Cattle feeders will also welcome an additional feed that can be used for this purpose because of the cost and frequent scarcity of cottonseed meal and linseed oil meal. Another advantage in using soy beans is that it is a farm-grown crop so that no cash outlay is required to secure the necessary protein feed.—W. H. Tomhave.

This Barn Is Not Red

Abner Eberly is one of the few Lancaster County, Pa., farmers whose barn is not painted red. His is a sort of cream color and in tip-top shape from top to bottom. It will stable 37 head of cattle and seven horses.—W.

DAIRY

FIRE SALE of Registered Guernseys

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical compendiums a farmer-stockman can obtain.

MUSCLES NOT DEVELOPED.—I have a two-year-old colt in good condition that has a hollow spot on the side of his shoulder. It appears to be getting larger as the colt grows. When he was young he had the habit of getting his foot over the tie chain. The colt isn't a bit lame. I would like to know if there could be anything done for it.—G. I. D., Patton, Pa. Try the plan of daily massage for the muscles involved. Apply a good liniment over the area with plenty of massage to stimulate circulation.

SORE TEATS.—Kindly tell us what to do for a cow five years old that has sore teats. Large blisters form which, when opened, water comes out. A scab forms and cracks open when you milk and seems very painful to her. She also has lots of warts on her teats which seem to get sore at the base. Two of my neighbor's cows also had the same sores. We have two other cows that do not have this trouble. She is in pasture all day and gets some dairy feed and sweet corn fodder twice a day.—W. I. F., Wrightsville, Pa. This may be cow pox in which case care should be exercised to prevent the spread to the milker. Wash the hands in an antiseptic solution before and after milking. Apply zinc oxide ointment to the sore areas after washing with a solution of one of the recognized antiseptics. WARTS—Apply castor oil to the warts at each milking time. Where crusts or scabs form apply vaseline.

Sandy Hoyle, negro janitor of the "Advocate," listened to a discussion by the foreman and the intelligent compositor on the commercial possibilities of the airplane. Sandy seemed deeply interested, but at the close of the conversation he shook his head solemnly and said:

"White folks may do great things with them flying machines, but one thing I know fo' suttin—they won't never need no Jim Crow cars on 'em.

Grandson — Have any of your childhood ambitions been realized?

Grandfather—I should say! When my mother used to cut my hair I always wished I hadn't any."

A young fellow wrote to his father from college "No mon, no fun, your son."

Promptly his father answered: "How sad, too bad, your dad."

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 160,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

Send for this new book *now.* Learn how Kalamazoo gives you 30 days FREE trial in your own home and 360 days approval test on anything you purchase. Read how Kalamazoo is saving over $1,000,000 yearly for Kalamazoo customers.

200 Styles and Sizes

No matter what you are interested in—gas stoves, coal and wood ranges, combination gas and coal ranges, oil stoves, heating stoves or furnaces (pipe or one-register type)—you will find here exactly what you want. Mail coupon today.

24-Hour Service--Safe Delivery Guaranteed

Send for this book! See how close Kalamazoo is to you—24 hours shipping service saves you time. Kalamazoo goods are carefully packed to arrive safely. Safe delivery is absolutely guaranteed.

Quality First—Values Unexcelled

Kalamazoo values cannot be equalled anywhere. When you buy from Kalamazoo you buy direct from manufacturer. There is nothing between you and our factory—but the railroad tracks. We are not a mail order house that collects a variety of merchandise from scores of factories to sell by mail—we are *specialized* manufacturers, making Kalamazoo stoves, ranges and furnaces complete in our own highly modernized factory and shipping direct to you, thus eliminating any other manufacturer or middleman of any kind. We build in large quantities. You get better quality at lower prices from a factory whose sole interest is making stoves, ranges and furnaces than elsewhere. This new catalog proves it. Fill out coupon for your copy.

Cash or Easy Terms

This FREE book quotes you easy terms that are truly amazing—many as low as $3 down and $3 monthly. Nowhere in the world can you get such value, such service as Kalamazoo now offers. This new book shows you why this big 13-acre factory, now in its 26th year, is a national institution.

Free Furnace Plans

This new FREE book tells you how you make a double saving on Kalamazoo furnaces. First, it saves you 1-3 to 1-2 on the price of the furnace itself. Secondly, it illustrates how you save the cost of installation by following Kalamazoo FREE plans and FREE service. Thousands of Kalamazoo owners have put up their furnaces themselves.

Beautiful Porcelain Enamel Ranges

Everywhere now porcelain enamel ranges are in demand. See these Kalamazoo ranges in Delft blue and pearl gray—bright, colorful, glistening clean—as easy to clean as a china dish. *Check and Mail Coupon Today!*

Saved $80 to $100

I put up the furnace in a very short time. I saved from $80 to $100 on what it would cost me here. Am more than satisfied.
John Fischer, Warren, Pa.

Quality Baker

Stove works perfectly. Stoves costing $175 could not begin to compare with it in fuel economy, baking quality and in heating performance.

AGRICULTURE THE KEYSTONE OF NATIONAL PROSPERITY

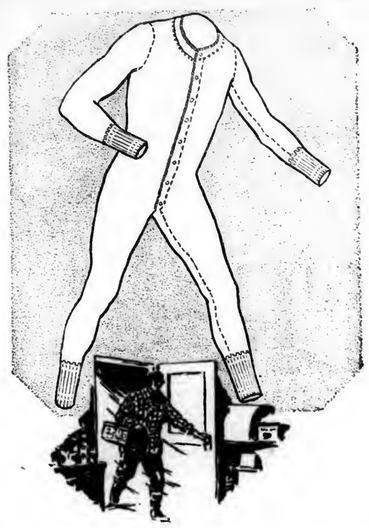
ESTABLISHED 1880 — PUBLISHED WEEKLY

(Pittsburgh Market Edition)

Vol. 96 — PHILADELPHIA, PA., SATURDAY, SEPTEMBER 24, 1927 — No. 13

During the harvest season

A few helpful hints that can be learned from other poultrymen. Have you made an inventory of your repair needs? Page 3.



This is something your men-folks often neglect

You simply can't depend upon men to take care of their health. You have to do it for them . . . make them dress warm enough . . . *and especially make them wear warm underwear.*

Wright's Health Underwear will keep your family warm and healthy. It keeps the cold out. It keeps the body warmth in. It prevents the body from chilling. It is made of wool, which is highly absorbent, and knitted with a patented loop-stitch to increase its absorbency. You know how hot a man gets working, even in winter. Then he stops and begins to cool off. He would chill with ordinary underwear. But when he wears Wright's Health Underwear the body moisture is absorbed. His skin is warm and dry. And he isn't so liable to take cold.

This underwear has special features your family will like. There's plenty of chest room. It doesn't bunch or bind. It is soft at the neck and doesn't chafe.

Wright's Health Underwear means less work for you. You won't have to spend your evenings sewing and patching it, because it is made strong and lasts well. When it comes out of the wringer, the buttons are all on. They're especially sewed to stay on. The buttonholes are strongly made and don't tear easily.

Go to your store today and lay in the family's winter supply. Moderately priced. All-wool or wool-and-cotton. Three weights, medium, heavy and light. Union suits or separate garments. Ask for Wright's Health Underwear. Wright's Underwear Co., Inc., 74 Leonard Street, New York City.

FREE—*Write for booklet, "Comfort," which gives you many interesting facts about Wright's Health Underwear. Please mention your dealer's name.*

Please Mention Pennsylvania Farmer When Writing to Advertiser

The Voice of the People

This department is reserved for the use of our readers to discuss all problems and matters of general interest. Write your views and comments briefly on any question of social, economic or educational importance and thus share them with others. It will be necessary to limit such articles to 200 or 300 words. Publication of an article in this department does not signify editorial endorsement.

THE EDITORS acknowledge with thanks a box of fine smooth skinned potatoes grown by Subscriber A. R. Pettie, of Mercer County, N. J. Mr. Pettie reports a yield of 24 sixteen-quart baskets from 30 pounds of seed.

Old Age Pensions

DEAR Pennsylvania Farmer:—I was pleased to read your article regarding old age pensions. It seems so nice to have someone interested in the poor aged ones. Many a childless couple who have a little could take care of themselves. Had they a small pension they could live so much happier and less expensively than in the county home. They could work a little garden, raise vegetables for their table, do lots of things to help themselves, but owing to age and infirmities would be unable to get out and earn a living. Many a poor widow who has worked and saved all her life but owing to handicaps has not been able to lay by a competence for age. It seems sad that those people have nothing to look forward to as a reward but the poorhouse. There are pensions for children, soldiers' widows, many who never suffered from the war, preachers, nearly all classes except the poor old people who have toiled patiently and lived upright lives. Help them!—L. W. H.

I Would Rather Live in the Country

Note.—Several readers have written to take exception to the article by C. R. Bashore, published some months ago, in which attention was called to the advantages of living in the country and working in the city. In response to our request Mr. Bashore has written again, setting forth his ideas in more detail.—The Editors.

DEAR SIR:—Living in the country and working in the city. Now I wish to speak of my immediate vicinity, and there are plenty like it. We live ten miles north of Myerstown, twenty-five miles northwest of Reading, fifteen miles northeast of Lebanon, and six miles south of Pine Grove. About half a dozen men are working at the stone quarries near Myerstown, some are working in Reading and going back and forth daily. Some are working in the mines ten miles north. Here we have electricity, consolidation of schools with free transportation and free mail delivery. We have all the city conveniences worth having. Of course, we do not have the theaters with the degrading movies, but we have monthly moving pictures by the Farm Bureau which are very instructive and interesting. We have radio better than it is possible in the city.

Rents Are Low

Now as to rents: I know one party recently rented half a big house for thirty dollars a year with garden. Telephone and electricity are in the house. The cost of electricity is one dollar per month minimum and only six dollars per hundred kilowatt hours. This is a beautiful house at a state road. I know another house at a public road which is in good repair and electricity in it and is unoccupied. This home could be rented for about four dollars a month. About two acres of good ground, orchard, new poultry house and barn and other buildings.

Another eighteen-acre farm adjoining could be bought for about seven hundred dollars. The soil is very good alfalfa soil. The buildings need repair but could be used as they are. At all these places the best of water is easily pumped from wells at the house. At each of these places the school bus passes about thirty minutes before the school hour. About one and one-half mile to Bethel where we have a first class high school. The first mentioned home is located two miles east of Bethel at the state road which road is under construction at present to be a federal highway,—a bee-line between Harrisburg, Pa., and New York City, shortening the route fifty miles. Let this road be finished once and our community will be boosted.

Yes, I think it is a great advantage to live in the country. Living in the city if a laboring man gets sick or laid off for quite a length of time, hardships will be realized, whereas living in the country where a family has poultry and pigs, and possibly a cow, the rents low, not much hardships are realized. Twenty-five years ago people used to say to me, "Oh, you are too far from the markets." Now I say I am only one hour from the market. I candidly believe that I can make more money with my farm where I am than if it were located within two miles of the city limits.—C. R. Bashore, Bethel, Pa.

Is Your Teacher One of the Best?

DO YOU ever weigh your child's teacher in the public school in any scales but money ones?

There are teachers, it is said, who are not teachers at all; they are self-seekers who take up teaching as a business to support themselves and keep their hands white.

If these same persons kept a store, drove a milk wagon or washed babies for a living they would be respectable. As trespassers on a noble profession they are worth no more than the books and pads and desks over which they preside, so much furniture to be had by the gross. They do not love their work. They contribute nothing to the higher development of their pupils. They busy themselves not with research into the science of teaching but with organized political demonstrations to advance the cause of selfish candidates for public office who promise them rewards.—C. J. S.

I Sharpen My Disc-Harrow with This Device

I NOTICED an inquiry in your paper of August 27 asking about a device for grinding the discs on a disc-harrow. There used to be a device on the market for this purpose but I have not seen one in years. But here is a substitute I made in imitation of it and it works almost as well; anyway, it sharpens the discs. Turn your harrow upside down, first removing the seat. Then take a sickle or mower-knife grinder, or a common kitchen grinder, having a good emery wheel, a piece of 2x4 or 2x6 and a low carpenter's saw bench or horse. Attach or clamp the grinder to the 2x4 or 2x6, place the timber on the benches and bring the grinding wheel in contact with the disc to be ground. It requires two men, one to run the grinder and one to rotate the discs slowly. This makes a good job of sharpening and you do not have to dissemble the harrow to do it. Also, you can grind either side of the disc, or both, if you wish, by shifting the benches to suit. It is quite rapid, too, being easier and much faster than dissembling the harrow.—Allan A. Blanchard.

Wasting Gas

Little George, the garage mascot, was visiting his aunt. He found the cat in a sunny window purring cheerfully.

"Oh, Auntie, come quick," said little George, "the cat has gone to sleep and left his engine running."

More Readers on Farms in Pennsylvania Than Any Other Farm Weekly

I Learned Many Things at This Farm

A Good Strain of Birds, Suitable Buildings and Sanitary Conditions, are Features

By R. L. SCHARRING-HAUSEN
Staff Contributor

I RECENTLY visited a farm in Mercer County, New Jersey, where a large flock of White Leghorns with a herd of ten cows marketed the crops from ninety fertile acres. On this farm nearly a thousand layers are wintered over for the production of market and hatching eggs, while many thousand chicks are produced for sale as well as for rearing to supply pullets for replacement and for sale to other poultrymen. This farm is run by Mr. Nels Larsen and Mr. Victor Johnson. Good up-to-date practices with careful management are the rule, with the result that good hatches are secured, the chicks are raised with a minimum of mortality, and the mature pullets are of large size, all factors in securing a maximum profit from the poultry business. Another strong point was a low death and disease rate, due, I believe, to the free use of codliver oil thruout the year, and the use of tobacco powder in the mashes to control worms. Still another feature is the feeding of fermented mash containing germinated oats, which, due to the digestants and vitamins contained, contributed largely to the health of the birds in the flock.

Mr. Larson plans to add to this long laying house and to build a two-story feed house in the center.

Mr. Larsen has plenty of land for range, and uses colony houses with coal stoves for brooding the chicks. About 275 chicks are placed in a building, altho their capacity is greater. It has been their experience that lower mortality results if the chicks are not crowded. The chicks are not fed for at least 72 hours, and are started on the New Jersey chick ration as outlined last spring. The earlier hatches are kept in the houses several weeks before they are let out, being kept in good health by sprouted oats and the free use of codliver oil. Mr. Larsen told me that he would hardly know how to stay in the poultry business without codliver oil. As we were walking about the farm he showed me a valuable Guernsey heifer calf from the Benson herd at Princeton, which his daughter, a calf club member, was raising. It was his intention to supply codliver oil to this calf in order to induce a superior bone growth.

Plows and Seeds Range Field Every Fall

The young chicks as they grow are worked over to a growing mash of the formula: 200 wheat bran, 250 corn meal, 100 meat scrap, 100 middlings, 100 ground oats, 22 oyster shell meal, 5 salt, 7 charcoal. With this is fed at least 1 pint of oil per 100 of mash. Skimmilk has also been fed in the liquid form, but I was told that if the milk could not be had, that 50 lbs. of dried milk should be added to the mash. Every fall the large range field as well as the ranges about the laying houses is plowed and seeded down to wheat, and the growing stock has (to page 21)

Is This Your Idea?

"The Roof Doesn't Leak When It Isn't Raining and I Can't Fix It When It Is."

IF YOU delay building or repairing until the wrong season, you not only lose money and time, but you get an inferior job. The old Arkansawyer, you remember, didn't need his roof fixed when it wasn't raining, and couldn't fix it in the rain.

The window frames of your house need painting. That's a safe thing to say, because it is true in about four cases out of five. The chances are about even that you will not think about it while the weather is fine, because you have so much else to do. If you are like thousands of other folks you will be up on a ladder next November trying to do that job of painting when the cold wind is making your fingers numb, and your paint is not having the chance to do its work most effectively.

About that time you will be thinking about storm windows. They are a great economy in any of the northern states, adding to comfort and saving fuel. You will probably order the sash some day when you hear a blizzard is coming, and you will be trying to put them up and fit them in a cold rain or sleet. Such delay not only inconveniences yourself, but causes you to lose much of the value of the repairs, and taxes the facilities of your lumber dealer to supply your needs.

Now is the time to get roofs prepared for winter. You can't do the best job of roofing in cold weather. Yet any number of people try to, and when they get a poor job they blame the roofing material. It is ever so much better to plan ahead, take your time in studying and selecting materials, place your order so the dealer won't have to rush it, and get the work done comfortably when it can be done well.

Inventory Needed

The natural reply to this advice is that you are too busy, and that you only build or repair as you can afford it. That brings up the real point of this discussion. The way to get the biggest value for your money and time is to go over your buildings and make an inventory of what they need, even making out lists of materials and taking measurements on rainy days, so that you know just what is needed.

Right now, for instance, or on the first rainy day you can figure up the amount of area you need to cover with paint, or the amount of roofing you are going to require for the house, the barn, the poultry house or garage. You can figure up and write down on a piece of paper the number of sacks of cement it will take to build the well curb, or sidewalk or feeding floor that you hope to build. Why not ask your lumber dealer to stop by next time he is in your neighborhood and look over some of these things with you, and figure on your needs. The average lumber dealer is full of good ideas. He knows the experience of a great many other people, and it won't cost you anything to talk to him.

If you make out your plans in this way, and get lists of materials and prices laid out in advance, you can go ahead much more intelligently and can know just what you can afford to do this year and what will have to be put off until the next hog crop goes to market.—Arthur C. Page.

Sanitary conditions are carefully maintained on the Larson Farm. The colony houses are kept clean and whitewashed. The pullets in this house are well supplied with shade.

Comments on the Week's News

IT WAS believed by the laymen that the Federal Reserve System was so firmly established and so generally satisfactory that no danger was likely to befall it. But it seems that even that institution is now to be haled before the courts. The dispute arises over the unwillingness of the directors of the Chicago Reserve Bank to lower its rediscount rates on the order of the Federal Reserve Board. The Chicago bank reads and interprets the Act differently from the way the Reserve Board has always construed it, and it will now be necessary to take the matter before the courts to find out whether or not the Board was given absolute power over the financial system of the entire nation.

✦ ✦ ✦

Time, it seems, will not only heal all wounds but may make heroes out of outlaws. It is reported that a movement is on foot in Missouri to erect a monument to Jesse James. But if the hero worshippers want to do something credible in this line we suggest that they select one from the hundred or more modern hold-up men and women. There is real daring exhibited in these days, when highwaymen hold up and murder in broad daylight in the streets of our biggest cities. Jesse James and his gang were mere pikers compared with them, yet some of us were not allowed to read about J. J. in the olden days.

✦ ✦ ✦

What may have been the phantom ship told of in Coleridge's Ancient Mariner arrived at an obscure dock in Philadelphia the other night. At least, no captain could be found, and the part of the crew that was arrested vanished without anyone's knowledge. The old ship slipped past the quarantine officers in the dark, had her name painted out and changed, and docked without being seen. The $2,000,000 worth of spirits found on board by the federal officers lends evidence to the phantom ship theory. It is supposed that the spirits were on their way to the Tunney-Dempsey fight at Chicago.

✦ ✦ ✦

The September crop report estimates the corn crop a little less than seventy per cent of normal, oats seventy and three-tenths per cent and spring wheat eighty-two and seven-tenths per cent of normal. The total of all wheat is estimated as being 860,892,000 bushels. Last year's crop totaled 833,000,000 bushels. The estimate for the white potato crop dropped 11,000,000 between August 1 and September 1, being now 400,000,000. Still an increase over last year's crop of 44,000,000 bushels. The wheat crop acreage this year is a little over three per cent greater than last year, and the potato acreage eleven per cent larger.

✦ ✦ ✦

No official information has as yet been given out as to the extent of the corn borer damage this season. The field survey began August 15 and is expected to be finished by September 30, when the findings will be given out. No doubt the campaign for future work will be based upon the findings of the check-up workers now in the infested districts. The efforts last spring were both extensive and expensive, and it is hope that the investigation will show definite results towards control, if not extermination.

✦ ✦ ✦

The Keystone Automobile Club in an official announcement wants it distinctly understood that the organization will not come to the aid of anyone who gets into trouble from driving an automobile while drunk. The letter says that "drunken drivers are a criminal menace to the safety of the highways and deserve no sympathy or help from the fellow motorists when arrested."

✦ ✦ ✦

Here is cause for optimism in those who have been depressed because of the statement of some scientists that the sun would go cold in ten million years, and that our coal, oil and gas supplies were on the wane. Now, a French scientist says the sun will continue to give us light and heat for 150 billion years, and another man declares the fuel and gas supplies are inexhaustible.

✦ ✦ ✦

The new French tariff rates are causing concern in this country. The U. S. Department of Commerce figures that the new rates practically will exclude $10,000,000 worth of goods hertofore sold from this country to France. In some instances the rate is as high as 400 per cent. Among the important items affected are jewelry, seeds, clocks, pencils and penholders. By the terms of the treaty, Germany and England will profit by the change in France's tariff schedule. Our country, thru the American Embassy in France, has protested the new rates. Well, hasn't this country taught the rest of the world how to make tariff laws?

✦ ✦ ✦

There is one matter in a valued exchange which we cannot let pass without comment. The editor of Wallace's Farmer, Henry A. Wallace, who, we believe, is a grandson of the founder of that paper, has been on a trip thru the East. His comments on eastern agriculture, as he compares the farmer's chances with those of Iowa, are good for a chuckle or two. As we remember it, "Uncle" Henry Wallace moved many years ago from a western Pennsylvania county to Iowa and established the paper which bears his name. Henry A. stopped on his recent trip in the neighborhood of the old homestead and is grieved over the decadence of the neighborhood and agriculture in general. As a matter of fact, the farmers of that section got too rich to farm and retired. Of course, it was thru the sale of coal, oil and gas rights, and in many instances the land went with these. However, there are many thousands of up-to-date farms yet in the East where farming is the sole occupation, and where the premises will compare favorably with Iowa. To quote:

"I cannot believe that our western agricultural civilization will go to pieces in the same way as the eastern civilization." Again:

"I am convinced that western farmers now occupy a much stronger position than eastern farmers a generation ago."

Eastern agriculture should be much more prosperous than it is just now, but it must be better than it is in Iowa, else why is there so much wailing from there and so little in the East?

Safe Milk for New Jersey

ON AND after January first, next, all milk offered for sale in New Jersey must be either from tuberculin tested cows, or pasteurized. According to the Department of Agriculture of New Jersey only about 50,000 of the state's 150,000 cows have been tested, and it is manifestly impossible to test the remaining two-thirds between now and January first. The state has appropriated $100,000 for indemnity, and this is augmented by $60,000 from the federal government. This, of course, is but a drop in the bucket to what it would require to finish the job of testing all the cattle. While it is practical for the larger towns and cities to install pasteurizing plants —and most of them have such plants already —the process is not practicable for small places and for individual, small retailers. Just how the law is to be enforced on the date set without depriving the small communities of their milk remains to be seen.

California Over-Planted Grapes

THE tremendous increase in the demand for grapes after the advent of prohibition, with attendant high prices, caused California fruit growers to plant too many grapes. Because of the glut caused by an over-supply of grapes, the prices returned to growers in 1926 were less in purchasing powers than pre-war prices. Raisin grapes have not been increased so much since the war, but the craze caused by high prices of wine and juice grapes has caused over planting to such an extent that the whole industry may go bankrupt unless there is a cooperative movement towards reducing the annual production. This is made all the more difficult because there are still thousands of acres just coming into bearing. During the last few years, twenty-seven per cent of California's total shipment of fruits has been grapes. In 1920 she shipped 37,000 car loads, and this was increased to 76,000 carloads in 1926.

Editorial Sidelights

FARMERS in some parts of Holland haul their hay from the field to the barn on boats, according to Howard G. Niesley, of the Pennsylvania State College, who returned a few weeks ago from the land of the Zuider Zee. Mr. Niesley and Dr. H. H. Havner, also of Penn State, spent the summer in Europe observing agricultural conditions and investigating the methods of European farmer cooperative organizations.

Mr. Niesley was the photographer of the Niesley-Havner European Expedition. We can vouch for the fact that he secured some unusually interesting pictures. We expect to have some of them ready to share with readers next week, along with his article on Holland, the home of the Holstein.

A livestock authority whom we were reading the other day said that we shouldn't "by rights" call our black and whites by the name "Holstein." He insisted that they be called "Friesians" if we must shorten the official "Holstein-Friesian" since they are more like Friesian cattle than any other type.

OPPOSE SESSION

Ask Repeal of Inheritance Tax —Dust Mosquito Infested Swamps—Smokers Cause 16 per cent of Forest Fires.

Washington, D. C.

THE extra session proposition is giving President Coolidge and the administration as a whole much concern. There is a wide difference of opinion among the President's advisers in regard to the matter. A powerful move is being made by an influential group to induce the President to call an early session of Congress for the purpose of disposing of the Vare-Smith contests and consideration of flood control legislation.

Senator Curtis, of Kansas, and Congressman John Q. Tilson, of Connecticut, administration leaders in the two houses of Congress, have told the President that they are opposed to an extra session of Congress; that no real progress on a flood control program could be made until a careful study in committee could be undertaken of the reports of the Mississippi River Commission and the army engineers. One hundred and fifty army engineers are at work on the problem, according to Major General Jadwin, and they hope to reach some conclusion by December 1, when Congress is scheduled to reconvene in regular session.

May Have Special Session

This does not mean, however, that there will be no special session called. The President is known to have an open mind, and is evincing a considerable degree of independence. No one need be surprised if an early session of Congress is called providing the officials who are investigating the flood control question have decided upon a definite program at an early date.

Demand Repeal of Tax

The business interests are demanding the repeal of the federal inheritance tax. Unlike the farm organizations they already have reached an agreement on a single concrete program of action. They know exactly what they want and are going after it with a single unified voice.

In leading this move, the United States Chamber of Commerce has enlisted the support of the so-called "states rights" advocates. Fifty-five state officials representing 37 states, at a meeting in Washington, adopted a resolution calling upon Congress to repeal the federal inheritance tax.

Use Airplanes for Dusting

Navy airplanes are being put into practical use for the benefit of humanity, in distributing dust over swamplands to eradicate mosquitoes. The excellent results obtained by dusting marshy areas at the Marine Corps base, Quantico, Va., near Washington, during the past year have given the Public Health officials confidence in this method of eradication.

Dusting demonstrations are being given in various mosquito-infested districts. The work is being done by the navy's new all-metal Ford transport plane, equipped with dusting apparatus to carry a mixture of 1000 pounds of Paris green with powdered soapstone. This mixture will penerate the most dense foliage and kill all mosquito larvae lodged in water beneath. Many swampy areas which cannot be drained and which produce swarms of malaria-carrying mosquitoes can be dusted in a short time by plane, thereby saving lives, preventing illness and increasing the value of property.

Grain Exports Lower

Exports of grain from the United States to foreign countries are running far below last year's exports. From July 1 to September 3, a total of 36,897,000 bushels were exported against 62,028,000 bushels during the same period of last year. No wheat has been imported for consumption in this country since July 1st.

Smokers Start Forest Fires

Smokers are blamed for starting 16 per cent of all the forest fires, according to the Forest Service. Of the 91,793 fires in forests in 1926, 72 per cent were due to man-made causes. These forest fires caused a direct loss amounting to $26,900,000 in the United States.

Last year 24,300,000 acres were burned over, an area equal in size to the farm land area of the state of Ohio. The greatest area burned over and the greatest damage done was in the southeastern states.

Reforestation is making slow progress because of the problem of taxation. The owners are not inclined to plant forests when they are required to pay taxes on the increasing valuation of the young forest while it is growing.—E. E. R.

PAY FOR CATTLE

Anticipate Little Trouble Over Area Disputes—Inspection Demonstrates Value—Encourage Municipal Control.

Harrisburg, Pa.

PAYMENTS by the state and federal authorities for cattle killed because of tuberculosis have been going to large figures lately and in some months as high as $100,000 has been paid by the state and almost as much from Washington. The cattle testing is said here to be progressing at a rate fully in line with expectations and the payments to be keeping pace. The fall schedule is now being made up and it is said many animals have been listed in southeastern counties, while in the central group extensive testing is in sight for winter. Little additional trouble is anticipated over area disputes such as occurred this summer, say officials.

Peach Inspection Valuable

Two different lines of activity are going forward in the peach raising sections of southern Pennsylvania, one being the inspection the state makes at shipping points, now declared to be demonstrating its value and the other efforts to find some control for the peach moth. The latter pest has been around for almost ten years and has been spreading in spite of attempts to check it. The moth turned up in the southeastern section and has been as troublesome as the corn borer altho not over such a wide territory. Speaking of the borer the state and federal agents are preaching cutting down the corn stalks as much as possible and the burning of all remnants. It is said, thanks to vigilance, in quarantine shipments of corn from Pennsylvania to states free of the pest were halted at borders of counties where grown.

Halt on Water Mergers

Much importance is attached to the refusal of the Public Service Commission to approve merger of a number of small water companies in central counties into larger corporations because the commission takes the position water companies are not like electric companies, which should be encouraged where they will aid in development of areas and that moreover public policy is toward municipal control of water. The opinion of the commission creates a precedent. Coupled with the policy of the state thru its Sanitary Water and Water and Power Resources Boards it would appear that water conservation is going to get considerable attention on Capitol Hill.

Purchases Are Planned

Members of the State Forest Commission have worked out what is said to be a two-year program for purchase of forest lands based on very satisfactory prices per acre as well as located so that the ground may be planted and become valuable in water sheds. Ten times as many acres as could be bought were offered, some of it very indifferent land and some not located where it could be of much service in linking up forestry operations, state and corporate. The last few years are said to have witnessed more tree planting by coal, water and other companies than ever known in a similar period with prospects for a large total of young trees set out this year.

MEMBERSHIP GROWS

Fairs Receive More Support—Market Shows a Successful Season—Vocational Schools Larger—Exhibit Train.

Trenton, N. J.

SELLING of farm products at standard roadside markets in New Jersey this year passed the expectations of the Farm Bureau, according to reports available at the State Office which show that over $250,000 worth were sold direct from the farm at prices somewhat less than ordinary quality was retailed at city stores. Membership in the Standard Roadside Market Association of New Jersey has grown rapidly over summer, new locals such as the Burlington Association bringing in growers and business to swell the total. Lower membership fees and continued help from the inspectors of the State Bureau of Markets have given the movement state-wide impetus. The roadside marketers will meet during Agricultural Week at Trenton in January.

Big Fair Turnout

The Atlantic County Fair at Egg Harbor City and the Cape May County Fair at Wildwood during the week ending September 17, brought out record attendance. The poultry shows at both events bore testimony to the marked growth in the poultry industry in these two counties in recent years. Exhibitors from several eastern states exhibited in competition with local breeders. The farm stock and egg classes were well represented. Earlier local fairs in the state have likewise shown good attendance and excellent displays of farm products and livestock, an indication that fairs are receiving considerable more support than three to five years ago.—W. H. B.

Berries Sold Very Good

Berries to the value of $400,000 were sold on the Hammonton market this season, which closed on September 10th. A total of 77,000 crates were brought into the market and sold to the buyers. This is the first year the market has been in operation and the total sales far exceeded the hopes of the Atlantic County Board of Agriculture which was back of the project. Seventy-seven licensed dealers bought berries on the market. Plans are already under way to continue the market another year along improved lines.

More Students Enroll

The largest enrollment ever known is entered this fall in the Agricultural vocational schools of New Jersey. Over one thousand boys are taking the courses as a part of their high school education. Bridgeton and Glassboro schools are leading the state with over 60 agricultural students in each school. One new school has been added to the list and additional teachers have been taken on in some schools.

Will Exhibit Market Train

The market train sponsored by the State Department of Agriculture early in the summer will be on display at the Trenton Fair and will form a part of the state's agricultural exhibit. The train will be arranged along lines similar to those used on the trip with a few changes based on experience gained while on the road.—A. K.

HOGGIN' DOWN TIME

OPEN GRAFT CHARGES

Withhold Names in Milk Graft Charges in New York—Will Plant Trees Along Roads to Serve as Snow Fences.

Ithaca, N. Y.

TODAY starts a wide-open inquiry into milk graft charges in New York City. The quiz will be of a John Doe nature, and will be ushed by Judge A. S. Tompkins, of Nyack. Ninety-six alleged criminal offenses in connection with milk, butter and cheese inspection will be reviewed. Names have been witheld. These are a part of the 148 cases reported by Judge Kelby, special milk graft prosecutor appointed by Mayor Walker a year ago. It would seem that the charges made in last fall's political campaign that certain political interests have been at work covering up wholesale frauds may be true. Oppression and extortion to a bad degree seem to have existed and the people will not be satisfied with less than full justice in these prosecutions.

Trees for Snow Fences

Supervisors of counties have had to spend thousands of dollars for temporary snow fences in this state and this type of public expense has just begun. Recognizing this the New York Development Association of Oswego is to start an extensive campaign to plant trees along the roads, as snow fences, in cooperation with the State Forestry College, the Conservation Commission and the highway officials. A five-year campaign to attract industry to the section covered by the association is one of the plans of the body.—M. F.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *non-skid* Goodyear All-Weather Tread

You can see it before you buy

The right size and type of tire for your car is carried in stock by your local Goodyear dealer; *you can see it before you buy.*

And after you buy, that dealer will back up the tire's superior quality with a service designed to *insure* you the lowest cost per mile.

He sells the world's finest tires at a range of prices to fit any pocketbook; the values he offers are dependable and real.

He puts the tire you buy on the rim for you, fills it with air, and throughout its life helps you give it the care it should have to deliver maximum results.

The Goodyear dealer's service will cut your tire bills down. Save you time and trouble. Make your tire money pay bigger returns.

It is part and parcel of the Goodyear policy: *to build the greatest possible value into Goodyear products,* and *to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced standard quality Goodyear Pathfinder

Goodyear Means Good Wear

GOODYEAR

Copyright 1927, by The Goodyear Tire & Rubber Co., Inc.

I HAVE just received a copy of a book entitled, "How to Live Longer," inscribed with the compliments and name of the author, Robert H. Lady, M. D. It is not a medical book, but gives in a plain, interesting way the simple rules of life,—rules which experience and science have evolved and which, at the same time, appeal to the good sense of intelligent people. The book is written in a popular style and when you start to read it you want to finish it without stopping.

✦ ✦ ✦

MOST people want to live to a good old age; at least sane, healthy people do. But the trouble with many is that they pay no attention to the rules of the game of living until they begin to notice the approach of old age. Everyone seems to feel that he is an exception and is immune from the dangers and ills common to the race. One of the noticeable improvements of the present generation is found in the more intelligent care and feeding of children. The average length of human life has been increased by several years during the past half-century, but the addition is nearly all to the first half of a lifetime.

✦ ✦ ✦

WHEN I began writing the Neshaminy Garden notes I exacted a solemn promise from myself that I would not do as many other columnists of farm papers have done, degenerate into a health writer. In the first place, I have not proven even to my own satisfaction that I know more than the average about how to live long and happily, and in the second place I have noticed that trying to correct the faulty habits of others is a most difficult and thankless task. The human race's habits of life are almost as hard to change as are its opinions on religion and politics.

✦ ✦ ✦

I ONCE had a most interesting and intelligent neighbor who, after he was sixty years of age, became convinced that it was easily possible for one to live to be 100 years old if he wanted to. A diet of fruit, vegetables, grains and nuts, eaten in the right amounts and in the right way, would insure long life. Of course, there were other things,—regular habits, enough sleep, plenty of fresh air, sunshine and water, etc. He started in to demonstrate and prove his theory and was getting along well with it, but he died at the age of seventy-two before his demonstration was finished. However, this does not in the least lessen the importance of adopting and practicing right living rules.

✦ ✦ ✦

WE ARE saving our own tomato and cantaloupe seed this year. While high quality in seed of all kinds is important, nothing is so fatal to success with tomatoes and melons as poor seed. While the best seedsmen take special care to get their seed from good fruit, too much of the commercial supply is obtained from the tag end of the tomato crop, and from fruit that is not fit for anything else. We have some of the finest Earliana and Marglobe tomatoes I ever saw and we want seed from them. This has been a hard season to bring cantaloupes to maturity, but many of our vines, by spraying, have come thru in good shape, and in spite of the public clamor for melons we are going to eat some of the first and best in order to get the seed.

✦ ✦ ✦

THE lawn at the new house was sown to lawn grass on September 8th. We would like to have sown it two weeks sooner, but the weather was not right, and it proved to be wise to wait because we had two heavy rains which would have ruined newly seeded grass. We applied hydrated lime and a 4-8-5 fertilizer and worked them into the soil. After dragging it down it was then raked by hand, and the seed sown both ways by hand. Then it was rolled with a hand roller and raked lightly again. Two very light rains fell during the next few hours and the prospects are good for a successful stand. This is a short description of an important job.

The Cheerful Plowman

Too Much Stick

THAT maid of ours, the blamed old hick, she's far too ready with the stick, she makes me cross, she makes me sick! You see she has a little lad, a snappy, racing little tad, who's anything but mean or bad; but everytime he turns around or ventures on her sacred ground, she grabs her willow with a bound. When he grows noisy in his play, as kids will do 'steen times a day, or turns a handspring in the hay, she's after him with whip in hand with words the world can understand, and soon the kid is licked and panned! The little jigger dare not run in wild goose fashion just for fun like kids in every age have done, he dare not be his very self, a sprightly, frisking little elf, while that old switch is on the shelf! Well, that old widow, drat her bones may see good things in stripes and groans, and see results in whips and moans; but I'm a gent of kinder views, my lenses carry brighter hues, her methods I would never use! I favor making kids obey each hour and minute of the day, the parents should have perfect sway; but still I'm prone to say and sing initiative is the thing that changes peasant into king! Initiative, power to act, the will to play alone, in fact, tho not supported, helped, or backed, is something kidlets should acquire when they are young and full of fire, 'tis something parents should inspire! How can a kid who cannot say his soul's his own a single day grow up with power of "Yes" and "Nay"? Drat that old lady! Some fine day I'll open up and say my say—she'll think six dikes have given 'way,—unless she throws away her stick and lets her youngster do his trick, become a man! The blamed old hick!—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

AS WE look out over our fields in late fall, there is something about them that brings a sense of loss. A few weeks ago these widespreading acres were covered with beautiful meadow grass, growing grain and other crops. Today they lie here bare, stripped of their burden, still, and whitening toward the cold days of winter. A dear old grandmother of ours used to say, "After the hay crop is gathered in, it makes you think of fall." And so it does, and more and more so as we harvest the other things upon which we have bestowed so much work.

But where are these good things? Have we lost them? Is it right that the bare field should cause this sense of sadness in our hearts? We stand on the big barn floor and look up. Our mows are full to the very peak with fine hay. The granary out yonder almost needs to be propped up, so great is the burden of grain it has to support. All gathered in ready to use. Nothing lost or wasted. We look upon the fruit of our hands and are glad. Glad that we have been able to do so much toward making our own dear ones comfortable and glad because we have some surplus to help feed the world.

What Have Our Lives Amounted To?

Sometimes it happens that men and women as they get along toward life's sundown fell as if they are leaving behind them nothing but fields stripped of fruit, just as our plowed ground and meadows lie bare now. More than once have we not heard people say, "My life has all been in vain. I have done nothing worth while. I have given the best there was in me and now what have I to show for it?" It always makes us feel bad to listen to such remarks, for they show a lack of appreciation of our own efforts which is not healthy to indulge in. It is right and proper that we should make a careful review of our lives when we get to feeling downspirited that way, to determine just what our human lives have amounted to.

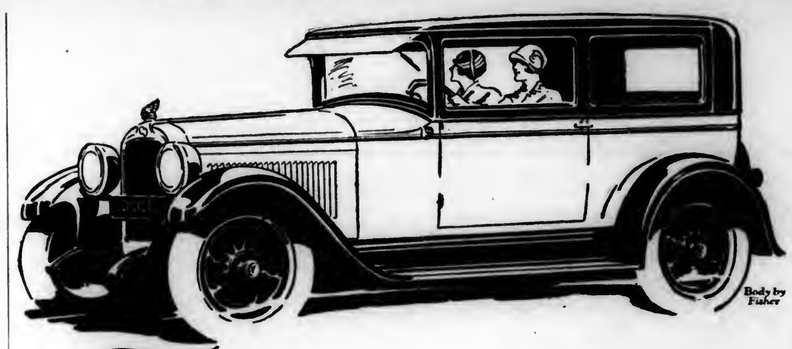
Quite frequently we shall find if we are honest with ourselves that these feelings of time and strength wasted come from the fact that we have not laid by a very great amount of money. As we compare our savings with those of men in other lines of business, it is true that the contrast is not very favorable from our standpoint. Farming is not apt to bring very great gains. And this worries us, especially if we started out with hopes of laying up in store for the days of old age plenty of this world's goods to make us and our loved ones comfortable and happy. More than one man has been soured and made unhappy by his apparent failure in this respect.

There Are Better Things Than Money

And yet, this is not wise. If we have done our best we probably have gained something. At any rate, we know in our heart of hearts that the same kind care which has furthered us in our efforts to do well in past years will not be withdrawn now that we are growing old.

But there is something better than money to be thought of. What has been the effect of the lives we have lived upon the little world about us? All these years we have been sowing and planting finer things than vegetables; and these have been maturing with the passing of the days. Richer harvests than any our fields have grown surely have come from the good lives we have lived, and these are really what make us rich when the world grows dim about us.

Our fields have yielded many a rich store for the betterment of humanity. The world will be a little better for our having lived in it, and this should make us glad, for it is all we can possibly do, and all God expects us to do. So, lets us rejoice and be glad!



Finer than ever in Quality

Lower than ever in Price

Today's Pontiac Six is the finest Pontiac Six ever built. Not merely does it offer the fashionable smartness of Fisher bodies in new Duco colors, but it brings to the buyer those many refinements which have been made in Pontiac Six design since the first Pontiac Six was introduced.

Although the original Pontiac Six was such a revolutionary value that it set a world record in the number of buyers it won during its first year—

—the Pontiac Six you buy today is even smoother in operation, even more sparing in the attention it requires, even more luxurious and more distinguished in appearance!

Yet it sells for less than ever—the result of price reductions made possible by the economies of increased volume production in the world's newest and finest motor car plant.

Unless you have actually driven today's Pontiac Six—actually studied the richness of its Fisher bodies and its exclusive features of modern design—you cannot know what thrilling power and smoothness, what thorough road mastery, and what enduring satisfaction can now be obtained in a six at $745!

WEBER FARM WAGONS have been used on American farms for 81 years. That fact alone may not be *positive* proof of quality, but it must be admitted that any manufacturing plant that has produced wagons for more than four score years must be making good ones. Further, you can rest assured that the Weber name has become known to a good many farmers in that length of time. Practically every community is the home of dozens of Webers, and every one in service is a testimonial to Weber quality. These facts combine with the Patented Fifth Wheel and the Patented Swivel Reach coupling to make the McCormick-Deering Weber the logical wagon choice. See the local McCormick-Deering dealer's display of these good wagons.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Markets Demand Quality Vegetables

A FEW days ago I was paid a visit by a fifty-year-old gardener who is being forced from his present place by some sort of real estate or other development. He has spent the summer traveling from coast to coast, visiting garden farms, observing markets in various cities and generally sizing up market gardening possibilities with an eye open for a new location.

After making the rounds he has concluded that the lot of the grower located near one of the many smaller cities and large towns here in the East is not so bad. In fact, he is now definitely looking for just such a place. The statistics that One County in Some State produced so many million dollars' worth of That Vegetable, or that a single shipping point in another state once loaded 800 cars of cabbage in a day catch one's fancy. On the other side of the picture plenty of growers in the big shipping districts of favored soil and climate are driving just as old automobiles as we nearer the markets, sometimes working amid stones or clay.

In a great many markets shipped produce, usually well graded and uniformly packed and packaged, is competing directly with locally-grown supplies. The degree of success with which we local growers meet this competition is likely to depend more and more upon the quality of the stuff we sell and the service we render in properly merchandising it.

We have a great advantage in our proximity to market and it is exceedingly important that we make every effort to grow only superior quality vegetables. Quality varieties, right growing conditions, timely harvesting and proper packing are the fundamentals.

We are accustomed to think of strawberries, snap beans, sweet corn, celery and peas as being products extremely variable in quality. The term applies with equal force to that coarser vegetable, cabbage. Just now there is an abundance of both native and shipped cabbage in nearly all markets. Just how much of this is strictly first class stuff, hard round heads of medium size? I do not know but cabbage of this type, secured by rather close planting on good soil, is in demand and moves across the retailer's counter twice as fast as loose or over large heads.

• • •

The other day a party who had apparently grown celery at some time or other inquired, "This celery heart game must be a mighty handy way of getting rid of stuff that would not sell in the usual manner?" The idea that a square of parchment paper stamped "CELERY HEARTS" is a good hiding place for the results of several unfortunate celery plants' pitiable efforts to become real celery has been put into practice here and there with the inevitable adverse reaction on the part of consumers.

Whether a celery plant is large or small rarely can more than 50 per cent be honestly classified as heart, or will more than that eat like heart. When trimming celery to pack hearts there is but one rule to follow: Quality must be maximum. Mr. Walter Marion, of Circleville, Ohio, answered when I once asked him for the standard by which he determined a first grade tomato that the "presence in your mind of the slightest doubt about any tomato being first grade automatically makes that tomato a second." If the feel, color or appearance of a particular leaf stalk on a celery plant raises a suspicion about its 100 per cent palatability pull it off if you want buyers of celery hearts to come again and again. This is a matter of considering the accused guilty and condemning without trial.

• • •

During the fall months there is a great opportunity to make our roadside markets or market stalls artistic and attractive by displaying great banquets of the beautiful wild flowers so abundant at this season. Brown-eyed Susans, wild asters, golden rod and others; even artichoke flowers and a little later brilliantly colored forest foliage all may be used. Last May we planted a short length of row in a corn field with Mammoth Russian Sunflowers and today several magnificent specimens adorn the corners of the wayside market.—Gilbert S. Watts.

Native Crops Valuable

EIGHT principal food products in the American vegetable garden are native to this country and were found in the Indian crops before the advent of the white man. These include beans, corn, peppers, pumpkins, squash, tomato, potato and sweet potato. Altho vegetables of Old World origin are far more numerous these eight native vegetables are of considerable greater value than the leading 24 or foreign origin.

These Concrete Frames Are Permanent

On the Eberly farm along the Lincoln Highway in Lancaster County, Pa., the beds for raising tobacco plants have concrete sides to support the frames. Harry, who is pulling plants to keep the setter going, told me the sides had been there as long as he could remember—at least fourteen years. They look good for another fourteen and are not to be compared to some of the decayed plank sides I saw the same day.—W.

New Jersey Growers Reorganize

NEW JERSEY Market Association members have reorganized and centralized themselves into two strong locals—one with ten members being grouped around Middletown, and the other around Burlington County. The ear-of-corn sign, which is their symbol, is displayed by all members. The Middletown local subscribed a $150 advertising fund to be spent in advertising every Friday in one of the Newark daily papers, while the Burlington County local advertises in the Camden papers. These advertisements contain the name and location of the individual members' roadside stands, and keep the customers fully informed concerning their products.

Growers around Moorestown having membership in the New Jersey Fruit Growers' Association, which packs under the "Jersey Jerry" brand have carried an advertisement in one of the fruit trade papers advising the jobbers of their brand and the shipping dates of their commodities.

Potatoes!

THE following article is from the Allentown (New Jersey) Messenger, and is so full of pertinent suggestion that we pass it along.—Editors.

"And still they plant potatoes! New Jersey farmers are not the only ones who persist in keeping up or increasing their acreage of white potatoes, the continued plea for diversified farming apparently falling on deaf ears. One is reminded of the cartoon that shows in the first scene a farmers' meeting where everybody agreed to decrease their acreage. In the next scene a farmer is soliloquizing: 'Now, I'll fool 'em. I'll double my acreage, and get big prices.' That, in fact, was what every attendant at the meeting did! Such 'co-operation' as that leads only to disaster.

They Flood the Market

"However, while we're doing better than that hereabouts, yet there has been shipped from our local station of Robbinsville, lately, about 35 carloads per day, with the prospect of 50 per day for the rest of the season—and there are 500 bushels in each car. But that is only half the story, as at least that many more are being moved daily by trucks!

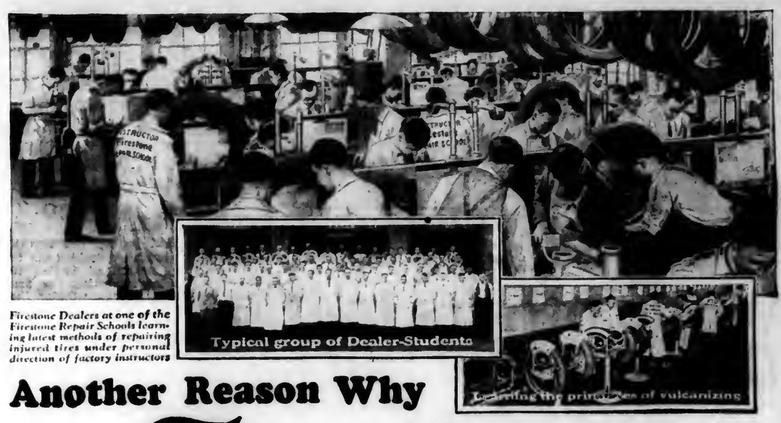
"According to the August 1 report of the U. S. Department of Agriculture the potato production of the country as a whole will run far above the estimated output. Our state alone is over two million bushels ahead of last year, and the other potato-growing states in proportion. Even Europe is reported to have an increased yield of 70,000,000 bushels over last year's output.

"All this can mean but one thing, and that is low prices. The heavy rains in this section the past few weeks have given temporary boosts to the condition of the market, and all growers welcomed the rain on that account. But the buyer is not so well off, he often being obliged to sell without a profit because the resumption of digging soon floods the market again, and back the prices slide. It's a case of Mr. Farmer preferring to see the marketplace flooded instead of the market!

Low Prices Mean Little Profit

"The potato crop this year has been in a splendidly healthy condition, and the yield is good, but after all the hard work and investment of money comes the sickening realization that low prices mean little profit.

"There are two things upon which Jersey growers would do well to concentrate—the production of late crop seed or the use of earlier seed and fertilizer to get their crop in the market during the month of July. Practically every state in the Union can produce white potatoes by the fifteenth of August, and the market at that time has entirely too many sources of supply to hold up the price."



Firestone Dealers at one of the Firestone Repair Schools learning latest methods of repairing injured tires under personal direction of factory instructors

Another Reason Why

Firestone Dealers

Can Save You Money and Serve You Better

Tire conservation—getting out of tires, all the mileage built into them at the factory—is an important part of the service of Firestone Dealers. They have modern repair equipment, specially designed by Firestone, to assure car owners quick, uniformly dependable repair service.

Firestone Dealers are trained in the latest tire repair methods at the Company's Repair Schools. They are experts in rebuilding, at low cost, tires that have been injured, protecting tire users from loss.

Firestone Dealers are in a position to give you better service for they receive their Firestone Gum-Dipped Tires and Steam-Welded Tubes direct from the nearest of 148 Factory Warehouses. They also receive, from these same warehouses, Oldfield Tires and Tubes which Firestone designed and manufactures for Firestone Dealers only. Regardless of the price you want to pay for a tire—the Firestone Dealer can save you money and serve you better.

While others loaf the Larro-fed flock *lays eggs*

Look at these production figures from the Larro-fed flock of Leghorn pullets, owned by Mrs. S. K. Lourim of Herndon, Virginia:

Pullets	Month	Eggs	Monthly Average Per Bird
327	November, 1926	4690	14.35
327	December	5624	17.19
327	January, 1927	5822	17.80
326	February	6453	19.79
324	March	7670	23.67

Grand average for the entire flock—92.8 eggs per bird for the five months or 61.4% production.

That is the kind of winter laying that puts money in the bank. Larro Egg Mash makes such production possible because it is especially designed to meet modern production requirements. It is different from any ration you have ever fed—a feed that marks the beginning of a new era in poultry husbandry.

Larro Egg Mash makes every bird yield the utmost profit of which she is capable, not just for a month or two but all the year round. It has just the right amount of buttermilk—the necessary vitamins, minerals and egg making materials—all in a uniform mixture of Larro-blended ingredients that keeps health at the peak and gives you more eggs and more profit over feed cost than any other ration.

THE LARROWE MILLING COMPANY · Detroit, Mich.

N. J. Poultry Breeders Adopt New Rulings for 1928-1929

THE certified poultry breeders of New Jersey have decided not to use until the season of 1928-1929 the new rulings regarding the pen matings for all flocks. Under the new ruling it has been decided to include for the coming season both "Certified" and "Supervised" flocks under the term "Certified." This means that the rulings in effect during the past season will be continued for another year. If the ruling had been put in force this year, it would have meant that many poultrymen would be handicapped in mating their flocks because of a shortage of pedigreed males and would be unable to supply their trade with a satisfactory grade of baby chicks next spring.

Secretary of Agriculture William B. Duryee, has appointed an advisory poultry committee to handle some of the problems coming up in this state in connection with certification of the poultry flocks of the state.

On this committee are Elmer Wene, Vineland, chairman; A. E. Jones, Department of Agriculture, secretary; A. E. Mercker, Department of Agriculture, Trenton; Prof. Willard Thompson, poultry husbandman, Experiment Station; Dr. Beaudette, poultry pathologist, Experiment station; C. T. Darby, North Branch; L. A. Nevin, Toms River; H. C. Demme, Sewell; Paul Smith, Vineland, and J. C. Weisel, Trenton. —A. K.

Will Exhibit Prize Birds in State

SILVER loving cups, medals, special rosette ribbons, books, magazines, cash and poultry equipment make up the prizes offered to winning exhibitors at the fifth annual Pennsylvania State Standard Production Poultry Show at State College, October 27, 28 and 29th.

Cups are offered for the best display of birds, all breeds competing; for the best display of White Leghorns, Rhode Island Reds, Barred Plymouth Rocks, White Plymouth Rocks, Jersey Black Giants, White Wyandottes, Mottled Anconas and capons; for the best display in the boys' and girls' class; for the county having the highest number of points in the show and for the best official egg-laying contest hen with an official record of 200 eggs or better.

The show is being sponsored by the Penn State Poultry Club and is open to Pennsylvania residents. Entries must be made before October 13 and exhibitors are urged to ship not later than Monday, October 24th.

Hatchability of Duck and Goose Eggs Vary

A number of farmers in my locality are interested in raising ducks and geese. This spring the fertility of ducks and geese eggs has been so poor on all of these farms that hardly any young stock can be seen. Many came to me and inquired as to the cause. Is there a general cause for same? What feeding of parent stock or care do you advise for the production of fertile eggs?—P. J. R., Lehigh County, Pa.

It is a well-known fact that fertility and hatchability in poultry vary in different seasons, and the cause is generally laid to the weather. While the weather may be responsible in part it is only one factor, however. For instance, both geese and ducks are supposed to show an increase in fertility if allowed to mate in deep water.

Goose breeders should be at least two years old, and improve with age for several years. The females are generally kept as long as the eggs are fertile, and the ganders replaced after five or six years. There is no exact rule about this, and goose matings are generally allowed to remain for a long time. Two or, at the most, three geese should be mated with one gander.

With ducks, one-year drakes are generally mated with two-year ducks in the proportion of one drake to from three to six ducks.

Give Breeding Stock Free Range

It is better to give breeding stock free range than to yard the birds up. Some sort of green feed should be provided early in the spring. Geese are generally fed chicken laying mash shortly after the first of the year; and ducks are fed a moist mash of bran, middlings and cornmeal with about 15 per cent beef scrap. Oyster shell should also be provided.

Both geese and ducks lay very early in the morning and during cold weather the eggs may get chilled if not gathered. This would injure the hatchability. Eggs are generally set under fowl hens. I think it pays to set them as soon as possible after they are laid. With geese, and perhaps with ducks, it is a good idea to turn them twice a day, as the eggs are too large for the hens to turn. During the latter part of the incubation period the eggs should be sprinkled once a day with lukewarm water.

The U. S. Department of Agriculture at Washington has bulletins on duck and goose raising for free distribution which you would find very interesting.—R. L. Scharring-Hausen.

Nest Box Notes

RIGHT now is a good time to get the pullets in their winter quarters, before cold rains and chilly nights bring on an attack of roup. When the season becomes late birds do better in confinement than on range. I have often noticed that on cold, windy, fall days the birds that are outside will seek a sheltered place in the sun and huddle there instead of eating at the hoppers. That isn't going to make them grow.

• • •

When pullets are first housed some of them will want to roost on the hoppers or in the nests, while others will choose the window sills or ventilators. Such independent individuals are not only a nuisance but are liable to get colds and roup from sleeping in drafts. It is a good plan to go thru the houses after the birds have gone to roost and see that they have gone to roost where they should. Bad habits can be easily broken up when they are first being formed.

• • •

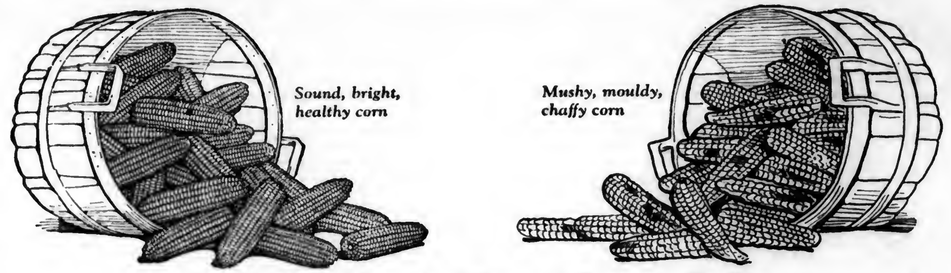
Before it gets too late, all poultry runs and bare ranges should be seeded down to wheat or rye to provide green feed for the early spring.

• • •

Egg prices are going up and everybody who has eggs to sell is pleased. Our early pullets are keeping up the yield, laying a few more all the time as the old hens drop off. I weighed up some of the pullet eggs and found that they were about two-thirds as large as the hen eggs, so I am selling them at two-thirds the price. Many of the pullets are laying full-size eggs by now.

"Quality First"

QUALITY and truthful advertising are aims of the International Baby Chick Association. At the I. B. C. A. Convention held at Grand Rapids, Michigan, last July they passed a resolution that their motto be, "Quality First." They also put themselves on record as favoring the elimination of all untruthful, misleading or grossly exaggerated advertising.



Two Bushels of Corn, but What a Difference in Feeding Value. There's the Same Difference in Lubricating Oils.

There's as Much Difference in Lubricating Oil as in Corn

TAKE a bushel of good, bright No. 2 corn and a bushel of inferior grade that has been caught by an early frost. Each is a bushel of corn, but one will be worth twice as much as the other in feeding value to make pork or beef or milk.

Oils are like that. Two different quarts of oil may show just as great a difference in lubricating quality. That is the purpose of oil—to lubricate. Your automobile and your tractor live on it. The rapidly moving parts, where metal slides on metal, must always be separated by a thin film of oil, so that the actual metal surfaces never touch. You know what would happen if you tried to drive either your car or your tractor with the crankcase dry. You wouldn't travel a hundred feet before the engine would jam, and probably be ruined.

The same thing happens, but in a slower way, when you use an oil that is lacking in lubricating quality. Gradually, insidiously, such an oil permits friction to do its deadly work and although you may not be stopped so suddenly, you find eventually that the life of the machine has been eaten out.

And the tragic thing about using unknown oils is that you save only a few dollars in an entire year, not one-tenth of what you are likely to pay out in repair bills as a result of using them.

But you can't look at oil or feel of it, and tell the difference. It takes the skillful examination of trained chemists to tell which is which. You can tell by experience, but why experiment with your good car or your expensive tractor?

There is a better way to tell good oils—by known trade-marks. We encourage the use of good, trade-marked oils, put out by manufacturers who are proud of their good name and are willing to stand back of their products. We warn against using unknown oils, with no name and no reputation, which may be cheap to buy, but much too expensive to use. Only reliable oil companies are permitted to use our columns. The oils and greases you see advertised here are not produced by accident. They are the result of years of study and research, development of special machinery and special processes of refining.

When you buy a quart or a gallon or a barrel of oil advertised in our columns, you buy not only the substance that you can see and feel, but also the skill of chemists, the painstaking care of inspectors, the faithfulness of workmen who have been trained to watch every detail for the production of a quality product.

The advertisements in this paper are your guides to merchandise of known value. We stand back of them.

Pennsylvania Farmer Advertisements Are Reliable

These Rations Mean More Profits *per Cow*

—the secret of successful dairying

Feed records on thousands of herds in the cow testing associations prove this: Success depends on your profit *per head,* which can be improved by better feeding. The only way to beat market conditions is by cheaper production through tested, successful rations.

The rations included in this big, free booklet—"How to Make Money Feeding Linseed Meal"—have brought farmers thousands of dollars in increased profits. Sent upon request. Mail the coupon.

FREE BOOKLET!

Includes money-making rations for dairy cows, beef cattle, hogs, sheep.

Nine out of ten successful dairy rations include Linseed Meal.

Names you should know

YOU like to know names that everybody knows—name of the man who tied lightning to a kite; name of the man who watched a tea kettle and went out and made an engine. Just knowing such names gives you pleasure.

Yet there are names that thousands of people know that can give you much more pleasure in a much more personal way. Names that stand for the best things to eat, to wear, to sleep on, you can buy. Names that if connected with the salad dressing, hat, mattress you select—or any other desirable thing you select—mean it is most desirable. Names written large in advertisements. Advertisements tell why those are wise names for you to know. Why such names greet you in the best groceries, department and hardware stores. Why those names are in the buying vocabulary of thousands . . . are believed in by thousands . . . justify belief!

Read the advertisements. Don't ask vaguely in a store for "cold cream," "a skillet," "a vacuum cleaner." Ask for So-and-So's Cold Cream, So-and-So's Skillet, So-and-So's Vacuum Cleaner. Use the names you have learned thru advertisements, that stand for the product that means most to you and most to most everybody.

Read the advertisements to know

Allegheny Co. C. T. A. Finishes Third Year

THE Allegheny County C. T. A. finished its third year July 1, 1927, with 24 whole-year members. In addition two members were in the association only part of the year. There were 517 cows in the association during all or part of the year.

Fifty-eight cows produced over 400 pounds of butterfat. The Fairacres Farm registered Guernsey cow "Vera," age seven years produced 12,764 pounds of milk and 739.8 pounds of butterfat, the highest production of butterfat in the association. This cow is followed in butterfat production by Staunton Farm's registered Holstein cow "Lola," age seven years, which produced 24,976 pounds of milk, the highest milk production in the association, and 715.8 pounds of butterfat. The second highest cow in milk production is owned by the Allegheny County Home, a registered Holstein, "Madeline," seven years old, with a milk production of 16,390 and 484.4 pounds of butterfat.

The result for the whole-year members is as follows:

Total average number of cows in the association..	375.29
Avge. per cow: lbs. of milk	8528
Pounds of butterfat	327.2
Percentage of butterfat....	3.8
Value of product	$279.71
Cost of pasture	6.66
Cost of roughage	56.32
Cost of grain	68.19
Total cost of feed	131.17
Value of product above feed cost	148.54
Returns for $1.00 expended for feed	2.13

Following is a grouping of all cows producing over 300 pounds of butterfat: Group I, above 700 lbs. butterfat, 2 cows; group II, between 600 and 700 lbs., 1; group III, between 500 and 600 lbs., 8; group IV, between 400 and 500 lbs., 47; group V, between 300 and 400 lbs., 115. Total, 173 cows.

Fifty-eight cows produced over 400 pounds of butterfat during the year.

Henry R. Eby, county agent; Gordon J. Rice, cow tester in charge; figures compiled by I. O. Sidelman.

Fourteen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Pounds milk	Pounds butterfat
Fairacres Farm, Sewickley	6.83	R. G.	10,094	495.9
Farmhill Dairy, Sewickley	10.00	R. G.	8074	403.1

Blackburn Farm, Sewickley	15.50	R. A.	8235	310.0

Eight Club Boys Attend Camp Vail

EIGHT club boys from Pennsylvania attended Camp Vail, which was conducted as a part of the Eastern States Exposition at Springfield, Massachusetts, September 18 to 24th.

Three of these boys are members of the Keystone 400 Bushel Potato Club. Wilbert Lance, Beaver County, grew 401.5 bushels on a measured acre last year; Merritt Bardo, Lycoming County, raised 432 bushels, and Bruce Cooper, Jefferson County, produced 412 bushels.

Lloyd Phillips, potato club boy of Clarion County; Lloyd Wilcox, Warren County junior cow club member; Ellsworth Dunn, Fayette County potato club boy; David Shaffer, potato and baby beef club boy of Somerset County, and Marvin Goss, Mifflin County potato club member, were the other boys chosen to attend the camp at Springfield.

Boys and Girls Judge Livestock

THIRTY-NINE boys and girls participated in the Livestock judging contest at the Nazareth Fair, Northampton County the first week in September. A. L. Baker, state club leader, assisted with the contest.

Winners in the swine judging were Harold Zellner, Paul Buss, Leroy Buse, David Creyer, Clayton Roth, Wilbert Roth, Elmer Dech, Mark Remaly, George Lukish and Carl Johnson.

The high scoring individuals in dairy judging were Elmer Dech, Raymond Uhler, Paul Dech, Alvin Mengel, Carl Johnson, Ralph Shoemaker, Leroy Buss, Harold Zellner, Elvin Gradwohl and Charles Fogel.

The Northampton County Bankers' Association sponsored the contest and awarded prizes to the winners. Teams to represent the county at Pennsylvania State College during Young Farmers' Week in June, 1928, will be selected from the high scoring individuals.—B. L. C.

He Advertises

Mr. William F. Schaefer is the tester in charge. He takes pride in his work and believes in advertising. The accompanying photograph

shows the tire cover on his automobile adorned with a cow and a suitable inscription calling attention to the association and its work. There should be marked dairy progress thruout that section of York County in which the association operates.—E. B. F.

Win Gold Medal for Best "Get of Sire"

FRANK COLEMAN and Sons, Alloine, Salem County, New Jersey, have won the gold medal for the best "get of sire," from the Holstein Friesian Association of America. The prize was awarded for the exhibit of this prominent breeder at the recent Garden State Fair, Bridgeton.

Interest among New Jersey breeders was very keen in one of the strictest competitions ever staged in South Jersey.

Three heifers and a bull, the get of Belle Farm Major, won the coveted prize, something that has never before been won by a South Jersey breeder and, as far as can be learned, the first time in the state. The second prize, a bronze medal, was won by Walter Squire, Bridgeton.

Belle Farm Major, owned jointly by Frank Coleman and Sons and Joseph Hill, Monroeville, is one of the leading herd sires of the East. His sire is a son of May Echo Sylvia, the cow which set the world's record at 41.01 pounds of butter and 1005.60 pounds of milk in seven days.—A. K.

Will Award Honor Certificates

FOUR hundred and twenty dairymen in Pennsylvania will be awarded honor certificates by the National Dairy Association for having herds that produced more than 300 pounds of butterfat per cow during the year ending in June. The highest herd, 13 cows owned by William Steigerwalt, of the Lehigh County Association, averaged 509.6 pounds per cow.

Dunlap Resigns

E. G. HAMILL, former county agent of Sullivan County, will succeed R. Bruce Dunlap as extension farm agent in Blair County. Dunlap, who has been county agent in Blair County since 1912, resigned to accept an agricultural position with the State Department of Welfare. J. W. Learn, at one time assistant county agent in Monroe County, is successor to Hamill.

Where the Fairs Are

FAIRS scheduled for this week are as follows:

Town	County	Date
Bedford	Bedford	Sept. 27-30
Cockport	Indiana	Sept. 29-Oct. 1
New Castle	Lawrence	Sept. 27-30
Philadelphia	Philadelphia	Sept. 27-28

Montrose	Susquehanna	Sept. 27-29
Lewisburg	Union	Sept. 27-30
Honesdale	Wayne	Sept. 27-30

HAVE A CAMEL

Camels—so mellow, mild and unfailingly good

MODERN, particular smokers, it is your insistence upon the best that makes Camel lead all other cigarettes. You are hard to please. In the true spirit of the modern age, you look for until you find value supreme in a cigarette. And it is this unremitting search for quality that puts Camel overwhelmingly first.

For Camel combines all those virtues, so indispensable to the cool, satisfying smoke. The choicest Turkish and Domestic tobaccos that Nature's sunny fields produce. And a blending that brings these inimitable flavors and fragrances to the delighted taste of the smoker. Really, there is no other smoke like Camel. No other can be so everlastingly good.

If your taste calls for the enchantment of the finest, just try Camels. Always tasteful and smooth. Always so mellow and mild.

"Have a Camel!"

R. J. REYNOLDS TOBACCO COMPANY, WINSTON-SALEM, N. C.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Editor:—For pets I have two kittens. I call one Nigger because he is all black and one Tabby because I liked the name. My brother is in the baby beef and potato clubs. We have a dog and we call her Teddy. She surely does like to chase the chickens and the cows. Last year I had the chicken pox and whooping cough and missed a good bit of school.—Jane C. Bair, Perry County, Pa.

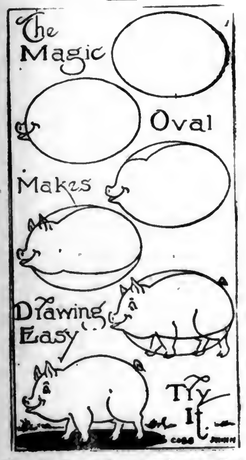
I hope you have better luck this year and that you do not miss a day on account of sickness.

THE FORUM EDITOR.

Dear Cousin Ruth and Forum Friends:—I received the membership pin some time ago and thank you very much for it. A panther passed within five rods of our house the other night. You should have heard the way it screamed and cried. That is the first panther that has been heard of around here in a long time. Did you ever see a panther?—Catherine V. Merrill, (X), Wayne County, Pa.

Yes, I have. I called on Mr. Panther one day—but you may be sure he was securely locked in his cage. I visited him at the Zoo in Philadelphia.

THE FORUM EDITOR.



You don't need a magic pencil to draw this picture

Dear Cousin Ruth and Forum Friends:—For pets I have a dog, a cat and a rooster. My dog's name is Jack, my cat's name is Tom and my rooster's name is Dick. He is red. You can go and pick him up any place he is so tame.

I am nine years old and am in the third grade. I go to the Stoney Batter School. — Arnold Shook, Northumberland County, Pa.

Dear Forum Editor:—My little brother and I hunt wild blackberries. Then my mother makes jelly. For pets we have three cats. One is gray and two of them are white and gray. When my oldest sister was small she used to make dresses for the little kittens.

My sister and I mind the cows almost every morning. Then our neighbor's dog comes over and plays with us. He is a police dog.

We have all our wheat and oats in the barn. I had to help thresh. There were snakes on the hay wagon and sometimes little mice. During the first days of August it was raining every day. We had a play house in the woods which was spoiled during the rain.

I suppose most of the Forum friends are all glad for school. When Pennsylvania Farmer gets old I cut out the pictures which the Forum friends send in.—Sarah Derstine, (X), Montgomery County, Pa.

Dear Cousin Ruth:—I received my membership pin and was glad to get it. We have two horses and five milking cows. I have a milking cow and two small calves which I show at the fairs. I think it nice to start out with a heifer and end with a herd. We have two pigs and 500 small Barred Rock chicks. I have to tend the chicks. I have a horse and ride her for the cows.—Gladys Hamilton, (X), Hunterdon County, N. J.

Answers: "What Five States?" Maryland, Oregon, Nevada, California and Florida

Dear Cousin Ruth and Forum Friends:—I live in Ohio County, West Virginia, which in most parts is hilly. I happen to live in the hilly part.

Last summer an airplane made a forced landing on account of engine trouble. The airplane went up in the air three times after that and crashed at all times and the pilot and passenger escaped without a scratch.—Robert Crupe, (X), Ohio County, W. Va.

Dear Forum Friends:—For some time I have greatly enjoyed the letters written by Forum girls and boys and it's pleasant to know that there are other young people who love the out-door life.

I am going to school and I love to study but I am glad when vacation comes. Books are interesting to me but on the farm I find the real beauties which are only artificial in books.

In comparing city life with country life we find a great difference. In the city you will find groups of people discussing the latest dance, song or movie. If we think it over we find that city folks are not seeing the good movies. They are not the best which you pay dollars to see. The scenes of nature are far more fascinating. In the country we can see the rare works of nature and enjoy its beauties. As one poet says,

"When breezes are soft and skies are fair,
I steal an hour from study and care,
And hie me away to the woodland scene,
Where wanders the stream with waters of green.
Oh, loveliest there the spring days come,
With blossoms and birds and wild bees hum;
The flowers of summer are fairest there."

These are some of the reasons why I like the country. Perhaps others see it differently. I'd like other Forum friends to write and express their opinion.—Irene Zimmerman, Burlington County, N. J.

Dear Cousin Ruth:—For a long time I have been wanting to write to you, as I am very much interested in "Our Young People's Forum."

Where we live there is running water where the thirty-five kinds of birds that nested here this summer come to bathe. The house is an old homestead with four of the largest silver maple trees I have ever seen growing in the front yard. There are shade trees at the side and back of the house.

On the tree at the back we have a bird house for the wrens. In the spring a pair of robins built a nest on the top of it and raised three baby robins. Later the wrens raised a brood of four in the house. We watched them carrying food for the little ones daily until one day they flew away. They didn't go far tho. First to the cherry tree, then to the currant bushes, then to the locust row, then to the hill.

We have a large garden at the east side of the house. There are many kinds of vegetables and flowers growing and blooming there. Two or three hummingbirds visit the phlox and bergamot many times a day.—Dorothy Bucher, (X), Cumberland County, Pa.

THE EVENING MEAL
Elizabeth Cook, Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—This is the first time I have ever written to the page. I like to read our page. I think it very interesting. I will send a few riddlee:

1. What is the hardest job in the U. S.?
2. What has a tongue and can't talk?
3. Name a living mouse trap in three letters?—Mary Lapp, Lawrence County, Pa.

Dear Cousin Ruth:—For pets we have three little kittens and two rabbits. One is white and the other gray. I am sending a recipe for:

GOLD LEAF CAKE

¼ cup butter
⅔ cup sugar
¾ cup milk
4 egg yolks
1 cup flour
1 level teaspoon baking powder

Cream the butter, add gradually the sugar, then the egg yolks beaten until light colored. Sift together thoroly the flour and baking powder and add alternately with the milk to the first mixture. Bake in a narrow, deep cake pan.—Bertha Marie Wenger, Cumberland County, Pa.

Do You Like Games?

DEAR FORUM BOYS AND GIRLS:—Next week I shall announce our October Contest. Many of you have sent in contest suggestions and altho I won't have time to acknowledge all the letters received I'm going to say "thank you" thru our page. I'm always glad to have you come along with new ideas and—we have a brand new idea for next month.

In looking over a book of games the other day I came across this one. Perhaps you may like to try it.

What Five States?

ARMY ADE CAIN GONE AIR FOR OR VAN AIL FOLD LAND

The eleven words contain letters which, if properly assembled, will give the names of five states of the Union. No word may be used in forming the name of more than one state. For example, the words "army" and "land" produce the letters necessary to form Maryland. Can you discover the four remaining states? Games like this are nice to keep in the back of your head for use on a rainy day. Elsewhere on the page (if you look carefully) you'll find that I've given you the answers, too.

You will also find on the page this week a drawing lesson. Did you have any trouble sketching the pig? I'm always glad to hear from all of you.

THE FORUM EDITOR.

Dear Cousin Ruth and Forum Friends:—I received my membership pin and was pleased with it and wish to thank you very much for it.

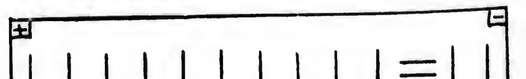
I am trying to raise some young ducks. I now have fourteen and they are growing nicely. My brothers, Paul and Roy, have about fifty young rabbits just now and eight old ones.

Cousin Ruth, you ought to see all their pretty young rabbits. They have black, white, brown, grey and black and white spreckled ones. They are awful pretty. I could sit out with them long and enjoy myself watching them.

Cousin Ruth, I'm waiting for the next contest to come.—Helen J. Fauser, (X), Lancaster County, Pa.

Dear Cousin Ruth and Forum Friends:—I have been reading the Forum for a long time and find it interesting. I have been helping my mother in the garden. I have gone to school for six years and for two years I haven't missed any or was tardy. — Genevieve Larue Fraker, twelve, Fulton County, Pa.

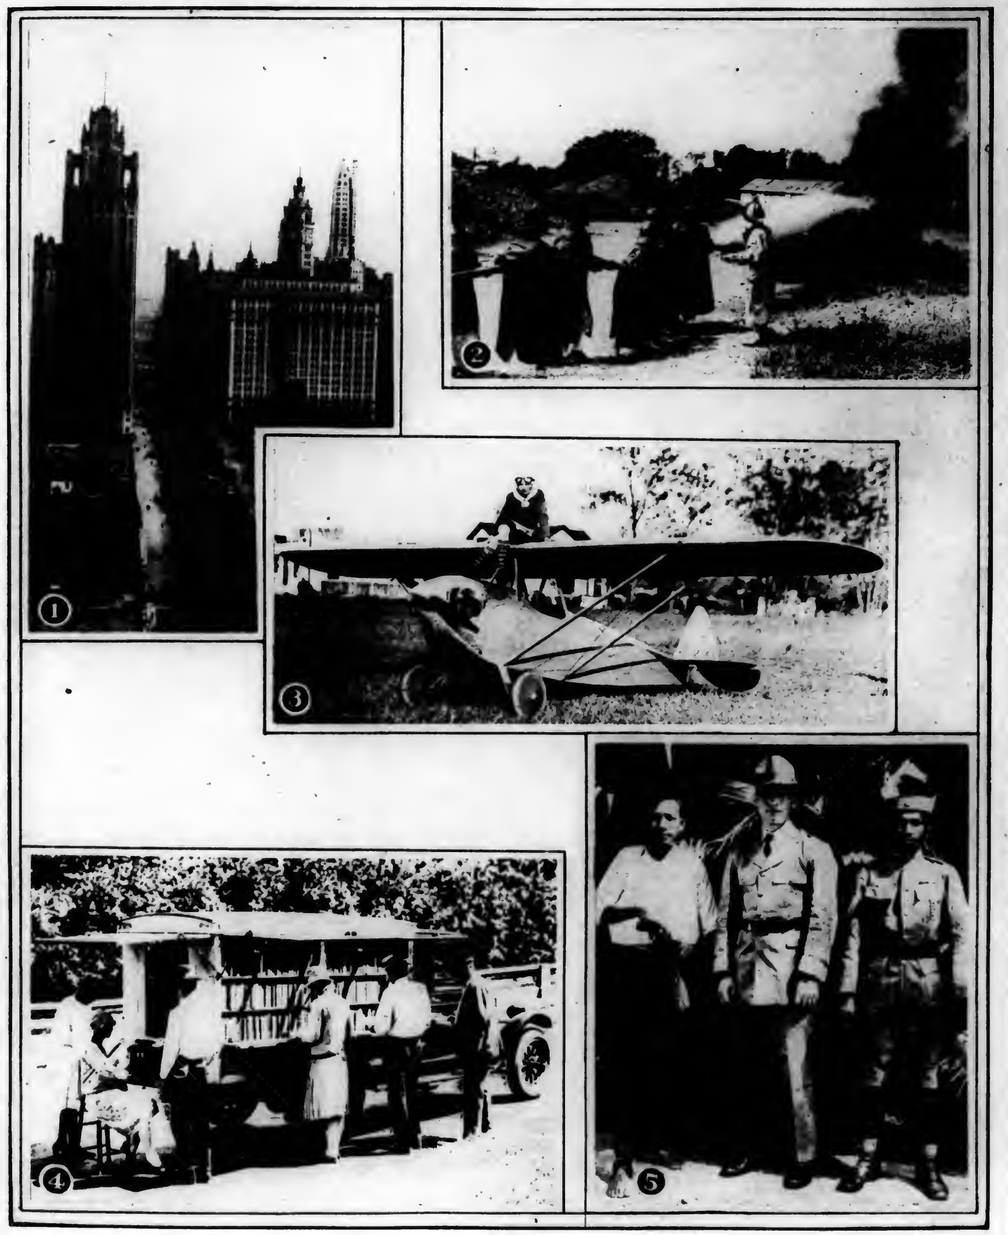
DEAR LITTLE FOLKS:—Some mornings I think that the things that come to my desk to be attended to make a great big pile; and then, after I sort them out, I find the problem of getting them done is not so impossible after all. There's this puzzle for you this week. Maybe it looks impossible, but I assure you it is not. Those ten ones can be made to equal the two ones by simply placing one plus sign and one minus sign in just the right spots in the group of ten ones. If you try this out on a piece of paper a few times you will soon find out where to place the plus sign and where to place the minus sign. When you have found the answer, let me have it, either on a postcard or in a letter so that it reaches me by October 1st. PLEASE REMEMBER TO TELL HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND THE NAME OF YOUR COUNTY. Of course, I need to know your name and address, too, for the I hear from some of you almost, if not quite, every week, I notice that occasionally the handwriting of several of you looks somewhat alike and I don't want to have to guess which of my good friends has written to me. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.



The answer to the puzzle published in the September 3 issue is: AIRPLANE.

The prize winners are: Esther Bohlayer, age 10, Troy, Pa.; Naomi Cragle, age 7, Bond Hill, Pa.; Leona Guris, age 11, Auburn, Pa.; Pearl G. Hunsicker, age 10, Rahns, Pa.; Lula Knorr, age 12, Berwick, Pa.; Gladys LaBar, age 12, Bangor, Pa.; Marjorie Robson, age 10, Jackson Center, Pa.; Charles F. Roeder, age 9, Spinnerstown, Pa.; Rose L. Stuck, age 10, Somerville, N. J.; Millard Talley, age 10, Wilmington, Del.

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—When the large boats have to go down the Chicago River, the link bridge has to be raised. The few minutes that this bridge is raised will congest the traffic many blocks along Michigan Boulevard. It is said that this bridge handles more traffic than any other bridge in the world.

2.—The only fire department in the country in which women serve as the brave "fire laddies" is in Silver Springs, Maryland.

3.—Dicky Heath, the daughter of E. B. Heath, one of the pioneer fliers and airplane manufacturers, has flown over 300 hours. She is shown with a tiny "Parosol Sport Plane." This sport plane has a wing spread of only 21 feet, but can step along with any 100-mile-an-hour ship and is far from being a toy.

4.—This branch of the Cincinnati Public Library goes out into the rural sections and distributes books of knowledge at the doorsteps of those who cannot come to the library.

5.—W. T. Doran, (center) of Rochester, N. Y., is the only American soldier in the Sulu Archipelago. He makes up Uncle Sam's entire armed force there.

A Desk Solves the Problem

Odd Furniture May Be Utilized for This Purpose

I WAS interested in Mrs. Edey's article in August 27 Pennsylvania Farmer and was hoping she might go one step farther. I am sure tho, that she is a Mother who will see that her children have a suitable place to study and to do school work when they are older.

If it is the right of children to have a place for playthings in the home it is much more necessary that they have a comfortable place for study and for keeping books and tablets together.

"Mother, where is my arithmetic? Have you seen my tablet? I cannot find a pencil." Do those questions have a familiar ring?

The desk may be but a kitchen table, painted a soft gray or a restful green, with a chair of the correct height placed near but the drawer holds pencils, pens, etc., and there are book ends for holding the necessary books in place.

In our own case the desk problem for the high school daughter was solved by having Mother's black walnut organ made into a desk. It is a thing of beauty and roomy, as you see by the photograph.

Children Appreciate Privacy

The desk is in daughter's room. Every person likes the feeling of privacy. The growing girl especially likes to feel that her desk is her very own and she does not like to have different members of the family hunting around thru her desk for pencils and the like, as they are quite apt to do if the desk is in the living room.

Then, too, it is easier to get school work done if the child can go to the desk away from the other members of the family. School work is not then interrupted by callers coming in for the evening.

It is essential to see that the child who is studying in the evening has a light correctly placed. By all means see that the eyes are shaded from the direct rays of light.

Home work is required at least in high school and a proper place to do this home studying is an all important factor in the success of the boy or girl.—May H. Mumaw.

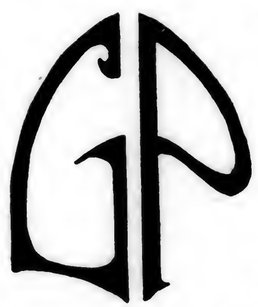
Crab Apple Pie

A CRAB APPLE pie tastes good right now, and another one early next spring, will taste just as good. Crab apples may be sliced thin and canned without sugar in a hot water bath to make pies at any time of the year. A well packed pint jar is about right for one medium-sized pie. Crab apples for pie do not need peeling and if their skins are red they give a bright color to the pie filling. To can the apples, according to methods which have proved satisfactory, wash and core them but do not peel them. Cut them in thin slices, pack them in clean jars to within one-half inch of the top and fill the jars with hot water. Adjust the covers and partially seal them. Boil the jars with their contents from sixteen to twenty minutes in a hot water bath. Seal the jars, and store them until they are wanted.

Vegetables canned now are an "ounce of prevention" against monotonous winter meals.—N. Y. State College of Agriculture.

Monograms Lend Individuality

PERHAPS you love a needle as I do—and have a taste for fine work. I have no pillow-case in my house without an extra touch of thought. For my own room I like best a plain 2½-inch hemstitched hem and an embroidered monogram in the center. Sheets are made in similar style, and how proud I have always felt over these little touches that stamp my very own individuality on the linens. Tablecloths and napkins deserve the same sort of treatment, and remember it is just these few stitches that make you prouder of the place called home. Just because you girls have married back to the soil, do not think you need sacrifice the pretty things your city sister does and so greatly enjoys.—Mary Stewart Shuman.



Note:—We have beautiful monograms to help you with this style of needlework. You know a wise man once said "Every useful thing can be beautiful as well." Mark your linens—give them a spark of individuality.

The monograms we offer contain the entire alphabet arranged for first or last initial. Sends 10c to Monogram Department, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

A Novel Idea for Mother's Vacation

HAS mother, with little desire and less money for a vacation trip, volunteered to remain at home and look after things while the other members of the family enjoy their vacations? Possibly now she can have her vacation at home if all the family cooperate and see that she gets it. How carefree mother would feel if she did not have to get up early to prepare breakfast. She might rise early and take a morning walk, a wonderful thing to be able to do once in one's life without thought of hurry or responsibility of breakfast to serve. To enjoy the dawn at leisure is even more tempting than a sunset. To never hear, for a whole day, "Mother, will you sew on this button?" or "Will you put a hem in my dress?" "I must have a suit pressed today," will be a restful change for mother. These apparently trifling requests are seemingly little things but, oh, so wearing when they come too thick and fast. Most mothers would enjoy a week, or two weeks, which they might call their own. To insure the success of such a vacation each member of the family must remember that mother is "off duty."—M. A.

Why Not Conserve?

ECONOMY is a household word which has been used so much and so faithfully followed during the past few years that with most of us it has nearly grown threadbare. If not on an equal with economy of food and clothing, economy of fuel comes a close second, and at this time we find a greater necessity for saving that commodity than ever before. In many farm homes the use of oil has taken the place of wood and coal for cooking purposes, not alone because of the scarcity of fuel, but for the increased convenience and lessened work of the housewife.

Fill the Oven to Capacity

In any family, large or small, the oil seems to disappear with great rapidity, as cooking is one of the endless duties of the home. Baking requires the greater part of the heat and whenever the oven is used, one should remember that a large part of the heat is wasted if the oven is not filled to capacity. Instead of promiscuous baking as one's fancy dictates, let a whole baked dinner be served on baking day. Seldom in the average family does one fill the oven at one time with pies or cakes.

If before she heats the oven, the housewife would prepare a roast, one or more vegetables, and perhaps apples, she would find that a meal might almost entirely be prepared with the same heat ordinarily used to bake a couple of pies. I find it a good practice to follow, to serve a wholesome baked dinner on baking day, and save the use of two or more extra fires in cooking meat and vegetables.—Mrs. J. A. U.

Salmon Cakes

Blend together one can of minced salmon, one finely-diced onion, two cups of stale bread crumbs that have been soaked in milk or water, and are squeezed nearly dry before adding. Then add one large egg well-beaten. Season to taste, using salt and pepper. Mold into cakes and fry in hot fat. Serve hot with a nice garnish of either crisp parsley or slices of lemon.—Mrs. V. H. Marshall, Pa.

Experts Urge You to Consider These Points

WITH September, your child is starting in a new grade at school. This is an important step that his mind is grasping as checked by observations of teachers. Is his body, or his physical self able to climb up this step along with his mind? That is a question health experts of the country are urging parents to consider seriously.

Every child should be weighed once a month and the record kept to see if he is gaining half a pound a month, the average gain for a school child. If you find your child is underweight or undernourished, here are some causes that National Dairy Council nutrition experts call to parents' attention:

1. PHYSICAL DEFECTS, especially obstruction of the breathing passages; children must all be "free to breathe" if they are to be "free to gain." Adenoids, enlarged or diseased tonsils, or growths in the nose; eye strain, defects of hearing, hollow chest, crooked back, flat feet, will all hold children back from normal gain.

2. LACK OF HOME CONTROL. This means that the parents must assume the intelligent direction of the family and not leave it to the children who are usually ready to assume this responsibility.

3. OVER-FATIGUE. Rest is as important as food in children's development and few of them have enough of it. The school program is often too intense for the growing child; he has too many outside activities, such as classes, clubs or lessons; he is up too late at night and is too fatigued to get proper nourishment from his food.

4. INADEQUATE FOOD. To supply the child with adequate food, mothers should plan three well-cooked meals a day consisting of a quart of milk, bread and butter, well-cooked whole cereals, fruits, green leafy vegetables and a little meat.

5. FAULTY HEALTH HABITS. Plenty of rest, ten to twelve hours sleep at night with the windows open, no vigorous exercise for underweights, but plenty of play time out-of-doors will correct faulty health habits.

A Brisk Walk Is the Best Tonic in the World

"STOP taking headache medicine, indigestion tablets, constipation pills and tonics," said a famous doctor to a run-down patient. "Walk more—take some physical exercise every day, be outdoors and report back to me in two months."

Everyone may not be fortunate enough to belong to a golf club and get in an afternoon or more of exercise weekly on the links. We may not all have access to a gymnasium, to a tennis court or swimming pool but nearly every one has his two good legs and enough money to buy a sensible pair of shoes and can walk at least a mile or two daily. Cool, crisp fall days lure one out-of-doors and there is no tonic in the world that can keep one more fit than a good brisk walk. But it must be brisk to do any good.

It is all very well to modify the diet and eat more wisely but a splendid diet regime will be of no avail if the muscles are allowed to become stiff and the body is not kept well oiled with exercise.

Neck muscles must be strong to hold the head erect and high; abdominal muscles must keep the organs from slumping or bulging. Arm, leg and trunk muscles must be reliable and enable one to work efficiently with vigor and enjoyment.

With this muscular development (not overdevelopment unless you are to be a circus performer!) will come better circulation of blood, better respiration and better functioning of skin, intestines and kidneys.

Prevention of sickness is our modern medicine. One of the best medicines to prevent sickness is exercise.

Simplicity Rules

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5908.—Cut in 6 sizes: 24, 26, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 1⅞ yard of one material 40 inches wide for the upper part of the dress and the facing on collar and belt, and 2⅝ yards of another material for bolero and flounce portions. If the bolero is omitted 1⅝ yard less will be required. The width of the dress at the lower edge is 2½ yards. Price 10c.

5924.—Cut in 4 sizes: 4, 6, 8 and 10 years. A 10-year size requires 2⅝ yards of 32-inch material together with ⅝ yard of contrasting material. If trimmed with bias binding on collar, cuffs and pockets, 1⅛ yard will be required. Price 10c.

Sends 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

The One-Room Home Of Every Closed Car Owner

A closed car is virtually a one-room home—a home in which the average motorist spends more waking hours than in any room in his house. When the body is by Fisher, your one-room house on wheels is sure to possess not only many outstanding advantages in comfort, in convenience, and in beauty, but also an extreme degree of durability which assures that the interior of your Fisher Body, including the upholstery, will retain its charm of appearance during the long life of the car. When you select a new car be sure that it brings you the important superiorities which Fisher Bodies provide.

Interior Features of Body by Fisher

Upholstery Cloth—Fisher uses mohair, velour and broadcloth, carefully tested for long wear and color fastness, of pleasing and harmonious color design and pattern.

Cushions and Backs—Fisher designs seat cushions and backs with utmost attention to comfort and durability. Saddle-back type springs are used in order to fit the contours of the human body and thus provide the maximum in riding comfort. Seat cushions and the back cushions each contain 50 flexible, resilient springs.

Hardware—Fisher door handles, window regulator handles, dome lights, and other appointments are all of pleasing design, and lasting finish, constructed for long service.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

A FAVORITE trick for the sheriff was to come down on a farmer unexpectedly and demand instant payment in cash of all back taxes. The farmer, of course, could rarely pay at once. While the farmer was looking for a money lender from whom to borrow the cash needed, the sheriff would hurry back to the county-seat, rush thru a sale of the farmer's land in payment of taxes, and for a few pounds turn the property over to one of his friends.

"They rob us blind with fees," Alexander went on with growing wrath. "Men bid for the place of county clerk; maybe they offer the scoundrel at Newbern who has the giving of them a bid of fifty pounds, maybe two hundred. And when a man bids high enough and is appointed, he mounts his horse and comes scurrying out here to rob us of ten times as much. There is a fee for every bit of writing recorded, and they have ways to prove that one document is ten with a fee for each.

"One of my old neighbors in Granville County, poor wretch, borrowed money to pay his taxes. He could not repay in time. His creditor got a judgment against him. Out comes the sheriff. But the poor fellow had no money at all. So the sheriff sees that he goes to work, even tho he has to leave his home and farm. To work he goes, and he works for twenty-seven days. He asks for money. No, that has gone to the clerk to pay the cost of entering his creditor's judgment on the docket. He works nineteen days more; this is to pay a lawyer for getting up in court and admitting that the money is owed. He works nineteen days more; that is to pay the sheriff. Then he goes home, to find that the sheriff has sold his goods and land to pay the original debt."

"Why do men bear this?" I asked.

"Because they must. But a change is coming. What does Governor Tryon, what do all the gentry of the seaboard, care about us here? We are merely bees that gather honey for them to steal. Even Fanning, off in Connecticut, hears of it and comes down to help in the thieving."

He broke off. His eyes were half shut as he strode onward. Suddenly he began to speak again, but this time in a high, strained voice that made his malediction oddly impressive.

"I WILL take for a text," said he, "these words: 'The plowers plowed upon my back and drew long their furrows.' Would you know who first yoked this plow? It was cursed Cain, when he drew his furrows so deep he let out the heart-blood of his brother Abel; and all his cursed seed had, and will design, desire and endeavor to follow his cursed example; and that plow has, and will gang summer and winter, frost and fresh weather till better days come and the wicked are overthrown. And at the sound of the trumpet that calls the men of wrath to their destruction, their single-trees will fall to the ground, plowmen will loose their grips on the plow, and gade men will throw away their gades and then, Oh, the yelling and the screeching that will be among all his cursed seed clapping their hands and crying to hills and mountains to cover them. What a moaning and wailing for Tryon and Fanning and Frohock and all their kin: for the wrath of the Lord will fall upon them and consume them for their malice and hatred toward His people."

For some time I had heard a horse's hoofs pounding on the road behind us. The rider drew up alongside as Alexander made an end.

"THAT sounds like disloyal talk to me, my man," the newcomer declared harshly. He was a middle-sized man, well-dressed for the back country, and with the air of a property holder and a man of substance.

"And who said it was anything else?" demanded Alexander hotly. "Do you take me for one of those lying ministers, those whited sepulchres, that hold for governor and king? Not Zion Alexander!"

The man on horseback was no less emphatic. He spurred his mount over and laid hold of Alexander's collar.

"I have heard of you," he cried, "a mad preacher, wanted for many crimes. Come along. I'll bring you before a magistrate or my name's—"

Alexander did not try to break loose, but he interposed with an utterance surprisingly mild. "I am a man of peace, but dinna provoke me too far." This was his comment, but I noticed he tightened his grip on his staff.

"Here, fellow, catch hold of him," said the representative of the law and order to me. "He's guilty of treasonable practices, associating with known outlaws, foregathering with mobs, assailing the king's majesty by vile language—"

I prudently kept aloof.

The end came more quickly than I expected. Alexander twisted free, dropped his staff, and dragged the rider from the saddle. The fellow fought back furiously for a moment, but those long arms cracked like flails, and in a second the newcomer was on the ground, bleeding from the nose and mouth, and pretty badly winded in the bargain.

Alexander had no mercy. He picked up his staff and hit the fallen man a sharp blow across the back.

"Up, you hound!" he cried. "Up and get gone, before I break every bone in your carcass."

He struck again, and the man's body gave off a dull sound like that of a full sack when you kick it. He staggered slowly to his feet. Alexander prodded him in the rear.

A few feet away the man turned back to shake a fist at us.

"I'll have you in jail for this before the day is over," he cried. His enunciation suffered somewhat because of the teeth he had spit out. "It's highway robbery, assault and battery—men have been hanged for less. I'll see you whipped till—"

Alexander made at him, and he ran. We saw him ahead of us for the next half hour as he vainly tried to catch his horse. A mile farther on he finally lured it to stand and wait for him. Thereupon he put spurs to the animal and was soon out of our vision.

"He had a tongue like a lawyer," Alexander commented. "The beating he got should be good for his soul."

"How about the whipping he promised us?" I asked. "He looked to me like a man angry enough to ride to Williamsburg to get justice."

Alexander considered. "There's a bit of sense in what you say," he admitted. "It may be well to give the high road the go-by for a few days. There's a trail over along the hills I know. We'll try that."

SO TOWARD the hills we went. I confess that on the way there was a good many times that I looked over my shoulder and expected to see our friend of the road thundering after with a troop of constables in tow.

No harm came near us then, altho as we traveled by devious ways along the edge of the hills, I sometimes caught glimpses of men passing on the main highway and wondered if they sought us. Alexander, I found to be a good companion so far as certain aids on the way were concerned. He knew where the occasional farms were and which held friends; he could find a spring or a creek when we needed water.

These merits were balanced by his constant ranting and by a too heroic unconcern about what he ate. We carried a bag of ground corn each, and when he could get it a pouch full of jerked venison or beef. Many times we ate at a cabin, but often noon or night found us far from any dwelling. At such times, Alexander insisted on pushing straight on and chewing alternate mouthfuls of jerked meat and ground corn as he went. My insistence on stopping to make a fire, mix water with the meal and bake flat cakes before the fire seemed to him a sign of effeminacy.

"TRICKS like these may do for Philadelphia," he told me reproachfully, "but such weak yielding to the demands of the carnal nature is not fitting here. Ah, man, when the time for fighting comes, you will see an army take nothing but a bag of corn and of salt and ride farther and fight harder than your pampered soldiery. We raise that kind of men here in the back country."

All of which sounded quite wild to me, who was not a prophet and who could not be expected to foresee Kings Mountain. Certainly I was sure that a hurried halt to mix meal and water and bake thin cakes before a fire did not come under the head of luxury or vain yielding to my "carnal nature."

Several days later we swung back to the main road again, partly because Alexander was sure that all trouble had blown over, and partly to make sure of a better crossing of the Shenandoah. It was easy to see that the easiest part of the journey down the valley was over. Ahead hills were rising and the rough country on each side pressed down closer to narrow the valley.

"Augusta Court House," Alexander was able to announce a little later. "Here is where you must make up your mind, lad. Will you go east or west? If you are for the Green Brier country and the new over-mountain settlements, the west road is the road to take. If you are still for Carolina, then it is on the south to the Roanoke and east thru the gap."

I told him it was south and east for me, and asked him where his road led. But to this he answered nothing, only frowned and shook his head like one puzzled.

As we came into the town, Alexander pointed out "Fort Lewis," a stout stone house John Lewis had put up years ago and which had served to beat off Indian attacks in many a raid.

"It's an old settlement," Alexander explained. "John Lewis came here close to forty years ago. Some more of our people followed him, and presently some Irish. The Germans have their points, but after all, they're not to be named with the Scotch. And that's why this end of the valley is the best."

Better for breeding fighting men, it might be, but it did not seem to me that the farms were as good. Nor did the town compare over favorably with Fredericktown.

We did find a welcome of a sort, I noticed, tho, that there was a certain pitying condescension in the attitude of those that spoke to Alexander. Even the good man who gave us dinner took me aside after the meal.

"You are traveling far with him?" I did that was as Alexander pleased.

"Ye'll gang your ain gait, lad, if you're wise," he told me, earnestly. "Alexander's a good man, and at times a mighty wrestler in prayer, but a bit daft all the same."

I found another with the same view shortly after. A tall man, with a cape over his shoulders, came striding across the street to hail Alexander.

"You'll be jailed yet, my friend," said he, "if you don't be more careful. There was a fellow thru here not two days ago, wanting to send you to the whipping post, or have you hanged, or some such matter. You can't beat the king and his governors all by yourself, you know."

"You may be right, Colonel Lewis," admitted my friend, in a voice much milder than customary. "Yet it irks me—"

"You and all of us," cried the colonel. "But the time is not yet. Be still, be cautious, or you'll hang better men."

Alexander seemed to be pondering over this as we went out of town. Eight miles out, we came to an old stone church, and here we sat down, not to rest so much as to talk.

HE HAD a deal to say about the church at first, how it was built in 1740, and served for a meeting house and a fort for all Presbyterians thereafter. It might be used for a fort again. Folks found it handy in '63 when the settlements on Muddy Creek and Green Brier were wiped out and fugitives from settlements closer in came running to the church at Fort Lewis. It was useful in '65, too, when the Shawnees raided in the Cowpasture. A party of frontiersmen had fought a skirmish with the advance guard of the Shawnees only a few miles east.

All this was told with the air of a man who is really thinking about something else. He had sat and talked for half an hour and I had listened with growing impatience when suddenly he got up and held out his hand to me.

"May your road be good," said he, "and now good-bye to you."

I inquired with some heat if this were another of his foolish tricks, and suggested that I had no time to waste. He took no offense.

"The Lord sent spies into the land of Canaan before the chosen people entered," he explained. "It has come to me that I am to go down along the Clinch and the Holston and spy out new lands for the oppressed in North Carolina. Tell James Hunter that when you see him."

With that he set off, and I let him go without any word. His reference to James Hunter had stunned me. Neither to Alexander nor to anyone else had I told the name of the man I sought.

There were other things to worry me in the days that followed. By all custom, it should have been pleasant spring weather, a fit time for a long tramp. Instead, it began to rain, and poured down day after day. I walked in mud or in high grass that soaked me thru as I brushed thru it. Creeks were hard to ford, and at the James River I had to wait for hours to make a crossing. The road I followed, moreover, led along the side of the Blue Ridge, so that I was climbing hills or going down them all the time. Yet the people were kind, and I was getting hardened to the work, so that in spite of everything I found myself shortly following the trail thru Roanoke gap and down across the foothills on the other side.

The weather cleared finally and I was striding along, trying to pick out landmarks that would tell me where I was, when a traveler came out of a side road and fell in step with me. He was a rangy fellow with a sardonic eye and a long nose that wrinkled like a pointer's when he showed interest.

I told him I was going to North Carolina.

"By whiskers, you're just about there," he commanded. "Lift your feet high, son, or you'll stumble over the line. See yonder?"

He pointed to where a knob-like hill lifted itself over to the southeast.

"THAT'S Pilot Mountain and Pilot Mountain's in North Carolina."

It seemed very near, but he told me there was plenty of tramping ahead for me. Depending on where I wanted to go, of course. If I was going down to court at Hillsboro, then straight ahead and bear to the east after I crossed the Dan. Tho from what he heard, court wasn't holding regular, not since the back country folks had run Slippery Dick Henderson out. But if I was going somewhere else—"

I told him I was bound for Bethabara.

"Oh, the Dutch fort. Well, then, you'll have to swing back west a bit. Good place to go, these times. No trouble there, plenty to eat, no fighting. If I had any sense, I'd go there myself and get converted till the fuss is over."

The Moravians, according to him, were good business men, had more money than anybody else, and held onto it. No fighters tho, didn't believe in it. Had a close rub with the Cherokees once or twice, but the Cherokees figured their palisade was too tough to break thru and went on to easier picking.

"They're loyal, tho," announced my companion provocatively, and squinted into my face.

"Loyal to whom?" I asked in as neutral a tone as I could muster.

"Why to his high and mighty excellence, Governor Tryon. He was out here a year or so back, and they blamed near kissed him to death. And they won't have a thing to do with those dirty villains, the Regulators."

The tone of these remarks established my companion's party. I grinned at him.

"Better come along with me, then, and be safe."

"Better come along with me, then, and be safe."

He shook his head. "Nope. I'm just naturally stupid. I'm going down and get in what that gang of hoodlums call their army and help furnish targets for Mr. Tryon and Mr. Fanning and the rest of them to shoot at."

"Will it come to that?" I asked.

"Yes, and mighty quick. The governor's called out the eastern militia and is somewhere on the road now. And we'll walk right up to him and hand him a nice petition and have it blown back at us out of his field pieces."

"And yet you're going?"

"Just naturally stupid. Of course, somebody might happen to get in front of my rifle when I let it off, and there might be a few more sorta careless with their guns, but most of them is like Husband, good at talking, but not quite pert enough for a fight. Husband's a Quaker, even. This ain't no place for a Quaker."

I pressed him to tell me more about the situation. He had much the same story I had heard from Alexander, but added that the struggle had gone on for years now, and this meant the end of it. Either the governor would knuckle down, or the back country folks would move.

"Lots of room over the mountains," he boasted. "This land ain't so much for farming, and the game's mostly run out."

He went on to tell of Fanning, a young adventurer from New England, who had come down to make money out of office-holding in the new counties and had done it. Fanning, I gathered, was worse hated than the governor.

"Howell bit it off in his song. Listen to this." My friend broke into a nearly tuneless song and brought his feet down hard to keep time.

"When Fanning first to Orange came,
He looked both pale and wan,
An old patched coat upon his back,
An old mare he rode on.

"Both man and mare wa'n't worth five pounds,
As I've been often told;
But by his civil robberies,
He's laced his coat with gold."

The song helped us to swing along for the next two days, when we crossed the Dan River, and were really, so my companion Haddock told me, in North Carolina.

"The road you want is only half a mile or so," he told me that afternoon as the sun was getting low. "Better stop over here with Jim Butler. He'll feed you and me both, even tho you are thinking about turning Moravian."

"BUTLER'S place was no different from any of the hundred I had passed. The back country seemed all of one piece, unlike the coast, where Virginia, and Pennsylvania, and New York, seemed like different countries. Here was the usual log cabin with a shake roof held in place by poles, a chimney of sticks and clay, and half a dozen dogs and almost as many children coming to meet us.

Butler showed interest when we told him of our different destinations.

(To be continued next week)

Domestic Philosophy

"That was an excellent paper your daughter read on The Influence of Science as Applied to Practical Government."

"Yes, Helen is the pride of her class, and now that she has mastered the Influence of Science as Applied to Practical Government I hope she will be willing to find out something concerning the Influence of the Vaccuum Cleaner as Applied to the Parlor Rug.

Not Lost, but Gone Before

Two farmers met in town a few days after a cyclone hit the countryside.

"Yes, it did quite a bit of damage out our way," said one, reflectively. "By the ways, Hank, was that new barn of yours injured any?"

The other shifted his wad of chewing tobacco.

"I can't say rightly," he answered, slowly. "I ain't found it yet."

A group of workmen were excavating for a large office building. Several passersby regarded them curiously and finally an inquisitive wayfarer stopped and addressed the end laborer of the gang.

"My man," he said, "what are you digging for?"

The workman looked up. "Money," he shortly replied.

"Money," ejaculated the amazed wayfarer. "And when do you expect to strike it?"

"Saturday," was the abrupt answer.

Slightly Nervous

An English barrister, after a particularly trying day, came home with his nerves on edge and at once sought refuge in his own study, well away from the noises of the household machinery.

He sat down by the fire and was gradually getting calmed down when the cat, which had been sitting there, too, got up slowly and walked across the room.

The master turned on her and said indignantly: "Now, what are you stamping around here for?"

They Visited Washington

New Jersey dairymen who, with their families, joined the state-wide dairy tour to the Bureau of Dairy Industry at Washington, D. C., and the Dairy Experimental Farm at Beltsville, Md., August 9 and 10th.

41 per cent cottonseed meal	45.50
43 per cent cottonseed meal	47.00
34 per cent linseed meal	51.75

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .46	$ .47⅝	$ .42⅝	$ .45⅜
Eggs, fresh gathered extra firsts (N. Y.)	.35½	.32½	.32½	.43¼
Steers, good to choice (Lancaster)	12.35½	11.62½	11.62½	10.00
Hay, Number 2 timothy, baled (Phila.)	16.50	18.00	18.00	22.00
Wheat, No. 2 red winter (Philadelphia)	1.35½	1.45½	1.45½	1.39
Oats, Number 2 white (Philadelphia)	.58	.60½	.60½	.52¾

Livestock Market Advances

Review of the Week Ending September 17

BUTTER — The butter markets were firm thruout the week and prices advanced 1c to 1½ per pound. Fancy butter was scarce and in fairly active demand. Medium and lower grades were also in better demand. Shortage of fancy butter and higher prices caused more storage butter to come into the market.

EGGS—The New York egg market was firm with a good demand for the best lots. Receipts were rather light and quite irregular in quality. Nearby white eggs were firm with prices higher on the best. Supplies were scarcely sufficent for trade needs.

POULTRY—Cooler weather toward the close of the week strengthened the New York live poultry market. Fowl were slightly stronger and there was a fair demand for chickens. Leghorns broilers held steady while fowl were very irregular in quality. Dressed poultry was about steady. Fowl were firm under lighter receipts. The Hebrew holidays which fall on September 27 and 28 are expected to bring larger supplies of live poultry on the market. This is the Hebrew New Year and there is a good market for fat fowl, turkeys and geese.

GRAIN—Favorable weather and lighter export demand caused wheat prices to decline. Corn was lower and warm weather improving crop prospects. Oats and rye were about steady with rather light offerings.

HAY—The hay markets were generally steady for top grades. Receipts were light and the demand fairly active. Offerings of timothy were liberal in eastern markets but considerable of this hay was of the poorer grades. Good pastures are still restricting the demand from many sections. Alfalfa hay was in slightly better demand and the quality of the receipts improved.

FEED—Declines in grain price have weakened the feed market and several feeds were sharply lower. Middlings dropped from $2 to $3 per ton but are still $6 to $8 higher than last year. The bran market was weaker but prices held about the same. Linseed meal prices dropped while hominy feed was around $2 to $3 lower. Limited supplies of gluten held the market steady for this feed.

LIVESTOCK—The Chicago hog market improved and prices were about 25c higher than last week at the close of the week. Beef steers continued to advance while heifers and cows were irregular. Vealers advanced while stockers and feeders were firm. Fat lambs and yearling wethers were higher while fat ewes and feeding lambs advanced around 15c to 50c.

POTATOES—The potato markets were irregular during the week. Early in the week there was a stronger tendency and prices advanced at most markets but toward the close prices were lower on many markets and trading very slow. Shipments from Maine showed heavy increases running as high as 132 cars a day. The movement from Pennsylvania also increased to around 25 cars daily.

County News and Comment

Gloucester County, Pa.—August has been a trying month for the farmers of Gloucester County. The weather has been too cold for most crops and there has been too much rain. Heavy losses have been sustained by the fruit and vegetable growers. The late tomato crop has been particularly hard hit. The rains have blasted the blossoms and the set. It is now thought that there will not be one-half of a crop this season. Prices have advanced to forty cents a basket for canning house stock and one dollar for table stock. Sweet potato crop appears to be very light. Very few growers have started to dig because the potatoes have not grown to the size that the trade demands. The few that are digging are harvesting less than two baskets to the hundred hills. The peach crop has ripened two weeks ahead of last season. This threw the height of the harvest into the Labor Day holiday which forced growers to place huge amounts of fruit in cold storage. Instead of the high prices that looked certain early in the season, the market nosed down to the point where fine fruit could be bought for 25c a basket. Of course, large amounts were sold in solid cars for distant markets at $1.50 and $2 per bushel basket f. o. b. the cars. It is estimated that close to a quarter of a million baskets of fruit have been placed in cold storage awaiting a higher market.—A. K.

Larkawanna County, Pa.—August was a freakish month, being the wettest on record of our local weather bureau. There were only seven clear days and eleven partly cloudy days. Thirteen cloudy days with lights frosts to its credit. Haying lasted well along into August. Oats not all cut yet, some not ripe enough to cut. Very little threshing done yet owing to the rainy weather. Some fall plowing done. The Annual Fair and Flower Show held at the Waverly Community House was a great success. Truck farmers are going to market three days a week. Prices continue good this lower in price. Pears, $1 per 14-qt basket; tomatoes, $1.50 per 16 qts; sweet corn, 50@75c doz; apples, 50c pk; cucumber pickles, 80c@$1 per 100; honey, 25c lb.; potatoes, 35c pk.; eggs, 45@50c.—I2. A. K., Sept. 3.

Lawrence County, Pa.—Harvest is ended. Wheat mostly threshed out of the shocks. Barns filled with hay which was a bumper crop and space for grain in the straw scarce. Some oats threshed yielding above the average. Tractors are booming preparing the ground for wheat seeding. Grain and other fertilizers are liberally used. Corn not ripening satisfactory. Garden crops behind time, cool nights are supposed to cause this delay. Preparations for the county fair are being pushed with high hopes of the best exhibit ever. Our county has had an unusual visitation by auto tourists. The fine roads of our state is the drawing card. Our township schools will open Tuesday, September 5th. Wheat selling at $1.30; oats, 52c; ear corn, 58c; country butter, 50@60c; fresh eggs, 40c; dressed chickens, 50c.—M. L. V., August 30.

Lebanon County, Pa.—September commenced with ideal weather, much warmer than month of August. Corn has made rapid growth and with warm weather may yet develop into good matured corn. The threshing season is nearing completion with wheat generally below general average. Oats good in most instances. Plowing for fall seeding is about completed. Soil is in excellent condition for preparation for seeding. Potato stalks that were well sprayed are yet green but unsprayed vines are dead. The outlook for late potatoes is fairly good. Fruit not so plentiful. Apples and peaches not more than 30 per cent of a crop. Silo filling will be later this year than usual. New grass fields are exceptionally good this summer. Many farmers are clipping the young clover, while some fields are so rank that some are removing same for hay. Prices: wheat, $1.35; corn, $1.10; oats, 40c; hay, $17; potatoes, $1; peaches, $1.20@2 per basket; eggs, 38@40c; milk, 9c, retail.—P. L. M., Sept. 5.

Salem County, N. J.—Salem County has about closed the white potato season with one of the best crops ever grown and with prices so low that the growers have about broken even on the costs. Fields have run from 300 to 700 baskets to the acre with an average price of less than $1.50 per hundred weight. Only 1100 cars were shipped by rail from Salem and Cumberland Counties this year. The truck movement made a bigger dent into the total shipments than ever before. More cars went to nearby city markets, like Atlantic City, Wilmington and Philadelphia than ever before. Preparations are being made for filling silos. The corn crop is fine with a heavy tonnage of ensilage to the acre. It is estimated that the barns are better filled with hay, the pastures in finer condition, and ensilage prospects brighter than for many years. Milk production is holding up at a high point and with present prices the dairymen are in an optimistic state of mind. Canneries are busy, but are far from running at full capacity on account of the light crop being harvested. The cold weather is interfering with the proper ripening of the fruit. Farm labor supply is about equal to the demand with indications of a shift in the near future as the silo filling and corn husking season approaches.—I2. M. B., Sept. 2.

Union County, Pa.—Not much wheat will be seeded before the 10th of the month on account of the danger from fly and many farmers will treat their wheat seed for smut. The second cutting of alfalfa has been made and a fine second-growth of medium red clover will be ready to cut for hay or for clover seed. A number of farmers are putting lime on the wheat seeding to help keep up a good growth of clover and to keep the soil sweet and friable. Potatoes are being sprayed weekly and unsprayed stalks are dying rapidly either of blight or they have made their growth and potatoes of such stalks are being dug. Corn will need continued warm weather all of this month to mature and it is hoped we will have no frost before October 1. Apples are being picked and marketed as they are ripening and the crop will be better than a half crop of other fruits, pears are the best crop this year. The mountain sheep-raising have helped the pastures and the stand of clover in wheat stubbles is the best for many years. Most of the rural schools opened last Monday. The Centre County Fair was held at Centre Hall last week with fine displays of fruits, vegetables and grain and the attendance was very good. The Union County Fair will be held the last four days of this month and 12 acres of an adjoining farm have been bought for parking cars. Prices: wheat, $1.30; corn, $1.10; new oats, 40c; potatoes, $1@1.25; apples, 50c@$1; eggs, 32c; butter, 50c.—J. N. G., Sept. 5.

Warren County, N. J.—August was a very wet and cool month. Some meadow and timothy hay yet to make and some oats still in the fields. Pasture has been very good during the entire summer and farmers have fed but little grain to get good production from cows. Milk has been advanced 42c per cwt. and the different receiving stations are paying from $2.25 to $2.37. Cows are selling from $150 to $225 each and are in good demand. Corn is developing slowly but some have started filling silos. Potatoes are not so large as usual but are smooth and clean and are yielding around 175 bushels per acre and are selling at $1.30. Peaches are quite plentiful and are selling from 75c to $1.25 basket. Sweet corn $2 per 100 ears; oats, 35c; wheat, $1.20; rye, 95c; barley, $1.10; corn, $30 ton; eggs, 41c; veal, 14c.—A. S. P., Sept. 2.

Westmoreland County, Pa.—Weather conditions fair but cold and foggy at night. Fall plowing most all done. Wheat crop small in this section this year on account of excessive rains last fall. Oats crop good; some corn making good headway toward maturity but some very poor. The Fayette County Granges held their annual picnic at Dawson Driving Park on Saturday, August 27, with a good turn out. Potatoes turning out well; plenty of apples, no peaches; no pears to speak of. Sweet corn scarce; some tomatoes. Prices: eggs, 45c; butter, 55c; corn, $1.20; wheat, $1.05; oats, 52c; timothy hay, $18.—L. C., Sept. 1.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

MANY farm crops, such as peaches or tomatoes, must be sold immediately after harvest, but there are others that may be held for a time for a favorable market. Grain and potatoes are, perhaps, the most important of these in this section of the country.

Farmers are usually hard pressed for cash at harvest time and must sell, even tho prices are unsatisfactory. Wheat is harvested at a time when taxes, fertilizer bills and other expenses fall due and altho the farmer feels reasonably sure that prices will advance, he is forced to sell. This condition is largely responsible for the fact that 85 per cent of the Pennsylvania wheat crop is marketed during July, August and September. It has been determined that about 60 per cent of the demand for soft red winter wheat for milling and export occurs between August 1 and January. This shows that while the crop may not be exceptionally heavy, there will be a temporary surplus during the months of most active marketing and prices will naturally be depressed. On the other hand, if the grower decided to hold his wheat his capital would be tied up and he would run the risk of damage by fire, rodents and insects.

Potato growers are faced with the same problem but with them it is more difficult as prices show a wider fluctuation. One reason for this is that the wheat market is established by world conditions. Wheat can be shipped long distances at a relatively low cost, as compared with potatoes, on account of its smaller bulk. The country-wide conditions establish the price of potatoes but higher transportation costs make it more of a local problem. This means that eastern markets are chiefly influenced by crop conditions in Pennsylvania, Maine, New York and Long Island.

Potatoes are a more perishable product than wheat and the grower who holds them for higher prices takes a chance. Prices are more erratic and loss from disease, decay and shrinkage are often large. The grower who decides to hold his crop must keep well informed on market and crop conditions. Market reports, shipment figures and crop estimates are an aid in determining when to sell. Market reports show the daily supply of potatoes in the various cities, the condition of the market and the prices at which potatoes are selling. It also shows conditions and prices at shipping points thruout the country. Shipment figures show where the supply is coming from and give an idea of the amount of potatoes left to ship. Crop estimates are a guide to yield and production in your own and competing states.

The prices prevailing at harvest time, the quality and condition of the potatoes, the cost of storage and the prospects for higher prices are points to consider in making the decision as whether to sell or store. A study of average monthly potato prices thru a course of ten years shows that in many years prices decline after harvest and do not advance to any extent until near the end of the marketing season. This means that in such years, the grower will have heavy expenses for storage and will also risk larger losses from decay and shrinkage.

Conditions are Continually Changing

In general, no absolute rules of marketing can be laid down for conditions change from day to day and unforseen developments may arise at any time. Many successful growers realize this and sell a good proportion of their crop at harvest. The balance they market gradually thruout the season.

I have noticed that when prices are advancing growers will hold their potatoes with the hope of selling at the peak. Prices will advance to a point that is not actually warranted by the supply and distant producing sections will begin to ship to those markets, since they can make a profit despite the high freight rate. The additional supply and high prices causes buyers to limit in their purchases and the market begins to drop. Then all the growers who have been holding potatoes for higher prices begin to ship as rapidly as they can with the hope of selling before prices drop still further. This forces prices down and results in a slump. The safest and wisest plan is to sell on a rising market and not to hold on in hopes of getting the last penny.

I Learned Many Things

(Continued from page 3)

this for greens. The chickens do not pick all the wheat off, so the field is harvested, after which the young pullets range over the stubble and glean the shattered wheat, also getting plenty of green feed from the weeds and grass in the stubble.

Sanitary conditions are carefully maintained on the farm. The colony houses are whitewashed and cleaned at frequent intervals, and the drops of the laying houses are cleaned off every day. When I visited the farm about the first of August they were getting ready to house some early pullets. The old litter was going out in spreader loads, after which the house was to be sprayed with a disinfectant solution and whitewashed prior to shutting up the young birds. I mentioned the fact that this litter was an excellent source of fertility, and that many farmers could better their farms as well as their flocks by cleaning out the poultry buildings more often, with the idea of working as much straw thru them as possible.

"That is right," agreed Mr. Larsen. "We make a lot of manure here, with the chickens and the cows, and it certainly has brought up the land. We always have enough corn, oats and wheat to supply our needs, and have had wheat to sell."

This is in marked contrast to many poultry farms where every pound of feed has to be purchased. On this farm mill feeds alone have to be bought, and by building a storage building these can be bought to advantage and held against a rise.

We went in this building, not quite finished, which was planned so that the feed went in at the second story to be mixed, and was chuted down to the ground floor to be bagged and distributed. Mr. Larsen is a carpenter by trade, and has built all the buildings himself, working at his trade to finance the farm while getting started. This ability is just another of the advantages the farm enjoys.

Feed Fermented Mash

One of the most interesting features of the farm is the method of feeding the layers, in which a fermented mash using germinated oats is used. This is known as the diastase method, from the name of a digestive ferment produced by the germinating oats. A mash of the following formula is the basis of this: 100 each of bran, middlings, ground oats and meat scrap, 150-200 cornmeal. The extra amount of meal is included to maintain body weight. Oats germinated in tubs are mixed with this to form a wet mash. About three pounds of dry oats are taken per 100 birds per day, and after this quantity has been soaked and germinated, a part is set aside to be fed to the hens at 10 A. M. while the remainder is mixed with the mash formula to form a moist mash and allowed to stand in a warm place until 3 P. M. when it is fed in troughs to the hens. Enough is fed so that there is some in the troughs the next morning to start the day. Sufficient scratch grain is fed to keep the hens in good condition. In the winter a brooder stove in the feed house furnishes enough heat to germinate the oats and maintain the fermenting process in the mixed mash. It takes several days, according to the temperature to germinate the oats. Mr. Larsen told me that he plans to add to his long laying house at which time he is going to build a two-story feed house in the center which will contain a small steam boiler to furnish warmth and hot water for the mash. Codliver oil at the rate of a pint per 100 pounds is fed with the mash, and more in cold weather. I understand that roup is almost unknown with this method of feeding, due to the fine condition which the birds maintain. When I was on the farm very few cull hens had been sold, and the layers that I saw were in fine shape, large and heavy with all evidences that they were producing right along.

Sell Pullets in Summer

Some of the outstanding features of this farm are a good strain of Leghorns carefully managed and well fed, suitable buildings economically constructed with everything handy, sanitary conditions carefully maintained, and home supplies of grain and roughage. Then, too, the sale of baby chicks, hatching eggs, broilers and pullets adds a great deal to the income from eggs. Right in the middle of the summer, for instance, when the egg yield is dropping and the growing stock is making extra demands for feed, it is a mighty fine thing to have the money from the sale of several hundred pullets.

When I was about to leave I told Mr. Larsen that I had enjoyed seeing his plant and felt that I had learned something.

"I always like to visit other plants, too," he replied. "Sometimes they are better than my own and sometimes not as good, but I never went on a farm yet where I didn't pick up at least one idea that I could use profitably at home."

That's a pretty good thought, isn't it?

High Finance

"A dime? what do you want a dime for?"

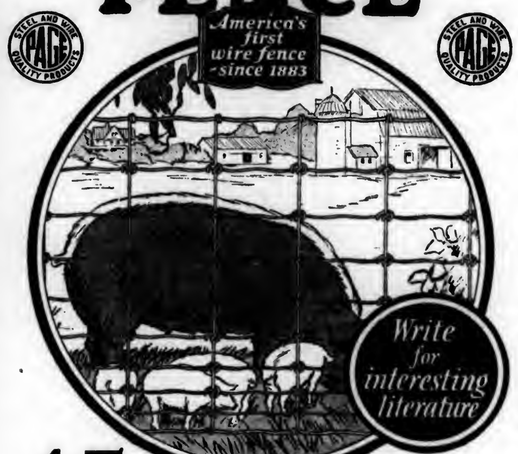
"What do I want a dime fur? Well, mister, I'll tell yer. I've got nine hundred an' ninety-nine thousan', nine hundred an' ninety-nine dollars an' ninety cents, an' I'd just love t' make it a million."

The Meanest Man

Mitzi—I heard that the guy you were out with last night is awful stingy.

Fritzi—Stingy? Dearie, if he'd 'a bought me a bag of peanuts I'd 'a' got shell shock!

PAGE FENCE



45 years *of protection*

For 45 years Page Fence has rendered economical, lasting protection. It was America's first wire fence—and it is still first for quality and proven service.

Page Fence is constructed of the best and most uniform of wire. It is covered with a heavy coat of galvanizing to resist rust and may be obtained either in the staple tie or hinge joint type of knot.

Ask your dealer to show you—he carries the pattern you need.

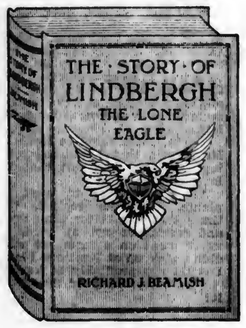
From the Plow to the Plane



Another farm bred boy gains eminence

You will want to read the story of the "Flying Fool," who was far wiser than his critics knew. His non-stop flight from New York to Paris has enrolled his name among the immortals.

The story of Lindbergh, together with the development of aviation, epoch-making flights, and historic efforts to bridge the distance between the Old and New Worlds, is more thrilling than fiction and every word true.

The complete book measures 6 x 8¼ inches and comprises approximately 300 pages, including 32 full pages of pictures. It is bound in rich cloth, with gold and ink stamping on front cover and back. It is written by Richard J. Beamish, whose "History of the World War" had the largest sale, within a given time, of any book ever published.

How to Secure One Free

Send us three yearly subscriptions to Pennsylvania Farmer at 50 cents each—your own renewal will count as one—and we will forward the book to your address postage prepaid. The book will not be given with your own subscription alone. Two other subscriptions must accompany your order.

PENNSYLVANIA FARMER,
261 South Third Street, Philadelphia, Pa.

Self-Feeder Used Extensively

Will you please advise me as to what you consider the most economical ration (at present prices) for steers from 600 to 800 pounds to be fed on self-feeder and hay? Mostly clover hay. My idea is to market these steers in 90 days if market is favorable. I have corn and usually chop it with the cobs.—M. G. R.

The self-feeder is quite extensively used in feeding cattle, especially where the cattle are put on a short feed. The results secured seem to justify the practice especially during the summer and fall months when considerable labor can be saved by this method of feeding. There is not only a saving of labor but there is also less danger of getting cattle off feed than by hand feeding, especially if the cattle are to be forced for market.

Since the current prices for feed are not given we will assume that any feed used in addition to the corn must be purchased. If such is the case, the most desirable practice to follow with the use of the self-feeder would be to purchase only a protein supplement in the form of linseed oil meal or cottonseed meal. If oats are available on the farm and the price per bushel is less than half the price per bushel for corn some oats can be used to advantage. The following combination should give good results when used in a self-feeder: Corn shelled or ground without the cob, 65 pounds; ground oats, 20 pounds; and linseed oil meal or cottonseed meal, 15 pounds. If the oats are not available the combination can be made up of corn, 85 pounds, and oil meal or cottonseed meal, 15 pounds. In addition to the grain feed the cattle should have all the clover hay they will consume. The cattle also should have free access to water and salt should be provided.—W. H. T.

If all the autos in the world were laid end to end, it would be Sunday afternoon.

IN PHILADELPHIA last year 134 children were killed by motor vehicles and 4000 others were injured.

There doesn't seem to be much trouble meeting expenses. One meets them almost everywhere.

"Just when a fellow is doing well in a hospital he gets discharged."

Let's fix up Now!

Don't let the late fall days get by before you fix up your farm buildings for the winter. At your local "Farm Service" Hardware Store — where you will find the "tag" in the window — you can get everything you need for this work. These stores have roofing, roof paper, prepared shingles that they have selected to best meet the conditions in your locality. They can help you with barn ventilating systems, and are headquarters for paints and varnishes that will give your buildings full protection against winter storms.

It pays to keep all of your equipment in good shape, and the easiest money you can make is to keep up repairs constantly so that you do not have the expense of rebuilding.

Fencing, Too

Are your fences tight and in good condition? Don't put it off until spring to put in new posts if they are needed. It is easier to put in a new stretch of fencing now than it will be next spring when the ground is muddy and spring work is piling up. Your "Farm Service" Hardware Man can give you all the information you need about fencing as well as builders' and all other kinds of hardware.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

GARGET.—I have a four-year-old cow that had twin calves last September. Since then she has come in heat quite often but fails to get with calf. Several weeks ago she gave bloody milk out of one teat and now the milk in that tent is thick and yellow.—L. W. L., Gettysburg, Pa. This is a condition in the interior of the udder which cannot always be corrected. It is a fact that some udders have a decided lack of tone, vigor and resistance in the internal glandular secreting structure. It is also true that such udders are chronically affected, and are subject to frequent periods of abnormal milk. For a trial give the following treatment—a full dose of Epsom salts (1½ pounds) in two quarts of water as a drench. Follow with a similar dose in five days. Give on the grain feed once daily for a five-day period a full teaspoon of saltpeter. For several days milk out the quarters four or five times a day. Would suggest, also, a highly stimulating grain ration. This is important. A mixture of 100 pounds each of corn and cob meal, ground oats and cottonseed meal is satisfactory. Please bear in mind that there are many such cases with which we cannot cope. Have your cow examined by a veterinarian who probably can determine the cause of failure to become pregnant.

SOW IS PARALYZED.—Please tell me what to do for a sow. She farrowed a litter of nine pigs, her first litter, on January 23 and raised seven. By March 4 she seemed to have no use of her hind legs and her front feet also were paralyzed. She always had dry bedding every day and was out of any draft. Stables were fairly warm. I gave her a dose of Epsom salts but she don't seem to get any better. She has a good appetite and I turn her over about three times a day. The sow is in good shape and is not run down.—A. M., Monroeville, N. J. This condition is probably a rachitic condition due to the ration being inadequate and the added drain on her body because of the little pigs. If milk is available, feed milk, weaning the pigs promptly. A good diet would consist of ground corn, 100 lbs.; oil meal, 5 lbs.; tankage or fish meal, 10 lbs; and ground alfalfa, 5 lbs. In the absence of ground alfalfa, good alfalfa or clover hay could be used. Feed one tablespoonful of cod liver oil per day in the feed. The ration has probably been deficient in vitamins during the nursing period.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

FRUIT TREES

PEACH TREES, $5 per 100 and up. Apple Trees, $7.50 per 100 and up. In large or small lots direct to planters by freight, parcel post, express. Plums, pears, cherries, grapes, nuts, berries, pecans, vines; ornamental trees, vines and shrubs. Free catalog in colors. Tennessee Nursery Co., Box 124, Cleveland, Tenn.

CIGARS

"THE IDEAL SMOKE"—Box of 25 National Stars Cigars, Sweet to the last puff, $1.00 postpaid. Box of 50, $1.90. C. O. D. orders accepted. I. C. Hildebrand, Red Lion, Pa.

TOBACCO

GUARANTEED HOMESPUN TOBACCO—Chewing 5 lbs. $1.00; 10—$1.75. Smoking, 10—$1.50. Pipe Free! Pay when received. United Farmers, Bardwell, Kentucky.

MISCELLANEOUS

ACETYLENE SUPPLIES—All kinds, globes, lighters, burners, sad-irons, hot-plates, etc. Carbide low price. Trade in your old generator for a "Standard Gas sell." Liberal allowance. Circulars free. Chas. A. Brown, Mannsville, N. Y.

PEERLESS CONCRETE MIXER not only mixes concrete but is a practical machine for treating seed wheat with proper carbonate dust for stinking smut. Catalogue Free. A. M. Deffinger, Lancaster, Pa.

RICH MAN'S Corn Harvester—poor man's price, only $25.00 with bundle tying attachment, easily shipped by express. Illustrated catalogue free. Prosser Mfg. Co., Salina, Kan.

REMNANTS for quilts, patchwork, etc., all kinds, all sizes, 4½ lbs., sent C. O. D. $1 plus postage. 11 lbs. $2.00. Warren Remnants Co., Dept D, Grove Hall, Mass.

FISTULA REMEDY—Physicians prescription, not a patent medicine. Used successfully 45 years. $2 per box postpaid. Satisfaction guaranteed or money refunded. Fillmore Co., Westminster, Md.

STANDARD HOT BED SASH REDWOOD. $1.40 each; white pine, $1.60 each made in four styles; write for circular. Glass, $2.50 per box. Robinson & Bro., Dept. 2, Baltimore, Md.

VIRGIN WOOL YARN for sale by manufacturer at barzain. Samples free. H. A. Bartlett, Harmony, Maine.

WANTED TO HEAR from owner of land for sale for fall delivery. O. Hawley, Baldwin, Wis.

MOTORCYCLE BARGAINS—Used, rebuilt. Guaranteed. Shipped on approval. Catalog free. Floyd Clymer, 815 Broadway, Denver, Colo.

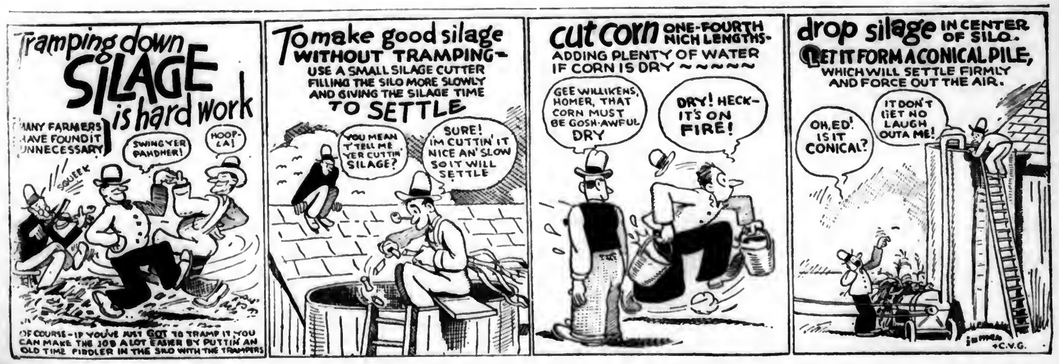
FISTULA—Horses cured $5. Pay when well. Chemist, Barnes, Kansas.

Daisy Air Rifle

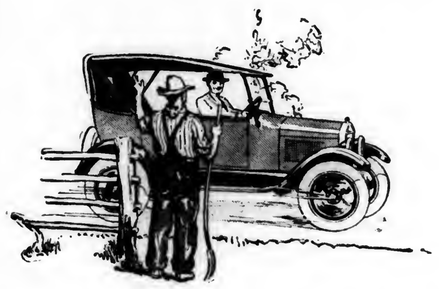
This air rifle is a repeater, lever action. Magazine holds 350 light rifle shot, smooth and perfect. Automatic retainer prevents shot from rolling out of barrel. 32 inches long. Nickel plated barrel. Walnut stock, dull finish. Given for four yearly subscriptions to Pennsylvania Farmer at 50c each. Reward No. 212.

PENNSYLVANIA FARMER 261 So. Third St., Phila. Pa

Herb the Handy Man Tells How—



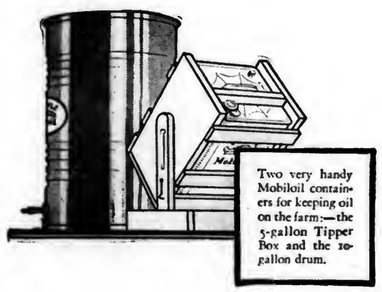
New Ford economy – through quieter, smoother starts – and lessened carbon!



During the past few months countless Ford owners have discovered these two things (1) Today's Gargoyle Mobiloil "E" brings new smoothness, new comfort to Ford starting and stopping; (2) the new Mobiloil "E" leaves *amazingly* little carbon. And no other lubricating oil seems to combine these *two* advantages in such a marked way.

It was only after a way had been found to combine these two qualities in one oil that the new Mobiloil "E" was offered to Ford owners.

Thus the new Mobiloil "E" offers two definite economies in Ford operation



It costs money to remove carbon. It costs money to replace transmission bands. With today's Mobiloil "E" you greatly postpone *both* of these expenses. Thus Mobiloil "E" is the cheapest Ford lubricant to use. Its slightly higher price is returned to you many times over by these definite savings.

There are other savings, too. The new Mobiloil "E" has just the right character and body to protect the Ford engine, clutch and transmission. Wear is substantially reduced. Repair bills are held to the minimum. Overheating is a rarity.

Proof in one crankcase full

Four quarts of the improved Mobiloil "E," when poured into your crankcase, will show you new smoothness in Ford starting and stopping.

As the mileage rolls up, the cash savings from the improved Mobiloil "E" will roll up, too. Fewer band replacements, fewer carbon removals, and fewer repairs to pay for. Have your Ford crankcase drained and refilled with one gallon of fresh Mobiloil "E," which can be obtained in original sealed one-gallon cans, or by the quart from reliable Mobiloil dealers. Also supplied in larger cans and drums for home supply.

Use Mobiloil "E" in your Ford car and Ford truck the year round. In Fordson tractor use Mobiloil "BB" in summer and Mobiloil "A" in winter. Ask the Mobiloil dealer what grade of Mobiloil to use in cars, trucks and tractors of other makes. All Mobiloil dealers have the complete Mobiloil Chart of Recommendations.

GARGOYLE

Mobiloil "E"

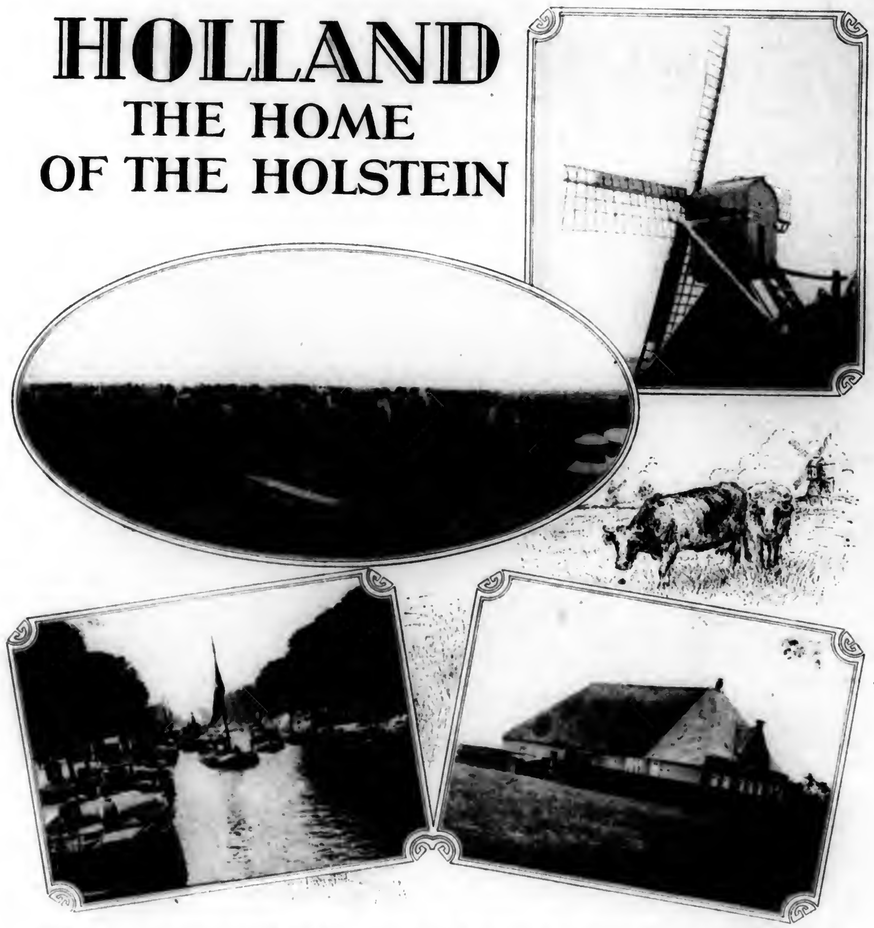
HOLLAND
THE HOME OF THE HOLSTEIN



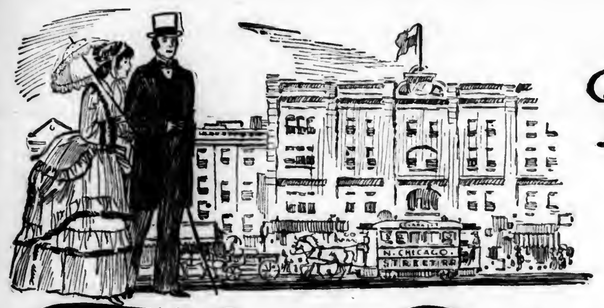
Some of the pictures taken by Mr. Niesley on his visit to the Netherlands. ***See page 3.***

Upper right—Windmills and modern electric pumps lift water from the canals of the Low Country into the sea.

Oval—The milkers go to the cows in the Netherlands. Small canals, about 3 feet deep and 3 to 5 feet wide, take the place of fences. Notice the footbridge.

Lower left—Oil cake, cottonseed meal and grain are coming in on some of these canal boats while others are carrying loads of Holland cheese for export.

Lower right—The house and barn are under the same roof on most Dutch farms. This is a typical farmstead.



For 55 years Ward's Policy has been QUALITY first — then LOW PRICE

WARD'S is a house of Low Prices. Ward's Catalogue always offers *lower than market prices*—it always brings you the largest possible savings. But your Ward's Catalogue offers you more than a saving in price.

When you use your Ward Catalogue, when you order from Ward's, you are certain of the greatest possible value at the price. You are sure of a heaping measure of quality—you are sure of a full dollar's worth of value for every dollar.

We never Sacrifice Quality To Make a Low Price

We do not adulterate or skimp quality, to make a low price. We do not put cheap inner soles in a shoe to take ten cents off the price. We do not save in the weight of an automobile tire to meet low prices made on inferior tires. We try to sell only honest, reliable merchandise,—the kind of goods that will stand your inspection and use.

It is easy to make low prices. It is easy to lower a price five cents or a quarter—*by cutting quality!* It takes vast resources and skill to *maintain quality* and *quote low prices.*

Sixty Million Dollars in Cash Made Possible Ward's Low Prices

Your copy of Ward's Catalogue brings you a saving made possible by buying in the largest possible quantities—and paying cash. Cash always buys cheapest. Goods bought by the dozen cost less than goods bought one at a time. We buy by the car load, by the train load and pay cash to secure low prices for you. Ward's savings are therefore real savings. Ward's maintains quality and secures low prices for you through the vast buying power of eight million customers.

Use your Catalogue Save on Everything You Buy

You may as well have the satisfaction of knowing that everything you buy will prove to be of reliable quality. You may as well get a heaping measure of value for every dollar you spend. And you too may as well save on the price of every article you buy. So use your Catalogue. Take full advantage of the savings and the satisfaction that may just as well be yours.

"We have bought in the great cities—the savings are larger at Ward's."
Bringing to you lower prices than even the big city stores can offer, has been our work for fifty-five years.
No one store in any city offers you the opportunity of saving on such complete assortments of the things you need.
MONTGOMERY WARD & CO
Catalogue Number 107 Fall and Winter 1927-28

Your orders are shipped within 24 hours

Your orders will be shipped within 24 hours. That saves time. Besides, one of our seven big stores is near to you. Therefore, your letter reaches us quicker. Your goods go to you quicker. It is quicker and cheaper, and more satisfactory to send all your orders to Ward's.

Holland-The Home of the Holstein

Two Pennsylvanians Visit the Land of Wooden Shoes, Windmills and Canals

By H. G. NIESLEY

THAT the quaint old costumes, wooden shoes, wind mills and canals are not the only things of interest in the little country of Holland is quite evident when one reaches the province of Friesland, occupying the northeastern part of the country. Here may be seen the original home of the Holstein cow. It is a province with only about 20,000 farms, all of which are below 100 acres in size, and averaging from 25 to 30 acres.

To enter this province, H. H. Havner, my traveling companion, and I passed thru the Zuider Zee. It may be of interest to note that here a great engineering project is under way, to make available more land for Holland's dense population. (The population of this country is over four hundred inhabitants per square mile.) Dikes are being built and the water will be pumped into the sea to make available dry land. This project is estimated to take 40 years to build. As one passes thru this country a great network of canals may be seen which serve as boundary fences and line fences for fields and farms.

Haul Hay on Canals

Our trip to Leeuwarden, the central city, was made in the midst of the haying season, and we actually saw hay being loaded from the field directly on a canal boat, and moved by boat to the barn. The country is dotted with black and white cattle grazing in the little fields. The practice of turning the cattle on pasture in the early spring, where they are allowed to remain until late in the fall, is quite common. The cattle drink from the canals, and grass is the principal feed. Very little, if any, grain is fed during the summer. This Holland grass seems to be to the dairy cows of Holland what the Kentucky blue grass is to the Kentucky horse in the United States, for they have certainly produced a high strain of dairy animals.

Upon entering Leeuwarden we called at the office of Mr. N. H. Blink, general secretary for the Friesian Agricultural Society, which is a general cooperative federation tying together all the cooperative associations. Among the many associations of which this little province boasts are the Friesian Cattle Herd Book (for registering their animals) and union of cooperative dairies, including 90 local associations. These locals are factories that have an average capacity of about 1,500,000 gallons of milk business per year. A cooperative bank, central buying association (for purchasing feed stuffs and fertilizer), cooperative slaughtering association, butter and cheese export association, poultry association (for selling eggs and poultry), purebred seed association (for selling farm seeds and seed potatoes), and a cooperative farm record keeping association, include some of the cooperative ventures of this province.

These round cheeses are brought to the boat for export by means of a two-wheel cart drawn by a dog. Note the dog under the cart resting while the load is lightened. Dogs in harness used as aids in transportation are quite common.

Mr. Blink then arranged for our inspection of the Herd Book Association, where we found a unique method of recording the registration and production of their dairy cows. About twenty per cent of dairy cows of Friesland are in the herd book, totaling 30,000 cows in 2000 herds. The average production of milk is 4505 kilograms of milk (9911 lbs.) testing 3.54 per cent butterfat. In addition, there are many cows in the cow testing associations (or milk control associations as they are called). There are 200 of such associations in this little province, and 80 per cent of the cattle are tested in these testing associations.

I Copied the Record

Before leaving the office I copied from the herd book a four-year record of the champion Friesian cow of Holland.

	Born 1919			
	1921	1923	1924	1925
Kilograms milk ...	5,020	6,499	7,314	13,164
Butterfat	3.50	3.83	3.60	3.78
Butter	191	271	286	542
No. days lactation	328	326	326	330

(Continued on page 13)

Both Parties Will Toe the Mark

I HAVE not the slightest doubt that the Democratic national convention of 1928 will demand the enforcement of the prohibition law. It is certain that the Republican national convention will. The Republican party has been the unvarying champion of prohibition from the first. Its record of loyalty to law and the Constitution is so complete that the suggestion it might palter with this great reform in its national assembly is preposterous.

Forty-five of the 48 states deliberately ratified national prohibition in the manner prescribed by law. And even the most contentious "wet" must admit that fully three-fourths of the states of the Union are uncompromisingly for the Eighteenth Amendment and the Volstead Act and its enforcement.

The West is overwhelmingly for prohibition. Prohibition is not a party issue in the West and cannot be made one. I doubt if it can be in the South. The sentiment of a comparatively few wet delegates from a few states will not influence the action of the Republican national convention. Nor have I had the slightest doubt that the Democratic national convention will fail to demand the enforcement of the prohibition law.

It is not suggested, as I understand the matter, that repeal of the Eighteenth Amendment, or its modification, be made an issue, but only the modification or the repeal of its enforcement. That shows the insincerity of the wet objectors.

Modification of enforcement means no enforcement. The Eighteenth Amendment prohibits using intoxicants for beverages. The Volstead Act simply translates the Amendment into statutory law. The Volstead Act is the Eighteenth Amendment and the Eighteenth Amendment is the Volstead Act. They cannot be separated. Anybody opposed to the Volstead Act is necessarily opposed to the Amendment. The proposed modification of the Volstead Act is merely a subterfuge for nullification of the Amendment. This is perfectly well known to wet and dry leaders alike. The fact cannot be camouflaged.

You Cannot Make Terms with John Barleycorn

Modificationists and compromisers on a question that is incapable of compromise or of modification, will be in such a minority in the Republican national convention that my prediction is they will not be heard from. If the issue should be raised on the floor of the convention, I do not anticipate it will arouse great interest among the delegates. It will simply be voted down without a roll call and by acclamation.

President Harding in his annual message to Congress on December 8, 1922, called for literal and vigorous enforcement of the prohibition law in these words: "Constitutional prohibition has been adopted by the nation. It is the supreme law of the land. The day is unlikely to come when the Eighteenth Amendment will be repealed. The fact may as well be recognized and our course adapted accordingly."

President Coolidge has as strongly upheld the law. He holds that the Eighteenth Amendment not only invites but commands a combined jurisdiction of the federal government with the state governments in enforcing prohibition.

Liquor has never obeyed any modifying law. It will never obey any law but a bone-dry law honestly and vigorously enforced. Every one of the rock-ribbed prohibition states knows you cannot make terms with John Barleycorn.

Whenever the liquor question is raised in an election the candidate who attempts to straddle it goes down to defeat. It is not an issue which may be juggled with. I am certain that neither party, certainly not the Republican party, will trifle with the people by favoring "modification" any more than it will favor the repeal of the Amendment.

Comments on the Week's News

WHILE the expected was made a fact in the matter of the Philadelphia primary election, the Vare slate being ratified thruout, the result was somewhat staggering to the organization. The vote given to Mr. Moore, the independent candidate, was beyond anything the gang had anticipated. Vare's candidate, Mr. Mackey, had a plurality of only 74,000. This is a hopeful sign of an awakening in Philadelphia citizens which may, mind we only say "may," develop into a real assertion of political independence sometime. If all the "good" citizens of the city had voted their sentiments this time Mr. Moore would have won, hands down. But they didn't.

♦ ♦ ♦

News from all sections concerning the condition of the corn crop indicate that an immense amount of soft corn is expected this fall. In all probability frost will come before the belated crop matures. There is one lesson which sticks out as prominently as a sore thumb, however, and that is that wherever fertilizer high in phosphoric acid was applied liberally the chances for ripe corn are 100 per cent greater than where the soil is deficient in this element. Already concern is expressed over the possibility of an insufficient quantity of good seed corn next year. The wise thing to do is to save and properly cure every ear that will provide viable seed.

♦ ♦ ♦

The news that 150,000 people have paid two and three-quarter millions of dollars to see two bruisers stand up and punch each other indicates something, but what? Many people feel that P. T. Barnum was either too conservative in his estimate of the American people, or else he was not well acquainted with them. But it must be remembered that he was speaking of conditions as they were fifty years ago, and that we have made great progress in that time. This is an age of speed, and the production of one a minute has evidently been speeded up to about three and two-fifths.

♦ ♦ ♦

President Coolidge has nominated D. W. Morrow, a member of the firm of J. P. Morgan and Co., of New York, as Ambassador to Mexico. In view of the troublous relations between this country and Mexico over American interests and holdings in Mexico the appointment of a Wall Street man is pretty sure to start a row in Congress. It is said that Mr. Morrow is liberal and progressive in many respects, but the question of his fitness under the present strained relation will no doubt be a question for debate.

♦ ♦ ♦

Individually-owned automobiles and public bus lines are gradually putting out of business trolley systems and lessening train service. All over the country trolley companies are giving up their charters and taking up their tracks, and almost every railroad is lessening the number of commutation trains annually. This is not because people travel less, but because they travel over the public highways in gas-propelled machines. What is the economic effect of these changes? The first one is that it is costing the people more to go from place to place than it used to by train and trolley, and that this cost will continue to increase. The second effect will be better understood when and if there should be a decided slump in business and incomes.

♦ ♦ ♦

So much is said about farm mortgages that the uninformed sometimes conclude that the whole business of agriculture is on the verge of being foreclosed. But D. T. Torrens, of the Mortgage Bankers' Association told that group the other day that farms are substantial security, and that farmers as a class are far less encumbered by mortgages than industrial and city property holders. In spite of the present unsatisfactory condition in agriculture, the probabilities are that the next few years may see more foreclosures in cities than on the farms, because investors have been over-eager in placing their money on things which may prove to be but temporarily prosperous.

♦ ♦ ♦

Among the numerous menaces on the public highways,—the inexperienced driver, the excitable man or woman, the speed fiend, the road hog, the big bus, and the drunken driver,—the drunken driver is by far the most dangerous and the most numerous. In reply to a question by Governor Fisher to the Highway Department, the Department stated that of the total number of violations, 194, during the week inquired about, one-sixth were chargeable to drunken drivers. The figures indicate that there is a steady increase in such cases. What is to be done about it? Let's have your best, pointed judgment on the matter.

♦ ♦ ♦

The press correspondents in Paris report that the French people were somewhat surprised and disappointed over the fact that the American Legion delegates to the convention did not spend money as freely as they anticipated. The provision of gay night life and big stocks of champagne were far beyond the demand. In other words, or at least the inference is, the boys who were boys in 1918 have become staid, sober American citizens, fit representatives of the greatest of all republics.

Need for More Research Work

THERE is an unquestioned need for greater appropriations for agricultural research work. Little of major importance has been developed along new lines of scientific discovery in a generation, altho research in the interests of industry, mechanics and warfare have revolutionized many phases of life. This is probably because the inducements have been greater and more certain. The discovery of scientific truths which affect the production of agricultural products touches every human being sooner or later, hence the search for them should be supported by the state and federal governments. It is because of the universal interest in agricultural research work which the American people have, or should have, that thirteen national associations have joined in a request to the budget bureau to appropriate larger sums for this work.

Research work requires time and patience, as well as the application of trained, scientific minds. It differs from testing and experimentation in that it is a quest for the unknown, while experimentation is merely using the known in different ways and quantities to determine what are the reactions under the varying conditions. We need further knowledge on soils and fertilizers, the principles of plant and animal breeding, the treatment of diseases, the control of pests, and the application of mechanics to the heavy work of farming. True, great strides have been made in the last hundred years, but there is without doubt still a great unexplored field in the agricultural industry awaiting the hand and mind of the true research worker. There should be no parsimonious hand holding the strings of the public purse when the advancement of research work is being considered.

Editorial Sidelights

RECENTLY we mentioned going to register in an alley saloon, so that we could vote in the recent primary election. When we reached the saloon it was closed, with a sign directing us to the new polling place,—the front parlor of a rooming house on a none-too-respectable street.

Inquiry revealed that the saloon had been raided by the prohibition officers several times and finally was padlocked. We cannot imagine why the officers should put the persecuted saloon owner to all that trouble. The customers had to be served, so someone opened another joint, evidently of the same kind, in the next building.

Probably the idea is to alternate, one building wearing the padlock while the other does business. Thus both the law and the thirsty customers are satisfied.

IF WE hadn't come to the bottom of the page before we finished last week we might have gone on somewhat as follows in regard to the article by Mr. Niesley on Page 3 of this issue:

The land ruled over by Queen Wilhelmina should be called "the Netherlands," not "Holland." To speak of the country as Holland is like calling the United States "Carolina." For North Holland and South Holland are only two of the eleven provinces of the Netherlands.

Mr. Niesley's article on the Netherlands, called Holland out of deference to the American way of speaking, will be followed in a later issue by a story of his visit to Switzerland together with more interesting pictures.

Readers will recall that Mr. Niesley was appointed Assistant Director of Agricultural Extension at the Pennsylvania State College shortly after he returned from Europe this summer. He succeeds Mr. Bell who resigned some months ago to become head of the Bureau of Plant Industry at Harrisburg.

The new Assistant Director was County Agent in Dauphin County preceding Mr. Burtner. From Harrisburg he went to the University of Wisconsin for his Master of Science degree, returning to become Professor of Agricultural Economics Extension at Penn State. A grant of several weeks leave of absence permitted the European trip.

FORECAST DANGEROUS

Most Flood Sufferers Provide for Themselves—Consolidate Rural Routes—Oppose Appointments.

Washington, D. C.

FORECASTING of prices of farm products is a dangerous business, as economists in the Department of Agriculture have found out in the last few days. The Bureau of Agricultural Economics on September 15 issued a statement on cotton in which it was predicted that under normal conditions prices are likely to decline in the next few months. The cotton buyers on the New Orleans market immediately took advantage of this forecast to bear down the price of cotton to $6.50 a bale, which brought a loud storm of protest. Senator Harris, of Georgia, declared that the forecast has cost southern cotton planters $100,000,000 by the break in the market.

Some Flood Sufferers Still Dependent

All the Mississippi Valley flood sufferers have now been returned from concentration camps to their homes, says Secretary of Commerce Hoover in his report to President Coolidge on the present situation in the devastated regions. There are about 46,000 still dependent for food supplies. Therefore, of the 614,000 at one time dependent on public support, 92 per cent are now providing for themselves.

Owing to the second flood and other causes probably 2,000,000 acres of crop land will make no substantial money returns this year. Between $27,000,000 and $28,0000,000 has been given for flood relief by the American people.

Thirty Millions Served by R. F. D.

When the Postoffice Department put into effect the rural free delivery service it created a market for the business of the country which today extends to nearly 7,000,000 families and over 30,000,000 individuals, says Postmaster General Harry S. New. The vast increase in the parcels of merchandise carried in the mails is due largely to the new markets which were created by the rural free delivery service. Approximately 66 carloads of parcel post matter in the mails move out of New York City every day; 32 carloads from Philadelphia, and 90 carloads from Chicago.

Economy Is the Rule

The cost of city and village delivery per person served is approximately $2 and the cost of rural delivery per person is $3.50 per annum. In the fall of 1925 the Department began the policy of consolidating routes where conditions were favorable without injuriously affecting the facilities offered the patrons. In the fiscal year 1927, 642 routes were discontinued as a result of such consolidations, at a saving in annual rate of cost of over $730,000.

To Fight Loan Board Appointments

It is definitely settled that there will be a strong opposition to the confirmation by the Senate of Eugene Meyer, Jr., George R. Cooke by and Floyd R. Harrison as members of the Farm Loan Board.

Senator Fletcher, of Florida, who had a prominent part in the creation of the Farm Loan Board, says he will oppose any action that would eliminate independent functions of the board, and he objects strongly to the forced resignations of three members, including Edward E. Jones, of Pennsylvania, who were in accord with the interests of the farmers, to make way for the appointment of men not identified with the farming interests.

Lowell and Brossard Return

The two representatives of agriculture on the United States Tariff Commission, Sherman J. Lowell and Edgar A. Brossard, have returned to Washington to take up their work on the commission, Mr. Lowell from a vacation on his farm in Chautauqua County, N. Y., and Mr. Brossard from a visit to several European countries.

Mr. Brossard says he talked with European government officials and economists who would be pleased to have the United States tariff rates reduced, but all who understood the United States Tariff Commission's methods of adjusting the rates to equalize domestic and foreign costs of production in the markets of the United States, thought that it was a liberal and fair policy for a protectionist country.

Farm Price Index Higher

The index of farm prices on August 15 at 132 was two points higher than on July 15, one point lower than on August 15, 1926, and 20 points lower than on August 15, 1925. The two-point advance was due mainly to the considerably higher cotton, corn, hog and egg prices, say economists in the Department of Agriculture.—E. E. R.

ASK HIGHWAY BIDS

State Buys Forest Area—Halt Corn Shipments—Continue Cattle Testing—Inspectors Make Arrests.

Harrisburg, Pa.

PRELIMINARY studies of the state's highway building authorities for the season of 1928 indicate the construction operations will be on a larger scale than this year owing to a certain extent to the acceptance of offers to participate with counties on the "fifty-fifty" basis. Most of the so-called "links" between existing improved roads and towns where there are paved streets will be under contract this year and calculations are being made on several longer stretches which will go toward making routes to relieve the present much congested main highways. The departmental officers plan to ask bids for construction until late this year so that contractors can get started during the winter on assembling of plant and placing orders for materials.

After Interior Lands

According to what is heard about the State Capitol the policy of State Forest authorities in buying lands will be to secure a considerable percentage of forest areas now within state lands, but privately or corporately owned. These "islands" of forest have been looked over and in many instances it is thought can be acquired for low figures. It is said state officials have turned down lands which were badly burned over holding that in the present state they would not be valuable and there is small chance of burned area of any type being bought. Thousands of acres of land, some in tracts of over 10,000 acres, have been offered.

Corn Shipments Halted

Some interesting stories of how corn has been kept within the borer quarantined district are coming here. One shipment was halted at a state line when it was on its way to a distant part of the country, while in another instance a truck got almost to a town many miles from where the borer exists. Photographs of fields ruined by the borer have been effectively used in some eastern counties where there has been trouble enough getting the usual crop of corn and a wholesome dread of the pest now exists.

Nine Counties Lined Up

Nine more counties are likely to be added to the nine declared free from tuberculosis within a short time. State Animal Bureau authorities have certified to completion of the tests in their limits and official action is to be taken soon. This certification will materially advance the standing of Pennsylvania in the list of states. Over 250 townships await tests, it is now estimated.

Shells in "Meal"

State inspectors have turned up ground oyster shells in stuff advertised as "pure bone meal" and arrests have been made on the charge of violating the fertilizer law. This is one of the rawest instances found, altho in probably a score of other cases the guarantees were too high for the mixture. Metal fasteners are still being used on sacks in spite of law and the infliction of fines.—C.

PROFIT ON PEACHES

Rise In Prices Brings Storage Peaches On Market—Set Date For Show—Tomato Market Is Slow.

Trenton, N. J.

A SHARP rise in the peach market in mid-September brought large blocks of New Jersey peaches out of storage. The turn was not altogether anticipated and growers who gambled on storage this season profited nicely. The fruit was stored when peaches were selling at 30 to 40 cents a basket at country loading point prices. They sold on the mid-September rise at $1 a basket at the country storage plants. One of the leading South Jersey fruit operators, handling the fruit for the growers' account estimated that the break in the producers' favor this season was worth $100,000 to the growers. New York State peaches did not get on the market in quantity to interfere with the Jersey storage movement until the last week of the month.

"Agricultural Week" Set

Twelve agricultural organizations sent representatives to the meeting of State Department and college executives recently, when the dates of January 10 to 13, 1928, were approved for the annual Agricultural Week exhibits in Trenton, and plans were mapped out for the displays and meetings. The Farm Products show will have an innovation this season in a display of certified chicks. Last year New Jersey shipped 4,600,000 chicks known to be from healthy flocks and true to type. The importance of this branch of the poultry industry warrants special attention from now on; the association men stated. A local business house has offered $100 to encourage this feature of the show. The machinery and corn show divisions will also receive special attention and inducements offered to bring out larger showing in these departments.

Tomato Market Unsettled

Late September found the tomato growers in South Jersey largely in the position of waiting to see what the market would do next. The largest movement of tomatoes to the canhouses on record in mid-September took the soup and canhouse buyers off the open market. Prices reacted accordingly, and growers who were not under contract ceased picking operations entirely until the canners were back on the market. The open market at South Jersey points went as low as 10 cents a basket for a short while. One large plant making soup, handled 236,000 baskets of tomatoes in one day. This represents the yield of 800 acres. Favorable weather resulted in the large production under contract being ready for harvest at one time more than satisfying canners' capacity to handle. It is said that only two canners in all South Jersey had salesmen out during the rush.—W. H. B.

THE BEST OF PALS MUST PART

NEED RURAL DOCTORS

Investigate Rural Situation In Regard To Medical Attendance—Plan Intensive Corn Borer Drive.

Ithaca, N. Y.

SOME months ago the Stafford Grange of Genessee County complained that medical services were not available to people in rural districts in this region, addressing the statement to the county medical society. The chief point in the complaint had to do with the refusal of physicians to responding to night calls, even on emergencies. The New York State Medical Society has now taken a hand in the matter and has sent a member to consult with the county society to discuss the situation. Dr. James A. Lawrence, executive officer of the state association says the complaint brings out points that have many comparable situations in other parts of the state. The result of Dr. Lawrence's study of the Genessee County situation will be reported to the state body at its annual meeting late this month.

More Intensive Borer Drive Needed

Unofficial reports from counties affected by the corn borer in this state indicate that the borer is more than holding its own. The State Department of Agriculture is planning a more intensive drive against the pest and is sending out appeals to farmers to start next year's corn borer control now. The borer cannot be reached by poison and all corn should be ensiled or the stalks and cobs burned or buried deeply along with all other plants known to harbor the pest. Future control of this destructive pest must depend on the individual farmer to a great extent.—M. G. F.

Made to last years

CAMBRIA FENCE

Ask your Dealer about Cambria Fence

Cambria Fence is made to last years!

Cambria Fence maintains its newness and neat appearance because it is made of selected steel wire, heavily coated with zinc by our own process.

Fence made to last years keeps your fields permanently protected and in good order —it is highly economical over the years!

THE cantaloupes are ripening at last! We have had a hard time bringing them thru the unfavorable season with its cool, wet weather and the persistent attacks of disease and insects. But we coaxed them along with nitrate of soda and kept them copper-plated by spraying seven times with Bordeaux. Some of the vines died in spite of it all,—notably the Milwaukee Market, —but we have a fine lot of luscious melons now, altho it's too cold to ripen them rapidly.

✣ ✣ ✣

ONE of our Leghorn pullets began laying at the age of eighteen weeks. I never had much experience with Leghorns, our poultry raising heretofore has been chiefly Wyandottes, Plymouth Rocks and Reds, and to raise a chicken that lays at that age is a unique experience. Most of the 240 pullets seem to be on the verge of laying, altho we would prefer to have them wait until the middle of October at the earliest.

✣ ✣ ✣

WE are pleased at the color and quality of the few peaches and apples on our young trees. In spite of the season, the J. H. Hale and Elberta peaches and the Stayman apples are finely colored. I have always noticed that the color as well as the quality of fruit depends upon the kind of soil it grows upon, and that soil quality must be natural. One may lower the quality and color of fruit by fertilization and cultural methods, but cannot do much towards raising them.

✣ ✣ ✣

I AM serving on the federal jury for the eastern district again and this will account for the short and listless notes this week. Being a juror may be a patriotic service to one's country, but it is a monotonous and tiresome service. Of course, it would not become me to make public the comments which spring up readily in my mind. But one cannot be criticized for wondering why it seems so hard for some people to go straight; why it is that some cannot pass up an opportunity to take what does not belong to them, or to trade in that which is forbidden. Nowhere is there a better exemplification of truth of the saying, "The love of money is the root of evil" than is seen in a criminal court. But nine o'clock draws near and I must go and witness more of it.

Why Does Concentrate Cost More Per Unit?

ONE of the New England correspondents has inquired about the relative cost of available phosphoric acid in concentrated and standard acid phosphate. The question submitted and the answer to it are herewith given.

"What in your opinion is the reason for so-called double or triple super-phosphate costing more per unit of available phosphoric acid than standard 16 per cent acid phosphate, and is it probable or possible that this difference will be eliminated in time and how?"

The manufacturing costs of so-called double or triple super-phosphate are relatively higher than those of ordinary acid phosphate. In the case of the latter, a mixture of equal parts of high grade phosphate rock and commercial sulphuric acid will furnish the standard acid phosphate. In the case of the more concentrated product that is double or triple super-phosphate enough sulphuric acid must be mixed with the phosphate rock to release the phosphoric acid which could then be used for treating phosphate rock. Hence, the savings made in the handling and transportation of the more concentrated product is offset partly or largely by the high manufacturing costs. With the development of improved methods for volatilizing the phosphoric acid, the cost of making double super-phosphate should become substantially lower. Even now some of the manufacturers should be able to sell double super-phosphate at a unit cost of available phosphoric acid that would be somewhat lower than that of phosphoric acid of standard acid phosphate.—J. G. Lipman.

Father (after half-an-hour's search)—Do you know what I have done with my box of nails, Bobby?

Bobby—Yes, father.

"Well, what have I done with them?"

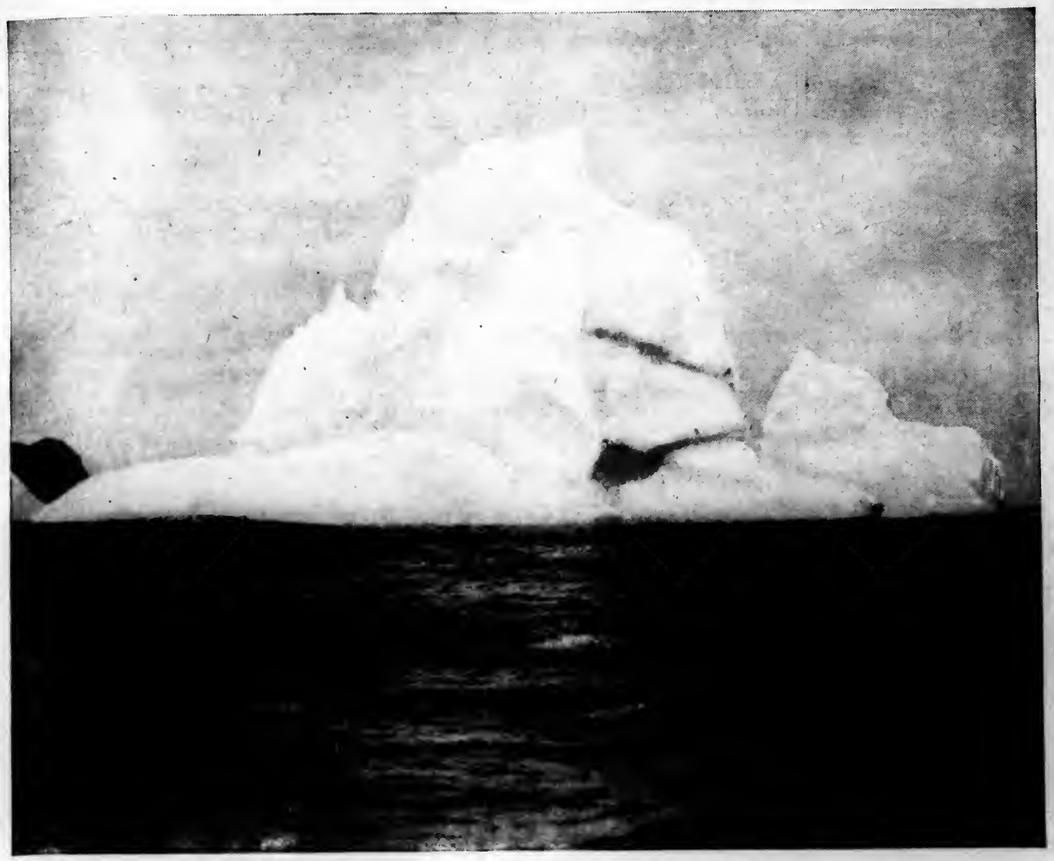
"You've lost 'em!"

The Cheerful Plowman

A Hot Day in Autumn

BY JOVE, it's hot! This cock of hay will catch on fire and blow away! The handle on this fork, I know, will soon begin to flare and glow! The hair is curling on my head, the buckles on my shoes are red! My whiskers singe upon my chin, a prairie fire consumes my skin! The metal on my overalls is melted down in tiny balls, the stubbies crumble all around, the crickets cook upon the ground! A mouse, well done, lies on his side with tail baked until it's curled and dried! A parboiled locust on a weed died as he munched a frying seed! I smell the feathers of the birds as they fly by in sizzling herds! Hot grease is bubbling from a toad that tried to hop across the road, while lard is dripping from the hair of those fat porkers over there! The beef upon that wilting cow is nothing but a pot-roast now, while those poor lambs out in the sun are tender mutton nicely done! The bread I carried out for lunch is toasted now, too hard to munch; cold coffee, cold at nine today, I find has mostly boiled away! That gurgling sound that comes to me is sap that's boiling in a tree! And look, by all that's good and great, this is the first time up to date that I have ever seen around this ranch roast apple hanging on a branch! Yes, it is hot, tho summer's past and autumn's here, or coming fast, yet heat is heat, and hot is hot, and Sol is Johnnie on the spot! June has no hotter days I'll say, (July and August not a day) then autumn brings sometimes, I vow—gosh, all my ribs are broiling now!—J. E. T.

AFTER SHAVING



HERE IS A GOOD BET

Have you ever tried Listerine after shaving? You will like it.

We are so certain of this that we are willing to risk the cost of this page (more than the average man's yearly income) to tell you about it.

After your next shave, just douse Listerine on full strength and await results. Immediately, your skin will tingle with new life and vigor. Then, over your face will steal a lingering and delightful sense of coolness such as you have never known before.

And as it cools, Listerine also heals—takes the smart and burn out of tiny wounds left by the razor and lessens the danger of infection. Go ahead and try Listerine this way. We dare you. Lambert Pharmacal Company, St. Louis, Mo., U. S. A.

EVERYBODY'S TALKING
Everybody's talking about the marvelous whiteness of teeth after using Listerine. Touch Paste a short time. You will be delighted. Large tube, 25c.

Inspected Potatoes Bring Premium

A PREMIUM of 15 cents per sack was paid to the New Jersey potato growers this season for stock that passed the U. S. inspection. It was not because the dealer could get 15 cents per sack more for the potatoes, but it was due to the narrow margin on which the dealer was able to sell.

In 1926, 423 cars of potatoes from the Central Jersey belt rolled to market with a U. S. certificate tacked on the door. This season saw 756 cars from the same district rolling to markets in a score of states, many of which had not seen a Jersey potato in years.

A visit was made to several of the biggest dealers in Mercer and Monmouth Counties the first week in September to learn first hand of this fine method of merchandising potatoes.

Inspected Stock Sells More Easily

It was in the office of Barclay and Chamberlin, Cranbury, that we were told about the 15-cent premium. This firm of potato buyers handled one-third of the entire carlot shipments from the state this year and their views were corroborated by other dealers who used the inspection service. Mr. Barclay admitted that the trade this year would not pay any more for potatoes that had been inspected than a car which had not been inspected, but it would sell much easier, as it had an inspection certificate and there would be no adjustments to make later in the season. It was on this latter problem that this dealer based the premium for inspected stock.

"We found," said Mr. Barclay, "that we could operate on a very narrow margin on those cars that had passed inspection. We knew that we would have no losses to meet on them because they left us in the best of condition and we passed this saving on to the growers. This, of course, applied only to cars loaded by individual growers who stood back of their goods and whom we knew put up good potatoes."

Dealers Had Wider Distribution

This firm had but little difficulty in getting their potatoes graded so that they would pass inspection, except the latter part of the season when the quality began to decline. The first 98 cars loaded passed the inspection which speaks well for the type of grading done in central New Jersey.

Rooney and Ely, a firm at Englishtown, also corroborated the views of Barclay and Chamberlin. They, too, had found the potatoes sold more easily when inspected.

An interesting point brought out in our trip was the wide expanse of the 1927 white potato market. Those dealers who were using inspection had a much wider distribution of potatoes this year than for many seasons, while the dealers who did not use the service were complaining over the gradually narrowing outlet for potatoes. We found a group of five farmers who loaded 74 cars of potatoes this year all of which passed inspection. In a year of low prices, the premium of 15 cents added a tidy sum to the final accounts of the central Jersey growers. That small sum represented the value of 40 cars of potatoes at existing prices in the middle of the season. It meant that the growers would have had to produce 40 cars of ordinary potatoes to equal the premium paid on the cars that passed the U. S. inspection requirements.—A. K.

Fair Season Closes

THE county and local fair season in Pennsylvania will draw practically to a close next week with the holding of the following fairs, according to dates reported to the Pennsylvania Department of Agriculture:

Place	County	Date
Doylestown	Bucks	Oct. 4-8
Bloomsburg	Columbia	Oct. 3-8
Burgettstown	Washington	Oct. 4-6
York	York	Oct. 4-8

Only two fairs are scheduled for later dates. These are:

Place	County	Date
Hughesville	Lycoming	Oct. 11-14
Oil City	Venango	Oct. 13-15

A lady went into a hardware store to buy a drinking dish for her dog.

"Would you like one with the words 'For the Dog' printed on it?"

"Oh, no thank you!" replied the customer. "You see, Fido can't read, and my husband never drinks water!"

Jersey Farmers Build Market

TWO summers ago if any farmer in Monmouth County, New Jersey, had said that farmers could own and operate their own market to advantage, he would be ridiculed. Yet, those two summers have passed and with their passing Monmouth County farmers are boasting of one of the biggest and best farmer-owned and controlled markets in the state. This market is a little over a year old, having opened in the spring of 1926. It is known as the North Shore Cooperative Association and is located in the heart of New Jersey's seashore district, just outside of Asbury Park in Neptune City.

More than 150 loaded trucks faced head on in the market each day with over 200 tons of perishable produce help to feed at least a portion of the consuming public.

Previous to 1926 farmers had to sell their produce in a privately owned and operated market. Here they were charged exhorbitant fees and sold their produce under conditions that were far from ideal from a farmer's market standpoint. Facilities for displaying and selling farm produce were poor. The privately-owned market was too small for the volume of busines. The lighting system was inadequate. The market grounds were dirty and after a shower were ankle deep in mud.

When farmers and buyers met everything was in a turmoil.

In the winter of 1926 a group of farmers met with County Agent Ellwood Douglass to discuss the possibility of making changes. With the cooperation of the Monmouth County Extension Service and the State Bureau of Markets of the State Department of Agriculture, plans were formulated. A two-acre lot was purchased with the money secured from the sale of shares to farmers. Grading of land and building operations started immediately. By the middle of June of last year the market was open for business.

Aim Is to Sell Quality Goods

Today the North Shore Cooperative Association market is the center of produce trade along the shore as well as catering to buyers from metropolitan buying centers. It attracts a class of trade that is of the highest type. The market converted a barren waste into an up-to-date $50,000 project in which over 150 farmers have invested their money and with more than 300 farmers using the new trade center. Last year the cooperative market showed a profit of over $5500 paying six per cent interest on its shares and applying the remainder on the mortgage. It is not, however, a money-making proposition. The profits have been and will continue to be put back into the business as the directors have dreams of making this market one of the finest in the country.

"To serve the consumer and buying public in a hundred per cent efficient manner with freshly-grown, honestly-graded and packed fruits and vegetables," is the aim of the market. At the same time every effort is being made to reduce the spread between the price the consumer pays and what the producer receives for his products. What better goal for successful and substantial business can a farmer-owned and operated organization have?—N. K.

Covered stands for the right type of speculator can be made an asset to the farmer's market. Additional buyers have been attracted by these men. Often these speculators buy up the surplus produce from the farmers in the market and sell it later in the day to the retail trade.

$15,000.00 in cash prizes for a slogan about WOOD

Read the fascinating story of Nature's most friendly and useful material. Know more about its beauty, durability and economy. Learn the truth about America's vast and permanent supply of timber. Then send us your slogan!

This message may mean $5,000 added to your bank account. And remember that these slogan contest prizes are seldom won by professional writers or technical experts. Nearly always the winners are people who never expected to win. So do not skip anything—not one word.

No timber shortage

Almost everyone has been induced to believe that this country is confronted by an acute shortage of timber. This is not true.

In fact, Col. William B. Greeley, U. S. Forester, urges the nation to "Use wood, and conserve the forests." For timber is a *crop*. It needs to be cut when ripe. Failure to do so means *waste*.

There is enough standing timber in the United States today to build a new six-room house for every family in this country, Canada, South America, all of Europe and the entire British Empire! And the *additional* lumber supplied by the *yearly growth* of standing trees would build a continuous row of these houses along both sides of a street reaching from New York to San Francisco.

These are not "opinions"—but *facts* backed up by extensive investigations and published reports of the United States Forest Service.

Better lumber than ever

Not only plenty of lumber—but *better* lumber! Today, *American Lumber Standards*, adopted by the industry and endorsed by the U. S. Government, give the purchaser protection he never had before.

Universal adoption of reliable standards has won for the Lumber Industry high praise from Secretary of Commerce, Herbert Hoover.

Wood built America

Without wood there could have been no America!

Stout wooden ships brought the settlers of America across the wide stretches of the stormy Atlantic. Wood sheltered them in sturdy log cabins and wood housed their descendants in colonial mansions—many of which endure today.

Throughout the Thirteen Colonies wood built the homes, the churches, the town halls, the schools. Wood built the wharves, the warehouses, the stockades, the barns, the corn cribs, the bridges.

Later, the Forty-Niners battled their way over the long cruel trail to California in covered wagons made of wood. On ties of wood the railroads advanced unceasingly, West, East, North and South.

Uses constantly increasing

Twenty years ago there were less than 2600 commercial and industrial uses for wood. Today there are more than 4500. Radio alone uses more lumber than some states use for buildings.

From the staunch timbers in mine shafts to the buoyant strength of Lindbergh's immortal plane, wood serves mankind in countless and ever-increasing ways.

Wood endures

The oldest and most beautiful homes in America are houses built of wood. Many of them stand today, as sound in timber and beam, and *as livable*, as they were before the Revolution.

Wood endures—and the supply is enduring. For it is the only one of our natural resources that *grows*. The mine becomes a gaping hole—the forest forever renews.

Wood is beautiful

Wood possesses a pleasing natural beauty of grain and texture that mellows and deepens with age and defies imitation.

Wood can be fashioned and carved and fitted into thousands of charming designs.

And surely it is significant that the American architect prefers lumber for his own home!

Wood is friendly

Of all materials there is none so *friendly*, with such a sense of human companionship, as wood. Wood is warm and alive to the touch. The handle of a tool, the steering wheel of your car, the arm of your chair, the bowl of your pipe—you like the feel of them because they are wood.

Wood is economical

Wood is stronger, pound for pound, than any other material. It is easily and cheaply fitted to special forms for special needs.

Its moderate cost is due today, in no small measure, to the elimination of waste. There is a grade of lumber for every purpose, a right wood for every need.

To inspire renewed and greater appreciation of wood, and to make more widely known its almost endless variety of uses, manufacturers of American Standard Lumber in the National Lumber Manufacturers Association are preparing an extensive educational campaign. The first thing the Association wants is a "slogan." Send your coupon *now!*

Poultrymen Meet at Atlantic City

THE New Jersey State Poultry Association will hold its annual convention October 12, 13 and 14 at the Hotel Chalfonte, Atlantic City.

The educational program for the convention includes speakers of national and international repute. Among them will be Dr. James E. Ackert, Manhattan, Kansas; Prof. James E. Rice, head of the poultry department of Cornell University; Dr. M. A. Jull, federal poultryman of Washington, D. C.; Harry R. Lewis, minister of agriculture in Rhode Island; Prof. W. R. Graham, head of the poultry department at Guelph, Ontario, Canada, and A. O. Schilling, noted judge and poultry artist of Rochester, N. Y.

The program has been enlarged to include a wider range of topics than has been handled in previous years and, in addition, an exposition will be held to call attention to the quality of poultry and eggs produced in the state. The exposition will include an exhibit of best poultry in the state, an egg show, commercial manufacturers' exhibits, and ringside judging. It is believed by those in charge that these will furnish interesting and valuable information to consumers of poultry products as well as to producers.

The annual banquet of the association will be held on Thursday evening, October 13th.

Throat Canker May Be Trouble

Until about a week ago my hens seemed to be laying good. All of a sudden they started coughing and choking. Two have already died. Could you please tell me what is the matter and what could I do for them?—Mrs. O. S., Sullivan County, N. Y.

The coughing and choking you describe in your chickens may be the result of scratching in dusty or musty and moldy litter, in which case the cause must be removed and clean sound straw supplied. There is also a disease known as throat canker in which a growth appears around the entrance to the windpipe causing the chicken to strangle. This yellowish growth can be removed with the quill end of a wing feather and the parts painted with iodine or a 12 per cent solution of nitrate of silver. In many cases the bird will recover if treated in time. Sometimes this growth occurs lower in the windpipe in which case no treatment will avail. Be sure that the birds' quarters are dry and clean and the litter sound. I think it would be a good idea to add a quart of cod-liver oil to each 100 pounds of mash, which can be reduced to a pint later. Be sure that your birds are well fed on proper rations, as chickens are able to throw off most diseases if vigorous and healthy.—R. L. S.-H.

Young Birds Dying

I have lost several young roosters and one or two pullets lately and wonder if you could tell me the trouble from the following facts: The neck protrudes and looks like an "S", they have no strength in legs; wings spread out and they just squat on the ground. They weigh practically nothing, altho appetite is good.—G. B., Bucks County, Pa.

If you had not stated in your letter that the sick birds you describe are extremely emaciated, I would be inclined to think that they had the limberneck, an ailment that comes from eating decaying flesh, and causes loss of control of the muscles and often death. The remedy for this is to give a dose of one pound of Epsom salts per 100 birds in the drinking water to physic them, and, of course, to discover and bury whatever carcass is causing the trouble.

I wish you would cut open one of the ailing birds and slit the intestines in order to see if you can find intestinal worms present. The roundworms are from a half-inch to several inches long and their presence causes in some cases weakness, paralysis and death. They may be controlled by adding tobacco powder to the dry mash at the rate of two pounds to 100 of mash, and this can be fed for several successive weeks. It is a good plan in combating these worms to move the stock to a clean range.—R. L. S.-H.

Nest Box Notes

WE HAVE been remodeling the front of one of our long laying houses by putting in several five-foot windows so as to admit more light.

These windows are made of an artificial glass composition tacked on a light wooden frame. The house has never been lined in front but we put in a lining of composition board made of waste sugar cane fiber. This lining will not only make the house warmer, but will give a nice surface to whitewash, and also make the house easier to clean, as we now have a smooth wall where formerly we had to sweep out a lot of odd corners formed by the studs.

• • •

There are several composition boards on the market these days which are much better than lumber for use as lining. They come in large sheets, making few joints and cracks to serve as hiding places for vermin or admit drafts, and are easily handled. They can be put up quicker than matched boards, also. Some builders have used them for outside work, and if painted soon after erection, before the rain causes them to swell or buckle, are said to be very satisfactory.

• • •

Some poultrymen are using a glass composition in place of muslin or burlap for curtains, providing ventilation in other ways on extremely cold or stormy days. This affords more light on dull days, and helps to keep the house warmer. This material comes in three-foot width, and in using the full width on a frame, we think it best to put in a center division, as the material not being stiff, will slap and tear in a high wind.

Pullets Go Blind

A number of my pullets have become blind and in a short time die. On examination I find spots on the liver. Please advise me as to what this is and how to cure it?—Mrs. W. V., Orange County, N. Y.

In case the chickens that are going blind have an offensive odor about the head, they probably have roup, especially if there is any cheesy material present in the eye socket or nostrils. The best thing to do is to give the flock a dose of Epsom salts in the drinking water at the rate of one pound per 100 birds at once, and then clean out, disinfect and whitewash the houses. It is also advisable to add two pounds of tobacco dust and a quart of codliver oil to each 100 of mash. The tobacco will eliminate any intestinal roundworms that may be present, and the oil will maintain the bird in a vigorous condition. Probably the best method of combating poultry diseases is to keep the birds as vigorous and healthy as possible. This means as a beginning clean, dry quarters free from drafts, liberal feeding of suitable rations, and freedom from all parasites.—R. L. S.-H.

Show Birds Need a Bath

Here is How to Prepare Them for Exhibition

PROBABLY not many readers of Pennsylvania Farmer are owners and exhibitors of fancy poultry or show birds, but with the growing interest in poultry shows from the farmers' standpoint, that is, the production classes which are forming an increasingly important part of our poultry shows, many practical poultrymen now enter birds, and some knowledge of how to prepare birds for a show is a good thing to have. I recently heard a very well-known breeder and exhibitor give a talk on washing birds for the show, and I am going to describe the process as he outlined it for the benefit of those who are going to enter birds in poultry shows this season.

Must Coop-train Birds Selected

The first step in the process is to look over the birds in the yard a few weeks before the show to make sure that the individuals to be shown are in proper feather, and to make any substitutions or replacements that this examination may show to be necessary. It is usually desirable to coop-train selected birds; that is, accustom them to confinement in the exhibition cage such as is used in shows, and to being handled without making a fuss. Experts are able to correct many faults of carriage during this time by the exercise of skill and patience. I remember seeing a Leghorn cockerel at the Sesqui show which the owner had trained to jump back into the cage when placed on the floor in front of it, which shows what can be done.

The actual washing should take place about four days before the show. This makes a little extra trouble in keeping the bird clean during the intervening period, but the plumage fluffs out and the bird is in better shape when the exhibition starts than if washed one day and shipped the next. On the morning that the birds are to be washed, they should receive a light breakfast on the principle that one should not go in swimming after a hearty dinner. Three tubs are provided on a bench, partly filled with warm soft water. The first should be 110 degrees, the others slightly cooler. The room, of course, should be very warm and a stove is commonly provided in front of which to dry the birds.

A good suds is made in the first tub with soap flakes, and the bird is thoroly lathered in the same fashion that one employs in washing the hair. When the lather is well rubbed into the feathers the bird is rinsed in the second tub. The feet, legs and face are scrubbed clean, and if the bird is very dirty it may be lathered and rinsed again, and then rinsed in the third tub. The bird is then placed in a coop with a slatted bottom to drain and dry. This can be helped somewhat by patting with a towel.

Dried and Fanned with Care

As the birds dry they are moved back from the heat. When nearly dry they can be fanned or dried with a hair dryer borrowed from the local beauty parlor; or the blowing attachment of the vacum cleaner may be used. The whole process of washing is pretty tough on the birds, and every care must be taken to keep them warm and out of drafts. A little direct sunlight is very good for them, and helps not only to put pep back into them, but also helps to fluff out the feathers and restore or bring out the natural sheen.

During the time elapsing between the washing and shipping to the show, the birds should be kept in a pen or cage littered with clean cut straw or planer shavings, and every effort made to avoid soiling the plumage in any way.—R. L. S.-H.

Rambles of a Pennsylvania Fruit Grower

XXIII California Grapes.

THE most distinctive and certainly the most cosmopolitan fruit of California is the grape. It is to California what the apple is to Pennsylvania. It is grown everywhere, at high altitudes and low, and it is trained in a great variety of ways, from the remarkable arbor vine near Los Angeles which covers an acre, to closely planted and closely pruned stump vines. The California grape of commerce is invariably a variety of vitus vinifera, the wine grape of Europe. This is seldom grown in the East, being too tender.

One of the most important centers of grape production in California is the Lodi district, in the Great Valley, forty miles south of Sacramento. The Lincoln Highway signs on the way to Lodi look familiar and homelike, but the country round about, tho attractive enough in its way, is far from homelike—if the home happens to be in Pennsylvania. It is flat, dry, sere, intensely sunny, with the Sierras looming faintly on the eastern horizon. The valley has a rainfall of ten to twenty inches, a cloudless summer, and irrigation is necessary on many crops. Water is developed from deep wells. Grapes are irrigated only two or three times a year, sometimes but once. The soil of the Lodi district is a mellow sandy loam, free from stones and so easy to work that no farmer from the East, say from Pennsylvania, can look upon it without breaking the Tenth Commandment.

A California vineyard. The trunks are self-supporting; no trellis is used.

Grapes still are grown to drink as well as to eat. When the prohibition amendment went into effect some California vineyardists, panic stricken, sold out at sacrifice prices. They repented at leisure. More than half of the 8363 cars of grapes shipped from the Lodi district in 1926 were "juice" grapes, formerly called wine grapes. The ultimate destination and use of these grapes is a matter for conjecture, and thereby undoubtedly hangs many a vivid tale, but this is a story of grape production, not of grape utilization. The dominant variety of juice grape is the Zinfandel. Yields of ten or twelve tons an acre are not uncommon but the average is nearer six. In 1926 the price was $50 to $60 a ton f. o. b. Lodi; in 1922 it was $130. Before the war Zinfandels sold for $10 to $15 a ton.

Some Soils Make Tokays Blush

The fame of Lodi as a grape district, however, rests fully as much on its production of table grapes as of juice grapes, especially the Flame Tokay. The Tokay is one of the most delicious of commercial dessert varieties. As grown in most parts of California it is green, with scarcely a vestige of color. As grown in some sections of the Lodi district, and a very few other favored spots, it is richly suffused with pink.

In 1926 the Lodi district shipped 3562 cars of Tokays, not all Flame, however, and several hundred cars of other dessert varieties such as Cornichon, Emperor and Almeria. Tokays yield eight to fourteen tons an acre, averaging around twelve tons. The price last year was $60 to $70 a ton, the lowest since the war. Some of the best Tokay vineyards have netted $400 an acre even during the last few years and today are held at $2000 to $3000 an acre.

The day I was in Lodi, May 31, grapes were in full bloom. The air was heavy with fragrance, reminding me of orange groves of Florida and southern California. The vineyards are well kept and have been clean tilled until recent years; now the annual melilotus has come into favor as a cover crop. If the winter rainfall is normal there is a good cover of native vegetation. No fertilizer is used. The vines are dusted with sulphur for mildew, and occasionally a five per cent nico-sulphur dust or a calcium cyanide dust is applied for thrips or leaf hopper. There is no spraying. The pest problem is much simpler than in most of the grape districts of the East. There is practically no phylloxera, or root louse, and most of the vines are rooted cuttings.

Trained to Be Self-supporting

The most interesting feature of California grape growing to an eastern observer is the training of the vines. A few varieties are pruned to renewal canes four to six feet long and tied to wire trellises, as in the East, but most of the vines are trained to a low trunk, and are self-supporting. The first two or three years the vines are tied to stakes and are cut back very heavily each season, so that the trunk becomes thick and strong enough to support the canes without stake or wire. Thereafter close spur pruning is practiced, the canes being cut back each year to one or two buds. The bearing canes that spring from these buds grow upright at first and then droop toward the ground, the great bunches of grapes being held well above the ground. As the vine gets older, some method of renewal is necessary as spur pruning carries it higher and higher. Some of the black, gnarled old vines, with trunks six inches or more in diameter, look like miniature fruit trees.

The Lodi grape harvest begins about August 20 and extends into November. Juice grapes are shipped in lugs of several sizes, commonly holding thirty-two pounds. Many table grapes are shipped in crates holding twenty-six pounds. The usual floating fruit harvest labor of the Pacific Coast is all that is available and is far from satisfactory. It costs $4.00 a day and keep. There is very little cooperation; most growers sell direct to dealers or consign. The California Grape Growers' Association has just been organized with a membership of 1000; it will attempt to do for table and juice grapes what the Sunkist organization has done for oranges.

Lodi grape growers still have confidence in their industry, in spite of diminishing returns the past few years, if we are to judge by the values they place on their vineyards. In 1922 and 1923 good vineyards sold for $2000 to $3000 an acre. Today these vineyards can be bought for $1200 an acre. This shrinkage is not as great as in some other fruits, the apple, for example. Lodi growers seem to be in a fairly optimistic frame of mind, and are not looking for purchasers. Is this, by any chance, a commentary on the outlook for complete prohibition enforcement?—S. W. Fletcher.

PAN-A-CE-A

your breeders at mating time

YOU WANT fertile eggs for hatching—eggs that will hatch into strong, livable chicks.

See to it that your flock, your hens and roosters, are in the pink of condition at the time the hatching eggs are laid.

Dr. Hess Poultry Pan-a-ce-a is a tonic—not a stimulant.

A tonic that imparts to the parent stock that spark of health and vigor that means fertile eggs for hatching.

Eggs that will hatch strong, livable chicks—not dead in the shell—not puny and weak.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

NEY

Make Your Milk Preferred

HAPPY, healthy cows require good feed, good housing and sanitary dairy barn equipment—Ney Equipment.

Preferred milk commands better prices and prompt remittances. That means more profits for you. And the added profits soon pay for the Ney Stalls and Stanchions. They reduce dairy farm chores to a minimum, save time and labor.

Sold by reputable dealers everywhere. Write us today for your copy of the Ney Catalog No.—— and name of dealer ready to serve you.

Complete Dairy Barn Equipment including stalls, stanchions, water bowls, feed, litter carriers, Ney "King" ventilators, etc.

THE NEY MANUFACTURING COMPANY
Established 1879 • Canton, Ohio • Established 1879
Minneapolis, Minn. • Council Bluffs, Iowa
Complete line of Haying tools including hay carriers, hay forks, hay harness, etc.

Butter Color Depends on YOU

Don't blame the feed or the condition of your stock if market men grade you low and customers complain on account of the color of your butter. You can keep your butter always that golden June color which brings top prices by using Dandelion Butter Color. It's purely vegetable and meets all State and National Pure Food Laws—used by all large creameries for years. It's harmless, tasteless and doesn't color buttermilk. Large bottles, 35c at all drug and grocery stores.

Waterford C. T. A. Finishes First Year

THE Waterford C. T. A. finished its first year July 1, 1927, with 18 whole-year members. In addition there was one member in the association only part of the year. There were 431 cows in the association during all or part of the year.

The result for the whole-year members is as follows:

Average per cow:—	
Number of cows in the association	311.42
Pounds of milk	7281
Pounds of butterfat	271.6
Percentage of butterfat	3.7
Value of product	$186.99
Cost of pasture	9.36
Cost of roughage	22.83
Cost of grain	47.19
Total cost of feed	79.38
Value of product above feed cost	107.61
Returns for $1.00 expended for feed	2.36
Feed cost per 100 lbs. milk	1.09
Feed cost per lb. butterfat	.29

The following is a grouping of all cows producing over 300 pounds of butterfat. These are grouped as follows: Group 1, above 400 lbs. butterfat, 7; group 2, between 300 and 400 lbs. butterfat, 76. Total, 83 cows.

Seven cows produced over 400 pounds of butterfat during the year.

R. H. Engle, county agent; O. C. Tritt, assistant county agent; James Glover, cow tester in charge; figures compiled by I. O. Sidelman.

Four herds with an average of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Pounds milk	Pounds butterfat
Harley Osborne, Waterford	11.08	R. & G. H.	10,883	372.3
H. H. Marsh, Waterford	11.33	R. H.	9881	327.2
H. G. Mallory, Waterford	9.75	G. H.	9061	321.2
Mark Potter, Mill Village	18.42	R. & G. J.	5917	306.4

five or more cows exceeded an average production of 300 pounds of butterfat.

Exhibit Fine Cattle at West Virginia State Fair

THE West Virginia State Fair at Wheeling, September 3 to 10, was marked by one of the finest dairy cattle exhibits that has ever been assembled on the fair grounds and one of the best in eastern United States, several hundred head of dairy cattle being included in the exhibit.

The Jerseys ranked highest in numbers, several of the classes containing from twenty to thirty entries. The outstanding show herd among the Jerseys was that of R. L. Willmoth, Rineyville, Kentucky, this herd winning senior, junior and grand championship on Jersey bulls; senior, junior and grand championship on Jersey cows, first prize on produce of dam and first, second and third prizes on get-of-sire. The grand champion bull, Glen's Raleigh Lad, was the sire of the junior champion bull and his appearance in the show ring with eight of his sons and daughters made a very impressive sight. Seaside Lassie the Third, grand champion cow, was a wonderfully handsome individual. Her type was almost ideal in conformation with a slight exception as to the shape of her udder.

The Holstein show was also excellent in quality. Echo Farms, of Long Run, Kentucky, won the grand championship with Lyon Mutual Burke, an excellent bull with deep middle, straight top line and an unusually level rump. The Centerville and Fair Valley Stock Farms of Fredericktown, Pa., won the grand championships in the female classes with a nice straight Holstein cow outstanding in dairy temperament and top line. Her name was Lady Wickums Energine.

Guernseys Made Fine Showing

Guernseys were well represented. Charles J. Wheeler, Wapakoneta, Ohio, won the grand championship in the Guernsey male classes with Lohiers Sequel of Myrna Marie. This bull was a handsome individual of Border Raider breeding and was clearly entitled to the purple ribbon. The grand championship Guernsey cow was Amadi Charity, owned by Centerville and Fair Valley Stock Farms, Fredericktown, Pa. The wonderful Guernsey udder on this cow was her outstanding feature.

Ayrshire honors, both in the male and female classes, went to T. T. Hileman, Altoona, Pa. His Ayrshire bull, Favorite Crusader, is an exceptional individual and would attract attention in any large show. His immense size, straight top line and attractive appearance won for him the purple ribbon while an attractive Ayrshire cow, owned by the same breeder, won the grand championship ribbon in the female classes.

There was an unusually large number of Brown Swiss cattle entered. D. N. Boyce, of Churchville, N. Y., won most of the honors, including the grand championships with a handsome two-year-old bull, Carl's Forest Boy of Lakeview, and a fine three-year-old cow, Reubens Venture of Orleans. The Boyce herd contains a number of very attractive animals and should be a winner in keen competition thruout the fair season.

The infantile paralysis epidemic kept the children at home but the attendance was still quite liberal and the show, as a whole, was perhaps the best one ever put on by the state fair association.—A. A. B.

Herd Honor Roll Grows

THE National Herd Honor Roll, created by the National Dairy Association, to stimulate interest in increased milk and butterfat production and the keeping of better herds is greater by nearly a thousand herds than ever before.

Herds of five or more cows which have produced at least 300 pounds of butterfat per cow per year "make" the honor roll which now includes more than 6000 herds.

Wisconsin again leads the nation this year with approximately 1400 herds, an increase of more than 175 herds. Michigan has 1078 herds, Pennsylvania jumped from 335 to 426 herds.

Virginia predominates among the southern states with 105 herds, an increase of nearly 100 per cent over last year.

Cow testing associations fostered by the National Dairy Association have been responsible for the growth of the herd honor roll. The "C. T. A.'s" principal function is to keep an accurate check on the milk and butterfat production of herds owned by the dairymen who make up the test associations. The number of these organizations is expected to increase rapidly in the South, with the coming of the milk-consuming industries and the increased demand for dairy products, according to S. H. Anderson, executive secretary of the National Dairy Exposition which will be held at Memphis, Tenn., October 15-22nd.

New Power Sprayer Chases the Flies

DAIRYMEN whose right arms are exercised to the point of exhaustion in pumping fly spray onto the cows at milking time will welcome a new electric power sprayer that has been developed for this purpose. The new sprayer creates a fine mist which can be thrown fifteen feet. The highly atomized vapor produced by this power sprayer makes a little of the fly dope go a long way, resulting in a saving in both material and labor.

The outfit is compact and portable and weighs about eight pounds. It will operate on either direct or alternating current and thru its use a large number of cows or a large dairy barn can be sprayed very quickly with no waste of the fly killing material.

If the cows and milking stable are sprayed as soon as the cows come in and before the udder is washed, there is no danger of a non-poisonous insect spray getting into the milk or imparting to it any objectionable odor or taste. This type of material is harmless to man but fatal to insects.

The usual method is to spray the cows first, with a light application, starting just back of the head and working backward, omitting the udder. Then the entire stable may be sprayed. A sufficient volume of the material in the air kills the flies in from three to five minutes.

Berkshire Breeders Advertise

IF BILLBOARD advertising pays commercial organizations why not try it ourselves, philosophized Jefferson County Berkshire breeders. The above-pictured board, well constructed and painted in attractive colors, is the result. It was erected by the Roseville Berkshire Breeders' Association. Buyers interested in Berkshire swine are directed to inquire of the county agent at Brookville, J. P. Winslow. The billboard is V-shaped, with the same advertisement on each side. It cannot be missed by travelers in either direction on the Lakes-to-Sea Highway between Brookville and Clarion.—W.

Holland—The Home of the Holstein

(Continued from page 3)

We were sorry to miss the big dairy shows which they hold in the fall. In the spring exhibits are limited to bulls only and usually there are about one hundred and sixty entries. In the fall exhibitors show about six hundred head of both bulls and cows.

One of the inspectors for the Record Association served as our guide and interpreter on a trip thru the country. The farm buildings have a unique architecture, with large flat roofs, and barn and house attached. The difference in type of roof sometimes aids one in distinguishing the barn from the house. Wind mills at one time were quite common in this part of Holland but are gradually becoming extinct. They are being supplanted by electric power for pumping water from the canals to the sea, altho many little wind mills can be seen dotting the country.

One of the interesting homes we visited was that of Y. S. VaWonde, a breeder of Holsteins. Here we saw cows that were producing 4420 kilograms of milk, testing 3.81; and Mr. VaWonde was quite proud of a two-year-old that last year produced 5194 kilograms* of milk testing 3.44. On this particular farm I was interested to learn that altho only 28 hectars (70 acres) in size a tax of 1200 guilders ($480) was paid last year.

Cows Are Milked in the Field

The milking is done usually by the men right out in the field or in a small paddock, in which the cattle are driven during the milking period.

Generally the milk is disposed of by hauling it to the cooperative dairies, where it is made into Holland cheese. The marketing is very different from that in America, because the transportation facilities are almost entirely by water, and one sees large boat loads of cottonseed meal and oil meal going into the country and cheese loaded for export going out.

Yields of milk on the average may not seem so high to an American dairyman. The Hollander emphasizes more than milk production. The program consists of:

1. Constitution.
2. Production and fat.
3. A calf each year.
4. Conformation, breed, type, markings, etc.
5. Freedom from disease.

To our surprise, black on the Holsteins of Holland is by far the predominating color.

As one travels thru the country one is impressed by the uniformity in the high grade of cattle, the well-kept farm homes and general optimism of the farmer.

*A kilogram is slightly more than two and one-fifth pounds.

Penna. Poultrymen Visit Farms

UNDER the leadership of John Vandervort, poultry extension specialist of the Pennsylvania State College, poultrymen of northeastern Pennsylvania spent two interesting days, September 6 and 7, visiting outstanding farms of Wayne County, Pennsylvania, and Orange County, New York.

Starting from Honesdale the touring chicken men stopped first at the Sands Poultry Farm at Hawley. Here they saw 6500 birds. Hens are kept in small units of about 100 birds. Early chicks are raised in close confinement for 10 weeks and the pullets are placed on free range.

Homestead Poultry Farm, near Honesdale, was next visited. Five thousand birds are kept here and 1200 are trapnested. The long, continuous type of laying houses is used and yards are rotated for maximum sanitation. Colony houses are used for the young stock. Range shelters are used for the laying flocks.

Mr. Vandervort, who has had considerable experience with poultry, has developed a unique system of range shelters. These are made of two sections of roofing, each section being 6 feet wide and 8 feet long. The sections are hinged together at the ridge and are supported by a single post. The shelters are moved frequently to provide fresh ground for the birds.

Mr. Vandervort has also developed a unique system of feeding. Hoppers are placed in the houses and the mash is kept before the birds at all times. Grain is fed in deep litter on the floor. Hoppers are also placed in the yards and the birds are encouraged to eat mash in the yards. Mr. Vandervort has found that this system of feeding keeps the birds out of the houses during the day and thus keeps the houses clean

Express Charm by Flowers

Bulbs Planted Now Will Bring Delight Next Spring

WHAT a beautiful yard! What a wonderful place for children to play! What ideal surroundings where to teach of the wonders of creation, the daily miracles of life, the love and peace that may be ours! I see trees, vines, shrubbery, a splendid stretch of grass, a well-kept fence, an inviting gate, a sunny walk, and flowers, flowers, flowers! And if we saw the colors, it would be even more enchanting. Then if we could see the bright array of butterflies hovering near, could hear the quick flutter of humming wings, and the songs of many birds that always abound in just this kind of spot, another delight would be added to the charm of such a garden.

Have you had lovely flowers this summer? Have you had the thrills that come with working at dawn and again until dusk among your floral beds? If you have you know exactly what I am talking about. If you have neglected flowers, you have missed a big joy that goes with summer, and do not let another chance slip.

Carry Them with You if You Move

So often the tenant farmer's wife laments that she cannot spend time when she knows not how long she will enjoy what she plants. Even she is pretty sure where she will be in the early days of spring, and no flowers give greater delight than the bulbs planted in October. You may tuck under your soil a few iris roots from your next-door neighbor. You may secure several gorgeous tulips and fragrant hyacinths for a few coins from any florist. All will reward you in the early spring with blooms which gladden the children and old folks, too. If you should happen to move, you may safely take the tubers with you and insure blossoms in the next home.

Now is the time to plan and plant the bulbs. Careful directions are given with different varieties wherever you buy. If you are afraid the children will not be careful in their play, just turn the flowers over to them, let them do the planting and there will be happy interest. A whole dozen crocus and snowdrop bulbs can be bought with less money than the average child spends weekly for candy. If the venture is new to you, talk it over with your county agent, and he will help you. You can have just as lovely a yard as this Pennsylvania one we have pictured —G. S. S.

House Plants Do Not Thrive in Cans

DEAR EDITOR:—Can you tell me what to do with my house flowers? I have trouble with maggots in the cans, and they kill the flowers.—Mrs. J. S., Pa.

At this time of year when we are planning for house plants to bring winter cheer, it is a fine idea to remember that many kinds of pests live in soil. The various stages of animal life that exist in the ground we are using for our plants are easily destroyed if we put the ground in a large pan and set it in the hot oven for an afternoon. Then moisten the soil again and enrich it if necessary.

Perhaps the trouble above comes from the use of cans. Many house plants do not thrive in cans. Special pots such as florists use are better as they are porous and allow circulation of both air and moisture.

Note: Will all readers please give full name and address when making inquiries? Often the question does not interest enough readers to justify using space on the page for an answer. We can answer you direct thru the mails, and that service is always quicker, too. Thank you.—Gertrude S. Stewart.

An Egg a Day Helps Balance Diet

AN EGG a day is one of the rules of a well balanced diet advised by the New York State College of Home Economics at Ithaca, N. Y. Because eggs are expensive in winter, the college says that many housewives use few of them not realizing their value as a food.

With a lack of fresh green vegetables in winter, eggs become more important as a source of minerals, especially iron, needed by the body. Eggs are an excellent source of iron and a good source of phosphorus and calcium which are necessary for well developed bones and teeth. Eggs also contain vitamins which are essential to good health, particularly those that affect bone growth and general resistance to disease.

To make eggs most palatable, they should be cooked at a low temperature. "Boiled" eggs should not be boiled but should be cooked in water just under the boiling point. Scrambled eggs are more tender when cooked in the top of a double boiler than when cooked in a frying pan, and omelets cook well in a slow oven. Dishes such as custards, souffles and spongecakes, which contain many eggs, should also be cooked at a low temperature. The reason for this is that protein cooked at a high temperature gets tough and leathery. This holds true for eggs as well as for meat, for both of them have a large proportion of protein.

The egg advised for everyone each day need not be "boiled," poached or cooked by itself, but it may be included in any prepared dish either for the noon or the evening meal.

Will There Be Another?

ONE of the Home Department friends wrote to me this week asking if we would have a reference number again in 1928. She says, "The reference number is certainly great. I use mine nearly every day and it is about worn out. I always enjoy the Home Pages, Neshaminy Gardens and the Cheerful Plowman hits the nail on the head every time."

We are considering another reference number, and are very glad to have our readers express hopes for the future. What are your wishes? —G. S. S.

Gifts from Country Gardens Trim the Christmas Tree

WHEN you are drying your family supply of sugar corn, just dry a few extra pints and you will be amazed and delighted at the attractive Christmas packages they provide for city cousins and friends.

A very festive container which adds much to the Yuletide gayety, and holds the corn, is easily made. In your remnant bag are gay pieces of cloth which will do nicely, or you may use white muslin and fashion a bag about six inches wide by ten inches deep. Overcast the seams with narrow red ribbon and tie at the top with a red ribbon bow. Paste a large Christmas sticker in the very center of one side of the sack, and you have one gift ready—and a gift to bring joy.

Note: Refer to the issue of August 20 for corn drying rules and recipes.

Tiny Jars Appeal to Small Folks

And when you are in the jelly business, be sure to fill some tiny jars especially for the little folks—either in your home or among your small friends. They do take delight in some glasses on the shelf all their very own which they can give away. They like to gladden the heart of a sick friend or donate to the mission box. A small glass is just right for the sick tray or to tuck in the school lunch kit.—Betsey Ford, Maryland.

Let's Teach Them to Consider the Rights of Others

ONE of the first things that every child should learn in the way of etiquette is to be unselfish and considerate of the rights of others. This is one thing which can be taught with comparative ease when the child is at the plastic age, but which is almost impossible for him to learn later.

An only child is very apt to be selfish and inconsiderate of the rights of others unless he is taught at an early age that he can't always have his own way. Sometimes such a child will be so lonely for other children's companionship that he will agree to anything that another child desires, but this is the exception rather than the rule.

When I was but a tot, I knew a girl by the name of Consuella. She was in the habit of playing with children I played with, and I had a chance to learn much about selfish children from her. She was the chief interest of a rich family. When she wanted a thing she asked for it, and, unless her wish was extremely extravagant, she got what she desired. This made her entirely unwilling to give in to the other children. She would want to play with our playthings, and if she took a fancy to them, she would try to keep them. The worst part of it was that her parents would defend her atrocious behavior. She very soon became so unpopular that none of the other children would permit her to play with them. Of course, she was quite hurt at this. I don't consider, now, that she was to any great extent to blame for her actions. If her parents had taught her to give in to others at least half of the time, she would have been liked by everyone, because she was by nature a sweet child, I believe.

The children of a large family should, and usually do, learn to give in to each other. Besides this, they should be taught not to complain if one member of the family receives a gift or favor and they do not. It may be their turn next time. In any case, they should be taught—not told—to rejoice in each other's good fortune. Of course, parents should not "play favorites"; this causes ill-feeling towards the one favored.

Learn from Parents' Example

It is especially essential that the father should always treat his wife with great respect and deference before his young children so that they will always regard their mother in the same respectful way. They will treat Mother unselfishly if Father does. So, in order to set the proper example, if for no other reason, Father should always try to treat Mother with the greatest kindness.

Children learn very much by watching others, principally their parents, and if they see that Mother is always treated with great consideration by Father they will just naturally think that there is no other way to do. Father will come in for his share of devotion when the children are older, for they will be sure to think that their father is better than other fathers if he treats his wife better than other men do.

There's a joker in the "cheap" paint barrel

WHEN anyone offers you a very tempting proposition on "cheap" paint, keep your eyes open. There's a "catch" in it somewhere.

No reputable concern can sell good house paint at a "cheap" price per gallon. And no *without* house is safe to deal with. No barrel of SWP House Paint is ever "planted" on the station platform. Don't be fooled by this "apple sauce."

No "quality" paint is ever peddled from door to door or offered in highly colored circulars by some very *friendly* person whom you do not know who tells some impossible tale about saving money for you.

These are sharp tricks that have fooled many unwary buyers. Don't let them fool you. Remember, "cheap" paint isn't cheap at all.

Why SWP *costs less*

"You can't make a silk purse out of a sow's ear." And you can't buy a house paint that will cover and hide and wear for years — for a "cheap" price.

Fine old SWP House Paint costs more per gallon. That's because it is made of superfine materials — in the world's greatest paint laboratories. Because it is mixed and ground to creamy-smooth texture by power-driven machines which no hand-mixing can possibly equal.

But "gallon price" does not indicate the cost of painting. "Low price" is a delusion. Actually, a "cheap" paint costs you from two to five times as much as SWP House Paint. And here is why:

A gallon of SWP House Paint covers 360 square feet, two coats. The average "cheap" paint must be greatly *stretched* to cover, poorly, a mere 250 square feet, two coats.

Therefore, nearly twice as many gallons of "cheap" paint are needed as of fine old SWP to cover the same area. Figure out the cost of the paint on that basis and your eyes will be opened. That is one angle of the "joker" in the "cheap" paint barrel.

Wonderful colors that last

But that's only the beginning. SWP House Paint will beautify and protect your building from two to five times as long as "cheap" paint.

SWP colors are unusually rich and true to character. They do not fade. Weather does not affect them. The film of SWP is tough and elastic. There is no chipping, peeling, chalking.

Most "cheap" paint begins to peel and chip and chalk almost before it is dry. It deteriorates very rapidly. Colors become "wishy-washy." In a very short time you have to burn or scrape the old stuff off and do it all over at heavy expense.

It's easy to see why cheap, trashy paint costs twice as much as SWP House Paint by the year. That's another angle of the "joker."

Sherwin-Williams
Commonwealth Barn Paint
(Red and Gray)
For barns, corn cribs, roofs, fences and similar outdoor surfaces.
Costs less on the wall than "cheap" barn paint

See "Paint Headquarters" —save money

SWP House Paint is sold by reliable dealers in every part of the world. Each one is "Paint Headquarters" in his vicinity.

Before you let any "bargain" offer lure you into a waste of money see the SWP dealer near you. He handles dependable merchandise. You probably know him personally. Get his advice, then decide. Express Charm by Flowers

Bulbs Planted Now Will Bring Delight Next Spring

WHAT a beautiful yard! What a wonderful place for children to play! What ideal surroundings where to teach of the wonders of creation, the daily miracles of life, the love and peace that may be ours! I see trees, vines, shrubbery, a splendid stretch of grass, a well-kept fence, an inviting gate, a sunny walk, and flowers, flowers, flowers! And if we saw the colors, it would be even more enchanting. Then if we could see the bright array of butterflies hovering near, could hear the quick flutter of humming wings, and the songs of many birds that always abound in just this kind of spot, another delight would be added to the charm of such a garden.

Have you had lovely flowers this summer? Have you had the thrills

that come with working at dawn and again until dusk among your floral beds? If you have you know exactly what I am talking about. If you have neglected flowers, you have missed a big joy that goes with summer, and do not let another chance slip.

Carry Them with You if You Move

So often the tenant farmer's wife laments that she cannot spend time when she knows not how long she will enjoy what she plants. Even she is pretty sure where she will be in the early days of spring, and no flowers give greater delight than the bulbs planted in October. You may tuck under your soil a few iris roots from your next-door neighbor. You may secure several gorgeous tulips and fragrant hyacinths for a few coins from any florist. All will reward you in the early spring with blooms which gladden the children and old folks, too. If you should happen to move, you may safely take the tubers with you and insure blossoms in the next home.

Now is the time to plan and plant the bulbs. Careful directions are given with different varieties wherever you buy. If you are afraid the children will not be careful in their play, just turn the flowers over to them, let them do the planting and there will be happy interest. A whole dozen crocus and snowdrop bulbs can be bought with less money than the average child spends weekly for candy. If the venture is new to you, talk it over with your county agent, and he will help you. You can have just as lovely a yard as this Pennsylvania one we have pictured —G. S. S.

House Plants Do Not Thrive in Cans

DEAR EDITOR:—Can you tell me what to do with my house flowers? I have trouble with maggots in the cans, and they kill the flowers.—Mrs. J. S., Pa.

At this time of year when we are planning for house plants to bring winter cheer, it is a fine idea to remember that many kinds of pests live in soil. The various stages of animal life that exist in the ground we are using for our plants are easily destroyed if we put the ground in a large pan and set it in the hot oven for an afternoon. Then moisten the soil again and enrich it if necessary.

Perhaps the trouble above comes from the use of cans. Many house plants do not thrive in cans. Special pots such as florists use are better as they are porous and allow circulation of both air and moisture.

Note: Will all readers please give full name and address when making inquiries? Often the question does not interest enough readers to justify using space on the page for an answer. We can answer you direct thru the mails, and that service is always quicker, too. Thank you.—Gertrude S. Stewart.

An Egg a Day Helps Balance Diet

AN EGG a day is one of the rules of a well balanced diet advised by the New York State College of Home Economics at Ithaca, N. Y. Because eggs are expensive in winter, the college says that many housewives use few of them not realizing their value as a food.

With a lack of fresh green vegetables in winter, eggs become more important as a source of minerals, especially iron, needed by the body. Eggs are an excellent source of iron and a good source of phosphorus and calcfum which are necessary for well developed bones and teeth. Eggs also contain vitamins which are essential to good health, particularly those that affect bone growth and general resistance to disease.

To make eggs most palatable, they should be cooked at a low temperature. "Boiled" eggs should not be boiled but should be cooked in water just under the boiling point. Scrambled eggs are more tender when cooked in the top of a double boiler than when cooked in a frying pan, and omelets cook well in a slow oven. Dishes such as custards, souffles and spongecakes, which contain many eggs, should also be cooked at a low temperature. The reason for this is that protein cooked at a high temperature gets tough and leathery. This holds true for eggs as well as for meat, for both of them have a large proportion of protein.

The egg advised for everyone each day need not be "boiled," poached or cooked by itself, but it may be included in any prepared dish either for the noon or the evening meal.

Will There Be Another?

ONE of the Home Department friends wrote to me this week asking if we would have a reference number again in 1928. She says, "The reference number is certainly great. I use mine nearly every day and it is about worn out. I always enjoy the Home Pages, Neshaminy Gardens and the Cheerful Plowman hits the nail on the head every time."

We are considering another reference number, and are very glad to have our readers express hopes for the future. What are your wishes? —G. S. S.

INTENTIONAL SECOND EXPOSURE

Good old P. A.!

THEY say that "no other tobacco is like it." I want to go a step further and say "no other *experience* is like it!" And I'm ready to prove *that*. Just get yourself a tidy red tin of long-burning Prince Albert. Throw back the lid and release that tantalizing aroma.

No more appetizing fragrance ever floated out of a package, you'll agree. Then tamp a load into your old jimmy-pipe and light up. Here is the supreme test—that *taste*—that Let-me-at-it, Gee-how-I-like-it taste! Never have you experienced anything like this, Men.

Cool as a drink from an artesian well. Sweet as a pear, ready to drop from the tree. Mild and mellow as October sunshine, yet with that full, rich tobacco-body that bangs your smoke-spot in dead center on every fire-up. A thrill you can repeat from morning to midnight.

Not the least of Prince Albert's many virtues is that it doesn't bite your tongue or parch your throat, no matter how swift your pipe-pace. I could tell you a lot more, but I want P. A. to tell you *in a pipe*. For that is testimony no seeker-after-truth can question. Get some Prince Albert now and find out!

P. A. is sold everywhere in tidy red tins, pound and half-pound tin humidors, and pound crystal-glass humidors with sponge-moistener top. And always with every bite of bite and parch removed by the Prince Albert process.

PRINCE ALBERT

—the national joy smoke!

Balanced and shaped for foot comfort

FOR over a generation Hood Red Boots have set the standard for boot quality. Freely imitated in color—but rarely in wear—their tough grey tire-tread soles and non-cracking red uppers are the outdoor man's identification of all-around durability.

Hood Red Boots, like all Hood Work Footwear, are scientifically balanced to feel lighter on the foot—have trimmer lines—they are made over foot-shaped lasts to prevent heel slipping and give greater comfort.

Look for the Yellow Arrow Label at the knee—mark of all Hood extra quality on boots.

This amazing Radiola 16—

the widest musical range ever achieved with one-dial control

IN the new, complete line of RADIOLAS that has just come from the famous research laboratories of RCA, Westinghouse and General Electric, the marvelously compact RADIOLA 16 is an outstanding achievement.

Particularly adapted—like the popular RADIOLA 20—for use on the farm, its simplicity of operation, perfection of tone and high selectivity and sensitivity make it a worthy companion of the more costly sets that carry the well-known RCA mark. The only rival of this new model in the low-price field is the RADIOLA 20.

When used with one of the RCA Loudspeakers, this storage battery set brings into your home the programs from the great broadcasting stations—the finest music, university extension courses, crop and weather bulletins, and the latest news of the world.

Like RADIOLA 20 this expertly designed 6-tube receiver can be adapted for alternating current operation from the house lighting circuit by the addition of socket power devices.

• • • •

You have not really heard radio until you have listened to a RADIOLA and RCA Loudspeaker. Ask any RCA Authorized Dealer for a demonstration of these marvelous instruments.

RADIOLA 16—Storage battery receiver of great compactness. For selectivity, sensitivity and tone quality, it sets a new standard for receivers in its price class. The cabinet is finished in mahogany.
Less accessories $69.50 . with Radiotrons $82.75

RADIOLA 20—Dry-battery-operated receiver, with amazing sensitivity and many times as selective as the average antenna set. Ideal for distant reception. Can readily be adapted to socket operation. Ideal to use with the new RCA Loudspeaker 100-A.
Less accessories $78 . with Radiotrons $89.50

Coffee Bread

HERE is a recipe, rich in milk, butter and fruit. I like to make it particularly because part of the dough may be rolled, cut with doughnut cutter and set to rise. When frying in deep fat, the doughnut is put in the fat with raised side on top. The heat causes the top side to rise by the time the doughnut is ready to turn. The remainder of the dough is rolled flat and topped with a mixture of brown sugar, butter and nuts melted in the frying pan a few minutes. Then I make part of the dough into crusty sweet rolls.

1 yeast cake
¼ cup lukewarm water
1 cup hot milk
¼ cup shortening
Flour (about 6 cups)
¼ cup sugar

Scald the milk, add shortening, sugar and salt, let cool to lukewarm and add dissolved yeast, beaten eggs, flour gradually. Let rise till doubled, cut down, let rise again, shape into flat loaves, not too thick, let double, bake at 350 degrees, a moderate oven, thirty-five minutes. This must be a softer dough than for ordinary bread, and it is kneaded simply long enough to blend the ingredients.

Topping for coffee bread consists of ½ cup raisins, ½ cup brown sugar, ½ cup English walnuts and ½ teaspoon cinnamon, spread over when shaping the loaves, being careful that it does not burn during baking. This mixture is suitable for buns or any sweet bread.—Doris W. McCray, Iowa.

Quick Breads

BAKING POWDER BISCUITS

5 cups flour
2 heaping teaspoons baking powder
½ cup shortening
1 tablespoon salt
2 cups lukewarm water or milk

Add baking powder and salt to flour before sifting. Mix the shortening in thoroly, then add water or milk gradually, mixing well. Turn out on floured board and roll. Cut with biscuit cutter and bake in quick oven, pricking each round with a fork just before slipping biscuits into oven. Cover closely with cloth until serving time. This recipe yields 30 good-sized biscuits. Frequently I cut the rolled dough with a sharp knife, slashing each direction — making square biscuits.

PLAIN MUFFINS

2 eggs
2 cups milk
2 rounding tablespoons sugar
1 tablespoon salt
2 heaping teaspoons baking powder
2 tablespoons melted lard or butter
3 cups flour

Beat eggs thoroly. Add milk, then melted fat. Sift in the dry ingredients, and beat until smooth. Pour into hot well-greased muffin pans and bake in rather hot oven—about 15 or 20 minutes. Recipe yields 12 large muffins.

CORN MEAL MUFFINS

Follow above recipe, substituting 2 cups corn meal and 1 cup flour for 3 cups flour used in plain muffin recipe.—E. M. W., Md.

Do You Know That—

ORANGE juice over stewed raisins is a delicious dessert?

A little allspice and bacon drippings improve the taste of string beans?

A spicy meat loaf is made from a pound of beef, a pound of veal and a half pound of home canned sausage, to which is added an egg, onion and seasoning?

Three tablespoons of cream or evaporated milk have the same adhesive quality as an egg when used in such dishes as cottage cheese pudding, meat balls, etc.?

The Kitchen Cabinet

Coffee Bread

HERE is a recipe, rich in milk, butter and fruit. I like to make it particularly because part of the dough may be rolled, cut with doughnut cutter and set to rise. When frying in deep fat, the doughnut is put in the fat with raised side on top. The heat causes the top side to rise by the time the doughnut is ready to turn. The remainder of the dough is rolled flat and topped with a mixture of brown sugar, butter and nuts melted in the frying pan a few minutes. Then I make part of the dough into crusty sweet rolls.

1 yeast cake
¼ cup lukewarm water
1 cup hot milk
½ cup shortening
Flour (about 6 cups)
½ cup sugar

Scald the milk, add shortening, sugar and salt, let cool to lukewarm and add dissolved yeast, beaten eggs, flour gradually. Let rise till doubled, cut down, let rise again, shape into flat loaves, not too thick, let double, bake at 350 degrees, a moderate oven, thirty-five minutes. This must be a softer dough than for ordinary bread, and it is kneaded simply long enough to blend the ingredients.

Topping for coffee bread consists of ½ cup raisins, ½ cup brown sugar, ¼ cup English walnuts and ½ teaspoon cinnamon, spread over when shaping the loaves, being careful that it does not burn during baking. This mixture is suitable for buns or any sweet bread.—Doris W. McCray, Iowa.

Quick Breads

BAKING POWDER BISCUITS

2 cups flour
2 heaping teaspoons baking powder
½ cup shortening
1 tablespoon salt
2 cups lukewarm water or milk

Add baking powder and salt to flour before sifting. Mix the shortening in thoroly, then add water or milk gradually, mixing well. Turn out on floured board and roll. Cut with biscuit cutter and bake in quick oven, pricking each round with a fork just before slipping biscuits into oven. Cover closely with cloth until serving time. This recipe yields 30 good-sized biscuits. Frequently I cut the rolled dough with a sharp knife, slashing each direction — making square biscuits.

PLAIN MUFFINS

2 eggs
2 cups milk
2 rounding tablespoons sugar
1 tablespoon salt
2 heaping teaspoons baking powder
3 tablespoons melted lard or butter
3 cups flour

Beat eggs thoroly. Add milk, then melted fat. Sift in the dry ingredients, and beat until smooth. Pour into hot well-greased muffin pans and bake in rather hot oven—about 15 or 20 minutes. Recipe yields 12 large muffins.

CORN MEAL MUFFINS

Follow above recipe, substituting 2 cups corn meal and 1 cup flour for 3 cups flour used in plain muffin recipe.—E. M. W., Md.

Do You Know That—

ORANGE juice over stewed raisins is a delicious dessert?

A little allspice and bacon drippings improve the taste of string beans?

A spicy meat loaf is made from a pound of beef, a pound of veal and a half pound of home canned sausage, to which is added an egg, onion and seasoning?

Three tablespoons of cream or evaporated milk have the same adhesive quality as an egg when used in such dishes as cottage cheese pudding, meat balls, etc.?

MEN have not been forgotten by the J. C. Penney Company, for at any of the 885 Department Stores in this Nation-wide Institution you will find everything the man wears—outer things and underthings, from head to foot—for work, for dress, or for rest and sleep.

As in all our other departments, here full VALUE for every dollar is our dominant thought. Here, too, you will find the reflection of the important savings effected by our tremendous co-operative purchasing resources—*savings made by us and then passed on to you!* The underwear and hosiery savings named here are typical examples of the values to be found in Clothing, Shoes, Hats, Haberdashery and in every other item of merchandise that either men, women or children wear.

It will pay you to go to your nearest J. C. Penney Store for your next purchases. See what you buy before you buy it—and SAVE MONEY ON EVERY PURCHASE.

VALUES THAT ARE THE TALK OF THE NATION

Styles for All Hours of the Day

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5577.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3¾ yards of one material 40 inches wide with ½ yard of contrasting material. Price 10c.

5855.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 1⅞ yard of lining for the underbody and 3¾ yards of 40-inch material with ⅝ yard of contrasting material. Price 10c.

5869.—Five sizes: 1, 2, 3, 4 and 5 years. A 2-year size requires 1⅝ yard 36 inches wide with ¾ yard of contrasting material 16 inches wide. Price 10c.

5861.—Three sizes: 16, 18 and 20 years. An 18-year size requires 2¾ yards of 32-inch material with ⅝ yard of contrasting material for the jabot and ⅞ yard of 27-inch lining for the underbody. Price 10c.

5875.—Four sizes: 8, 10, 12 and 14 years. A 12-year size requires 2⅝ yards of 32-inch material with ½ yard of contrasting material. Price 10c.

5853.—Four sizes: small, medium, large and extra large. A medium size requires 1⅞ yard of 36-inch material. To trim as illustrated requires 6¾ yards of bias binding. Price 10c.

5409.—Nine sizes: 28, 30, 32, 34, 36, 38, 40, 42, 44 inches bust measure. A 32-inch size as illustrated will require 1 yard of plain material and 4⅞ yards of striped material 32 inches wide. Price 10c.

5863.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 4¼ yards of 36-inch material. Price 10c.

5334.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 yards of 36-inch material. Price 10c.

5356.—Five sizes: 6, 8, 10, 12 and 14 years. A 12-year size requires 3¾ yards of 27-inch material. Price 10c.

4750.—Five sizes: 4, 6, 8, 10 and 12 years. A 10-year size requires 1⅝ yard of 36-inch material. Price 10c.

5873.—Four sizes: small, 34-36; medium, 38-40; large, 42-44; extra large, 46-48 inches bust measure. A medium size requires 2 yards of 40-inch material if made with the jabot. Without the jabot 1⅜ yard is required. Price 10c.

Send 10c in silver or stamps for our up-to-date fall and winter 1927 Book of Fashions.

Friendly Talks

By EDGAR L. VINCENT

I AM writing this on Labor Day, and according to the generally accepted notion, instead of being here talking with the big Pennsylvania Farmer family, I ought to be off somewhere celebrating, risking my life on the road and tiring myself out so that it would take me a week or two to rest up.

The most of the farmers I know, however, are doing just what I am doing, pursuing the even course of their lives, leaving it to the hired men and others to whom holidays mean more than they do to the man of the farm to do the celebrating.

And I am thinking this morning what a splendid thing work is. Now, when I say that I imagine I see a good many lips curl and I hear some sarcastic voices saying, "Yes, work is a great thing! The farmer knows all about that. Every day of his life he wears his fingers down to the quick and uses up last bit of strength he has, and even at that he cannot keep within sight of his work; and he gets nothing for what he does. Oh yes! Work is great!"

Work Is a Blessing to Us

And still I shall maintain that work is one of the greatest blessings we have. The most miserable men I know anything about are those that have nothing to do. They are just rotting down to death; no comfort to themselves, no help to the world.

I can count on the fingers of my hands a little army of men who are going this way. Some of them used to be farmers. They got tired of the steady work of the old home place. The grass over the fence looked so much greener, so over they jumped, and now they have no strength left to jump back again. They are poor, disappointed, unhappy men, wandering about town like lost sheep without a shepherd.

Nobody can tell me anything about it. I have done every kind of work that comes to the farmer. I have been tired as a dog at night. My hands have been blistered in many places and I have kept my nose down to the traditional grindstone just as tightly and just as long as any man of my age. I have also tried other kinds of work, a number of them; and this is my testimony, that I never was happier and never felt that my work was counting for more than when I was living with my heart right down close to the heart of the farm.

For when that was so I felt that my heart was nearest to that of God, too.

Man Is Working Partner with God

For He is the most untiring worker in all this universe. From the beginning He has been working; He is working now; He always will work; and when He gave man a job, all he did was to take man into partnership with Him. If we only realized this as we should, it would take all the irksomeness out of these days we are living on the farm.

And the man who gets this thought of being a working partner with God in the business of making the world more beautiful, and of caring for the needs of humanity, is the man who can whistle and sing about his task and thank the Almighty for giving him such a fine job. This makes him happy and contented, even tho he may not lay up as much money as men do in some other lines of business.

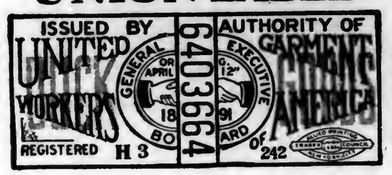
And there is this other thing about it, and it counts for much. The farm worker is in a position to make the most possible out of himself just where he is. Sometimes we think if we had some other job, away off somewhere, we might make more of our lives than we can on the farm. No greater mistake ever was made. Everything any man needs for the making of a perfect manhood is close at hand, out where man and nature meet every day. All we require is a seeing eye and a heart in tune with God to make this come true. God help us all to do it!

Don't Buy BLINDLY!

There is no economy in buying work garments of doubtful origin and risk the possible contamination of prisons and sweat shops, when you can get more value, greater satisfaction and absolute protection in products that are UNION MADE.

Your Unquestioned Guarantee of Clean, Long Wearing and Economical Work Garments is this UNION LABEL

This Union Label is positive proof that the garments were produced in clean, bright, sanitary plants by highly skilled operators working under ideal conditions.



This Union Label identifies the utmost quality in work garments. It is used exclusively by reputable manufacturers who are proud of their products.

When you buy Overalls, Trousers, Work Shirts, Combination Suits, and Play Suits, be sure that they bear the Union Label as it guarantees big, full, comfortable cut, skilled workmanship, longest wear and greatest economy. In addition, the Union Label is your protection against prison-made work garments and those of doubtful origin.

In every locality there are dependable stores that sell Union Made work garments which bear the Union Label of the United Garment Workers of America. These merchants deserve your patronage and confidence because they are protecting you from inferior merchandise and prison filth by selling garments that are

UNION MADE

BEWARE OF PRISON-MADE WORK GARMENTS

For a few cents a day, convicts are sold to prison labor contractors and forced to make work garments, by the contractors' henchmen. They must produce a certain number of garments daily, regardless of their health or ability. Prison work rooms ofttimes reek with disease and odors, but this is of no concern to the prison labor contractor. The garments made in these prison pens are dumped on the market, and sold under fake and misleading labels. Prison labor contractors do not want you to know the truth.

Prisoners should be used in making goods for state purposes only. They should also be used in occupations that will train them to properly fit into the economic system after they have been freed. Some states have reconized the injustice of the contract prison labor system and do not permit prison-made goods to come into open competition with the products of free labor and enterprise. All other states should follow this leadership.

From Forum Members and Friends

Dear Cousin Ruth and Forum Friends:—I am thirteen and in the eighth grade. I go to Logan school. Do any of the Forum members raise little chickens? I set an old hen with 21 eggs and she brought out 15 chicks and one of them got caught in the door and was killed.

For pets we have three dogs, Prince, Sport and Rex and six cats, Dirty-chin, Pretty Kitty are one age, Timmie and Lizzie are a few months younger. Then we have two small kittens just a few weeks old. We have two horses and some cattle, also some hogs.—Lois Callen, Butler County, Pa.

Dear Cousin Ruth, Forum Members and Friends:—I spent my vacation this summer in Ohio. My father, mother and small brother drove to Ohio in the later part of June. I saw many interesting things while I was there. I had the pleasure of going into a coal mine as there is no coal mine where I live it was an exciting experience.

On our way home we saw a lot of oil wells. I wish that all Forum friends could have been with me.—Nellie Keemer, Juniata County, Pa.

Dear Forum Friends:—I have enjoyed reading the letters of the Forum page. I go to Cherry Grove School. I am 12 years old and am in the seventh grade. My brother and I have two ponies, one is Pansy and the other is her little colt, Lindbergh. We have two large dogs, their names are Ned and Bingo. I am enclosing a picture of Lindbergh and me.—Elma Wilson, twelve, Chester County, Pa.

MY LITTLE CHARGE
Elma Wilson, (X), Chester County, Pa.

Dear Cousin Ruth and Forum Friends:—How many of the boys and girls like to go to school? I do.

I do not get much time to write letters as I have to help mother. I read the Forum page every week and would like to be some of the girls and boys that have had such nice trips to tell about. The only two trips I have taken were over the Jacob Ladder and from Stockbridge to Gladestone, New Jersey. The Jacob Ladder trip was very nice but there were very dangerous curves in the road. We went to the top of the tower and we saw a very long distance and I also saw a mountain made of rocks and not a tree or anything but rocks.

On my trip to Gladestone I went over the Bear Town Mountain Bridge. We had to pay because it had not been open very long.—Virginia Opperman, (X), Berkshire County, Mass.

Dear Cousin Ruth and Forum Friends:—I am going to tell you of my trip to Blairsville to my aunt's and from there we went to Johnstown. We went thru the cemetery and we saw where the people of the Johnstown flood were buried.

Then on the Fourth of July we all took our dinners out in the country. We went down an old road that looked as tho it hadn't been traveled for about ten years.

When we finally got out on to a good road it didn't take us very long to hunt a nice place to eat our dinner for we were all hungry.

After we finished our dinner we drove around a little and then we started home. In the evening we went to Griffiths Park and we stayed for the fireworks.—Beatrice Rupert, Armstrong County, Pa.

Dear Cousin Ruth:—I enjoy the Forum page very much. For my pets I have a dog and a cat. The dog's name is Shep and the cat's name is Stubby. Every night when I am coming home from school Shep meets me and walks home with me. He likes to carry sticks and packages home. Stubby is very fat and walks very slowly. When my mother opens the bedroom window, or any window, she will jump in and sleep on chairs or on the bed till someone comes and chases her.—Mary Slovinsky, Crawford County, Pa.

Dear Forum Members:—I am anxious to join this club and hope you will accept me. It's very interesting to read the items.

It was a shame about Clarabelle Chamber's Blackie. It really is a mystery where he went. I have a kitten that does all sorts of tricks. He calls me in the morning. You would be surprised how he knows it is time for me to get up. He eats corn off the cob, sits up and begs. He will not eat unless he sees I am eating the same thing. He eats candy. He mews to be let in or out. I pity all poor animals. Alley cats and dogs I feed and always wish I could give them a home.

My cat is named Boots. He won a prize at the age of three weeks.—Mildred Singleton, Montgomery County, Pa.

Dear Forum Friends:—The kittens you see on the picture are my playmates and they are dandy ones, too. We have the best fun frolicing about the yard. They climb trees, turn tumblesaults and play catcher just like boys and girls do.

FAITHFUL FRIENDS
Pauline Trimmer, Cumberland Co., Pa.

Maybe you would like to know their names—Spotty, Grey Nose, Timmy, Tommy and Black Beard. Tommy liked best to have his picture taken for he sat very still and you can see he is looking right at you.

I hope you like my playmates, I'm sure I do.—Pauline Trimmer, (X), Cumberland County, Pa.

Dear Cousin Ruth:—I am so sorry that I waited so long to write again but I have been kept busy with my garden and roadside stand.

I had my tonsils taken out and got over the chickenpox, so feel pretty good.—Margaret Rusch, nine, (X), Morris County, N. Y.

I'm sure your Forum cousins would like to hear more about your roadside stand, Margaret.

THE FORUM EDITOR.

The Old Witch and Her Cat Are Invited Too

DEAR FORUM BOYS AND AND GIRLS:—How would you like to have a Hallowe'en party? Wouldn't it be fun to have a party October 31st? (That's Hallowe'en, you know.) I don't see how we could possibly arrange a regular party but I'll tell you what we can do. We can have a Make-Believe-Party. Did you ever attend a Make-Believe-Party? Well, there's a treat in store for you. I'm extending this invitation to every boy and girl who reads our page and I'll be dreadfully disappointed if you don't accept.

Spirits! Assemble at the stroke of 8,
In Marlow's attic and don't be late.
Dress in a garb that none will know,
Utter no word as you come and go.

The Forum page in the October 22 issue will be devoted entirely to our Make-Believe-Party. Suggestions for party decorations, games, etc., will be published. In addition to our Make-Believe-Party I think it would be nice if each one would arrange a real party at home. You can follow the suggestions I'll give you for the decorations, play the spooky games and dress up in all sorts of weird costumes.

I'll take care of the decorations and the games but I can't possibly arrange your costumes. I'll leave that to you. Decide what you're going to wear, then write and describe your costume to me. I'm going to award prizes for the costumes just as tho it were a real "honest-to-goodness" party. There's going to be a prize for the most original, one for the most popular and one for the funniest costume.

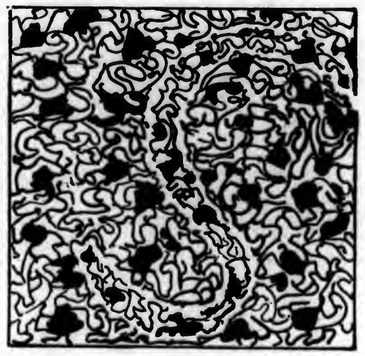
If you are able to have your picture taken in your Hallowe'en dress or suit so much the better. Send it to me and if it's clear enough I'll find room for it on the page.

You can begin sending your letters along right away—just as soon as you decide what you're going to wear. All letters must reach me by October 12th. In the October 22nd issue I'll print a list of all those who are going to come to our Make-Believe Party. In addition to giving your name and county I'll announce also the costumes you'll wear. Won't we have lots and lots of fun?

THE FORUM EDITOR.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—"This is the way we wash our clothes so early on Monday morning." The "Mulberry Bush" game goes on until all the days of the week had certain things which belonged to them. Well, I don't believe you ever knew this, or if you did, you probably hadn't thought much about it. That there is something which every day in the week has—every day, that is, except Monday and Friday. You can find out what this strange thing is by working your way thru the tangle of leaves or vines or whatever it is in the square below. Begin at the opening in the right hand side and follow a path which you can find if you look carefully, and you will come on out at the same opening again. If you do this correctly you will draw what it is that belongs to every day in the week except Monday and Friday. When you have found out what this is send me your answer so that it reaches me by October 8th. PLEASE TELL ME HOW OLD YOU ARE, THE NAME OF YOUR COUNTY AND WHEN YOUR BIRTHDAY COMES. The prizes go to the ten children, sending in the correct answer on a postcard or in a letter, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.



The answer to the puzzle in the September 10 issue is: THE EARLY BIRD CATCHES THE WORM.

The prize winners are: Ina Bard, age 10, Shippensburg, Pa.; Earle F. Bolton, age 13, Export, Pa.; Mary Agnes Brittain, age 12, Danville, Pa.; Florence Chase, age 12, New Albany, Pa.; Anna A. Hexamer, age 12, Franklin, Pa.; Hattie A. Kramer, age 11, Allentown, N. J.; Joseph Marcy, age 8, Pittston, Pa.; Clara Szczepanski, age 10, Ottsville, Pa.; Anna Van Vorst, age 10, Petersburg, N. J.; John Willig, age 11, Fork, Maryland.

1.—The east entrance of the White House as it appears from between the great marble columns of the Treasury across the street.

2.—Four hundred feet above the city street, on the roof of the Biltmore Hotel, Providence, R. I., L. Duane Wallick, the hotel manager, has a farm with a thousand chickens, 275 ducks and vegetable and flower beds. He sells the products from this roof farm to his guests.

3.—Some of the radio cabinets built by Boy Scouts to house sets for exhibition at the Radio World's Fair at New York City. There are many interesting designs.

4.—The United States battleship "Texas" as she sailed to take her place as flagship of the United States fleet, replacing the "Seattle." The "Texas" has been converted from a coal burner to an oil burner and undergone other alterations at a cost of more than $2,000,000.

5.—Mrs. Adelin Wright Macauley, national president of the auxullary of the American Legion, who will lead the wives, daughters and sweethearts of the American Legion to Paris for the annual convention.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

"BOY, I'm your uncle," he said. How I stared at the roughly dressed backwoodsman who had forced his way into the house. I reckoned myself a young gentleman of Philadelphia. Could kin of mine be nothing but a trader of the frontier?

It was true enough. Worse yet, it was he who had supplied my income since my aunt died. And he planned to take me back with him some time to Carolina. That was horror added to horror to a delicately bred lad like myself.

Some matter connected with the Regulators, rebels against the authority of His Excellency, Governor Tryon, called him back before he could carry out his threat to take me south with him. Yet I knew he would return and that my gay life in that Philadelphia of 1771 would vanish like a bubble. I dreaded the day.

Circumstances made it necessary for me to leave Philadelphia sooner than I had ever anticipated. Within a few weeks from the time of my uncle's unexpected visit I was well on my way to Carolina, with a message to Hunter, Chief of the Regulators. Many and varied have been my experiences on this journey. I have made strange acquaintances and at times it has been difficult for me to distinguish friend from foe. Krafft, a friend, handles me roughly during a narrow escape from the king's soldiers and I become angry.

I finally decided to leave Krafft and travel the remainder of the journey alone. I did not, however, travel any great distance by myself. It was two days later that I came upon Zion Alexander. He was a long, gaunly creature with an inordinately long jaw. Of the troubles in North Carolina he talked more freely than any other man I had yet met.

Alexander quarreled with one of Governor Tryon's men and for several days after we kept to the side roads. After parting from Alexander at Fort Lewis, I met another traveler, Haddock by name, who was in sympathy with the Regulators. From him I learned more about the situation in Carolina. That night we stopped over with Jim Butler, a friend of Haddock.

"DUMMKOPF, was willst du?" I asked gruffly. "Here I stay tonight; tomorrow I go to Betharaba. Colonel Fanning is mine freund; shall I tell him vat a donkey his under officer tes?"

It was a poor imitation, but it served to make the deputy pause. He studied me for a minute and looked puzzled.

"Jack, see if this fellow has a pistol or a knife on him," he ordered suddenly. "Do you see an extra rifle?"

I was searched and so was the room. It was reported that I had no weapons and that Butler's rifle was the only one in the room aside from those brought by the posse. The deputy frowned again.

I spoke to Butler.

"For the supper, dankeschen. When this donkey takes you to the Colonel, tell him that you are a freund of Peter Voorhees."

Then I spread my blankets out on the floor again, rolled up in them, and pretended to go to sleep. The deputy was stumped. Twice he started to say something and twice stopped.

"I guess we can get him if we want him," he declared finally. "Come, Butler, we've got a ride before us tonight."

If they left before the deputy changed his mind again, I was a free man. Yet what a time it took to get the party off. Butler had to get a pack together, get his saddle horse out and finally say good-bye to his family. And all the time the deputy walked up and down beside me, and paused at every turn to give me a look that was still dissatisfied.

But at last they were off. The sound of hoofs grew steadily fainter. Mrs. Butler, sobbing quietly, leaned against the door and looked after down the lane.

Then there was a flash of buckskin down the ladder and Haddock was in the room.

"Shet that door, woman," he ordered. "Younker, get out of there, there's riding to be done tonight."

Mrs. Butler turned and there was a little hope in her face, but more fear. "They'll hang him sure," she cried. "You heard what they said. Court martial."

"Hang me ding," snorted Haddock. "Any more horsee? Where are they? Pasture? All right. Get the little tikes ont hunting for them. Peter and I"—he grinned at me—"will look too."

The two oldest boys came running out, in shirts and bare feet. We followed. The stars were out, but no moon, and the woods were dark. Wet branches slapped my face. I kept my eyes on the boys' shirts and followed as fast as I could.

Presently the gloom lightened The branches above broke away to show gray blue sky. Before us opened a little pasture. Brush studded it. It seemed empty.

Then something moved to the right, shook itself, and took form.

"Bess," cried one of the boys, "come Bess, good Bess."

STUMBLING thru the long grass, the mare approached. Behind came another. In an instant the two boys had them by the mane. Haddock produced bridles. We led them back thru the wood to the house and the road in front.

"Don't bother about saddles," ordered Haddock. "Butler's got the only good one anyway—and the only good horse. These aren't worth stealing but they'll carry us to the next farm. Come on."

He slid onto his mount's back, and, still carrying his rifle in one hand, urged it torward to the road. I followed. My pack was in the house and I was bare-headed, but there was no time to get either pack or hat.

"We'll bring him back," cried Haddock to Mrs. Butler as we broke into a trot, but when he comes, pack up and git. There's better places for you than North Carolina."

We kept at a trot until a smooth stretch of road showed itself.

"Now let 'em go," cried Haddock.

We thumped heels into our mounts and tried for a gallop. They kept it up for a brief stretch and then fell off. As we pulled down, at Haddock's signal, he said:

"They're gaining on us every second, of comrse, but we've still a chance. They daren't ride south thru Hillsboro; too many Regulators out. They'll go east and then south and that means most probably they'll stop for sleep and fresh horses some place before morning."

"They don't know anybody's after them," I added.

"They'll know it before morning," said Haddock between his teeth, "but it helps our chances now. Kick that mare of yours again and let's see if we can go faster."

We pounded on thru the night. Presently we were out of the shadow of the woods with star light around us. A cabin made a dark blur on the far side of the clearing.

HADDOCK let out an Indian yell and rode up to the door. Before the bars came down, he had poured out explanations and orders and was back with me.

"He'll take the crossroad and call out the men there," he explained as he went on.

Twice he repeated this, but at the third clearing, he slid from his mount's back and gave a sigh of relief.

"This man has good horses and saddles to go with them," he confided. "Now we'll get after them."

It was only a few minutes before four of us, the farmer and his oldest boy being the reinforcement, were on the road again and with fresh mounts. At the next cross roads, the boy was sent one way and the farmer another. We pressed on, and left a roused countryside behind us.

There was little talking, and little explanation. I marveled to see how little. It showed how accustomed the people were to a condition of civil war. Haddock would rouse the man and say briefly:

"A gang of Fanning's has got Butler. Get your rifle and come on. They're heading straight east now. Watch for a turn at Mobery's."

Then a light would flare in the house, and as we rode away, we could hear folks scurrying around within. Presently if the road was rocky, there would come the "clip, clip" of a horse's hoofs far behind and we would know there was another rifle on the way.

By now six men rode with us and more came behind. To one of the six, Haddock observed, as we let our horses breathe:

"Peter here needs something to shoot with. Know anybody along here with an old trade gun or a blunderbuss or something to spare?"

One of them did. And after the next halt, a long horse pistol was thrust into my belt. Thereafter we rode without a pause and left other members of the group to stop and give the alarm.

The dawn was grey when Haddock motioned us to a stop. We were in a sandy lane, with a thicket of pines on each side. Ahead the road turned sharply.

"Jackson's place is ahead," he warned, "and Jackson's a good Fanning man. If they stop at all, they'll stop here. Gus, you stay with the horses and keep the rest from galloping up in front of the house. The rest of us will do some prowling around."

We followed him in single file. Where the pines thinned, he split the party and set half to watch the stables and half to guard by the road. He and I went straight on.

Peering thru the brush-grown snake fence, we saw a log house, of three or four rooms. Smoke was coming out of the chimney. A couple of saddle bags lay by the door.

"I believe we've got them," whispered Haddock.

An inquisitive hound veered toward us, sniffed the air and began to bark. Out of the front door a man popped A rifle crashed at my ear, and the man dodged back. Things began to stir within.

"Keep them where they belong, boys," shouted Haddock and a shot came from the brush across the road to answer. Some one answered from the house. Another riffe from the circle hidden in the brush spoke. The fight was on.

For an hour there was desultory firing. The posse tried one dash for the stables, but came back pell mell and dragging a wounded man with them Haddock was putting man after man into position until we had forty around the house.

"SHALL we burn you out or will you give up Jim Butler peaceful?" called Haddock finally.

No one answered, but presently Butler stoout alone outside the door. He walked to the shelter of the woods while both sides held their fire.

"Now, you Fanning pets, take your choice," called Haddock again. "Come out without weapons, with your hands up, and start off on foot down the road. Or stay where you are and we'll make you buzzard meat."

A volley answered him, but an hour later when blazing arrows began to drop on the roof of the house, the deputy changed his mind A white flag waved out of a window and a minute later, six dejected looking men with their hands in the air stepped outside the door. On the instant the woods vomited men Running beside Haddock, I saw the members of the posse shrink visibly as we came toward them. Haddock reached them first and swung around to face the farmers who swarmed in.

"Stand back," he roared. "This is no whipping party."

"Let's tie 'em up to some trees," suggested a big fellow with a broken nose. "Just a few licks across the back wouldn't hurt 'em much."

Haddock shook his head.

"I said I'd turn 'em loose and I'm going to. Stand clear."

There was some muttering, but the men drew back. Haddock ordered the posse to the road As they passed, the deputy's eye fell on me and lit with a sudden understanding.

"I'll see you hang yet," he told me under his breath, and then was gone with the rest running down the road. Rifles banged around me. I thought at first the men were out of hand and were shooting to kill in defiance of Haddock. Then I saw dust spurting at the runner's heels. The bullets were merely jocular aids to speed.

A tall man pushed his way thru the crowd.

"See here, Haddock," he declared "all of us ought to be over by Hillsboro or Salisbury. The governor is on the march and Waddell is bringing up the militia from the south. Let's organize a company right here and start."

His words brought me down to earth again. If armed conflict was that near, then the Regulators needed the powder badly. My job was to find Hunter at once. Perhaps I could ride straight to him and not have to go back to Betharaba.

"Where is Hunter now?" I asked.

He shook his head.

"I don't know, don't even know for sure where the muster is. And Hunter may not be there. He's traipsing all over the back country these days."

"Then I've got to get back to Betharaba at once," I cried. "Get me a fresh horse."

Haddock gave me a sharp look and then nodded. He spoke to the tall man.

"This boy has got word for Hunter. He's going to Retharaba, to you know who Take a look in Jackson's stables and see if you can't find a good horse for him to ride."

We worked our way out of the crowd. Haddock growled to himself as we went When we came to the road and the nearest knot of men was some distance away, he broke out to me:

"You young idiot, why didn't you tell me this last night? Here you're miles out of the way and time lost. Now you've got to make up for it. If you go at a good pace, you'll reach Hastings about noon. Stop there to eat and rest. Change horses. Then straight on and you ought to make Betharaba by night. But you may have to dig your spurs in."

He told me how to recognize Hastings. It was a big white house, on a hill by the right hand side of the road. You crossed a creek half a mile this side of it. I was to mention Haddock's name and my errand

THE tall man brought out a beautiful bay gelding, long limbed, with open nostrils, clear eyes, and that suggestion of driving power in hips and shoulders that goes with speed.

"You said he was looking for Hunter," explained the tall man.

"It's lucky he is," Haddock commented. "If he warn't, I'd take after him and steal this hoss offen him myself."

I mounted. Haddock stepped close to me.

"If what you've got to say to Hunter has anything about powder in it," he whispered, "you've got my leave to ride that horse to death."

The bay, I thought, might last longer than I. There was a day's walk behind me, a night's ride and no rest to speak of. And here I was just starting on a ride that would have tested my endurance had I been fresh.

Aches in back and thighs that I had not noticed in the excitement of the night chase began to develop as we went on. I put the bay to a gallop on every level spot, slowed down to a walk for hills and to a trot on uneven ground. Consequently there was a good deal of trotting to be done, and I groaned every time that jolting began. For my own sake, I eased him into a single foot occasionally but my conscience hurt me lest I should tire the horse unnecessarily; and so I came back to the trot, which was easier for him but otherwise for me.

EVERY mile we covered I became a better King's man. I cursed the errand that had brought me here to the world's end and sent me riding like mad for the benefit of a gang of backwoodsmen. Moreover, I promised myself that once the message was delivered, I should strike back to the east, return to Philadelphia, and lead a civilized life again.

This picture pleased me so much that I almost forgot where I was and ambled along, grinning for more than a mile. I pictured the new clothes I would get—I who wore rags now—what plays, what dances I should attend, what horse races, what—.

What of Major Dunston? Him I had forgotten totally for the moment. That unlucky hour barred me absolutely from all but outlaws. And what of my present treasonable work? No doubt if I were caught, the governor would hang me out of hand.

It seemed I was beaten and for a time I felt nothing but despair over my fortunes. But as the morning passed and I grew more and more tired, that dream of a safe return to Philadelphia and my old life changed to another and nearer vision. I began to think of the bed at the inn ahead, and how good it would feel. The Moravians I had heard kept a good house. The governor had stopped there. I pictured even clean sheets, thick mattresses, I looked wearily thru the dust of the highway, and wondered if I should ever see the welcome walls of that inn.

It was past noon when I crossed the creek of which Haddock had told me and walked my tired horse up the hill beyond. There was the white house on the hill and a gentleman sitting on the front porch. He took a long pipe out of his mouth and greeted me with the utmost courtesy but with very evident curiosity.

I was too tired to be cautious.

"Haddock sent me," I murmured, as I slid from the saddle. "I'm going to the Dutch fort—message for Hunter. Get me a fresh horse and wake me up in two hours."

(To be continued next week)

What Are They Doing?

WE WON'T keep you in suspense. These farmers are harvesting their potato crop. But this is a picture of a corn field, you say. Exactly. Just after farmers of the Del-Mar-Va Eastern Shore Peninsula cultivate their early potato crop for the last time they plant corn between the rows. The corn may be nearly shoulder high when the potatoes are dug

A year ago we visited the southern counties of the Eastern Shore for the first time just after the farmers there had dug many million dollars worth of early potatoes. But we didn't see a sign of a potato field,—only corn everywhere. "Where did you grow the potatoes?" we asked a native. His amusement at our supreme ed ia to resolve to see for ourself at the first opportunity. This picture is the result of that resolution. It was taken in July on the road between Pocomoke City and Princess Anne.—C. L. W.

Did you ever hear this one?—

The Commonplace

Suburbanite—Your hens have been over the wall and scratched my garden.

Neighbor—Well, there's nothing queer in that. It's the nature of hens to scratch. Now, if your garden had come over the wall and scratched my hens, you'd have something to talk about.

A Speed Record

"That customer could talk!"

"Yes, I think she must have been vaccinated with a phonograph needle."

A Philadelphian committed suicide and left the following note:

"I married a widow with a grown daughter. My father fell in love with my step-daughter and married her—thus becoming my son-in-law, and my step-daughter became my mother because she was my father's wife.

"My wife gave birth to a son, who was, of course, my father's brother-in-law and my uncle, for he was the brother of my step-mother.

"My father's wife became the mother of a son. He was, of course, my brother—and also my grandchild for he was the son of my daughter.

"Accordingly, my wife was my grandmother because she was my mother's mother. I was my wife's husband and grandchild at the same time—and as the husband of a person's grandmother is his grandfather. I AM MY OWN GRANDFATHER!"

You, Josie, that snappin' is drivin' me wild,
An' sure as my name is O'Grady
I'll be givin' yer gum to the Hooligan child
If you can't learn to chew like a lady!

Holding His Own

"Whatever you tell a man goes in to one ear and out of the other," angrily snapped the wife because her husband had forgotten to mail a letter.

"Yes," he retorted, "and whatever you tell a woman goes in at both ears and comes out her mouth."

Wife—Mrs. Jones has another new hat.

Hubby—Well, if she were as attractive as you are, my dear, she wouldn't have to depend so much upon the milliner.

Too Expensive

"Did you ever hear of the Scotchman who never would get weighed?"

"No. What was his reason?"

"Oh, he was afraid he might tip the scales."

He—When I was young, the doctors said that if I didn't stop smoking I would become feeble-minded.

She—Well, why didn't you stop?

Just the Man

Mrs. Brown—When are you going to get that fence mended?

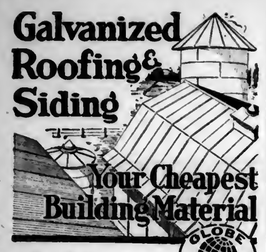
Mr. Brown—Let's wait till George gets home. He wrote the other day that he's taking fencing lessons this term.

No Profiteer

Small Brother—Ha, ha! I saw you kiss Sis!

Suitor (hurriedly) — Er — ah — here's a quarter!

"And here's 10c change. One price to all, that's the way I do business."



Galvanized Roofing & Siding

Your Cheapest Building Material

GLOBE BRAND — The Serviceable Sheet Steel

PROTECT—your barns — houses — sheds — silos — corncribs — grain buildings—tanks, etc., with old reliable "Globe" Brand Galvanized Roofing and Siding.

The only safe, long lasting, easily handled, moderately priced roofing and siding. Fire safe, lightning proof, weather proof, rat and vermin proof.

In your state GLOBE Galvanized Roofing and Siding has stood for three generations back—tested and proven by satisfied users. GLOBE Galvanized Roofing comes to you, backed not only by a record of service, but by a mill recommendation.

We recommend GLOBE Roofing because it is made in our own mills, formed in our own shops, subjected to every test possible, backed by the wisdom of many years of manufacturing experience.

Fill in the coupon below and receive at once our PREPAID PRICE LIST on GLOBE Galvanized Roofing and Siding and a sample of the gauge we recommend.

Time for Eastern Farmer to Wake Up

Editors' Note:—Recently we had occasion to write to Clifford V. Gregory, able Editor of the Prairie Farmer, Chicago, in reference to an article scheduled for publication in his paper. The article intimated that the corn and wheat growers of the Middle West would benefit if they produced less grain and more vegetables and dairy products. We concluded our letter to him by saying: "I am wondering what will happen to the markets when your midwestern corn and wheat growers increase still further their production of the vegetable and dairy products that are now the mainstay of eastern agriculture." Mr. Gregory replied in part as follows:

I HAVE wondered how soon some of the eastern farmers, who have been opposed to the McNary-Haugen bill, would wake up and realize what will happen to them in case some legislation is not adopted. Self-preservation is the first law of nature. A continuance of present conditions is bound to result in western competition with eastern farmers, which will make conditions very difficult for them.—C. V. Gregory.

Mistake Ear Worm for Corn Borer

EDITOR Pennsylvania Farmer:—We read so much about the fight about the corn borer, and I believe I read an article stating it was first brought to this country from Europe only a few years ago.

My father lived near Medford, Oregon, at one time and he says they had a worm there which bored thru the husks and into the ears of corn and nearly destroyed the crop on 20 acres they had. This was in the years 1906 and 1907. He did not report it, and did not hear anyone else mentioned it.—Mrs. W. B., Tioga County, Pa.

Note:—The corn car worm is sometimes mistaken for the European corn borer altho the habits of the two insects are entirely different. The former may have caused the damage described above.—The Editors.

THE European corn borer was first discovered in the United States during the summer of 1927, but is believed to have gained a foothold in Massachusetts several years prior to that date.

The insect's method of attack upon the corn plant is described as follows in Farmers' Bulletin 1046:

"The larvae or borers of the European corn borer tunnel thru all parts of the corn plant except the fibrous roots. They even feed within the midrib and upon the surface of the leaf blades. They cause their most serious damage, however, by their work in the stalks and ears, which they partially or totally destroy. Generally, they enter the stalk at its upper end near the base of the tassel and at first tunnel upward. This damage so weakens the tassel stalk that it breaks over before the tassel matures, resulting in loss of pollen and the lack of normal grain formation on the ears. These broken tassels, with extrusions of sawdust-like material at the breaks, are the most conspicuous signs of infestation in a field. Field counts in badly infested areas have shown as many as 60 per cent of the tassels broken over in this manner.

Borers Tunnel Thru the Stalks

"After destroying the tassel the borers tunnel downward thru the stalk gradually increasing the size of their tunnels as they develop. Instead of entering the stalk near the tassel many of the borers enter between the leaf sheath and stalk to a point lower down and tunnel upward or downward according to their individual preferences. Small holes in the stalk with sawdust-like extrusions indicate where the borer is at work. When several or many borers are present within the same stalk, as is frequently the case, the stalk becomes reduced to a mere shell, filled with fragments of the frass or castings of the borers. This injury cuts off the supply of nutriment to the developing ear and greatly weakens the stalk, which eventually breaks over.

"Some of the partly-grown borers leave the stalk and enter the ears thru the husk and also thru the stem and cob. Here they feed upon the immature grain and tunnel thru all parts of the cob. During July and August many of the moths deposit their eggs directly upon the newly developed ears of late corn.

"The resulting borers feed at first upon the silk and then enter the ears directly, where they feed voraciously upon the grain and cob. As many as 15 full-grown borers, each about an inch long, have been found feeding upon and within a single ear of corn. This extensive injury to the ear results in its complete destruction."

Energy Is Spent in Useless Criticism

OUR township has, doubtless, as many dissatisfied citizens as do other localities, but instead of using their energy to change conditions much of it is spent in useless criticisms. At a recent town meeting, or "caucus," only a very few voters came and in November the election will bring out, I believe, only about two-thirds of the voters, (or rather those that should be voters.)

But when we have a chance to vote for hard-surfaced roads the attendance at the polls is nearly one hundred per cent perfect. The result mostly in favor of bonding the township—with the blue sky as the limit—for roads that, in a short time, would have been built by the state. We are in favor of good roads. We confess that we are also in favor of not going if we have to go (too deeply) in debt.

But it seems obvious that in the interest of good roads the election of able, honest supervisors is very important. We have many more miles of dirt roads than of hard-surfaced highways and the condition of these secondary roads depends largely on the supervisors.

Efficiency Depends Upon Voters

We hoped that there would be more income from taxes to be used on the township roads after the state took over the primary system but in many cases farmers and others have donated much labor to make the roads passable. This is only one department of the business that depends on the voters for efficient foremen.

When will some prophet arise, some system of education be adopted, or some realization of the relation of their civic condition to their civic inertia awaken people to the fact that government of the people by a few of the people is ever unsatisfactory?—M. C. S., Potter County, Pa.

How Did They Plant Them?

TO THE EDITOR:—Isn't there a mistake in the recent article referring to the potato field of Ray Briggs and Son where it is stated that 400 bushels of Michigan seed were used per acre? I cannot understand how they can find room for that amount of seed on an acre.—T. S. James, Lehigh County, Pa.

We are not surprised at the wonderment of Reader James. We were amazed too when we saw the sentence in which a typographical error multiplied by ten the amount of seed used per acre by the state's champion potato grower. The statement in question should have read: "About 40 bushels of Michigan seed per acre are used, the seed pieces weighing from two to three ounces each."—The Editors.

Gas Heat Wherever You Live

HERE'S the Coleman Radiant Heater—a complete, portable heating unit that gives you gas heat no matter where you live. Like Coleman Lamps and Lanterns, it works on the safety-pressure principle:—makes and burns its own gas from any good grade of gasoline—no piping, no cost of installation. Starts quickly—easy to operate—use it anywhere.

Just the thing for the cool spells of fall and spring and for extra heat needed on severely cold days of winter. Radiates a penetrating fan-like zone of clean, live heat—like sunshine. Instant regulation. Steady even temperature. Hotter than city gas; no smoke, no soot, no ashes. Prices in the U. S. A.: Model No. 2, $27; Model No. 4, $35.

Ask Your Dealer to show you the Coleman Radiant Heater. If he is not supplied, write us for full particulars. Address Dept. PA 1

BORERS MULTIPLY

They Also Can Add But You Have to Make Them Subtract

"PIGS Is Pigs" is not in it with the corn borer. Figure it out for yourself. Taking a hypothetical case, if 96 per cent of the borers were destroyed in the clean-up campaign, there would be 4 out of every 100 borers still at large.

Of these 4 borers, 2 will normally be females laying 400 eggs apiece, or 800 eggs. Only about 120 or 15 per cent will become established, as the infant mortality among borers is, fortunately, very high.

If these 120 borers survive the many pitfalls and dangers of a borer's life, the possible rate of increase will be one and one-fifth borers this year for every borer last year as compared with a possible increase of 30 without the clean-up, or last year's increase of five, or yet again Michigan's last year's record of seven borers for each borer of the previous year.

Do you get it?

$2,740,116.68 Paid to Farmers

Vouchers for payment of the extra-labor fees are still being received at Washington, thu the heaviest rush is over. A total of 174,760 vouchers has been received from farmers who performed extra labor in cleaning up their cornfields, and nearly $3,000,000 has been paid to 110,600 farmers to whom checks have already been mailed.

A slight infestation has been found in the following townships. In these cases of extremely light infestation, in new territory, there is practically no danger of spread until another season. It is, therefore, not necessary that these townships be immediately included in this quarantine.

PENNSYLVANIA

Bedford County, Liberty. **Columbia County,** Jackson, Sugar Loaf, Benton, Greenwood. **Fayette County,** Salt Lick. **Greene County,** Cumberland. **Huntingdon County,** Walker, Logan, Oneida, Miller, Hopewell, Franklin, West, Spruce Creek, Warriors Mark, Morris, Porter, Henderson, Brady. **Lackawanna County,** Newton Ransom. **Luzerne County,** Exeter, Dallas, Lehman. **Montour County,** Limestone, Northumberland County, Turbut, West Chillisquaque. **Somerset County,** Paint, Conemaugh. **Union County,** Whitedeer, East Buffalo. **Wyoming County,** Meshoppen, Washington, Mehoopany, Windham, Tunkhannock, Eaton, Overfield, Forkston, Falls, Monroe.

Have You Overhauled Your Harness?

Would like to know if crank case oil is injurious to leather when used for oiling harness?—H. H., Crawford County, Pa.

Yes, crank case oil is injurious to leather and should be kept away from harness, belting and other leather goods. Since at this time many of our readers will want to overhaul their harness and put it in shape for next season, perhaps the following suggestions may be helpful.

The job of overhauling the harness is usually done in the following order:

1. Take all the harness apart, taking off all the buckles, snaps, loops, dees, cockeyes and other parts which can be taken off without cutting rivets, stitching or straps.

2. Do all repair work which needs to be done on the harness.

3. Having filled an ordinary washtub about three-quarters full of warm water and thrown into the water a handful of sal soda or washing soda, place all parts of the harness in the tub.

4. Place one end of a scrubbing board in the tub in a position similar to a washboard and support the other end of the board on a bench, stool or other support so that the water will drain from the board back into the tub.

5. Having left the harness parts in the water long enough to thoroly soak, place each piece on the board and scrub it with the scrubbing brush.

6. Spread paper on the floor and as each piece is clean lay it by itself on the paper.

7. The harness oil should be warm and may be applied with a rag. It is not necessary that the harness be thoroly dry before the oil is applied. As the water is drying out the oil will draw in.

8. Having applied the oil and allowed overnight to dry, wipe off all grease with burlap, then hang the harness up. Apply one, two, three or four coats of oil depending on the condition of the harness. The room where the harness is drying should be warm.

9. Put soap in a wash dish of water and with a damp sponge apply soap same as when greasing. If harness dressing is used follow carefully the directions on the container.

10. Assemble the harness.

So far as the oil is concerned, any harness oil put out by a good reliable firm and recommended by the manufacturer of your harness or by a good harness man is very likely to be as good as anything you could make up yourself. Neat's foot oil is considered to be the most satisfactory oil for harness leather, to which enough lampblack can be added to color the harness black. If soft grease is preferred, equal parts of beef tallow and neat's foot oil can be melted together, with enough lampblack stirred to make it black. —I. W. D.

Violate Dog Law

VIOLATORS of the Pennsylvania dog law who have been prosecuted during the first eight months of the year numbered over 5000. Two hundred and ninety-six were prosecuted during August. Cameron is the only county from which no violations have been reported this year. Luzerne County leads with 392 arrests.

The number of individual dog licenses issued to August 1 was 470,987, over 10,000 more than for the same period a year ago.

The Glendola Grange Dedicates Hall at Meeting

AT THE summer meeting of the Monmouth County Pomona Grange, on September 3, Glendola Grange dedicated a new hall. State Master David Agans, Three Bridges, performing the ceremonies. About 250 enthusiastic Grangers from many parts of the state attended the meeting. The new building, a one-story frame structure, was built to serve the needs of the entire community as well as the Grange. It is 40 feet wide and 60 feet long with a basement which will be used for dinners and other affairs.

State Master Agans emphasized the point that the abuse for such a building would be largely in not making it the community center for every activity of the members of Grange, their friends and the people of the community.

In the evening a class of 40 was initiated in the fifth degree. The ceremonies of the day were in charge of Pomona Master Stillwell who also gave the unwritten work of the degree at the evening meeting. Monmouth County took steps to place a Grange exhibit, displaying the products of the county at the state fair, Trenton, during the week of September 26th.—A. K

"Nothing takes the place of Old Hickory"

"I have cured my own meats for twenty years. Old Hickory Smoked Salt is the most practical, economical and satisfactory method I have ever used." — *C. H. Mannon, Route 2, Kewanee, Ill.*

Mr. Mannon uses his regular curing formula, merely substituting Old Hickory Smoked Salt for ordinary curing salt. Old Hickory is nothing in the world but pure table salt with hickory wood smoke added by the Edwards Process, — *nothing* else. This explains why you get the exact flavor you desire, a beautiful brown color, uniform smoke-cure from rind to bone and no smoke-house shrinkage when you cure your meat with Old Hickory. When the meat comes out of the cure it is ready for immediate use or to be kept indefinitely.

But the secret of meat-curing success is to be very sure that you get the genuine Old Hickory. Examine the package carefully before you buy. The air-tight, 10 pound drum with the yellow and blue label must carry the Old Hickory Smoked Salt trade-mark exactly as it appears here. At the better stores generally. If not at your regular trading place, write to us direct.

GET A **Leola** Self-Feeder **on Trial**

WE WILL ship you a feeder at no cost to you, freight prepaid. Give it a thirty-day trial and if not entirely satisfied, we will pay the return freight. We do not ask you to pay one cent until you have tried a "LEOLA" Hog Feeder.

"Healthy, Heavy Hogs"

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for ninety days on a ration of corn-meal, buckwheat, middlings and tankage, self-fed in one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.3 lbs.	.88 lbs.
Cost per cwt., gain	$5.74	$7.17
Profit above feed cost	$7.43	$3.18

This test shows what a Self-Feeder will do for you. Low prices for Spring delivery. Commissions paid at once.

Write Quick for this chance. Just say, "I am interested in your proposition," in a letter or on a postcard. Mail it and I'll send complete particulars by return mail. First applications get the preference.

Hogs—15c higher; 150@190 lbs, $11@ 11.50; 200@250 lbs, $11.50; few loads, 260@ 300 lbs, butchers, $11.65@11.75; packing sows mostly $9.50@9.85.

Cattle—Compared with week ago: Good to choice 1601 steers and long yearlings steady to 25c lower; best heavy fed steers $16.10; long yearlings, $15.85; bulk westerns, $13.50@15.25; $11.25@13.50; stockers and feeders, $7.75@9.25; vealers up to $17.50.

Sheep—Week's top prices: Fat range lambs, $14.35; natives, $14.25; aged wethers, $7.50; fat ewes, $6.50; range feeding lambs, $14. Bulk prices: Fat rangers, $13@14.35; natives, $13.25@13.75; culls, $9.50@10.50; slaughter yearling wethers, $8.50@10; fat ewes, $5.50@6.25; feeding lambs, $12.50@13.75.

WOOL MARKET

Boston, September 24, 1927.

Domestic: Ohio and Penna fleeces—Delaine, unwashed, 45½@46½c; ½-blood combing, 45@45½c; ⅜-blood combing, 45c; ¼-blood combing, 45c. Michigan and New York fleeces—Delaine, unwashed, 44@45c; ½-blood, combing, 44@45c; ⅜-blood combing, 45c; ¼-blood combing, 45c; Wisconsin, Missouri and average New England—¼-blood, 40@42c; ⅜-blood 44c, ½-blood, 43c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, September 24, 1927.

Cloverseed, cash, imported, $14.25 asked; October, $15.50 bid; December, domestic, $15.75 bid; December, imported, $14.25 asked; March, domestic, $15.85 bid. Alsike, cash, $14.80; December, $14.90; January, $15.05. Timothyseed, cash, $1.60; December, $1.65; March, $1.80@.

FEED PRICES

The prices below are for prompt shipments based on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, September 26, 1927. Quotations cover mill car lots for delivery at Philadelphia or Scranton rate points.

Pure spring bran	$ 35.00
Spring bran	33.50@34.50
Soft winter wheat bran	35.50@36.00
Hard winter wheat bran	35.00@35.50
Standard middlings	35.00@35.50
Soft winter wheat middlings	40.00@42.50
Flour middlings	41.00@48.00
Red dog flour	48.00@51.00
White hominy	41.00@45.75
Yellow hominy	42.50@43.50
Gluten feed	41.30
36 per cent cottonseed meal	41.80@42.75
41 per cent cottonseed meal	46.25
43 per cent cottonseed meal	46.80@47.25
34 per cent linseed meal	52.20

For Baltimore, Cumberland and Williamsport rate points subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.40 per ton.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ 48	$ 46	$ 43½	$ 45½
Eggs, fresh gathered extra firsts (N. Y.)	40½	35½	32½	41
Steers, good to choice (Lancaster)	11.50	11.50	11.00	5.75
Hay, Number 2 timothy, baled (Philadelphia)	16.50	16.50	17.00	23.50
Wheat, No. 2 red winter (Philadelphia)	1.39	1.35½	1.45	1.41
Oats, Number 2 white (Philadelphia)	.60½	.58	.58¾	.54½

Most Markets Irregular

Review of the Week Ending September 24

POTATOES—The market was unsettled during the week and showed a weaker tendency toward the close. Prices on the best stock held about steady but there was considerable poor stock offered at low figures. The movement from New Jersey is nearly over and shipments from Maine and Pennsylvania increased sharply. The market at Maine and Michigan shipping points was steady with a fair demand. Maine stock was selling toward the close of the week at **$2.15 per 150-pound sack f. o. b. while Michigan stock brought $1.75 to $1.80 per 100-pound sack f. o. b.**

EGGS—Receipts of eggs were light in New York and were irregular in quality. Fresh eggs of fancy grade were in demand and sold at higher prices. Average stock was irregular in price and sold slowly. Nearby white eggs were scarce and the best of these were active and higher in price. The demand for the poorer grades was very slow.

POULTRY—The live poultry market was firm with a good demand for fancy fowl. Prices on these advanced and heavy stock brought a premium. Chickens were quiet and while prices were about 1c higher the demand was slow. Dressed poultry was plentiful but the market was fairly satisfactory.

APPLES—Receipts of apples in Philadelphia and New York were more liberal during the week and the market showed a weaker tone. Fancy large fruit held about steady in price but considerable ordinary stock was offered. Jonathan and Delicious are beginning to appear on the markets and are bringing fairly good prices when well colored.

LIVESTOCK—The Chicago hog market was weak and prices on top hogs declined sharply. Beef steers were unsettled while heifers and cows advanced. Vealers and heavy calves were about $1.00 higher than last week while stockers and feeders were firm. Fat lambs and yearling wethers were strong and about 50c higher. Fat ewes were steady and feeding lambs unsettled.

BUTTER—Fancy butter was scarce and prices on the eastern markets advanced 2c per pound. Hot weather during the early part of the month was largely responsible for the poorer quality. This warm weather also caused considerable **butterfat to be used for ice cream. All markets were firm at the close of** the week with dealers expecting further advances unless the receipts increased materially.

HAY—The hay markets were quiet with supplies more than ample for the demand. Offerings of timothy were liberal in the eastern markets and trading was slow. The best alfalfa was firmer with a more active shipping demand. Receipts of nearby hay in Baltimore increased but it showed a wide range in quality and sold slowly.

GRAIN—The grain markets were unsettled but showed a firmer tone at the close of the week. The strengthening of foreign markets and less favorable crop conditions were the strengthening factors. Wheat prices were lower than last week but were firm at the close. Corn and oats advanced while rye was about steady.

FEED—The market for mill feeds was generally steady with a slightly better demand. Prices of wheat feeds were steady altho middlings declined and bran was somewhat lower. Corn feeds advanced around $1.80 per ton on account of light production and the recent advance in corn prices. Linseed meal was steady while cottonseed was lower.

County News and Comment

Bradford County, Pa.—Oat threshing is nearly completed. Straw is rather short but the grain is the heaviest in years. Barley gave fair yields. Buckwheat is ripening fast. Yield will be fair. Ensilage corn on the hills will be very poor. Dairying seems to be on the gain. Many pullets already in winter quarters. Pail fed flocks this season average somewhat earlier than usual. Culling is practiced on nearly every flock in the county. Many entire flocks of old birds being disposed of to make way for pullets. Some penalties in young birds. Considerable interest being shown in the fairs now being held. Lots of improved road now being built.—G. E. E., Sept. 14.

Centre County, Pa.—Frost has been reported from several localities but no apparent damage done. Many farmers are thru plowing and ready to sow wheat. Threshing is in progress. Apples, peaches and pears are not plentiful. Public schools began on September 6 for an eight-month term. The Grange encampment at Centre Hall passed off last week very successfully. Nearly 500 families spent a week or ten days in the tented city in the most beautiful camp in the state. The exhibits far surpassed those of former years. Market quotations: wheat, $1.25; rye, $1; corn, $1; barley, 75c; buckwheat, 90c; oats, 45c; butter, 40@50c; eggs, 30c; lard, 14c.—A., Sept. 7.

Columbia County, Pa.—Fall plowing about finished. Some are sowing wheat. While weather has been fine during the forepart of September very little corn will ripen if we have an early frost. Many acres of potatoes were blighted and some planters have been digging but do not know what the yield will be. The county fair will be held the first week of October at Bloomsburg. Market prices are: wheat, $1.25; potatoes, $1.40; butter, 45@50c; eggs, 36c; young chickens, 26c; old chickens, 24c—J. H. L., Sept. 12.

Indiana County, Pa.—Working conditions have been much better this season than last year, with plenty of rain but few times in excess. Hay was all put up in good condition. Wheat grew some in the shudder and was tough to thresh. Oats was difficult to get dried but is keeping well but did not turn out well for many farmers as the grain seemed to be dead so there is a very wide range in its yield. Ground has been plowed nearly for fall sowing, an average yield is being put out. Prices are as follows: wheat, $1.20; oats, 60c; dairy feeds, over $50; rye, $1; milk, $2.40 per hundred; $15; potatoes, $1.25; eggs, 35@40c. There were 20 persons from Indiana County who traveled with the potato growers over Pennsylvania last month. Everyone excited about the election.—H. A. N., Sept. 12.

Lehigh County, (Upper) Pa.—The grass fields have an exceptionally fine stand and look excellent. The oat harvest was the best in many years. The straw was very long and very well headed. Wheat and rye are threshing very good per sheaf. The yield per acre is also much better than expected. The potato crop in general is not what was expected. The yield in general will be lower than for years. Rot has set in and this still may reduce the yield greatly. Sprayed fields are green yet while unsprayed fields have been dead for two weeks. Apples are very scarce, peaches, and especially pears, a good crop. The country schools opened last Monday and some this Monday, September 12, for another eight-month term. The attendance seemed very good in most places. The number of pupils entering high school from these rural sections is increasing yearly. Prices: wheat, $1.20; rye $1, corn, $1; oats, 65c; butter, 46c; eggs, 40c. Fruits of most kinds high and scarce.—G. J. R., Sept. 12.

Mifflin County, Pa.—Weather very warm with light showers. Ground dry and hard for plowing. Farmers are busy hauling fertilizer and seeding ground that was plowed early. Threshing is in full blast which will be a short job as there is only half an average crop of wheat and oats. Corn is coming on nicely but most of it will need four weeks yet to mature. Early potatoes were good but the late planting hurt with blight. Pasture is still good. Some alfalfa hay is being made at this time. Cider making has begun which will likely be a light job. Markets: wheat, $1.25; corn, $1.20; oats, 60c; butter, 50c; eggs, 30c; lard, 20c; chickens, 22c; hand-picked apples, $1; potatoes, $1.50.—J. H. B., Sept. 15.

Montgomery County, Pa.—The harvest is now over and in spite of a lot of dire forebodings very good yields are reported. The hay crop was the best for many years, wheat, altho not as good as last year, was good; many yields of 30 bushels were reported. Oats was also very good. Stinking smut is causing a lot of trouble in wheat. Some feed dealers are putting in machinery to treat seed wheat. Corn will be below normal, but is coming along wonderfully and barring an early frost will have a fair crop. The Montgomery County Fair, held at Hatfield was bigger and better than ever, altho rain marred the attendance two days. Montgomery County Pomona Grange met at Center Square, September 1st. Prices: wheat, $1.25; oats, 70c; poultry, 25@30c; eggs, 45c. Truck crops are plentiful and bring a good price.—C. N. D., Sept. 12.

Passaic County, N. J.—The weather for the past month has been very cool and wet. Fruit has a very poor flavor and all the vegetables show the effects of the weather. On September 1 there was a very heavy rain and the Passaic River overflowed its banks. Any one who had crops in land adjoining the river banks lost them. The markets are fair, quite a lot of produce coming in with the demand and prices good for this time of year. Beets and carrots are rather scarce with the price ranging from 5c to 8c per bunch, and carrots $1.25 per bu. Cabbage still rather a drag at $1 per bbl., celery showing the effects of the wet weather is bringing $1.25@1.50 per doz. for hearts. Peaches are very plentiful with the price about 75c per basket for good stock. The only grapes in market as yet are the early varieties which have a fair demand. Apples are rather a drag, bringing 50@75c per 15-qt basket. Tomatoes from 50c to $1. Beans, both wax and green, around $3.25 and corn is bringing from $3 to $4 per 100, some bringing more on some mornings.—N. D., Sept. 12.

Potter County, Pa.—We have had excellent weather for harvesting grain. Threshing has begun while many late-sown fields are just beginning to ripen. Some buckwheat and corn has made much good. Thirty-two bush that I is lodging badly. Lack of rainfall has lowered the water supply and injured pastures. Bees have not done well this season due to cold, wet weather in early summer. Little honey stored and a few worth-while swarms resulted. In this section few reports in regard to T. B. test were found. Potato blight increasing. Deer increasing in number, two came very near our house recently. A good supply of fall pigs reported. Prices: eggs, 36c; cheese, 25c; butter, 50c; honey, 25@30c; potatoes, $1.35 bu.—M. C. S., Sept. 10.

Tioga County, Pa.—The weather for the past month has been dry with only occasional showers. The ground is too dry for plowing. Nights cool and greater part of days the same. Most of the oats are cut and some of them threshed. Buckwheat cutting just beginning. Corn has improved a great deal in the past month, seems better in northern part of the county than elsewhere. A series of corn borer meetings have been held thruout the county by County Agent P. E. Korb and Mr. Hotchkiss, of State College. One of these was held in connection with the Dairymen's League sub-district meeting at Austinburg, September 7th. The Wellsboro Cow Testing Association passed a resolution to begin clean-up work at once in order to prevent the corn borer getting a foothold. Practically every delegate at the sub-district meeting reported that the prospects for a larger flow of milk in their territory this fall are good. There is little call for hay and the price is $8. Eggs, 35c.—F. W. L., Sept. 13.

Wyoming County, Pa.—After a continuous rain for nearly a week, the weather has been very favorable for harvesting oats and ripening corn. The corn crop is rather poor this year, but most everyone had more hay than they could get in their barns. The oat crop is also good. The potato fields have been filled with the late blight. There will be only a half crop of apples which will sell from $1 to $2 a bushel. Potatoes, $1.25@1.75; eggs around 40@50c.—J. J. J., Sept. 12.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

WHEN I was a boy we had a red plush-covered family album that was kept on a gilded table with a marble top. A tall ornamental parlor lamp with a globular shade painted with red roses stood on the same table. I remember the tintypes, the funny hats and dresses, the flowing beards and mustaches and the odd cut suits. A few nights ago I was looking over an album of snap-shots taken while I was in high school and again I was struck with the long full dresses, the wide hats and the odd cut of the suits. I suppose they will look even funnier to my boys about fifteen years from now.

This all goes to prove that styles are changing and will in all probability continue to change. Many large clothing houses have style scouts in the fashion centers of the world that report the latest changes and style trends so that the manufacturers may be prepared. Style was hard on the ostrich plume and textile business but it was a stroke of fortune for silk hosiery mills, manufacturers of galoshes and yellow slickers.

The fruit and vegetable business is changing and styles of marketing farm produce are shifting. Just as the manufacturer finds it profitable to keep in touch with the style centers of the world, so will the grower profit by keeping in touch with his markets and studying what they want. Not so many years ago the potato crop was generally marketed in bulk. Then came the 165-pound sack, later the 150 and during recent years the preference for the 120-pound sack is becoming more pronounced.

Dealers and buyers claim that the 150-pound sack is too heavy to be handled conveniently and that they prefer the lighter one. Last season potatoes of the same quality in 120-pound sacks sold at relatively higher prices than the 150's and also sold more readily. I notice this season that a good many potatoes are arriving in 90- to 105-pound sacks which shows that an even lighter sack may prove popular.

Sacks Prove More Popular

The winter cabbage crop has been marketed in bulk for many years with the exception of smaller lots that have been packed in baskets or barrels. Last year some New York State growers started to pack their best cabbage in 100-pound sacks and ship it to Philadelphia. This proved very popular with the buyers and they generally paid a substantial premium over bulk stock. I believe that this practice will increase, especially during cold weather. A few soft, decayed heads in a sack, however, would spot the sacks and probably cause greater discounts than if an even larger proportion was scattered thru a car of bulk stock.

Onions were formerly shipped loose in cars but this practice has been almost entirely discontinued. The sack and the crate are used most extensively. A special sack has been devised that is strong, yet very coarsely woven, so that the buyers can see the onions thru its meshes. It is more attractive than the regular burlap sack and dealers and growers claim that it aids in selling the stock.

Apples Dressed up in Paper

Apples are another product that has been dressed up in new containers and fancy paper. There is a trend away from the barrel as a container for apples and an increasing use of boxes and bushel baskets. The barrel has its advantages but the smaller package is becoming more popular. The new style bushel baskets are more rigid and the new packing devices enable the grower to put up a more attractive package. Even the paper is not just for looks but aids in preventing scald in storage. Box packing of eastern apples is increasing and some growers are putting up a pack that compares favorably with the western pack. It is likely that this trend will continue for it seems to be what buyers want.

Even carrots, beets and turnips are being dressed up. They formerly were dug, stored and marketed without washing. Now they are scrubbed until they shine and carefully graded and packed in baskets. Some growers who grow these root crops extensively have installed motor-driven washing machines to clean them.

The chief difference between the clothing industry and the fruit and vegetable industry in this matter of style is that in the clothing business every one must follow the changes as soon as they occur or go bankrupt. In the fruit and vegetable industry the change is more gradual but the man who is prepared will profit.

Snakes Develop Rattles by Shedding Skin

FOREST Ranger Howard P. Seese, of the Sproul State Forest District, with headquarters at Renova, Pa., reports that he has been collecting all the rattles from rattlesnakes that he killed during the past six years, and joined them together, with the result that he now has a string of rattles seven feet in length. Ranger Seese says that the superstition that a rattlesnake acquires a new ring every year is incorrect, as they add from two to four rings each year.

Investigations have shown that a young rattlesnake is provided with a single button at birth, and within a few days it sheds its skin and commences feeding. In about two months it sheds its skin for the second time and then the first ring of the rattle is uncovered or added. This has been growing under the old skin, as its presence was apparent in the swollen appearance of the tail at the base of the original button. The last seven or eight vertebrae fuse together shortly after birth and form a composite bone known as the "shaker" and it is around this bone that each cap or ring of the rattle forms.

All of our snakes have the habit of shedding their skin one or more times during the year. The shed skin usually comes off entirely so that from head to tail it forms but a single piece of very thin transparent material and is generally turned inside out. That part of the skin which covers the cap on the tail cannot be shed on account of its peculiar shape. At the time the skin is shed, however, it is loosened and dislodged from its place and moves backward to become an additional ring on the rattle. Thus the rattle of the rattlesnake is simply a series of shed caps or rings which are held together mechanically and loosely because of their shape. The rattles seldom number more than ten rings, because the vibration at the tip is so great that the terminal rings are soon worn down or broken off. The idea that rattlesnakes cannot rattle after swimming or from being in wet grass or rain storms, is incorrect.—Penna. Dept. of Forests and Waters News Letter.

Batteries that won't die young!

For every make of plant

You can have plenty of lights and plenty of power—all the convenience your light plant was built to give—if you give it strong dependable Universal "Nu-Seal" Batteries to work with.

Less care—long life

Big sediment space, viable charging gauge, extra thick plates, fewer fillings—all this saves you trouble, insures long life. "Nu-Seals" cost you no more now and much less in the long run.

For EVERY plant

These batteries—the *original* sealed glass cells—are made in every size and capacity for every light plant ever sold!—Yours! Any!

Battery Guide FREE

Big free book that tells you how to care for all batteries. We make farm light, radio and auto batteries for *every purpose*—this book gives you our expert advice. Send for it. And remember there's a good trade-in allowance on your worn-out batteries. Ask for it—today!

Establish the Record Horse-Pull

A PAIR of grade Belgian brood mares, owned by Clarence M. Wilkey, of Connellsville, Pa., established a new state horse-pulling record at the Dawson Fair recently. They pulled 3000 pounds on the drawbar the full required distance of 27½ feet. This team weighing 3505 pounds was driven by C. B. Wilkey. Both mares are with foal and made 13 pulls during the afternoon. When they made the championship effort the mares still were not forced to extend themselves.

The record broken at Dawson was 2975 pounds made by a 3335-pound team of grade Percherons, owned by R. A. Grimes, Duke Center, at the Smethport Fair the previous week. This team in establishing the new mark topped by 25 pounds tractive pull the record established at Wattsburg the same week by a 3466-pound pair of grade Percherons, owned by Corry Fur Farm and driven by Glenn Wynn. At the beginning of this season the best state pull by a team of over 3000 pounds weight was 2925 pounds by a Cook-Anderson Lumber Company team at the Beaver Fair last fall.

Find Stale Bread Makes Good Hog Feed

AN ANALYSIS of the stale bread and cracker waste indicated the by-products to be high in carbohydrate content, hence, the use for fattening swine and as a substitute for corn or barley seemed logical. In the tests thus far conducted stale bread and cracker waste has been supplemented with tankage or fishmeal to form a fattening ration for hogs. The ability of both of these materials to replace corn has been quite satisfactory from the angle of gain producing capacity. Likewise, the cost of gain per hundredweight was practical when the price of by-products was in line with that of corn. For example, when corn sold at one dollar per bushel, the stale bread was worth approximately forty dollars per ton as hog feed. The proportion of the mixture fed was twelve of by-product to one of the supplement.

In order to overcome certain dietetic difficulties it seems advisable to supply a mineral mixture as well as pasture in summer or oil meal when animals are in dry lot. Also the feeds should be soaked shortly before time of feeding.

These by-products appear to be palatable to the animals when fed in accordance with suggestions here made and the resultant carcasses are acceptable in every way to the trade.

Whenever by-products or waste materials find a place in animal feeding, both manufacturer and livestock producer benefit. To the former a saving is effected, while the latter thru enlarging the range of available feeds can more efficiently fill the pork barrel.—M. F. Grimes.

He Was a Leader

THE first tractor in Morrison County, Minnesota, was operated by Charles Lindbergh, according to neighbors near Little Falls. This conqueror of the air not only had the first tractor, but owned the first milking machine in his county.

Appreciation

Artist—By the way, Cooper, I'm going to paint your cottage tomorrow.

Cooper—Thank you kindly, sir. I'll bring you a ladder.

Mr. Snyder Raised Lancaster County's First Ton Litter

THE picture shows the first ton litter of hogs raised in Lancaster County this year. The man on the job is C. B. Snyder, of Willow Spring Farm, near Clay. The nine pigs in the litter in 180 days from birth weighed 2304 pounds.

The dam of this litter of pigs is a purebred Hampshire and the sire is a purebred Poland-China. This is the sow's second litter.

The Ohio, Poland-China record book, shows Mr. Snyder purchased his first purebred Poland-China sow, "Celia Wilton" No. 98130, in 1897. He has been breeding purebred Poland-Chinas ever since. This record shows he is the oldest continuous breeder of Poland-Chinas in Lancaster County.

Two years ago he produced a litter of ten purebred Poland-China pigs in 180 days that weighed 2251 pounds. The above cross of Hampshire and Poland-China has produced a heavier litter with nine pigs, in the same time.

The feed fed was 2700 pounds of oats chop, 2835 pounds of corn, 700 pounds of middlings, and 1025 pounds of tankage, at a total cost of $168.76. The market value of the hogs at the time of weighing was $264.51, leaving a profit of $95.75.

Mr. Snyder followed the McLean system of hog sanitation to start his hogs free from worm infestation. He cleaned the farrowing pen thoroly, then scrubbed it with boiling water and lye. Then washed the sow off with warm water containing disinfectant before he put her into pen to farrow.

Besides raising hogs, Mr. Snyder grows Lancaster Sure Crop seed corn, Forward seed wheat and some of the finest apples in Lancaster County. Last year he took more prizes on apples at the State Products Show than any other man from his county.—M. S. S.

When You buy a gun

A good gun is always the pride of the man who likes hunting—the greatest of all outdoor sports. When you buy a new one you undoubtedly plan to use it for many seasons. Therefore, you want to get just exactly the right sort of a gun, one that feels right, acts right and is thoroughly dependable and an accurate shooter.

The only possible way to be sure of these things is to buy from your local dealer so that you may have the privilege of handling and studying it at your leisure before you buy it. That is why the most particular hunters buy their guns at these "tag" stores.

Ammunition
and Camping Needs

You are always welcome to visit the sporting goods department of the "Farm Service" Hardware Stores and examine their stock of guns and other sporting goods. It is the best place to buy fresh ammunition, gun cleaners, hunting knives, cartridge belts and all the other accessories that add to your sport. Make your local "Farm Service" Hardware Store your "gun store."

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column, when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW FAILS TO BREED.—Sometime ago I wrote the veterinary column for advice on a cow failing to breed and got a receipt containing nux vomica and something else. I used it with good results but have since lost it. Am wondering if you can find it and either send it to me or print it in the veterinary column. H. B., Fish's Eddy, N. Y. The prescription mentioned may be apparently valuable in some cases but the greatest value comes thru an examination of the animal by a graduate veterinarian. It is probable that there is some abnormal condition of the reproductive organs and this can be most surely relieved following an examination. Nux vomica and gentian would act as a tonic and improve the physical condition of the cow.

SORE SHOULDERS.—Will you kindly tell me the number of parts to be used in making a good healing mixture of lead and boric acid for horses' sore shoulders? What would be a good mixture for cows with sore navels?—R. L. W., Chambersburg, Pa. Two ounces each of lead acetate and zinc sulphate in one pint of water may be used to advantage. Boric acid is usually applied dry. Cows with sore navels should be well bedded so as to keep the parts dry. Apply boric acid powder or equal parts of boric acid and tannic acid powder.

No Regrets

A hardware dealer was asked by a lazy employe, whom he had fired, for a recommendation. He thought for a moment and then wrote as follows:

"The bearer of this letter is leaving me after one month's work. I am perfectly satisfied."

"How are you getting on at your job, Bill?"

"Fine. I've got five men under me now."

"Really?"

"Yes; I work upstairs."

Smarty—Seen our new delivery truck? It has five wheels.

Traveling Salesman—Good heavens! What's the fifth for?

Smarty—To steer with, bonehead! To steer with!

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions; 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising may run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

Send for this new book *now*. Learn how Kalamazoo gives you 30 days **FREE** trial in your own home and 360 days approval test on anything you purchase. Read how Kalamazoo is saving over $1,000,000 yearly for Kalamazoo customers.

200 Styles and Sizes

No matter what you are interested in—gas stoves, coal and wood ranges, combination gas and coal ranges, oil stoves, heating stoves or furnaces (pipe or one-register type)—you will find here exactly what you want. Mail coupon today.

24-Hour Service--Safe Delivery Guaranteed

Send for this book! See how close Kalamazoo is to you—24 hours shipping service saves you time. Kalamazoo goods are carefully packed to arrive safely. Safe delivery is absolutely guaranteed.

Quality First—Values Unexcelled

Kalamazoo values cannot be equalled anywhere. When you buy from Kalamazoo you buy direct from manufacturer. There is nothing between you and our factory—but the railroad tracks. We are not a mail order house that collects a variety of merchandise from scores of factories to sell by mail—we are *specialized* manufacturers, making Kalamazoo stoves, ranges and furnaces complete in our own highly modernized factory and shipping direct to you, thus eliminating any other manufacturer or middleman of any kind. We build in large quantities. You get better quality at lower prices from a factory whose sole interest is making stoves, ranges and furnaces than elsewhere. This new catalog proves it. Fill out coupon for your copy.

Cash or Easy Terms

This **FREE** book quotes you easy terms that are truly amazing—many as low as $3 down and $3 monthly. Nowhere in the world can you get such value, such service as Kalamazoo now offers. This new book shows you why this big 13-acre factory, now in its 26th year, is a national institution.

Free Furnace Plans

This new **FREE** book tells you how you make a double saving on Kalamazoo furnaces. First, it saves you 1-3 to 1-2 on the price of the furnace itself. Secondly, it illustrates how you save the cost of installation by following Kalamazoo **FREE** plans and **FREE** service. Thousands of Kalamazoo owners have put up their furnaces themselves.

Beautiful Porcelain Enamel Ranges

Everywhere now porcelain enamel ranges are in demand. See these Kalamazoo ranges in Delft blue and pearl gray—bright, colorful, glistening clean—as easy to clean as a china dish. *Check and Mail Coupon Today!*

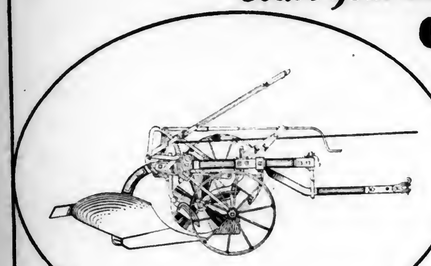
There is no trouble finding a market for these apples

One farmer who did not go bankrupt as his friends prophesied. How reforestation saved the water supply on a farm. Page 3.

Don't wait until next Spring

Start Your Battle Against the CORN BORER NOW!



The Oliver No. 134XX Big Base Corn Borer Plow shown above is built to operate with any standard tractor. The No. 3AXX pictured below is designed special for the Fordson. The Oliver Big Base Plow is also furnished for use with horses.

Right now is the time to start your fight against the Borer. Experts agree that to control the Borer ordinary plowing will not do the trick. Your plowing must be clean—absolutely clean. If you leave trash uncovered it will not only protect the Borer this winter, but it may be necessary to hand-pick this trash next spring and burn it before your clean-up will be complete.

But you need not worry about a complete clean-up if you use an Oliver Big Base Plow this fall. It buries all trash. Your ground will be in ideal condition for oats, corn and other crops next spring. There is no other plow like the Oliver Big Base Plow. Its work is a revelation to farmers who own it—and to their neighbors who see it work.

Select your heaviest growth of stalks and let us show you how this Plow will completely bury them, and do clean-up work that will pass the most rigid inspection. Whether you are in the infested area or not you should be using one of these Big Base Plows. It means cleaner plowing, fewer weeds and better farming.

See the Oliver Big Base Plow your Oliver Dealer has on display and arrange for a demonstration in your heaviest growth of stalks and trash—the heavier the growth the better for this plow.

LEADCLAD FARM FENCE

Ed Scott's prize bull got away again. This time over in Ace Kline's lot. If Ed would put up a good, stout fence, that would last, he wouldn't get into so much hot water with his stock.

Leadclad fences stay good and turn stock long after ordinary fences are rusted and gone. It's the heavy, Pure Lead Coating that does the trick. That's why they last so long.

Write now for a catalog and prices.

Weeds Cause Loss of $2.50 Per Acre

"IF FARMERS realized that weeds were causing them annually a loss of about $2.50 per acre, they would no doubt give the cutting of weeds more attention and would try to make their eradication a concerted community problem," says Dr. E. M. Gress, state botanist.

"Almost appalling" is the way he describes the growth of noxious weeds, after a field survey made during early September in connection with the enforcement of the Pennsylvania seed law in Berks, Montgomery, Bucks, Lehigh and part of Lancaster Counties.

"There is a state law against chicory and Canada thistle, the enforcement of which is charged to the local authorities, so that any one aggrieved or about to be injured should become familiar with the provisions of the law and see to it that they are carried out. A copy of the law may be secured by writing the Department of Agriculture, Harrisburg, Pa.

"Among the other weeds that are causing tremendous loss to the farmers in the counties named are: Pennsylvania smartweed, Canada thistle, horse nettle and wild carrot. In the lower grounds some of the fields are almost covered with a growth of asters, goldenrod, wild sunflowers and ragweeds."

Made Farm Manager

DR. CHARLES F. NOLL has been appointed superintendent of the farms at Pennsylvania State College to take the place of C. L. Goodling who was farm superintendent for the past 17 years. Mr. Goodling left last May to become director of the National Farm School at Doylestown.

Doctor Noll a few years ago developed the now famous Pennsylvania 44 wheat. Along with the duties of farm superintendent he will continue in charge of the experimental work in agronomy.

He Saves on Fuel Oil

THE motor truck pays dividends on the big fruit farm of Wesley Brown, Glassboro, New Jersey. On days it is not busy hauling fruit to market, Mr. Brown sends it over to the oil plant for a load of oil for the many engines used about the farm.

By going to the plant, a saving of three cents a gallon on the oil is secured. Fuel oil, gasoline and kerosene are all used in large amounts on this 230-acre farm. Mr. Brown also operates a 115,000-bushel cold storage plant with fuel oil. Two tanks holding 700 gallons apiece were bought and mounted on skids. The trucks are all flat bodies and these tanks are easily rolled into the trucks when a load of oil is needed. A small platform was built on a level with the bottom of the truck which makes loading and unloading a very simple matter.

Two loads of oil a day can be hauled by the truck and placed in the big 10,000-gallon fuel oil tank adjoining the storage house. By having the two tanks a mixed load of oil is frequently hauled in the busy season.

A saving of $84 for the day's work is secured by utilizing the truck for hauling oil. This work is usually done on days when there is little to do on the farm and the only expense is the operation of the truck, as the driver would possibly not be at work during this time.

Mr. Brown has found, with a dozen engines using oil, that this saving of over $80 in one day with the truck is an item worth considering in these days of low-priced fruit and farm products.—A. K.

Salesman—If you buy this car, we'll put your initials on free.

Prospect—Oh, it's not the initial cost I'm worried about. It's the upkeep.

He Practices What He Preaches

This Man Did Not Starve on the Home Farm—He Fooled His Friends

By THOS. H. WITTKORN

Mr. Charles Preston

CHARLIE PRESTON has fooled them. You will recall he served four years as Chester County's first county agent, starting in 1913 and then was called back to State College as assistant state leader of county agents. Then he suddenly gave up these so-called "easy jobs" and went back to make his living on the old home place.

Many and many were the predictions made at that time that Charlie would starve to death, be sold out by the sheriff or something of the kind in anywhere from one to three years just according to the fertility of the farm of the man who was doing the talking. He is still there, however, and has known what it is to take in more than $10,000 in a year for his products.

They Judged the Land

The mistake these prophets made was in looking merely at the land instead of the man on it. What matters it if his 200 acres are located in a section of Lancaster County, Little Britain Township, which is not noted for an abundance of rich farms as are some others of the "Garden Spot." His father had raised and educated five children there, sending three of them thru college by a combination of sheep, hay and wheat. His grandfather lived there before that, so why not I, thought Charlie.

He knew the old system of farming the place would not work today so he tried steers but after two disastrous years with them he put on a small grade herd of tested Holsteins. His three big moneymakers, however, are mushrooms, poultry and potatoes. The mushrooms help him distribute his labor thruout the year and his two houses with 20 beds, each five and a half feet wide and 60 feet long, make plenty of work.

Charles Preston returned to the old home farm to live. He now raises poultry, mushrooms and potatoes which are his moneymakers.

Poultry has never failed to make a profit for him. Several years he has sold $3000 worth of eggs and market birds. No breeding stock is kept but every year 500 chicks and 800 eggs are bought from a prominent White Leghorn breeder. The flock is culled very closely and since starting in 1922 he has had from 350 to 400 pullets each winter which have netted a good profit.

Sanitation, Charlie told me, is the biggest thing in his opinion, after having the right stock, of course, to make or break poultry profits. Before his pullets are placed in their winter quarters the houses are thoroly cleaned, washed with scalding water and lye, sprayed with a strong disinfectant and each bird greased with blue ointment to control lice.

He Changed Feeding Systems

This year a system of all dry mash feeding was tried because of its labor-saving possibilities. Up to the time I was there, September 1, it had worked remarkably well. The birds had had nothing but dry mash and water to eat while growing on their alfalfa range and had made such good progress that all the cockerels had been sold by August 15 whereas last year some (to page 25)

One Summer the Spring Went Dry

By Practicing Reforestation They Brought Back the Water Supply

By C. R. ANDERSON

YES, water everywhere but where you want it, and when you need it. The farmer seldom appreciates the boon of never-failing spring and well until they go dry, whereupon he hauls barrels and barrels of it, and drives cattle a mile twice a day, over dusty roads, that they may get a half-way satisfying chance at a thin trickle in a rocky creek bed.

A few years after the new century came in, Andrew Abraczinsky and his wife bought a farm in southern Columbia County, Pennsylvania. Among other advantages, it had an excellent spring of water near the house, in addition to a fine well at the house and one at the barn. They were assured there would never be a shortage of water for all ordinary uses in average years. These passing seasons seemed to bear this out, as season after season, spring and wells met all demands made upon them.

There's Something Wrong Here

All went well until at last there came a season when trouble arose. For some reason or other there was less water. "Perhaps," said Andrew, "there's something wrong here we can't see. We'll worry along thru this and hope it won't come again." But his hope was a "hope" and nothing else. The next season was no better and the next was just as bad. It began to look as tho late summer would always mean a lack of water for the Abraczinsky family.

What had happened? Just this! Back of the farm buildings there rose a fairly steep, long hill belonging to a neighbor. Two generations earlier it had been cleared and farmed. But it was steep, it was naturally thin soil, and gradually it had been abandoned, until at the time the new family moved in at the foot of the hill, it was well covered with young pine trees seeded in from nearby woods.

One winter the owner of the hill decided that his land had lain idle long enough, so he set to work, cut the trees, pulled the stumps, and planted a crop of buckwheat. This very year is the same as that in which the family at the foot of the hill had their first difficulty with their flow of water.

The farmer and some of the fifty thousand young forest trees he has planted

That fall, after harvesting his buckwheat, the owner planted a crop of rye on the hillside. The rye was the last crop planted. After it was harvested, the land was again abandoned to come up to weeds and finally a thin growth of grass. As the grassy cover on the hill increased, the water supply at the foot gave less trouble. But still the supply was irregular in the late summer.

Trees Conserved Water for Well

In 1916, four seasons after the land was last cropped, Andrew Abraczinsky bought the farm of which the hill was a part. The next year he set the entire hill closely with young forest trees, hoping to solve for some time to come, his water supply problem. Today the entire hill is covered with trees whose tops are so woven together that the admiring visitor makes his way thru with difficulty.

The rain drops which would otherwise hammer the soil are broken in their fall by needle, twig, branch and tree trunk, by one or by all, so that they fall lightly upon the litter of old needles and tiny twigs beneath. The tree with all its parts shades the soil below so that the pulling effect of the sun's rays is not so great upon the moisture underneath; that winter snows and summer rains remain available longer. Ever notice how much longer snow lies in the shade of a forest than in the open? Snows often lie ten days longer on areas covered by dense evergreen forests and may exceed that. This area (to page 17)

"A pessimist is a man who has his choice of two evils and chooses both."

Comments on the Week's News

A GOOD sized tempest in a teapot was started recently in the publication of an article written by Admiral Magruder in which he criticized the navy and its management. Of course, anything which smacks of criticism could not be expected to pass unnoticed by so bureaucratic an organization as the navy department, and Admiral Magruder would, no doubt, have been hauled on the carpet had not the article met the popular approval of so great a number of the people. Among the criticisms were the intimations that the navy was over-officered, and that the public is paying about $300,000,000 for $200,000,000 worth of navy.

✦ ✦ ✦

After a steady decline for over two years commodity prices showed an upward trend in August,—commodities meaning such things as farm products, foods, clothing materials, metals, cattle feed and leather. There was a noticeable decline in such things as building materials and chemicals. What are called the industrial groups are voicing the hopes that the change in trend of the class products may not be permanent, but that food may again decline and manufactured products begin an upward swing. Personal profit rather than justice is always the chief desire of humanity.

✦ ✦ ✦

Altho the presidential nominating conventions are less than a year away, there seem to be few, if any, outstanding possibilities. Since McAdoo stated his decision not to be a candidate, the only recognized Democratic man whose willingness is taken for granted is Governor Al Smith, of New York. If the present division in that party continues, and it bids fair to do so, we may expect a repetition of the 1924 fiasco when that convention meets. Some of the most conservative of the Republican leaders would like to have Mr. Hughes run, but he is not willing. Secretary Hoover is being pushed in many quarters as the most able possibility, but some of the Old Guard have no love for him. In the agricultural sections ex-Governor Lowden and Vice President Dawes are popular, with Lowden a real prospect.

✦ ✦ ✦

One of the ever asked and never answered questions among farmers is, "Why do valuations of property of apparently the same worth vary so on the assessor's list?" "Do personal friendships, relationship or politics have anything to do with it?" No doubt the second question suggests the answer in a good many cases. All investigations show that there is a wide and unexplained variation in the valuation of real estate, even when both or all have the same intrinsic value. Isn't it time to look for some better and more equitable method of arriving at the value of taxable property? One reader suggests that the work of assessing be left to three or five of certain other township officers. This, at least, would eliminate the one-man feature.

✦ ✦ ✦

There is more than one law that is hard to enforce, or that is laxly enforced. One of them is the dog law. The same cause for laxity operates in nearly all cases, viz., the unwillingness of local officers to proceed as the laws directs, and the timidity of citizens about making information. During the first seven months of this year 233 persons and 634 animals were bitten by mad dogs in Pennsylvania, most of which would not have happened if the state's dog law had been observed and enforced. It is unlawful to allow a dog to run at large, yet dog owners in many sections make no pretense of observing the law. The payment of a dog tax carries with it no liberty to let a dog leave the owner's premises unless it is on leash.

✦ ✦ ✦

Daniel Dean, the well-known potato grower of New York State, writes to say he thinks the remarks in the quoted article on page 279 which intimates that the crop of potatoes is so large that prices may be ruinously low are misleading. Mr. Dean keeps in close touch with the national potato situation and is of the belief that the final yield will not be much, if any, above that of last year. He finds that the prospects have gone back badly in the last six weeks. We infer from his letter that growers will do well not to rush their potatoes to market in such quantities as to break the market.

✦ ✦ ✦

"In what is the public most interested?" This is a question which editors are continually asking themselves. If the front pages of the newspapers may be taken as an indication that they have found the answer, then the public is more interested in marital infidelity, murder, prize fights and baseball than in anything else. Is that true? Probably most people would deny it if asked point blank whether their minds prefer to be fed on this class of news, yet the testimony of editors as a class intimates that the common mind of the public prefers that which is sensational rather than that which is elevating.

Shall Farmers Form a Trust?

THIS seems to be an age of trust making, instead of trust-busting,—the national sport a few years ago. Never before has there been such a tendency to form big corporations, mergers, amalgamations, etc. Even farmers in some sections are beginning to talk and act along these lines. In one section of the Middle West, three wheat farmers have formed a corporation and pooled their land and interests to the extent of $150,000. Their farms will be operated as a unit under one management and their crops sold thru a selling agency. The losses due to wet weather this year and the inability to get threshing done at a seasonable time, they say, drove them to consider some way by which their business would be big enough to be independent of transient labor and custom work.

A well-known economist said recently that agriculture must follow the course outlined by big business if it would make a similar success. He said that manufacture and industry were not notably successful until the practice of bringing capital and equipment together in big amounts under competent management was begun. Such a step in agriculture would be a radical move. It would mean a complete over-turning of all traditions in farming. Can it be done? And, what is still more important, should it be done?

Farm Conditions Improved

THE October report of the Bureau of Agricultural Economics shows a definite step upward in the agricultural situation. The index of the purchasing power of farm products is now 88, whereas, it was 83 at the same time last year. The animal industries are said to be in the most favorable position they have enjoyed in ten years, while cotton and fruits promise to return much more money than last year because of lesser yields. The prospects of a short corn crop will undoubtedly send many light hogs to market, and will probably act towards reducing the number of breeding sows kept over winter. The indications are that the potato crop will not reach the estimate made a few weeks ago.

Prophets Get Their Due

CLOSE observers with good memories are making much just now of the predictions of a couple of long-range weather forecasters who, two years ago, prophesied an abnormally wet season in 1926, and an unusually cold, calamitous year in 1927. Their prophesies have been verified and people are saying that there must be something in the methods by which they foretell weather. We are chirked up greatly to know that their evil prophesies referred to the past and passing years, and that there is nothing from them as yet about 1928. May their tidings concerning the future be such as to cheer the discouraged!

Is the Barberry Guilty?

FOR several years there has been a strenuous warfare carried on in the wheat-growing sections for the purpose of eradicating the common barberry. The scientists have told us that the spores of the destructive rust on wheat are carried over on the foliage of the barberry and that the only relief possible was in the banishment of that shrub. But the rust was exceedingly bad in sections of the spring wheat belt this year, even where the barberry was apparently non-existent. The Dakota Farmer says:

". . . Survey after survey has been conducted; sites of destroyed plants have been repeatedly visited to insure that sprouts meet with death. But rust conditions of the present season rather strongly indicate that faith has been misplaced; that the elimination of the barberry does not reduce the possibility of rust invasion, or that our barberry hunters have poor eyesight. We don't know the answer, but we do know that this was a rusty year."

We would not advise our readers to lessen their past efforts in the work of destroying the common barberry because of the question raised. We need further information on the subject and it is to be hoped that the scientists will continue their investigations, and not rest in the belief that their past conclusions were unquestionably final.

AIR SHIPPING POLICY

Do Not Want Bars Restored to Vessels Railroads Protest Lower Rates—Highways Are State Problem.

Washington, D. C.

A DEFINITE shipping policy will be provided for the passage of legislation during the coming session of Congress. This is the unanimous opinion of congressional leaders, but there is a marked difference of opinion as to what this policy should be.

One influential group in Congress insists that the government should sell all its Shipping Board lines to private interests and maintain a private-owned merchant marine by means of subsidies.

Another group led by Senator Fletcher favors continued and aggressive governmental operation of the merchant marine. This group is backing the Jones bill, which provides for government operation of a fleet and the establishment of a policy that will insure the United States a merchant marine that will carry American goods to foreign markets.

Prohibition Is Advantage

That prohibition is an advantage and not a disadvantage in the operation of passenger lines of the United States Shipping Board, is the settled conviction of General Dalton. On his return to Washington from a trip of inspection of American shipping facilities, he said: "Prohibition has had no effect on the passenger bookings of American vessels, despite statements to the contrary. Personally I would not approve restoring bars to American passenger vessels even if bars were authorized by law. It is my honest conviction that prohibition has not been detrimental and there are no longer scenes of drunkenness aboard these vessels. Young couples now patronize the dance floors on American ships, whereas when bars existed young men were prone to spend their time in them. Foreign passengers are patronizing Shipping Board Vessels in preference to their own country's ships."

Threaten Action on Freight Rate

The constitutionality of the Hoch-Smith resolution authorizing the Interstate Commerce Commission to take into consideration the depressed condition of agriculture in determining freight rates on farm products is questioned by the railroads. They threaten to bring a court test of the constitutionality of the resolution unless the Interstate Commerce Commission reverses its recent decision ordering reductions in freight rates on deciduous fruits from the Pacific Coast to eastern destinations.

This contemplated action of the railroads is held to be out of line with recent promises of the railroads to the farmers. During the World War the railroads were permitted to collect a sur-charge on Pullman fares. In recent Congresses bills have been introduced to abolish these sur-charges. In each instance the railroads have sent their lobbyists out among the farmers, using the argument that the farmers could not expect any reduction in freight rates on farm produce, if these bills were passed. They held out implied promises that they would be favorable to agriculture in rate making if the farmers would help them defeat the proposed measures. As a result of this propaganda, Congress was flooded with protests against the rate reduction bills.

Would Control Motor Service

That a powerful effort will be made when the 70th Congress meets to secure legislation placing the regulation of motor vehicle lines under the jurisdiction of the Interstate Commerce Commission is indicated by propaganda that is being circulated and speeches that are being made by representatives of interested parties in favor of such federal regulation.

The Interstate Commerce Commission has completed its investigations of motor transportation, and its report will be presented to Congress early this coming winter.

In his able statement on behalf of the National Grange in the matter of motor bus and motor truck transportation before the Interstate Commerce Commission last winter, Dr. T. C. Atkeson said the National Grange holds the view that highways are local and state instruments and not parts or instrumentalities of interstate commerce. Since the highways are outside of federal jurisdiction except for such limited jurisdiction as comes from the Post Roads clause in the Constitution, and since this conception seems to be thoroly grounded in both the Constitution and its court decisions, it follows that the Interstate Commerce Commission is without power to take control over them.—E. E. R.

WILL STORE EXHIBITS

Weeds Become Menace—Are Grading Roads—Arouse Sentiment for Municipal Control of Water Supply.

Harrisburg, Pa.

ACCORDING to reports arising here quite a few prize-winning exhibits at county fairs are to go into cold storage so they can be shown at the mid-winter farm products show. Arrangements have been made to take care of many exhibits and in addition specimens to be entered can be stored in Harrisburg as soon as harvested. One of the interesting advance statements about the show is that over $1500 has been offered for apple competition next January.

Beetle on Susquehanna

While the Japanese beetle has been spotted at numerous places along the Susquehanna River this year it is said there have been hardly any bugs seen on the western edge of the stream. Fears of appearance of the beetle in the Cumberland Valley have been heard from time to time. It is the intention of the state and federal authorities to make a check up of all reports of the beetle west of the Susquehanna.

State Has Own Weed

Pennsylvania has a weed named for itself which is accused of doing much damage and causing considerable loss in the southeastern agricultural counties, according to a statement issued at the Department of Agriculture. It is called Pennsylvania smartweed, a common one enough nuisance, but which has been ranking lately with the thistles and wild carrot. There have also been stories heard lately of wild asters becoming almost as much trouble as the chicory, whose blue flowers were widespread in late August. The state officials in addresses during the coming winter will emphasize the necessity of weed elimination and closer cultivation. Copies of the weed laws are to be sent to local authorities with a view to stimulating enforcement.

Starting Late

In spite of the season contractors awarded state road construction as the result of September bidding are starting work so they can get grading under way as far as possible before frost halts operations. In some of the eastern counties work will go on until snow flies and there is a heavy demand for labor in several sections.

No More Water Moves

The State Public Service Commission decision against certain water developments recently proposed has served to arouse considerable sentiment for municipal control here and there, if what comes here is correct. Pressing of several old established water companies to new control has apparently brought a fear of advances in rates and the next moves are being awaited with interest at the Capitol. In a limited way the absorption of water companies resembles what went on among electric companies a few years ago.

Costs Up to Courts

State Department of Agriculture attorneys in cases involving violation of laws relative to cattle, foods, dog licenses and the like are now asking judges in trials of such actions to dispose of the costs as in certain counties the juries did not mention costs and they were not imposed. State authorities hold the Commonwealth cannot be held liable in such cases.—T. C.

FAVOR NEW CRATE

Will Feature 24-pint Berry Crate —Grangers Meet—Late Frosts Reduce Cranberry Crops—Exhibit Poultry.

Trenton, N. J.

A MOVE is on foot in Atlantic County to feature a new 24-pint crate for raspberries next year. This new crate tried out quite extensively this season gave complete satisfaction. A smaller crate than the standard 60-pint crate is stimulating the buying of berries by small dealers who cannot find a market for the large crates without considerable loss. The crate is being advocated by the County Board of Agriculture as one of its major projects for 1928 in helping the growers to improve their marketing methods.

Grange Executives Meet

The executive committee of the New Jersey State Grange met at Atlantic City last week to discuss plans for the annual meeting in December, and the advisability of holding a special session in October to confer the sixth degree for the Monmouth County Pomona. The Monmouth Grange plans to hold the ceremonial at Asbury Park on October 12th. Action of the state executive committee was necessary before arrangements could be completed.—B.

Cranberry Crop Light

New Jersey is picking the lightest crop of cranberries in many years. The harvest has already started and reports indicate less than one-half of a crop for the state. What berries are to be had are of very high quality. Two late frosts at unexpected periods killed the crop. Prices are also very high. The association has priced the berries at $11 per barrel or a $2 increase over 1926 prices.

Boys and Girls Exhibit Poultry

The poultry exhibit for the boys' and girls' club members at Trenton Fair was the largest ever known. About 700 birds grown by boys and girls still in their early teens were displayed in this contest. This show contained 150 birds more than last year, double the year previous and six times the number entered in 1924.—A. K.

Here's a Flagpole Sitter Who Has Been Sitting Too Long

FARMERS ARE READERS.

Rural People Read More Than City People—Two Counties Have County Libraries—Take Baby Beef Prizes.

Ithaca, N. Y.

PROF. R. A. FELTON, of the New York State College of Agriculture, announces that a study of 179 average farm families of this state as to reading facilities shows that the average farmer takes six newspapers or periodicals. Sixty per cent of the reading of these families was newspapers, while 30 per cent consisted of agricultural papers, leaving 10 per cent for fiction periodicals. Prof. Felton, speaking before the New York State Library Association, said that as a rule country people read more than do city people, even tho there are fewer books and libraries available to rural folks. Ninety per cent of rural people without library service live in the open country or in villages of less than 2500 people. Only two counties have county libraries in operation, tho this system is endorsed as the best and of less cost. A typical county library service amounts to less than five cents a person annually. Leading farm organizations of this state have endorsed the county library plan.

Beefsteak $1.05 Pound, Alive

A New York 4-H Club boy, Harold Hamilton, of Millerton, had the grand champion baby beef steer at the Eastern States Exposition, an Aberdeen-Angus weighing more than 1000 pounds. It was sold at public auction on the Springfield Public Market at $1.05 a pound, live weight. The first prize steer in the light class at the exposition, also owned by a York State boy, Vincent Wright, of White Plains, was sold to the Roosevelt Hotel of New York at 55 cents a pound. Five other New York boys, all from Dutchess County, sold prize winners in this class. Seven prizes and a grand championship for seven entries in a class of 52 steers was the record for New York boys at this show.—M. G. F.

Kelly sales increase 57% in six months

FOR the first six months of this year the sales of Kelly-Springfield tires were 57% ahead of the figures for the corresponding months of last year.

There can be only one explanation for this astonishing showing. That explanation lies in the quality and the value that are being built into the Kelly product.

Car-owners have grown tire-wise. No tire company could show such a tremendous increase in business unless it had been able to demonstrate to tire buyers that it had something out of the ordinary to offer.

Kellys cost *no more* than a great many other makes of tires.

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS
BY R. P. KEESTER

WE WERE greatly surprised the other day at our roadside market to find so many people did not know anything about comb honey. At least four out of five customers that day had never seen honey in anything but a glass bottle, hence were of the opinion that bees made it in bulk, probably putting it in the bottles themselves. It seemed like teaching a kindergarten school to explain that honey in its natural state is eaten comb and all.

✦ ✦ ✦

NEXT to Golden Bantam sweet corn we find Stowell's Evergreen the most palatable. The ears are large and the grains are long. People who have been buying it since it appeared on our market want nothing else, except those who will eat nothing but Golden Bantam. Of course, the eating of a whole ear of Evergreen cannot be done as gracefully in company as can the more aristocratic Bantam. In other words, Golden Bantam is ideal for a society luncheon, while the Evergreen should be eaten in the privacy of the home circle.

✦ ✦ ✦

OUR grape crop is good, but not so large as last year. The demand promises to be far in excess of the supply. In spite of the cool, wet August the flavor of our grapes was never better, and there is a large percentage of perfect bunches. All but two of our grape vines are Concord, the grape that has held first place with the average grower ever since it was introduced. We have two vines of the Sheridan grape, a grape introduced a few years ago by the Geneva Experiment Station. It is a close rival of the Concord in many respects. We would like to have a larger variety, but scarcely know what to select.

✦ ✦ ✦

WE HAVE begun the addition to our poultry house, adding another twenty feet to its length. The house will then be forty feet long by sixteen feet wide. There will be a half-partition in the middle cutting the roosting quarters into two sections. This will be for the purpose of avoiding drafts over the roosts, as there is a greater movement of the air in a long room.

✦ ✦ ✦

FALL, practically and poetically, is with us again. The nights are long and cool, and the leaves have begun to turn from their summer green to the beautiful colorings which are the despair of the artists, but which Mother Nature produces so easily and so lavishly. There is a feeling comes with fall which is sweetly melancholic with me. It seems like the end of a perfect day, —like bidding a longing farewell to a departing friend.

But I must stop this here and now. Duty compels it, as the time has arrived when I must again go to the noisy, dingy courtroom and listen to the sordid tales of human weakness and greed. Why can't people love the great out-of-doors so much that they would turn a deaf ear to temptation when it comes, and thus stay out of jail?

Appropriate

The minister had undergone an operation for appendicitis. On the first Sunday after his return, he announced from the pulpit, "We will conclude by singing the hymn, 'Peace, Perfect Peace,' in the Appendix."

The bald man entered the drug store and asked for a bottle of hair-restorer.

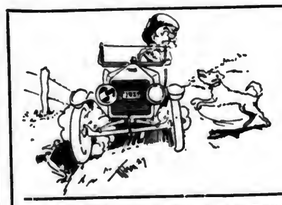
"Here is a preparation," the druggist said briskly, "that will grow hair on an eggshell."

"Right," replied the other. "I'll take a large bottle; and please wrap up a brush and comb, too."

Lots of things are awfully high, but I don't believe anything has gone up like the dime novel, some of which sell for $3.

"Do you have to see a doctor in this town before you can get booze?"

"No; afterwards."



The Cheerful Plowman

Car-Chasing Dogs

THAT dog of neighbor Jasper Pratt's must have his belfry full of bats, must have his attic full of rats! Why, every time I pass the place, with curling snarls and snapping face, he runs my car a merry chase! He comes a-roaring thru the fence and thru the pigweeds tall and dense as if he'd lost his tail or sense! With hair on end and eyes on fire, each jump a-vaulting high and higher, he plunges at my extra tire! He follows me a half a mile a-roaring louder all the while, I push the gas and watch the dial!

That dog's a nuisance, I would say, a nuisance forty times a day, a pest to drivers on the way! He frightens women, I suppose, and girls out riding with their beaux; Pratt's friends are changing into foes! I often wonder why that man persists in his asserted plan to keep that bow-wow black and tan! I wonder how, by all that's sane, that man can figure any gain in dogs that raise such Ned and Cain!

But, I have wondered more than that why neighbor Jasper Remus Pratt first let that bow-wow chew the fat! I cannot see why any jay who trains a pup from early day should ever let him be that way! The poor wild hound is not to blame when he cuts loose and shakes his frame with barker loose and eyes a-flame! The dog is loud and coarsely grained, his raucous howling he obtained by being sorely, badly trained! The dog's poor head is full of rats, his attic space is full of bats, but all the fault is Jasper Pratt's!—J. Edw. Tufft.

YOUR BARN IS FULL OF HARD-EARNED FEED

Will you cash in on it?

TIME, money, and potential profit are tied up in your full hay mows, the corn in your silo, the home-grown grain in your bins. Your hope is to get back what you have put in, and make a profit.

Fed, straight, to your cows, your home-grown feeds will not return what they cost you, even with milk at a high price. Fed with the right purchased concentrates you can make money not only on your investment in purchased feed, but—what is even more important—on your home-grown stuff.

No single ingredient will add to your home-grown feeds all the qualities which you must have to maintain your cows in good flesh and get the last ounce of production from them on a profitable basis. What you require is a mixture of feeds which, when fed with your home-grown stuff, will use it to advantage and still give your cows a ration that is palatable, highly digestible, balanced as to protein and carbohydrates, and economical enough to make you some money.

Amco Feed Mixing Service furnishes three such mixed feeds which will enable you to take fullest advantage of the value in your home-grown stuff and still feed your cows according to the highest standards. These three feeds, AMCO 32 % SUPPLEMENT DAIRY, AMCO 24% DAIRY, and AMCO 20% DAIRY, are simply mixtures of the most economically priced feed ingredients on the market, put together in proportions approved by the colleges of agriculture. Study your home-grown feed inventory and then select the Amco mixture which will feed best with your home-grown stuff. Your Amco Agent can supply you.

AMCO-MIXED *open formula feed*

To Feed with Clover and Alfalfa Hay

AMCO 20% DAIRY, when fed with home-grown alfalfa and clover hay, utilizes without waste the high protein content of these roughages. It furnishes the safest amount of protein to feed with legume hay.

To Feed with Low Quality Roughage

AMCO 24% DAIRY is made to feed with low-grade roughage. It contains several ingredients, is very palatable, carries the needed mineral content, and is digestible enough to feed a cow completely and well when the roughage she gets is low in protein, high in fiber, and of low digestibility.

To Feed with Home-Grown Grains

AMCO 32% SUPPLEMENT DAIRY, when combined with a home-grown grain like ground barley, or oats, or corn in the proper proportion, adds to the home-grown feed all of the qualities of the best prepared dairy feed that can be purchased.

Logan Spring Farm

We Try to Keep Frost Loss at a Minimum

EACH morning for the past six days the thermometer has registered below 40 degrees F. We have escaped frost, thanks to heavy fogs, and the low temperatures have warned us that summer is past. Close picking has been practiced all week and as I write this on Saturday evening, September 24, I know there are practically no peppers, tomatoes, eggplants, cucumbers or beans of marketable stage in our fields. If frost comes tonight or Sunday night we are in good shape and losses will be at the minimum.

A few weeks later temperatures damaging to celery may occur in some sections which this paper reaches. The dates on which fall frosts and freezes are likely to occur are strictly local matters but the general proposition to play safe is a good one.

Easy to Have Too Much at Stake

It is very easy to have more at stake than is really necessary. A few years go enormous quantities of celery in the northeastern states were ruined by a hard freeze in late October. Some of this was of satisfactory size and could have been safely trenched a little earlier. Unquestionably there are times when pressure of other crops, bad weather or shortage of help forces a delay in harvesting and storing a valuable crop. In such cases, as the danger date approaches closely, it looks like good business to secure additional help, offering any reasonable inducement, and then get the job done on time.

Last December I was at a gathering of potato growers. Someone remarked that So and So had a wonderful crop but failed to get a third of them dug on account of the cold wet fall and that it was certainly too bad. Someone else spoke up and stated that This Man's Neighbor had just as large a crop and somehow or other dug them all before November first.

I know this runs like a sermon but the writer is going thru it equally for the stiffening of his own morale. Nature gives the gardener little quarter at any time and none at all when the breath of winter sweeps down. We cannot afford to make excuses to ourselves for not getting the thing done on time. This whole matter of saving crops in treacherous seasons has something of the military in it. In 1918 a friend was given furlough from his station in New Jersey to visit his mother in Chicago. He did not return on time. Two hours later he arrived and was brought before the Court. He made the excuse that a derailment had delayed his train and had the conductor's signature on a statement to this effect. The Court suggested, "If you had been on the train before the one that was late you would have been at your post in time," and proceeded to award additional duties and restriction of liberty for two weeks.—Gilbert S. Watts.

Some Difference!

AN ACRE of garden peas grown for seed will normally produce seed for only three acres of the canning crop. An acre yield of cabbage seed will provide seed for at least 2500 acres of new planting.

Blister Beetle Creates Havoc

IN THE fight against the foreign foes, European corn borer, Japanese beetle and Mexican bean beetle, don't forget the other insects that are out to make life interesting for the producer of farm crops, fruits and vegetables.

Blister beetles are creating considerable havoc, according to H. E. Hodgkiss, extension entomologist of the Pennsylvania State College. They are immune from poisons apparently, with the exception of calcium fluosilicate, which has given good results in the South. It has not been used in the North because the range of safety is not known. Mr. Hodgkiss advises the use of tobacco dust or strong nicotine dust to drive the bugs away.

Farmers are beginning to ask questions about the bean weevil. Small quantities of beans to be used for eating purposes should be put in a container in the oven where the temperature can be raised to 130 degrees Fahrenheit for one-half an hour.

Beans to be used for seed should be put in a box or barrel that is airtight, leaving 6 to 8 inches of the top unfilled. Then pour about one ounce of carbon bisulphide in a shallow dish placed on top of the beans. This amount will be enough for a barrel of beans or two bushels if in a box. Cover the top of the barrel or box with a heavy paper so it will be tight and let stand for 48 hours.

Keep open lights away from carbon bisulphide, Mr. Hodgkiss warns.

Borer Area Widens

THE clean-up last spring before planting the 1927 corn crop has proven a great aid in combating the European corn borer is the report of officials of the Pennsylvania Department of Agriculture who have just returned from an inspection trip thru the heavily infested areas of Ohio, Michigan, Pennsylvania and Ontario, Canada. Counts of degrees of infestation indicate that the increase in degree of infestation so far this year over 1926 is much less than the increase in 1926 over 1925.

The spread of the corn borer up to September 10 is reported by scouts to include 48 townships in Pennsylvania in the following counties: Monroe, Wayne, Lackawanna, Luzerne, Wyoming, Columbia, Northumberland, Union, Huntingdon, Bedford, Somerset, Greene and Fayette. When the new quarantine is placed all or parts of these counties will be included.

Pupils Aid in Search for Pine Rust

THE cooperation of school teachers and their pupils was enlisted by federal and state officials early in September in a state-wide survey to determine the prevalence of white pine blister rust in Pennsylvania. So much interest has been created among the 15,000 school children that it appears that W. A. Cubbin, plant pathologist of the Bureau of Plant Industry at Harrisburg, will have to spend most of the winter months looking thru a microscope at the thousands of currant and gooseberry leaves which have been sent to him.

A card showing the underside of currant and gooseberry leaves was placed in the hands of each pupil. Since the white pine disease spends part of its life's cycle on currant and gooseberry plants, the children were asked to look over these plants in their home gardens. All suspicious leaves were taken to school.

H. Earl Dieffenbach, of Moscow, Lackawanna County, was the first school teacher to send in leaves showing the blister rust disease.

Rambles of a Pennsylvania Fruit Grower

XXIV The World's Peach Bowl

By S. W. FLETCHER

THE can of peaches which you buy from the corner grocer probably has a California label. Within twenty-five years this amazing state has captured the canned peach market formerly held by New Jersey, Delaware and Maryland and, to a lesser extent, by Michigan and New York. Eastern growers and canners have struggled to regain the supremacy wrested from them by the Golden State, but without avail.

The East cannot compete with California in the canned peach trade because we do not grow the type of peach that the trade demands. We grow freestone varieties, like the Elberta, because our peaches are planted primarily for the fresh fruit market which requires a yellow freestone; their use for canning is wholly incidental. The consuming public, on the other hand, demands a clingstone in the can. A clingstone keeps its shape and color in the can better than a freestone, being finer and firmer in texture. It also holds up better after picking. Many eastern housewives know this and pay a premium for home-grown clings, such as the Heath Cling.

California freestone peaches are an important factor in the fresh fruit market of the East, but the bulk of the peaches grown in California are clingstones, grown solely for canning. The most important peach-growing center in California is the Marysville district, an hour's drive north of Sacramento. It includes parts of Yuba, Butte and Sutter Counties, but mainly the latter. The first large orchard of clingstones planted in California was in Yuba County, in 1850. Now this district produces more canned peaches than all the rest of California. In fact, one-third of the canned peaches of the world are produced in Sutter County alone.

Irrigating peaches, Marysville, California. One-third of the canned peaches of the world come from this county. Note the severe pruning.

Section Deserves Its Name

There are over 13,000 acres in bearing in the Marysville district, of which 10,000 are in Sutter County. Nearly as many acres are not yet in bearing; recent planting has been heavy, indicating a prosperous condition in the industry. The shipment of canned peaches last year from the forty canneries in the Marysville district was 15,000 cars. If any section deserves to be called "The World's Peach Bowl," as the local Chamber of Commerce modestly claims, the Marysville district can wear the laurel wreath with least embarrassment. This is another indication of the fixed California policy which has brought prosperity to many districts, of finding out what can be produced best and then hitting that hard, to the exclusion of all else.

When I reached Marysville, the first week in June, the crop was set and thinning was well under way. They do not have to wait for the June drop before thinning for there is very little drop anyhow. Altho this district is in the Great Valley and the peach land looks dangerously flat to an eastern fruit grower, the frost hazard is remarkably small. They are practically certain of a good crop every year. There has not been a serious crop shortage since 1898, altho it has been cut by frost somewhat several times during this thirty-year period. Heaters are used by a few growers, but are a doubtful investment. One man told me that he bought heaters in 1910 and had used them but twice, without positive results.

Varieties Here Unknown in East

Good, unplanted peach land costs $300 to $500 an acre. It is a light, well-drained alluvial loam. There is, however, a good deal of marginal land that never should have been planted. The best canning varieties of clingstone are Tuscan, Palara, Peak and Phillips. A few peaches are grown for drying; these are mostly Muir and Lovell. None of these is known in the East and the Elberta is unknown here.

This part of the Valley has a rainfall of sixteen to eighteen inches, all winter precipitation. Orchards are irrigated three to six times a year by flooding, applying three or four inches at each irrigation, which is followed by thoro cultivation. A driven well forty feet deep develops enough water for forty acres of orchard. The cost of irrigation is eight to twelve dollars an acre annually if the grower develops and applies the water himself. Most of the growers use only the natural cover crop of weeds; if the land is not stirred after September 1 it grows a heavy mat of burr clover and other native vegetation. A few seed annual melilotu or summer vetch.

I am constantly being impressed and made covetous by the comparative freedom from pests of our California competitors. The Marysville peach grower certainly has no cause for complaint in this respect. He has no yellows, no borers or practically none, no brown rot to speak o', no Oriental moth, no Japanese beetle, no San Jose scale. About the only pests of any consequence are the leaf curl and the twig borer, which also makes wormy fruit. Most of the growers spray but once a year, using lime-sulphur or Bordeaux with arsenate of lead added, about a week before the blossoms show pink. No summer sprays are necessary. Many growers do not spray at all. Some of my New Jersey and southeastern Pennsylvania friends who are now struggling desperately with the Oriental moth and trying to be optimistic about the possibility of paying their nicotine bill with the fruit that comes thru unscathed, ought to visit Marysville sometime. The change and the rest would do them good. They would return to New Jersey or Pennsylvania (and they should return, by all means) strengthened for the next battle with the enemy.

(To be concluded next week)

The famous Goodyear Pathfinder. Car owners have already bought nearly 5,000,000 of these lower-priced, standard quality Goodyears

Right in Your Home Town

No one in the world enjoys a better tire proposition than is available to you right in your home town.

This proposition is offered you by your local Goodyear dealer.

He sells the world's finest tires at a range of prices to fit any pocketbook, and he *services* those tires after you buy.

He recommends the right size and type of Goodyear Tire for your car. He puts it on the rim for you, fills it with air. He helps you give it the care it should have to deliver maximum results.

When you buy from your Goodyear dealer, therefore, you get a superior tire *which you can see before you buy*, backed up by a handy intelligent service that will save you money.

This service is an important part of the Goodyear policy: *to build the greatest possible value into Goodyear products*, and *to provide facilities so that users can get all this inbuilt value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced standard quality Goodyear Pathfinder

10% More Eggs 25% More Chicks with Ful-O-Pep Egg Mash

HILLSIDE POULTRY FARM
MT AIRY MARYLAND

July 9, 1927

QUAKER OATS CO., Chicago, Ill.

Dear Sir:

Enclosed you will find a report of the test I made at this farm with home mixed rations versus Ful-O-Pep Feed.

The test was run from Dec. 1st, 1926, to July 1st, 1927, on two-year old hens and proved that Ful-O-Pep Egg Mash is superior to home mixed feed in every way.

During my twenty-five years' experience with poultry this is the first time that I have been convinced that your commercial feed is the real feed for raising growing and laying stock.

We are making arrangements to put our whole flock of layers on Ful-O-Pep Feeds as the result of our test.

Our growing pullets (about 5000) are now on Ful-O-Pep Growing Mash and they look the best of any pullets I ever saw.

I wish to thank you for past favors to us during the test and remain.

IN a poultry feeding test conducted by Hillside Farm, 508 yearling hens were started on Ful-O-Pep Egg Mash.

At the same time 985 yearling hens were started on a home-mixed ration, sprouted oats, and semi-solid buttermilk.

The Ful-O-Pep flock averaged *82* eggs per bird during the test.

The home-mixture flock averaged *74* eggs per bird during the test.

10% more eggs per bird from the Ful-O-Pep flock.

The Ful-O-Pep birds ate less mash. The cost of feeding the home-mixture flock was higher.

The labor necessary for feeding the Ful-O-Pep flock was less, owing to the elimination of a morning feeding of grain and other extras and the fact that Ful-O-Pep Egg Mash is ready for use, just as it comes from the sack.

Eggs from the Ful-O-Pep flock averaged *78%* hatch against *62%* for the "home mixture" flock.

25% increase in hatch from Ful-O-Pep eggs.

Isn't such evidence as this enough? Aren't you ready, now, to give up old-fashioned and unprofitable feeding methods? Do it now! Put your hens on Ful-O-Pep Egg Mash—the scientific ration that contains just the things a hen must have to make eggs—minerals, proteins, and other substances. And remember—this is the feed that contains COD LIVER MEAL to make all ingredients do faster and better work. See the Quaker Dealer near you. Look for the blue-and-white striped sack.

Nest Box Notes

A FRIEND of mine recently told me of a method he used for securing the proper temperature of water in scalding chickens. Simply take a gallon of boiling water and add a quart of cold.

• • •

The epithet "chicken-witted" as applied to folks is not exactly complimentary. One reason why is illustrated by the behavior of young stock on range. Some of the young pullets delight in getting out and deserting the mash hoppers for the doubtful pleasures of scratching in the barnyard or around the straw stacks, and no matter how often they are put back in the yard, persist in getting out again. Such independent creatures unfortunately do not mature as desirable pullets on account of not having had the right kind of food, and it is best to sell them to the chicken buyer instead of putting them into the laying pens.

The following notes are from the New Jersey Poultry Extension Department News Letter:

It will not be long before all the pullets on range will have to be moved into permanent quarters. Those that are coming into production should be gathered up from time to time and placed in the laying pens. One loses the chief value from early hatching if the birds are allowed to remain on range after laying has commenced. Good feeding practices can be followed to best advantage after the birds are housed and the chances of avoiding a fall molt enhanced.

Your greatest problem will probably be to get the birds to consume enough scratch grain to maintain their body weight. If barley can be obtained it can often be included in the scratch ration to good advantage.

About one-third of the scratch grain ration can be made up of barley. Use good wholesome grains and then follow a good system of daily management to encourage maximum consumption. Electric lights from five in the morning until daybreak should help increase scratch consumption.

• • •

The Breeders:—Your success with baby chicks next year is dependent upon the type of bird which enters your breeding pens and the method of handling the breeders. After a year of production the birds selected will be in a rundown condition. It will take three months to rebuild them and during that time no eggs should be expected. Allow them to molt, or if necessary, force them into it by taking away the mash or discontinuing the lights. Thru the rest period house them comfortably, feed growing mash with cod liver oil, plenty of green feed and allow free range. Care at this season will be reflected in next spring's hatches.

Pennsylvania Boys Place High at Camp Vail

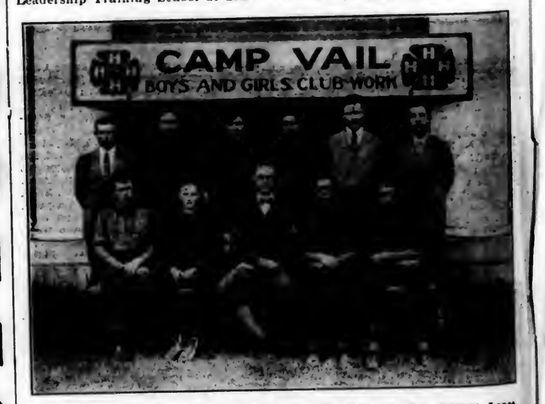
PENNSYLVANIA was represented at Camp Vail, Springfield, Massachusetts, September 18 to 24, by eight outstanding club boys. The camp is an annual event held at the time of the Eastern States Exposition.

The nucleus of the Keystone group was composed of the three boys who became members of the 400 Bushel Potato Club last year: Merritt Bardo, Lycoming County, 432 bushels per acre; Bruce Cooper, Jefferson County, 412 bushels, and Wilbert Lance, Beaver County, 401.5 bushels.

Other boys who attended the camp were Marvin Goss, potato club boy of Mifflin County who with his father built a potato sprayer, operated at first by hand and now by an engine; Lloyd Phillips, first prize winner in the Clarion County Disease-free Potato Club last year; Lloyd Wilcox, president of the Warren County Junior Cow Club; Ellsworth Dunn, Fayette County acre potato club boy who was president of the Leadership Training School at State College last June, and David Shaffer, member of the 1926 Somerset County Potato Club, president of the 1927 County Baby Beef Club and member of county livestock judging team which competed in the state-wide contest at State College last June.

Two other Pennsylvania boys attended the Leadership Training School which opened the week before Camp Vail. They then stayed to assist in running Camp Vail. They were Sherman Smith, who organized the Sabula Guernsey Calf Club in Clearfield County, and Raymond Powell, a member of the Butler Agrarians, who are assisting County Agent W. F. Mandeville in developing the extension program in Butler County.

Lloyd Wilcox, the only Pennsylvania entry in the dairy cattle judging contest, placed third. He had been a calf club boy but never before participated in a judging contest. The club boys placed the same classes as those used in the college students' judging contest.



Back row, left to right: Sherman Smith, Clearfield County; Wilbert Lance, Beaver County; Ellsworth Dunn, Fayette County; Marvin Goss, Mifflin County; Lloyd Phillips, Clarion County; Raymond Powell, Butler County.
Front row, left to right: Lloyd Wilcox, Warren County; Merritt Bardo, Lycoming County; A. L. Baker, state club leader, the Pennsylvania State College; Bruce Cooper, Jefferson County; David Shaffer, Somerset County.

Egg Record Hens Rank With Blue-bloods at Show

A DREAM of Prof. Willard H. Allen has come true. The New Jersey State Poultry Association is staging a show in connection with its annual meeting in Atlantic City next month. The poultry interests of New Jersey have united hands in creating an exhibition in connection with the association's annual meeting.

Several years ago at Atlantic City plans were laid, committees appointed and arrangements made for staging a poultry exhibition on the world's playground in the fall of 1927. These early plans have matured and the final arrangements for the greatest poultry show that New Jersey has ever seen will be opened to the public on October 11 on the Steeplechase Pier, Atlantic City.

Every Phase of Business Included

For the first time in New Jersey the utility classes are ranking even with the standard bred classes. The founders of the show, realizing the trend of the times and that poultry exhibitions must represent the entire industry, have included every phase of the business in this show.

The hen with the egg record is going to be recognized and occupy as prominent a position as the hen that is true to type of the breed with the object of blood tracking thru her veins. The day of the fancier will never wane, but the hen that produces 200 to 300 eggs will be equally recognized and occupy just as prominent a position.

Proof of the type of a show that the New Jersey Association is staging can be seen from a list of the judges who will be there to look over the breeds that will be represented.

Then in connection with the show, the Poultry Association is going to hold its annual meeting. On the program are noted poultry producers and experts of this country and Canada.

Features Typical Poultry Plant

Occupying three days, the sessions of the association will be held in the music room of the Hotel Chalfonte where many of the important poultry questions of the day will be discussed.

In addition to the show and the meetings, the Department of Poultry Husbandry of the Agricultural Experiment Station, New Brunswick, is staging a new educational exhibit featuring all points in the management of a typical New Jersey poultry plant.

Besides showing the latest developments in the industry, the poultrymen are bringing to the consumer's door the most elaborate poultry exhibit that the country has seen in many years.—A. K.

New Jersey Boys to Judge at National Show

NEW JERSEY vocational agricultural schools have selected a team to represent this state at the National Dairy Show, Memphis, Tennessee, the second week in October. Eighteen schools sent delegates to the Trenton fair for the elimination contest and four boys were selected to take the trip with H. O. Sampson, New Brunswick, director of vocational agricultural education.

The boys selected are Linton Allen, Flemington; John Rockafellow, Flemington; John Tilton, Mt. Holly, and Joseph Price, Lambertville. Linton Allen led the judging contest by winning 282.6 points out of a possible 300. Every boy selected was from the farm and the boys from the dairy sections stood highest in all judging work.

Three boys were from Hunterdon County and one from Burlington County. Credit for their early training goes to Fred G. Lodge, instructor, Flemington, with two winners; C. B. Davenport, Mt. Holly, one winner, and R. M. McKinney, Lambertville with one winner. A side trip to Washington to visit the U. S. Department of Agriculture will be an additional feature of the trip.—A. K.

HAVE A CAMEL

Smoke Camels for the one big reason . . . enjoyment!

WHY do people like good tobaccos? For just one reason — enjoyment. And Camel brings this world more tobacco pleasure every day than any other cigarette that ever was made. That's why the number of Camel smokers is the largest in the world. Why Camel gains in popularity every hour.

If you want the sheerest pleasure that wonderful tobaccos can give, just try Camels. So mellow and mild you'll wonder how you ever got along without them. So smooth and fragrant that they will reveal a smoking contentment that is full and complete.

We invite you to know Camels because they are so good. This famous cigarette will repay you in full measures of genuine enjoyment. Camel leads the world!

This Dairy Ration is Increasing Milk Production everywhere

From the users of Gold Medal Vitamin Dairy Ration the story is always the same—more milk from every cow, greater profits from the dairy. And better milk, too.

The reason is simply this: Gold Medal Vitamin Dairy Ration is a feed scientifically made to increase the quantity and improve the quality of milk. It is made of the finest ingredients we can obtain, perfectly balanced and double-tested daily for uniformity.

You can try it at our risk

We have hundreds of letters from dairymen and farmers proving conclusively that this feed is greatly increasing dairy profits and keeping cows in better physical condition, but we want you to prove it on your own herd—*at our risk.*

Order enough Gold Medal Vitamin Dairy Ration to make a 30-day test. Check results carefully. If any sack of Gold Medal Vitamin Dairy Ration is not satisfactory in every way, return the unused portion to your dealer and he will refund your money. We will repay him. Isn't this the fairest kind of an offer?

You run no risk. Gold Medal Vitamin Dairy Ration must satisfy you that it is a better, more profitable feed for you, or your money back. The reputation of the world's largest millers stands back of this straightforward guarantee. Order from your dealer today and start making more money from your dairy.

DAIRY

A. A. BORLAND,
Staff Contributor and Adviser
Head of the Department of Dairy Husbandry Pennsylvania State College

Mifflin C. T. A. Increase Production

THE Mifflin County Cow Testing Association finished its fifth year August 1, 1926, with 21 whole-year members. There has been a general increase in both milk and butterfat production during the time the association has been in operation. It has been obtained by using better methods of feeding and also by disposing of the unprofitable cows in the different herds. There were 271 cows in the association during all or part of the year.

The result for the associations for the five years is as follows:

Year	Avge. no. cows	Lbs. milk	Lbs. butterfat
1921	.....	7470	274.7
1922	.....	6971	270.8
1925	.....	7564	280.0
1926	180.71	8380	305.0
1927	213.40	8955	308.1

The results from the members are as follows:

Average number of cows in the association	213.40
Avge. per cow: Lbs. of milk	8955
Pounds of butterfat	308.1
Percentage of butterfat	3.4
Value of product	$252.74
Cost of pasture	14.84
Cost of roughage	28.55
Cost of grain	56.03
Total cost of feed	99.42
Value of product above feed cost	154.32
Returns for $1 expended for feed	2.55
Feed cost per 100 lbs. milk	1.11
Feed cost per lb. butterfat	.32

Following is a grouping of all cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 lbs. butterfat, 6; group 2, between 400-500 lbs., 15; group 3, between 300-400 lbs., 61. Total, 82 cows.

Twenty-one cows produced over 400 pounds of butterfat during the year. J. C. Thompson, county agent; D. C. Drake, cow tester in charge; figures compiled by I. O. Sidelmann.

Twelve herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no cows	Breed	Pounds milk	Pounds butterfat
Sam M. Yoder, Allensville	10.25	R. & G. H.	12,339	420.7
J. B. Byler, Allensville	9.75	R & G. H.	11,990	419.7
R. H. King, Belleville	9.00	R. H.	12,281	401.6
B. R. Byler, Allensville	7.42	R & G. H.	10,030	377.0
U. K. Peachey, Belleville	8.08	R. & G. H.	10,057	342.9

John O. Wirt, McVeytown	9.08	R. & G. H.	8906	321.4
R. F. Brown, Mill Creek	9.83	R. & G. H.	9023	320.0
Henry Erb, McClure	6.08	R. & G. H.	9160	316.3
J. C. Fleming, Belleville	10.08	R & G H.	9190	306.1
S. C. Mitchell, Lewistown	6.75	R. & G. H.	8643	304.6
Rudy J. Yoder, Belleville	19.00	R. & G. H.	8675	300.3

Lightning Takes Toll

THE largest farm fire loss is shown to be charged against lightning. Altho natural causes of fire cannot be controlled, losses which they create may be greatly reduced. The Bureau of Standards estimates that, taking lightning rods as they come, bad and indifferent, they reduce the fire hazard by as much as 80 to 90 per cent.

All extended metal work on farm buildings, such as spouting, hay and manure carrier tracks, should be a part of a system connected to the lightning rod. Metal stanchions should be grounded independently within the building.

Parasites Are Freed for Corn Borer Control

TWELVE different species of corn borer parasites have been introduced from France, Italy, Hungary and Belgium. A total of 22,670 of three different species have been liberated in Pennsylvania. Of the twelve species introduced into this country, six have been recovered in numbers to indicate their permanent establishment in the field.

Stalks of corn which are resistant to the attacks of the corn borer are being grown at the Michigan experimental station with the hopes that a cross can be made which will give a variety having quality, production and corn borer resistant characteristics. These plants are from a very hardy variety of corn introduced from South America.

Announce Inter-State Price for October

THE f. o. b. Philadelphia price for milk in effect October 1, 1927, as announced by the Inter-State Milk Producers' Association, is as follows: For 3 per cent milk, basic quantity, $3.29 per 100 pounds, 7.1c per quart; September surplus price, Class 1, $2.34 per 100 pounds, 5.05c per quart. There is no Class 2 surplus for September. The 51-60-mile zone receiving station price for 3 per cent milk, basic quantity, is $2.71 per 100 pounds; September surplus price, Class 1, $1.77 per 100 pounds. The differential is 4c.

The Sun Is a Great Purifier

Rinse milk utensils with cold water, wash thoroly with hot water and washing soda, rinse with hot water and let dry in sun without wiping.

Friendly Talks

By EDGAR L. VINCENT

MAY I pass on to you a little story which is found in the Talmud, the old book of Jewish law?

There was a great drought in Israel. The heavens seemed like brass. Water failed. The earth was parched everywhere. Cattle were dying. The king called his people together and directed them to pray for rain. The king himself led in the public petition. Still no rain came. The priests of the temple prayed with the same result. The lords and great men of the nation followed. Captains and sages erbed to God that the drought might be broken. It was in vain.

Then a man came out wearing poor clothing and showing every indication of poverty. He too prayed fervently for rain, and almost instantly the sky became black and there was a sound of abundance of rain. Then the king and his counsellors demanded:

A Teacher of Little Children

"Who are you, that your prayer should avail to bring rain?"

"I am a teacher of little children," was the old man's humble response, as he quietly slipped away out of sight.

It is only a story saved from the long ago; and yet it carries something about it which we cannot afford to lose, for it has an appeal particularly to those of our day who are fathers and mothers or are in any way concerned in the care and training of youth.

How many times have we heard it said in recent years that the young people of our day are growing up with a great disregard for things that are right? From every side this comes to us, and while it may not be true that our boys and girls are sinners above all men, still some things they do almost break our hearts. For we do love our children. We long that they shall be the best possible.

And whether rightly or wrongly, it is charged against us as parents that we are at fault for the failings of those in our own homes, who are nearest and dearest to us. That it is because of our own indifference or postive wrongdoings that our boys and girls are taking the wrong path, the path that leads downward to sin and ruin of life and character.

Will Our Prayers Be Answered?

Still farther run these direful charges against us. We are told that much of the evil which so wracks the world today naturally follows our lack of bringing up our children right, and that worse calamities than fire or flood or drought will overtake our nation if we do not change our attitude toward the youth for whom we are in great measure responsible.

Whatever of truth there may be in all these accusations nothing of good can come from self accusation or from assailing one another. It may be that there is some litter in front of our own doorsills, something that should be swept away before we can feel that we are free from responsibility for present conditions. Here is the thing which concerns us most:

Are we living lives so good, so kind, so true before our neighbors, our dear ones and our God that the prayers we send up for their welfare and for the honor and glory of the country in which we live, will be heard and answered? It is a great thing to live so that our boys and girls will be glad to follow in our footsteps.

Once I heard a young man say, "My father is the best man in the world." I would rather have that said of me than that I had gathered together all the wealth of this world; for then I should know that my prayers so heaven would not come back to me unanswered!

Great Servants of Agriculture

These 4-Cylinder Tractors

McCormick-Deering 15-30 10-20 Farmall

McCormick-Deering 15-30. *Three-plow power and capacity. Showing also the McCormick-Deering Corn Picker which goes into the standing corn and does the work of six hand huskers*

THE years of experience of the Harvester Company in the building of power farming equipment has produced the finely developed McCormick-Deering Tractors shown in these three views. One is a 3-plow tractor *with power to spare.* The others are 2-plow tractors, *also with a liberal surplus of power.*

Where any member of this trio of tractors is on the job, power farming is at its best, easiest and most profitable level. So popular have the 15-30 and 10-20 been for several years that you can now find them plugging away any day in any farming community in the land. The FARMALL is younger, but already old in service on thousands of corn and cotton farms. It meets the demand for a *true general-purpose tractor* that will replace animal power *for plowing, disking, planting, cultivating, mowing, raking, and all other farm power work.*

Put a 15-30, a 10-20 or a *Farmall* at work—or use the special features of the new *Farmall* in combination with the 15-30 or 10-20 tractor—and settle your farm power problem for years to come. Hundreds of farms are being handled much more efficiently by the use of *two* tractors. Write for a catalog, and see the tractors themselves at the McCormick-Deering dealer's.

Above: **McCormick-Deering 10-20.** *Liberal Power for Belt, Drawbar and Power Take-Off*

At right: **McCormick-Deering Farmall** *It plows, plants, cultivates, mows and rakes—it "does it all."*

Health Depends on Vitamins

Careful Selection of Food Prevents Disease

SCIENTISTS have classified our foods accurately as to vitamin content. They speak of vitamins as very definite things, which can be inactivated by too long cooking, or by drying. Vitamin is the food substance which protects against dietary deficiency diseases, or which cures them.

These diseases can be produced in experimental animals easily by feeding them a limited ration. Rats and guinea pigs are used, since their reactions to foods are similar to those of the human child. By feeding a group of animals a basal ration lacking in one vitamin, then adding only one food supposed to contain this vitamin, it is possible to determine whether this food is a good source or a poor source of vitamin.

Vitamin A, known as fat soluble A, is found in milk, cheese, egg yolks, butter (but not oleomargarine, lard or cooking oils and compounds), liver, kidney, leafy vegetables and cod liver oil. Lack of Vitamin A causes night blindness (xerophthalmia), and sore eyes in children.

Lack of Vitamin B Retards Growth

Vitamin B is water-soluble, it is found in skimmed milk rather than cream, in outer coverings of grains, whole wheat and bran, in fruits, vegetables, especially the green leafy ones, eggs and nuts. It is sensitive to heat, and is most abundant in lettuce and green salad leaves.

Absence of this vitamin causes beri-beri, a disease of the nervous system accompanied by swelling of the limbs and weakened heart and circulatory system. Lack of this vitamin slows the growth of your child, and makes him more apt to become infected with other diseases.

Water-soluble Vitamin C is found in milk, cabbage, oranges and all citrus fruits, tomatoes, pineapple and most other acid fruits, sauer kraut and many vegetables. Lack of it produces scurvy, a disease effecting certain bony changes and a condition of progressive weakening and anemia together with hemorrhage and soft bleeding gums, or bleeding joints and mucous membranes. This is seen in babies who receive no food except boiled milk. Orange juice is needed by all bottle babies and most breast-fed babies. Tomato or pineapple juice can be used instead.

Most Children Need Cod Liver Oil

Vitamin D protects bone growth and prevents rickets. It is found in foods containing Vitamin A, but is most abundant in cod liver oil, hence doctors now advise giving cod liver oil to every child, with almost no exceptions. Fresh cod liver oil put up into capsules is easier to take. Do not give any kind of dried or powdered cod liver oil medicine.

Vitamin D affects the absorption of calcium into the bones. For prevention of this disease, give plenty of foods rich in calcium. Rickets is common in bottle-fed babies under two years. It is universal among premature babies. It is not found in the tropics where the babies are exposed to sunshine without clothing.

Rickets is characterized by a flat chest, protruding ribs, distended abdomen, enlarged wrists and ankles, bow legs, protruding forehead and square-shaped head, "pigeon breast" or spinal curvature, and delayed teething.

Feed Vitamin D in cod liver oil and choose foods rich in calcium to build your child's bones and teeth. These are: cauliflower, celery, buttermilk, milk, cheese, spinach, cabbage, string beans, carrots, blackberries, onions, figs, tomatoes, lemons, eggs, beets, peas, oatmeal, prunes, raisins, brown bread, lean beef, yellow cornmeal.

Foods rich in phosphorus help to make the bones firm: They are practically the same foods as those rich in calcium, also lettuce, fish, peanuts and tomatoes.—Doris McCray, Iowa.

Salads for A-B-C Menus

EVEN in the simplest meals, well-balanced combinations can be secured if the housewife follows a novel plan of A-B-C menus, prepared by Miss Frances Wolfe at the National Dairy Council.

Because cabbage is year-round material for salads, is inexpensive, is roughage and is very rich in Vitamin C, it is featured in each of the suggested salads. Vitamins A and B are furnished in the luncheon plans in whole wheat bread and butter sandwiches since the wheat germ and yeast are graded as very rich in Vitamin B, while next to cod-liver oil, butter contains the most concentrated form of Vitamin A.

If it is desired to make the luncheons more substantial, besides the whole wheat bread and butter sandwiches and a glass of milk or milk-made chocolate, which furnishes some of both Vitamins A and B, any kind of cream soup, whole grain rice pudding, egg custards or cheese soufflé can make a delicious addition.

Cabbage and Apple Salad

Run a small head of cabbage thru the meat grinder, using the large blade. Pare, core and chop two tart apples. Add one cup of chopped celery, 3 tablespoons lemon juice, 2 tablespoons sugar, enough mayonnaise dressing to moisten and salt to taste.

Cabbage and Bacon Salad

Drain and dry 6 slices of fried bacon and cut in small squares. Let cool, and add 2 tablespoons finely chopped green pepper from which the seeds have been removed, 2 cups finely chopped cabbage, some grated onion and 1 cup of mayonnaise dressing beaten with some cream. Serve on lettuce and garnish with green pepper rings.

Cabbage and Cheese Salad

Mix together 2 tablespoons finely chopped green pepper from which the seeds have been removed, 2 cups finely chopped cabbage, 2 tablespoons finely diced cheese, ½ cup fine chopped celery, some grated onion, 1 cup of mayonnaise dressing. This same salad may be made with chopped tomatoes and 2 hard-boiled eggs, adding more cheese.

Pineapple and Cabbage Salad

One-half cup of chopped raw cabbage mixed with ½ cup of drained canned pineapple finely cut. Add marshmallows and blanched almonds which have been cut in small pieces. Mix with mayonnaise and serve on lettuce. Top with whipped cream beaten with mayonnaise.

"Don't Spank Bobby" Is Advised

SPANKING is not the best discipline. The secret of discipline is to let the child suffer the natural consequences of his act, or, if this is too severe, "make the punishment fit the crime" in a reasonable way.

Before punishing the child, it is essential to find out whether the misdeed was accidental or intentional. If accidental, the child should be treated with an expression of regret, as any grown-up would be treated if he unwittingly did something wrong, after which he should make an effort to repair the damage as much as possible. Once intentional naughtiness is discovered, however, it should be dealt with promptly so that the child will know why he is being punished.

The first requisite in dealing with a naughty child is to get his attention. Even very young children can understand expressions of disappointment and disapproval, and, frequently, this is enough punishment for sensitive children. Hard and fast rules of discipline cannot be set, for discipline should be adapted to meet the individual child and the particular situation.

If the children's surroundings are arranged so that they cannot injure themselves, much disobedience will take care of itself. Slapping the children's hands for hurting the cat is seldom necessary, for a scratch will usually teach them to treat the cat with respect.

Reasonable discipline, administered firmly but without anger or echotion helps children to control their emotions and to live comfortably with others.—N. Y. State College of Agriculture.

Does Your Living Room Have Charm?

THE cool of autumn is with us, and we home-makers, in spite of the alluring colors outside, have begun thinking of the walls inside. We have begun planning for rainy dull days, followed by piercing gales, when touches are needed here and there to brighten and lend cheer to the living room, or gladden the fine country kitchen.

Fortunate, indeed, is she who has a fireplace as the very center of living room decoration. Dancing flames in an open hearth, and a beautiful chime clock gracing the mantel are two intimate, friendly furnishings to brighten long days and blustery evenings. Every useful thing can be beautiful as well. Let there be a bowl of gay flowers on the table, artistic lights, a colorful shaded lamp near which to read or sew, comfortable chairs blending in tones with the rugs and draperies. All breathe of the friendliness and individuality of the wife and mother.

Comfort and beauty center around the fireplace in this room

On another side of the living room we have sketched for you, arrange for music, and plenty of room opposite for the books and magazines. Make home an attractive spot, and the boys and girls will not wander far nor for very long.

Let's Make Them More Homelike

October is here. The work among flowers and gardens is nearly done. The grind of canning is dwindling to a few favorite relishes and specialties. The chickens are being established in winter quarters. The children are off to school. Now let's go visiting—right in our own living rooms, and look them over with critical eyes. How can we make them more homelike? Let's open them up and use them every day this fall and winter. Why reserve them for funerals? Let's let the sunshine in. Let's introduce color and beauty, not forgetting the great charm of simplicity. Let's buy something new for the living room. Let it be something fine and beautiful—something to add to the charm of the place our children call home.—G. S. Stewart.

Autumn Brings Long Sleeves

While Afternoon Frocks Flaunt Gay Colors in Printed Materials or in Touches of Embroidery

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5878.—Four sizes: 8, 10, 12 and 14 years. A 12 year size will require 1¾ yard of 27-inch lining for the underbody and 2⅛ yards of 40-inch other material for the dress. Embroidery design not given. Pattern, 10 cents.

5854.—Eight sizes: 38, 40, 42, 44, 46, 48, 50 and 52 inches bust measure. A 44-inch size will require 4¾ yards of 32-inch material and 1 yard of contrasting material for facing on panel, collar and cuffs. Pattern, 10 cents.

5726.—Four sizes: 2, 3, 4 and 5 years. To make the suit as illustrated for a 4-year size will require 1 yard for the blouse and ⅞ yard for the trousers of 36-inch material. If the blouse is made with short sleeves ⅛ yard less of 36-inch material is required. Pattern 10 cents.

5883.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size will require 2⅞ yards of 40-inch material with ¾ yard of contrasting material for facing on belt and trimming tab. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Windfall Apples Equal the Best If Cooked or Canned in Time

IT IS a long step from the original apple resembling a small, hard, wild crabapple, to the fifteen hundred varieties of large, luscious, juicy apples of today. This popular high-flavored fruit, valued for its mineral, sugar and vitamin content, causes the thrifty housewife to look askance at the thousands of windfall apples wasting on the ground every autumn in our apple-growing states.

When gathered promptly, windfall apples yield identically the same food value pound for pound as the expensive, fancy-shaped, fancy-flavored red apples shining on the fruit stand. The windfall apple as a fresh fruit is short-lived, but in delicious sauces, jellies and conserves, we can enjoy windfall apples all winter long.

Fresh Apple Sauce Baked in Oven

Fresh apple sauce has a delicate flavor all its own when baked in the oven. Peel, core and quarter a dozen windfall apples. Pack them into a casserole with about two cups of sugar and a teaspoon of nutmeg sprinkled over them. Cover tightly and bake slowly for about an hour. The juice and sugar form a jelly. No water is added.

To can windfall apples, make them into a sauce, using to three quarts of apples about three cups of sugar and three cups of water. Boil the sauce fifteen minutes, at least, and pour it into sterilized cans. Seal hot and test before putting away.

A government bulletin suggests a mild salt solution (one-fourth cup of salt to one gallon of water) for the pieces of apple that must stand, to prevent them from turning dark.

Pie filling may be canned from either the baked apple sauce or an open kettle thick apple sauce. Cinnamon may be added.

Apple and plum butter is made easily by pressing the cooked fruit thru a fruit press or a potato ricer. To each cup of pulp, use one-half cup of sugar and cook, stirring frequently, until the mixture is thick and clear.

Delicious Marmalade and Jelly

Apple and peach marmalade is a dainty addition to the luncheon or tea table. Pare, core and slice the fruit. Cook it in a covered dish until tender, tossing it about with a spoon at first, to prevent scorching. Measure the cooked fruit and add to it two-thirds as much sugar as fruit. Boil until clear. Pour into sterilized jelly glasses. Cool and seal with paraffin.

A clear, light colored jelly may be made from windfall apples. Wash, core and quarter the apples. Put them into a kettle and add only enough water to come just below the top of the apples. That is an important point. If the apples are covered completely, the juice resulting will be too diluted to make good jelly.

Cook the apples until tender. Then pour the mixture into a jelly bag and let the clear juice drip from the bag.

Reheat the juice and to each cup add three-fourths cup of sugar. Boil rapidly for about seven minutes. Test by placing a drop on the blade of a silver knife. If the drop wrinkles, when gently pushed by spoon, the jelly is done. Pour into clean hot glasses. Seal with paraffin.—Floris Culver Thompson.

North — Don't you agree that speed is the curse of America?

West—No, I can't say I do. I'm an installment collector!

Hanes

keeps you comfortable
and saves you money too

1 HANES Collarettes are cut to size. A 40 suit has a 40 collarette. Won't roll or gap open.

2 HANES Cuffs won't pull off. They snug the wrist. Reinforced on the end to prevent raveling.

3 HANES Elastic Shoulders give with every movement, because they're made with a service-doubling lap seam. Comfortable. Strong.

4 HANES Closed Crotch really stays closed. Crotch can't bind, for HANES is fitted by *trunk* measurement as well as chest.

5 HANES Elastic Ankles never bunch over the shoe-tops. No ugly pucker showing under socks.

THE words "underwear comfort" will take on an entirely new meaning when you step into a suit of HANES. For HANES is made to fit snugly—all over.

You simply cannot make HANES bind or pull anywhere. The soft, elastic-knit material and the famous HANES *five* points keep your body warm and comfortable—from morning till night.

You'll appreciate the thoroughness of HANES workmanship too. Seams are flat and perfectly smooth. And, those buttons are secured with plenty of good stout thread.

HANES wears better. It stands more trips to the wash. And, its low price brings you far and away the best underwear value on the market.

HANES comes in a wide variety of weights. Extra-heavy to light weight. For outdoors or in. Men's union suits priced from $1 to $1.50. Shirts and drawers at 75c and 85c a garment. Union suits for boys and children too, 75c to $1. If your regular store doesn't carry HANES, write to us today.

P. H. HANES KNITTING CO., Winston-Salem, N. C.

TRADE MARK HANES

Heirlooms yes! but not in a bedspring

Putting off buying a good bedspring is coaxing ill health to come sooner. Today is the time to get your Foster Ideal Bedspring. Tonight is the time to start with better spine support—finer nerve rest—more comfortable sleep—and better health. The Foster Ideal Spring with its 120 supertempered upright spirals will put more genuine rest and comfort into your bed than you ever conceived was possible.

Each genuine Foster Ideal Spring bears this trade mark on its side rail. If you don't see this trade mark it isn't a Foster Ideal.

Lampshade Frames Anyone Can Make

WHEN we installed electricity a few months ago and I had canvassed our town stores in vain for lampshade frames, I asked a friend who was going to the city to buy several for me. She returned with only one frame and some fixtures.

There is no use in being a Yankee if you cannot use ingenuity when you need it. So I bought a coil of fine wire for five cents and using the bought frame as a model, began to experiment.

Never having made any lampshades, and with no help except two short articles, I carefully copied my model frame as to size of top opening. In other dimensions I used my own imagination, making the frames with varying depths and varying degrees of flare. Indeed, the shade for the hall light is almost as straight-sided as a baking powder can, while one other is shaped like a saucer bottom side up.

The main difficulty in making a frame of pliable wire is to get it symmetrical and keep it so till it is covered and hung. Best results come from making the top and bottom rings double; that is, taking a little more wire than twice the circumference and twisting it on itself to the desired size.

Rings Measured Carefully

To get my rings true I use compass-drawn circles on big cardboard as models. These models have the quarters of the circles marked for placing the side-wires to connect the hoops. But before the top wire is joined to the lower one, the cross-wires should be put on.

My simplest frame needed no side wires as my cover was of yellow crepe paper (the fine kind used in making flowers). I cut a strip of paper a little longer than the circumference of the larger hoop and one-inch wider than the desired depth of shade. A half-inch fold on each side of the paper was put around the rings and sewed fast with basting stitches. The paper had to be pleated on the top ring. Then a coat or two of shellac, gilt braid glued over the stiches, and the shade was done.

When making other frames on which the material is stretched smooth, I needed at least four side-wires to join the rings. These were made of wires cut about two and one-half times the desired length and then bent up at both ends to make them all the same length. They are hooked over each ring with proper spacings. If there is any wobble in the frame, as there is generally, careful winding with tape cures it.

For the plain coverings of shades, I like thin silk. Shellac makes them look like porcelain. Making my own frames has been most interesting; largely because I could make them in any shape I chose, at about one and one-fourth cents per frame.—Vida M. Bates.

Must We Be Reminded of Beauty?

"OH! Just look at the moon!" exclaimed a city cousin who was visiting us last summer. A thunder shower had just ended and we were going outside when the moon burst into view from behind a cloud. It was very beautiful; many silver-lined clouds surrounded it.

Another cry of ecstacy from my guest and I looked to see myriads of tiny lights bobbing up and down over the alfalfa field. Fireflies out on parade after the rain! Does it need someone else to remind us of the beauties of God's handiwork that surround us on the farm? Altho we are hardly aware of the presence all about us of love and beauty, the influence of such surroundings on our character cannot be estimated.

Sunrise and sunset! Two of Nature's glories can be viewed from our own doorstep—free for the looking. Take time tomorrow morning to say with one of Shakespeare's characters:

"Look! What streaks
Do lace the severing clouds in yonder east.
Night's candles are burnt out and jocund day
Stands tiptoe on the misty mountain top.—E. May Willis, Md.

Ants Disappear As If by Magic

THIS is the time of year when many housewives are troubled with ants of various sorts. One can get rid of them easily by using tartar emetic. Purchase five or ten cents' worth at any drug store, dissolve a rounding teaspoon of it in one-quarter cup of well sweetened water. Place the solution in small saucers near the runway infested by ants, on the floor, on shelves, or in the cupboards. Keep it out of reach of children and pets. In a short time, perhaps only twelve hours, the ants will have disappeared as if by magic. I have used the remedy with the best of results, yet have never seen any dead ants around.—E. M. L. B.

Do You Dread the Winter?

"I'M SO glad the winter is over! I think I dread it more and more each year!"

So often we hear something like this in the spring. What was it that made last winter especially hard for you? Was it sickness in the family? We cannot guard against that entirely, but we can do much toward keeping ourselves and our family well. Consult your doctor and a reliable nurse now; follow their suggestions; have sensible remedies at hand and use them. Dress and eat correctly. It will help amazingly.

Banish Monotony by Recreation

Was it monotony and the sameness, the dull days and duller evenings? Every woman must find her own remedy for this. But there is a remedy that fits each case if we search for it. One person finds relief in reading, another in pretty needlework, another in real study or in music. Perhaps the remedy will cost a little but it is worth the cost.

While I am not a genuine radio enthusiast I consider it the most wonderful gift of modern invention that has come to the isolated home. It is an unspeakable privilege to listen to lecturers and speeches, opera and jazz and all the numberless features that can be so mysteriously picked from the air.

Radio Offers Much of Interest

Having a radio in your own home will be a revelation to you, I know. You will find yourself unconsciously arranging bits of sewing, a favorite magazine or some hand-work so that you can reach it while you listen. You will hunt up a blank book and a pencil with which to jot down interesting bits of information as it comes in. Try it. If you haven't already.

Look back to last winter. See what made it so hard. See if you can find a remedy for the greatest hardships. Plan now for the coming winter. Have something good to read. Have something to study. Have some interesting work to do. And finally, have this assurance: that you are not having the hardest time of any woman in the world!—Alice Margaret Ashton, N. Y.

The Spring Went Dry

(Continued from page 3)

is no exception. The ground cover serves a variety of purposes. It protects the soil in just the same way as do the trees and their parts, from the beating effect of the rain. It insulates the ground and prevents the water beneath from passing as freely again into the air. It stores water within itself. It creates tiny dams and reservoirs, millions of them, which individually do very, very little, but which collectively exert a

In the shade of any forest cover, snows remain on the ground longer than in the open. Evergreen trees make the best watershed cover.

tremendous influence in holding back waters, reducing flood crests, prolonging periods of heavy run-off, shortening dry periods, and reducing their severity. All this, mind you, is in addition to feeding and watering the root systems of the trees which produce it.

For hill lands there is no water storage cover equal to that of the forest. Grass and weeds are some aid, it is true. Ferns, oak brush and chaparral are still better. But best of all is the forest and especially that of pine, spruce or hemlock—in short, the evergreen forest.

The grass and weed cover present when the trees were planted was a start in the right direction, but the trees really made the improved conditions permanent. During the 10 years since the first trees were set, the water storage conditions have improved steadily. No one of the three sources of supply has failed to furnish water since the trees were large enough to produce a real effect. It looks now as tho the Abraczinsky family will have no more difficulty. They, themselves, believe that such is the case.

Cape May County Wins Sweepstakes

CAPE MAY COUNTY won the sweepstakes prize at the Inter-State Fair for the finest Pomona Grange exhibit entered in the Grange contest. Mercer County was placed first, Camden second and Hunterdon County third. The Pomona Grange exhibit was a new feature at the fair and it attracted the attention of thousands of visitors because of its wide variety of farm crops and the attractive way in which they were displayed.

Cape May arrived too late to be judged with the other Granges, but once it was put in place and judged by a group of laymen it was placed above all others because of its appeal to the eye of the buyer. The counties of Cape May, Camden, Monmouth, Mercer, Hunterdon and Middlesex-Somerset were all represented.

Each county played up the type of farming followed by its farmers. Cape May stressed the roadside market. The local markets of the Cape May farmer demand high quality produce and they featured varieties that are usually not grown in the commercial sections.

Camden County was more largely centered on commercial production and its exhibit featured produce and fruit in the large market style of packages. Mercer County also featured the roadside market method of moving farm crops by using a special home package containing a mixture of vegetables that would be suited to the housekeeper's daily needs.

Monmouth County, with its wide variety of crops, had a most attractive exhibit and was the only section to offer a display of celery. Hunterdon County led with a general line of farm products including grains, fruits and vegetables, while Middlesex-Somerset had probably the widest variety of fruits and vegetables.—A. K.

Yours for the Asking

BULLETIN 448 of the Pennsylvania Department of Agriculture, Harrisburg, entitled "Pennsylvania Weeds, Their Control and Eradication," is sent free to all farmers, backyard gardeners and other property owners who are troubled with weeds.

The bulletin was written by Dr. E. M. Gress, state botanist, and describes practical ways to control Canada thistle, plantain, chicory, false flax, field pepper grass, horse nettle, garlic, winter cress, cockle, perennial or field sow thistle, quack grass, clover dodder, morning glory, hawkweeds, ox-eye daisy, wild carrot and wild mustard.

Write for this bulletin and read it this fall or winter.

Save Radio Information

WITH every radio part or set that is purchased the manufacturer supplies an instruction sheet, or at least provides information on the box itself. Many listeners are apt to throw such sheets away but it might be well to point out the value in retaining such data.

If a defect develops it is best to know the name of the manufacturer. The dealer may not be able or willing to make good and the question can be put up to the manufacturer. In writing to the manufacturer the type number and other numbered information appearing on the tags or sheets can be quoted and they will then understand perfectly just what part or set you are inquiring about.

As for parts used in making up a set, the various unit sheets should be kept for the information on the wiring of each part, binding post labels, internal connections, numbers for replacement as they may be required later.—B. F.

KINNEY SHOES

ONE OF OUR 280 STORES NEAR YOU

This Combination Offer by the World's Largest Shoe Retailers *Will Save You Money*

FOR many years Kinney Shoe Stores throughout the country have been favored with the patronage of the nation's farmers. Kinney farm and work shoes have come to be known for their wide variety and honest value.

Because Kinney is the largest organization of its kind, because Kinney owns 5 big factories and over 280 shoe stores, it is possible for Kinney to make and sell better shoes for less money.

This combination offer includes: 1 pair Gleasonite black or tan shoes for heavy duty wear, Army last, special composition soles guaranteed 6 months. 1 pair heavy sole patrol sandal rubbers for wet weather work. 6 pairs heavy cotton socks. Total value nearly $7.00

For ONLY $5.98 Complete

Thousands of farm families know this. But we want thousands more to know it, too—to know that their shoe dollars go further at Kinney's. And so we make this Special Offer:—If you will go to the Kinney Shoe Store nearest you and buy a pair of sturdy Gleasonite shoes you will also receive a pair of heavy sole patrol sandals for wet weather and six pairs of our best cotton hose—all at the low Kinney price of only $5.98. Take this opportunity to save money and get acquainted with Kinney values the very next time you go to town.

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Forum Friends and Readers:—I am glad that school will start in about a week. I will be in the eighth grade. Last year we used to write short stories sometimes for composition. Once when we had to write a story I wrote about "A Spook on the Dark and Lonely Road," and the next day after the teacher had looked over the papers and picked out the best, mine happened to be one of the best. The teacher made those that had the best read them to the class and after I had read mine everybody laughed.

CHILDREN OF INDIA UNDER NATIVE UMBRELLAS
Mildred Royer, (X), Montgomery Co., Pa.

I receive letters from a friend in India who is a missionary and she writes about some very interesting things. At times she and a family of native Christians go around to villages and hold services.

My friend can grow almost every kind of vegetable in India. In India they have a dry and a wet season. When the rains come everyone rejoices. I am sending a picture of two girls of India.—Mildred Royer, (X), Montgomery County, Pa.

Dear Cousin Ruth:—I have been reading the Forum page for a number of years. Alenna Rhine, of Juniata County, says she has read "Little Women." I have also. It is a very good book. I am sending a recipe for candy which I have made several times.

MOLASSES CANDY

1 cup molasses
2 cups sugar
1 tablespoon vinegar
A lump of butter the size of an egg

Flavor with vanilla. Boil 10 minutes, then cool it enough to pull. —Anna Ruth Kreider, Lebanon County, Pa.

Dear Cousin Ruth and Forum Friends:—I'm sending a recipe for lemon cream cake.

LEMON CREAM CAKE

Juice of ½ lemon
Rind of 1 lemon
1 cup water
White of 4 eggs
2 cups flour
½ cup granulated sugar
½ cup butter
½ rounding teaspoon baking powder

—Mildred Hartman, ten, Columbia County, Pa.

Dear Forum Readers:—Of course our Forum page is very interesting but don't you think we could make it a bit more entertaining by telling the different things you do in detail? We enjoy stories, don't we? Then let's make our letters a little story-like.

Perhaps you'd like to hear what I do when I am not busy helping mother. Being the youngest and having no near playmates you'd think I'd be lonesome. Oh, no! Just listen to how I've been enjoying myself this summer.

I have a lovely flower garden for which I've especially cared. Now I have the prettiest and largest asters, cockscomb that makes you think of velvet, moonflower that (really) climbs up to the moon.

I have a trapeze bar and enjoy doing stunts that are of benefit to health and a much more delightful way to exercise.

For pets I have two darling kitties, Gypsy and Topsy, and a shepherd dog, Bobby.

I also like to romp thru the woods to gather flowers and hunt for birds' nests.

While in Red Valley I climbed Sugar Loaf Hill with a friend. We had the most exciting time. We climbed the topmost trees and saw the hangar at Lakehurst where the Los Angeles is moored. It is about 18 miles away. There are wild plums around the hill and snow white sand.—Catherine Zygmont, Mercer County, N. J.

Dear Cousin Ruth and Forum Friends:—We have a dog named Sport. He chases cows for us and when I go to the barn to milk he comes in and lies down till I go out again.

I am sending a picture of our orchestra. In March we had a program at school. I am the first one to the left and my brother, Paul, is the first one to the right.—Pauline Gates, (X), Dauphin County, Pa.

FIVE HAPPY STRUMMERS
Pauline Gates, (X), Dauphin County, Pa.

Dear Forum Editor:—My school starts next Monday. I suppose you want to know where I go to school. I go to Green Grove School. I am in the eighth grade.

We are pretty busy just now. It is canning time. I will send some pictures when I write the next time.—Marjorie Marie Kuhns, (X), Perry County, Pa.

Don't forget your promise to send pictures. If they're clear enough I'll have them printed on the Forum page.

THE FORUM EDITOR.

Dear Cousin Ruth:—Hello! May I come in? Is there room for one more in this large room? I am a country girl and live on a small farm of 72 acres. We raise potatoes. I help to pick them. We have nine acres of tobacco.

As it is corn season I will send a recipe for corn fritters which I like very much.

CORN FRITTERS

6 ears corn
2 eggs
1 cup flour
1 teaspoon baking powder
Milk to thin and salt to taste

—Ella Grace Keller, 10, Lancaster County, Pa.

Dear Forum Friends:—I have forty tame rabbits. I feed them every morning. I think it is fun to feed them. I have a pet dog. His name is Sport. He is a very good dog and will jump a rope, shake hands and he is a good hunter and a good watch dog. I am sending you a picture of myself when I was in the Pennsylvania school in the sixth grade.—Charles Kolich, Warren County, Pa.

I haven't received the picture, Charles. Are you going to mail it?

THE FORUM EDITOR

Dear Forum Editor:—I have six pets. They are a goose and five ducks. The goose's name is Mary. She is very pretty. When school starts I will write and tell you about my teacher and school.—Margaret Parks, eight, Caroline County, Md.

Don't forget your promise, Margaret. I'll be looking for your letter.

Goblins and Grinning Pumpkins Will Greet You

DEAR FORUM BOYS AND GIRLS:—I suppose all of you are busy making preparations for our Make Believe Hallowe'en Party. I see a puzzled expression here and there which tells me that a number of you have not as yet read last week's announcement.

Well, we are going to have a Make Believe Party on October 31st. I do wish we could all get together and have a real party but that seems to be next to the impossible for some Forum friends live way up in the northern part of New York State, some as far south as Florida and some as far west as Ohio, not to mention the cousins scattered thru Pennsylvania, New Jersey, Delaware and Maryland. I could never get all of you together for a single evening. Since a real party is out of the question we're going to do the next best thing—we're going to have a Make Believe Party. The issue of October 22 will be devoted entirely to our Hallowe'en Party. On the Forum page in that issue we'll publish suggestions for decorations, games, refreshments, etc.

I told you last week, if you'll remember, that I would attend to all the details of the party but that you must plan your costume. Just as soon as you decide the costume you're going to wear—write and describe it to me. There will be prizes awarded for the costumes just as tho it were a real party—one for the most original, one for the most popular and one for the funniest. All letters must reach me by October 12th.

Every reader of our page is invited to the party. In order to attend our MAKE BELIEVE PARTY you simply have to write and describe the costume you'll wear to the party. I'm getting the games together now. Some of them are so very spooky they make me shiver just to read them.

I'm anxiously waiting to hear from all of you.

THE FORUM EDITOR.

Dear Cousin Ruth and Forum Friends:—For pets I have a little dog named Bobby. He shakes hands with you and he is very playful. He chases the cats and chickens out of the garden and he can swim, too.

MOTHER AND DAUGHTER
Anna Shewchuk, (X), Berks County, Pa.

Will somebody please send a recipe for butterscotch candy? I am sending a picture of my pet calf with its mother.—Anna Shewchuk, (X), Berks County, Pa.

Dear Forum Friends:—I have a little black puppy dog. His name is Gippy. I taught him to sit up and coax for his food. I live on a farm. We have a horse, chickens and dogs. We also have two little ducks and every day they go down to the creek and wash themselves. We can't keep them away from the creek.

Our Sunday school had a picnic on the 20th of August. We had a fine time.—Harriet Marcy, twelve, Luzerne County, Pa.

OUR LITTLE FOLKS' PUZZLE CORNER

DEAR LITTLE FOLKS:—Looks like a regular jungle of words in the square below, doesn't it? But if you are good hunters you will be able to find a lot of names of animals before you are much older. (Please tell me when your birthday comes, as well as how old you are.) Some of these animals live in the forest; some are wild; others are on your very own farm; some live in the water and some fly in the air. (Be sure to tell me your post office address and the name of your county.) Some of the animals are very small and some are very, very big, while others are—well, just ordinary animal-size. Here's the secret of how to find their names. (By the way, you want me to find your name on your puzzle answer, don't you?) Take the first word you come across—S E A T—and change the first letter and the last letter so that it forms the name of an animal. That means that the letters "E" and "A" are the second and third letters of the animal's name, and I'll tell you this much—it's a "B E A R." Now, go over the rest of this strange lot of words until you have changed the first letter and the last letter in each word so that the new word is the name of an animal. Remember, I told you there were many kinds. Noah probably had more kinds in the ark, but he had more time to figure out their names. You will want to get your answers in to me by October 15, and you may send them on a postcard or in a letter. By the way, Jonah knew one of these animals, too. The ten children who receive prizes will send in correct answers, of course, but their postcards or letters will be the best in spelling, that shouldn't be difficult this time, because most of the letters are there for you, only you change the first and last letter in each word I have given your grammar, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle published in the September 17 issue (about the thing which is broken if you speak its name) is: SILENCE.

The prize winners are: John D. Burkholder, age 7, Chambersburg, Pa.; Gladys Fried, age 9, Orwigsburg, Pa.; Dorothy Huston, age 12, South Kensey, Pa.; Harry J. Kauffman, age 8, Columbia, Pa.; Margaret Limburg, age 7, Morrisdale, Pa.; Paul Pflumer, age 11, Norristown, Pa.; Maybelle Pike, age 7, Shippensburg, Pa.; Anna Van Alstine, age 5, Durlon, N. Y.; James Niles Walton, age 11, Edgewater Park, N. J.; Lorraine Weller, age 9, Brandywine Summit, Pa.

1.—Princess Mary of England, with her two sons, the Hon. Gerald David Lascelles (left) and the Hon. George Henry Hubert Lascelles.
2.—When Henry B. Murtagh, a solo organist of Chicago, fell into a theatre pit and fractured his shoulder he did not stop entertaining. An improvised keyboard of one and a half octaves, connected to the console by cables, enabled him to play as well as before the accident.
3.—"Jean," a collie, is one of the latest stars of the movies.
4.—Miss Ruth Elder says that her only ambition is to be the first woman to cross the Atlantic in a plane. She claims that her interest is not a scientific one, but purely a feminine desire to be the first woman to make the transatlantic flight.
5.—The first locomotive to be run in Minnesota, built in 1861, made its way under its own steam from Chicago to Baltimore to take part in a recent transportation exhibition.
6.—Herd sires at the U. S. D. A. Experimental Farm at Beltsville, Md., are exercised one and a half hours each day.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

WITH that I lay down on the spot of grass where I had chanced to stop and fell into a deep stupor of sleep and exhaustion almost instantly. My last recollection was of Hastings standing with his hand on the bridle of the bay and cursing, apparently not angrily but as a way of showing profound astonishment.

It seemed to me that he must have bent over on the instant and waked me again. Yet the shadows were longer on the grass, and altho I was scarcely rested, I knew I had slept. A little Negro boy was squatting at my head, and keeping a branch going back and forth over me. This struck me as thoughtful, and doubtless prevented insects from bothering altho I would have sworn that it would have taken a legion of hornets to have disturbed me greatly.

A woman brought a pannikin of broth of some sort, piping hot, and I drank it gratefully tho at the cost of scorched mouth and throat. Then they gave me milk, fresh from the spring house, and I must have swallowed a quart of that.

Still I was only half awake. Hastings beckoned the same little Negro boy. He came with a bucket of cold water and I soused my head in it. I felt better.

"Here is a mount for you, sir," Hastings announced finally. "You should reach Betharaba by dusk. Remember they are not all friendly here. Be careful."

I thanked him and said I would remember. He helped me into the saddle, for I was stiff and sore. As I rode down the lane I looked back and saw the plantation that I had found so quiet was now all bustle. Horses were being driven up from pasture, women were scurrying about between the different buildings; there was a great deal of shouting of orders and replies. I judged my coming meant to them that the storm was about to break. Again I wondered what was to happen to these people. That the governor would overwhelm them with troops, I made no doubt. After that, what? Confiscation of land, imprisonment of ring leaders and what else? It would be hard to imprison the whole back country of North Carolina.

OF THAT afternoon I can remember little. I rode in sort of a daze, and only spurred myself awake when I came to a crossroads. Even then I took the wrong turn once and lost time. Once in a while I recalled that I was supposed to be riding post haste and spurred into a gallop. Mostly, I fancy, I rode hunched up, trying to keep from being torn to pieces by a racking trot.

Almost with surprise, I realized suddenly that it was evening, the heat had gone out of the sun, and that the pines were casting low shadows across the road. One whom I passed on the road answered my usual query with the answer in a German accent that the tavern was only a mile or so beyond.

Shortly thereafter the road sloped down to a creek bottom, with cultivated fields on each side. I passed a house presently and another field. Then lights began to spring out of the dusk ahead, and to my left also I saw lights but farther away. Those to my left, I gathered, were at Betharaba, while ahead was the tavern which lay north of the palisaded village.

I COULD see but little of it as I rode up. It seemed nothing more than a large log house, surrounded by out buildings. At my hail a boy came from the stable and took my horse. I slung the saddle bags over my shoulder. There was nothing in them except in the one that hung down in front of me. The horse pistol was there, and I shook fresh powder into the pan before I started for the door.

It was my purpose to enter as quietly as possible, seek out the keeper of the tavern and ask that a boy be sent for Gottfried Steup. I had hoped too that the tavern might be empty.

Luck was not with me. There must have been nearly a dozen men in the tap room when I entered. A few were respectable Germans, but the rest looked like typical products of the frontier. Indeed, after a second glance, I was about ready to say they looked villainous as well as hardy.

Worse than that, talking stopped dead when I entered. All eyes were turned toward me. I had the air of a man who had ridden post haste. That as I should have known, was enough to mark me.

"What news from Hillsboro?" asked one.

"None," I replied. "I come from the north."

He gave an exclamation and stared at me, then stepped back to talk with his fellows. A low buzz of talk broke out behind my back. I felt a moment's curiosity as to who the fellow might be. His voice had seemed familiar.

To the tavern keeper I explained my errand.

"Herr Steup," he repeated loud enough for the room to hear. "He is no longer here."

Here was disappointment.

"Where is he?" I asked.

A hand came down on my shoulder and I was whirled around to face my erstwhile questioner. A group of men were behind him. I saw knives and pistols in their belts. As their leader spoke, I glimpsed the scar on his forehead and knew him. It was the escaped bond-servant who had robbed me south of Harris Ferry, him."

"STEUP is in jail waiting for the governor to hang him," declared this fellow savagely, "and you are just about to start on the way to join him."

If anyone had asked me an hour before, I should have said that the threat of capture would have stirred me not at all. I was ready to go docilely with whoever ordered me. Any further exertion, any further thought even, was a pain too great to be borne. Come what may, my errand ended at the tavern. I would have done my best; let fortune care for all else.

But almost before I knew what I was doing, a certain memory and a certain habit of mind struck for me. I remembered that this was the man who had robbed me; I remembered that till I delivered that message to Hunter, I was still in debt to certain gentlemen in Philadelphia. And before these thoughts came to my conscious mind, that horse pistol was out, there was a flare and a roar, and I was standing alone in the middle of the room with a smoking pistol in my hand and a man writhing and moaning on the floor in front of me.

As I stared at him, a sharp voice cut across the clamor of the room.

"Keep your hands away from your pistols," it cried, "I'm watching you. Now, Craig, the stairs are to your back. Slowly now."

A man in woolen breeches and a coonskin cap came out of the corner to my left. He had a long rifle at the carry and its muzzle covered a group of five or six near the door.

"Krafft!" I cried.

"There's a powder horn on the wall behind you," he told me quietly. "See if there aren't a few bullets in the pocket of that coat. Got 'em?"

We were at the foot of a narrow flight of stairs. "Load!" he ordered under his breath. I fumbled, spilled powder and dropped one patch.

"Ready? Up with you. Quick."

I stumbled upstairs. There was a shouting below like so many hounds released. Krafft's hands were at my belt, pushing me. They dropped away as I scrambled around the corner.

A GUN roared behind me, the noise of the report clamorous in those narrow walls. I thought for a second Krafft had been shot, and turned. No, there he was at the head of the stair, and reloading like mad.

"Hold your fire," he shouted. "I discouraged 'em a little. We'll need both shots if they make a rush."

There must have been five or six rooms on the floor, with a hall running down the center and the stairway at one end. Krafft ran along and opened door after door.

"All clear," he reported. "Now what?"

I was dizzy. The shadow at the head of the stair swelled and shrunk. My hands seemed far away and the pistol I held heavy. I leaned against the wall. Krafft looked at me again, dashed into the nearest room, and dragged out a chair. He pushed me into it, brought out a small flask from a pocket and set it to my lips.

"Now, tell me."

"Tryon's on the march, headed for Hillsboro," I mumbled. "Waddell's at Salisbury. I can't find Hunter. Powder at Cross Creek."

Krafft broke into a string of cursing.

"We can't waste time," he declared. "There's a shed at the back. We can make it by a good jump. Those fools below are watching the stairs. Come on, Hunter's down at Sandy Creek."

I opened my shirt and took off the lid thong with its buckskin bag.

"This is for Hunter," I said. "From Philadelphia. Take it to him."

Krafft looked at me.

"Better come," he urged. "They may scalp you for luck before they take you to Fanning. And Fanning's sure to hang you."

"Done for," I muttered. "You go on."

Krafft swore again and pocketed the buckskin bag.

"Powder we must have," he said as if he were arguing with himself. "It's hard tho. I'll cover your grave with scalps of Fanning's men if they get you."

"Go on," I said again, and presently I realized I was alone.

For a long time I sat there and listened for a sound. Nothing came. I rested my head against the plank wall and almost dozed off. Something stirred me to a dazed wakefulness. I fixed my gaze on that spot of gloom in the stair head. A part of the shadow moved. I fired.

There was a yell and the clatter of men rolling downstairs very rapidly. I remember that this amused me, and that I sat there smiling in rather silly fashion at nothing for some time. I forgot entirely to recharge the pistol. And presently, it seemed to me that all would be well if I took a little sleep first. There was much for me to do, I knew. Very well, a little sleep and then I would do whatever awaited. It seemed to me a very wise plan. Chuckling a little over that wisdom, I let my head slip over against the wall again and sank on the instant into a profound slumber.

I AWOKE to feel the bite of ropes on my wrist. There were four men around my chair. When I was bound securely, they dragged me down the stairs and cuffed and kicked me as they went. Yet I was still sleepy and stupid when they dragged me into the big inn parlor.

My old enemy, the ex-bondservant, was sitting up in a great chair. Very pale he looked and very villainous. He carried a big bandage across his arm and chest.

"This is the one," said he. "Have you searched him?"

They laid before him the contents of my pockets, at which he swore dreadfully.

"The reward is for him, too, tho," he remarked after a while. "But must we carry such a hulk all the way back to the Colonel?"

Over this the man with the brand seemed to ponder for some time, and called for a drink to help him think. Then he laughed, a queer laugh that had a snarl in the middle of it.

"Take him and hang him to the tree outside," he ordered. "Then cut off his head. We shall take that in a sack to prove we have earned the money."

To myself I said this must surely be a bad joke. Nothing like this could happen. I might be carried to Colonel Fanning and to the Governor and then tried for aiding the rebels. But this—impossible.

Yet the man seemed businesslike. One brought a rope. Another called from outside that here was a limb that would do.

"It's quicker to shoot him," suggested one.

The man with the brand shook his head.

"I hanker to see him kick," he declared.

IN POURED suddenly a dozen of our sober-faced Moravians. They had been mighty scarce so far, but now they came in with something of authority. The reason for it was the man in their midst, a sturdy fellow with a very determined German face.

"Who is in charge?" he asked and some one pointed out the man in the chair.

"We have had enough disorder here," the newcomer declared vigorously. "There will be no hanging."

The man with the brand asked himself profanely if he had come to be hearded by a cursed psalm singer. And answered himself in a negative but with oaths. The Moravian showed anger.

"I am Justice Marshall," he cried, "take care, my man. His Excellency listens to what I say. Do you hearken. This man may be a criminal and a fleer from justice, as you say. Very well. Take him then to the court at Hillsboro or to Colonel Fanning or to His Excellency. But take not upon yourselves the power of judgment and of execution. For I shall send word to His Excellency of what happened here; and if you bring not this fellow safe and sound, there shall be questions asked which you will not care to answer."

And with that he turned and marched off. But the rope came down from the tree, and my knaves counseled together once more. Also it was worth nothing that the tavern keeper, hitherto pretty quiet, began to use a sharper tone when he spoke to the men who held me.

"Bring horses," ordered the man with the brand presently, and I perceived that I was to live yet a little longer. Yet how long was doubtful. We set forth, six of us, with me in the middle and tied fast to the saddle.

"If we meet a gang of these Regulators," suggested one, "we can shoot this fellow and tell 'em he's a man of Fanning's."

They assented. I began to hope that our road would be clear. It was not. Everywhere we caught glimpses of small bands hurrying south. By careful work, we avoided speech with them. Once we left the road and lay quiet for an hour while a larger party passed.

So on all day. When night fell, we traveled faster. I had time enough all this while to figure out what was in store for me and what if anything I might do to save my neck. Yet tho every hour or so I would rouse out of a stupor of exhaustion and swear to myself that I must think of some way out, still my brain refused to work. And as night came on, I even gave over the effort and rode in a gray haze, altho the figure of a gallows showed at times, the only thing of substance that I continued to see was a rough bed in a cabin corner. Let them hang me if they cared to, but let me sleep first.

Someone ahead flung out a challenge. A musket shot ripped thru the stillness. Our troop halted suddenly. Horses, milling together, squealed and snapped at each other. One rode on ahead. Voices sounded thru the dark. The parley ended. There was a shout for us to come on. We gave our horses their heads again.

Two men leaned on muskets at the roadside and watched us pass. Fifty yards on, another sentinel stirred in the gloom beside the road. Then we came into an open space, which I recognized only by missing the deeper black of the trees. A light flashed out ahead. It came on slowly, swinging as it came, and presently showing the legs and body of the lantern bearer.

THERE was a lot of talking. Men dismounted around me and led their horses away. They were out of sight at once, but I could hear their horses stumbling after them and their calls to each other. Presently these too ceased.

"Prisoner?" came a voice from in front. "Put him in the meat house."

The rumble of talk went on.

"We'll put a guard outside," came the first voice again. "Escape? Nonsense. Guard him yourself, if you're worried about that reward."

They cut the ropes that bound me to the saddle and one man caught me when missing that support, I slumped over. Two of them took me by the arms and dragged me, for my legs would not hold me up, over several rods of rough ground. We paused. Someone wrestling with the catch of a door, swore feelingly. Then I heard a hinge creak and I was dragged forward again. The men who carried me gave me a final swing. I lay where I dropped. A door slammed; a bar dropped. Saddle galled, muscle and nerve weary that I was, I had a brief moment almost of content as I lay spread-eagled on the floor. Here was at least the end of effort, and for a time, here was also the priceless gift of rest.

I awoke late, with a stiffness in all my joints and a surprising lightness in my spirits. The delivering of that message from Thomson had weighed on me so greatly, that merely to know my duty there was ended was a cause of joy. That job was done. Now I was my own man again. For a moment, the task of making Colonel Fanning or the governor see my case in its right light seemed easy.

SO WHEN the bar on the door rattled, I looked up rather eagerly in hope someone was coming to lead me to a hearing. But instead of a guard there was thrust in only a very dirty man who gave me a sharp look and set to work to try and scrape the mud off his breeches. Behind him the bar clattered into place again.

I surveyed the newcomer with some curiosity. Under the layer of dirt he had the air of a very respectable landholder. His clothes were fairly good, and his anxiety to scrape himself free of mud indicated that he was not used to soiled breeches. There was a job for him there, for the fellow had the look of one who had been dragged thru a mudhole by the feet.

"Do they feed us here?" I asked finally. "My stomach tells me it's past breakfast time."

"A brush and a nigger with a good arm would be more to the point," said my friend somewhat irritably.

Harvesting the Crop

The farmers of Lancaster County have started to cut tobacco. This scene was taken on the farm of David B. Lapp, Kinzer, Pa. The tobacco crop is somewhat late this year due to rainy and cool weather.

"Bless me if I ever was in such a state. And no change, of course."

I replied that it seemed unlikely that prisoners would have extra clothes provided and went on to ask him how he came in such a place.

He snorted. "Because of a foolish belief that my horses belong to me," he snapped. "Two scoundrels rode into my pasture and started to round up my four best horses. I had at them with a pistol and missed. Then what does one do but tie a rope around me and drag me for a mile thru mud—to teach me manners, he said. So here I am and likely to stay till someone teaches these scoundrels manners."

The Regulators were not likely to do that soon, I told him, since this party was doubtless due to march soon to meet the governor. At the word, the man stared at me open mouthed for a minute and then began to laugh.

"Blast me," he cried, "I thought these scamps were Regulators. Well, it's all one. There are scamps on both sides. But Fanning may let me go quicker than the Regulators would."

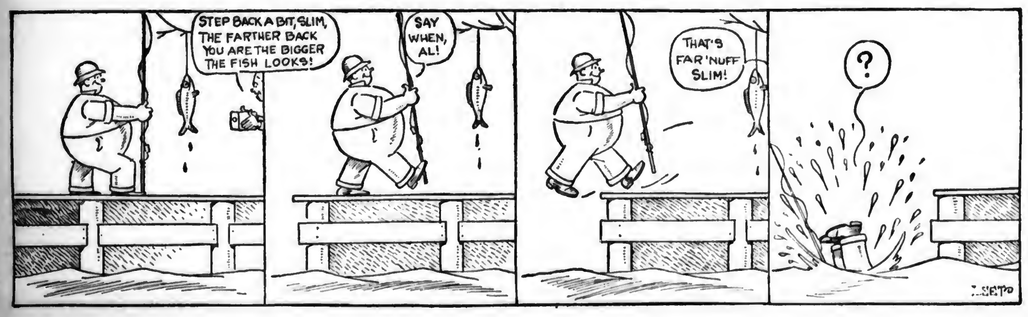
He made as if to go on and then after a sharp look at me, apparently thought better of it. It struck me that I had better make my position clear. I told him therefore of the robbery, of how I had been seized, but nothing of the message.

(To be continued next week)

He—What are you taking for your cold?

She—Make me an offer.

Activities of Al Acres: *Al Takes a Picture for the Folks At Home:* : : : *By Leet*



Did you ever hear this one?—

The Editor

Most anyone can be an editor. All the editor has got to do is sit at a desk six days out of the week, four weeks of the month and 12 months of the year, and "edit" such stuff as this:

"Mrs. Jones, of Cactus Creek, let a can opener slip last week and cut herself in the pantry.

"A mischievous lad of Piletown threw a stone and struck Mr. Pike in the alley last Tuesday.

"Joe Doe climbed on the roof of his house last week looking for a leak and fell, striking himself on the back porch.

"While Harold Green was escorting Miss Violet Wise from the church social last Saturday night a savage dog attacked them and bit Mr. Green several times on the public square.

"Isaiah Trimmer, of Running Creek was playing with a cat Friday, when it scratched him on the veranda.

"Mr. Fond, while harnessing a bronco last Saturday, was kicked just south of the corn crib."

"Oh, Doctor," cried a wild-eyed man, "I am dreadfully afflicted. The ghosts of my departed relatives come and perch on the tops of the fence posts all 'round my garden when dusk is falling. I can look out any night and see a couple of dozen spooks sitting on top of the posts, waiting, waiting, waiting! What shall I do?"

"Sharpen the tops of the posts," came the reply.

Nothing Inside

The stout man on the scale was eagerly watched by two small boys.

The man dropped his cent, but the machine was out of order and only registered 75 pounds.

"Good night, Bill," gasped one of the youngsters in amazement. "He's hollow!"

Darky (to hardware clerk)—Have you any razurs, Boss?

"Yes, indeed," said the clerk, bringing out some safety razors.

The darky examined them carefully, shook his head and handed them back.

"Boss, I'll tell you; dem 'er razurs might be all right for shaving, but they am absolutely no good for social functions."

A Time-Saver

Driver of a sadly worn-out car to a bystander: "Can you tell me the quickest way to Hackensack?"

Bystander, after a critical glance at the car: "Yes, take the first bus that happens to come along."

Jeannie—Jock, Jock, there's a coo in the vegetable garden.

Jock—All richt woman, dinna stand makin' a fuss. Hurry up and milk her before she gets out.

High Enough

"When I was in China I saw a woman hanging from a tree."

"Shanghai?"

"Oh, about six feet."

A Clean Sweep

Dealer—Somebody stole three sets of harness out of my store.

Policeman—Did the thief leave any traces?

Dealer—No, he took the traces, too!

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUG. 24, 1912.

Of PENNSYLVANIA FARMER, published weekly at Philadelphia, October 1, 1927.

County of Philadelphia.
State of Pennsylvania. ss.

Before me, a Notary Public in and for the State and county aforesaid, personally appeared Neff Laing, who, having been duly sworn according to law, deposes and says that he is the Business Manager of PENNSYLVANIA FARMER, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 443, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor, and business managers are: Publisher, The Lawrence Publishing Company, Philadelphia, Pa.

Editor, R. P. Koster, Newtown, Pa.
Managing Editor, C. L. White, Philadelphia, Pa.
Business Manager, Neff Laing, Philadelphia, Pa.

2. That the owners are: (Give names and addresses of individual owners, or, if a corporation, give its name and the names and addresses of stockholders owning or holding 1 per cent or more of the total amount of stock.)

The Lawrence Publishing Company, Cleveland, Ohio
Arthur Capper, Topeka, Kan.
Paul T. Lawrence, Cleveland, Ohio
The Union Trust Company, Administrator, Cleveland, O.
Estate of Mrs. C. B. Rogers, Cleveland, O.
The Union Trust Company, Administrator
Estate of Lillian Gilbert, Cleveland, Ohio
Kate E. Mundell, Detroit, Mich.
F. H. Nance, Lakewood, O.
Neff Laing, Philadelphia, Pa.
L. B. Waterbury, Detroit, Mich.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) The American Life Ins. Co., Detroit, Mich.

4. That the two paragraphs next above, giving the names of the owners, stockholders and security holders, if any, contain not only the list of stockholders and security holders as they appear upon the books of the company but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting; is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

Neff Laing, Business Manager.

Sworn to and subscribed before me this 27th day of September, 1927.

George R. M. Burkert, Notary Public
(My commission expires March 7, 1929)

Rocky Job

Boss—Rastus, you good-for-nothing scamp, where have you been loafing all day? Didn't I tell you to lay in some coal?

Rastus—Yassu. Ah's been layin' in de coal all day, tho dere is lots of softer places whar Ah'd ruther lay.

Take a Dare

Futility—Trying to sell a copy of "Ask Me Another!" to the father of five small boys.

Ask your Neighbor

What kind of spark plugs he finds most dependable in engine-driven farm equipment and it is two to one that he will say, "Champions!"

For Champions are known the world over as the *better* spark plugs.

Their exclusive sillimanite insulators which are practically unbreakable and strongly resist carbon formation — their two-piece, gas-tight construction making cleaning easy — and their special analysis electrodes which do not corrode assure greater dependability; better engine performance; longer life; and a saving in gas and oil.

Try a set of Champions in your truck, tractor, stationary engine or your own personal car and learn why the majority of farm owners as well as millions of car owners always buy Champions.

CHAMPION
Spark Plugs
TOLEDO, OHIO

Champion X—Exclusively for Ford cars, trucks and tractors—packed in the Red Box 60¢

Champion—for trucks, tractors and cars other than Fords—and for all stationary engines—packed in the Blue Box 75¢

"I Know It's Good Because It's Advertised in Pennsylvania Farmer"

RESULTS count in radio. When you buy a receiving set you have a right to expect that it will respond quickly and accurately to your touch. No adjusting or tinkering. No shrieks and howls. Just quick and faithful service when you want it, whether you tune for a near-by station or one hundreds of miles away. This holds true whether it is an inexpensive set or a big high-priced one that will bring in stations from coast to coast.

The service you get from the radio depends on the quality that is built into it. Put together the finest materials, utilize designs worked out through years of careful research, enlist the skill of the most accomplished engineers, and you have a known product that is bound to give results. The manufacturer is not taking any chance at all when he tells you what such a set will do. He knows what's in it.

There are receiving sets on the market that do not and cannot deliver satisfactory service. Some concerns, taking advantage of great interest in radio, have thrown together outfits which are built only to sell. Like mongrel livestock, no matter how little you pay for them they are not worth having.

You need never doubt the quality of any radio set advertised in Pennsylvania Farmer. The rules of this publication are strict. Every advertisement must pass the closest scrutiny before it is admitted to these columns. On a radio set advertised in Pennsylvania Farmer the trade-mark is the personal signature of a manufacturer worthy of your confidence, who is proud to stand back of his product. When you buy through Pennsylvania Farmer you have the manufacturer's guarantee, and also Pennsylvania Farmer's assurance of reliability.

Hogs—Receipts, 850. Heavyweight, 250 @300 lbs, medium, good and choice, $10.25@12; mediumweight, 200@250 lbs, medium, good and choice, $12.25@13.25; lightweight, 150@200 lbs, medium, good and choice, $12.25@13.25; packing sows, rough and smooth, $8.50@10.25.

Cattle—Receipts, 350; calves, receipts, 100.

Markets Close Strong

Review of the Week Ending October 1

BUTTER—Receipts of fancy fresh butter were light on practically all markets during the week. The eastern markets opened firm and prices advanced about 1c per pound. At Chicago, however, prices held steady thruout the week and the market showed a weaker tendency.

POTATOES—The potato markets in the East were unsettled during the week. Heavy supplies and the lack of trading resulting from the Jewish holidays caused prices to drop but later in the week the demand improved and conditions improved at practically all eastern markets. The unseasonal warm weather has retarded the demand to some extent but the quality of the offerings has shown some improvement.

EGGS—Accumulations over the holidays resulted in liberal supplies of eggs on the New York market. The market was firm on fresh stock of good quality toward the close of the week. Nearby white eggs were irregular. There was a good outlet for fancy stock but the average run was dull and weak.

POULTRY—Supplies of live poultry were heavy in New York and the market showed a weaker tendency altho prices showed little change. Chickens were dull and of rather poor quality. Leghorn chickens were in fair demand. The dressed poultry market was quiet with a slow demand.

LIVESTOCK—The Chicago hog market advanced and prices were higher at the close. Beef steers were steady with the better grades showing advances. Heifers dropped sharply but cows were about steady. Vealers and stockers and feeders were about steady. Fat lambs declined while yearling wethers were higher. Fat ewes and feeding lambs were steady.

HAY—The hay market was inactive but light receipts and small country loadings improved the demand. Receipts at eastern markets were light but supplies were more than ample for the demand and prices were lower at some cities.

GRAIN—The grain markets showed a firmer tone toward the close of the week due to stronger foreign markets. Wheat futures advanced and cash grain was somewhat higher. Mild weather influenced the corn market and prices dropped slightly. Oats were firm with a fair demand while rye was inactive.

HAY AND GRAIN

Hay—No 1 timothy, $17@17.50; standard timothy $15.50@16; No 2 timothy, $14@15; No 3 timothy, $12@13; No 1 mixed, $16@16.50; No 2 mixed, $14@15; No 1 clover mixed, $15@15.50; No 2 clover mixed, $13@14; No 1 clover, $15.50@16; No 2 clover mixed, $12@13; No 1 heavy clover mixed, $14@15; No 2 heavy clover mixed, $12@13.

Oats—No 2 white, 56c; No 3 white, 54c; No 4 white, 52@53c.

Shelled Corn—No 2 yellow, $1.05@1.06; No 3 yellow, $1.03@1.04; No 4 yellow, $1@1.01; No 5 yellow, 98@99c; No 6 yellow, 96@97c.

NEW YORK MARKETS

PRODUCE

Are you ready for Winter?

It is almost here. To protect yourself and family, your home, barns and stock from the discomforts and destruction from winter, you need your "Farm Service" Hardware Store more than any other place. Here you can get heating apparatus of all kinds, materials to make your buildings weather tight and storm proof, and other necessities to make the long winter days happier and more comfortable.

Why Huddle Around the Old Stove?

The days of stove heat are gone. If you are still doing it, both your health and your pocketbook demand that you install more modern equipment so that all of the rooms in your house can be comfortable all of the time and that your fuel bill won't eat up all of your summer profits. Good heating equipment pays for itself more rapidly than any other one thing that you can buy for the farm home.

If you have drafty windows and doors, get some weather strips at the "tag" store and stop the waste of fuel and the pneumonia-making drafts. There, also, you can get glass for repairing broken windows, door closers that will shut your storm doors tightly, locks, springs, hinges and window catches to replace missing or broken ones.

Other Helps for Farm Home Comfort

Go to your "Farm Service" Hardware Store for other things that will make winter days more pleasant. There you will find better lights for indoor and outdoor use, water heaters for the home and the stock barn, necessary winter chicken equipment, tools for your repairing and glass substitutes for covering your porches and windows to save fuel, and also for your chicken houses and barns to make your livestock more comfortable. Last but not least, talk to him about a radio, the most wonderful thing that the farmers ever had for winter days and evenings. They are your stores for comfort, convenience and happiness.

Your "Farm Service" Hardware Men

Stallion Wins Blue Ribbon at Fair

SIR WILLIAM, the purebred Percheron stallion owned by the Franklin County Percheron Breeders' Association, E. A. Nicodemus, Waynesboro, president, has proved that a busy season of breeding 82 mares need not interfere with winning prizes in the show ring. At the recent Ohio State Fair, this remarkable animal was first in the aged stallion class and reserve senior champion to Don Dyos, grand champion at last year's International Livestock Exposition.

Then another stallion in the state selected by agricultural extension workers,—as was Sir William,—also was a prize winner. Range Line Phoenix 2nd, Belgian stallion owned by Hollymeade Farm, in Beaver County, was the blue ribbon winner in the three-year-old class at the Ohio State Fair and later repeated this peformance at Detroit, Michigan, where he also took reserve senior champion and reserve grand champion honors.

National Swine Show Exhibits Larger Than 1926

THE Twelfth Annual National Swine Show was held the week of September 12 to 17 at Peoria, Illinois. The number of hogs on exhibition was 1618 which was an increase of about one-half dozen head over the 1926 show. In most breeds there was a material strengthening over the show in recent years with the exception of the Poland-China breed.

It was pretty commonly agreed that it was the best Duroc show during the past five years.

What could be said of Durocs could also be said of Hampshires, which breed ended up their week's activity with a dispersal sale of the Underhill Hampshires from California. The Chester-White show was fully up to the usual standard in numbers; there being 217 head on exhibition. The Spotted Poland breed was up to previous standards in numbers and the Yorkshire breed was above standard. The Poland China breed had 183 head on the ground with very outstanding tops big lacking by almost 100 entries the number that could be rightfully expected from this breed. Berkshires and Tamworths were about normal in their shows. The Berkshire classes caused some very favorable comment particularly in sows because of their scale and size, but were criticized for a lack of uniformity and in some cases, inferior underpinnings.

Almost any show is made by the judging done and there was a general feeling at the end of the week that there was an excellent job of work done in every breed. Perhaps never in the history of the show has there been a better feeling on the awards than after this 1927 show. Professor Arthur L. Anderson, of Ames, Iowa, worked over the Durocs; Frank E. Shearer, of Joy, Illinois, made the awards of the Chester-Whites; J. M. Dowell, of Seymour, Illinois, tied the Tamworths; Sol L. Leonard, of St. Joseph, Missouri, worked over the Poland-Chinas; R. L. Pemberton, of Le Grange, Iowa, placed the Hampshires, and Canada furnished Professor Wade Toole for the Yorkshires, with Professor L. A. Weaver, of Columbia, Missouri, putting the Berkshires in their proper pens and Professor W. H. Smith, of Urbana, Illinois, making the decisions for the Spotted-Poland China breed. Much of the success of the 1927 show is due to the very capable and efficient work of these gentlemen.

The entries came from eleven states and 105 different herds. From across the country came herds from Pennsylvania and California and in the opposite direction was Wisconsin and Minnesota going south thru Missouri. Certainly this demonstrates that the national is not a show in name only.—E. M. C.

This Boy Has Started His Business Training

SALEM COUNTY will continue to lead New Jersey on hog production while such boys as Joseph Clayton, Jr., Shirley, are engaged in club work. This fourteen-year-old boy shows that it is possible to produce pork at a profit, besides demonstrating a keen insight into business methods.

In the spring of 1927 he bought a Hampshire sow for fifty dollars, giving his note for the full amount. In the early spring she farrowed a litter of ten pigs, all of which she raised.

When they were eight weeks old Joseph sold three of them for $30. Four were sold for another $30. He gave his father two of the others for the feed they had consumed and the last one he kept for a breeder.

From the original investment of $50 of borrowed capital on January 27 of this year he has already paid the note, which was not due until January 27, 1928. He has a cash balance of $10, a 200-pound gilt valued at $30 and the original sow, soon to farrow again, with a cash value of $75. The original investment paid this fourteen-year-old boy a cash dividend of 120 per cent, a stock dividend of 60 per cent and the original investment has since increased 50 per cent in value on present-day market values. The investment was made less than eight months ago. In addition the boy has had a barrel full of fun and a year's experience in practical farming.—K.

This Barn Is Kept in Repair

It is the neat appearance of these farm buildings which prompted this picture. Samuel M. Martin, East Earl, Lancaster County, built the barn in 1912 and has kept it in constant repair. It is 102 feet long and 44 feet wide. The two silos are 36 feet high. The ensilage is used to fatten steers during the winter months.—L. W. M.

New Automatic Gambrel Hook

Adjusts Itself Automatically to Any Size Animal

In cutting down, or halving the animal, it automatically spreads the carcass making it possible for one person with block and tackle to straighten, scald and cut down an animal.

Endorsed by leading Grange associations. Satisfaction guaranteed. Ask your dealer or write us direct for full description and prices.

Veterinary

Conducted by Dr. J. F. Shigley

Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

DOG EATS MASH—DEPRAVED APPETITE.—My Collie dog seems to have a liking for chicken mash. Whenever he has a chance he gets at it and helps himself. Would it be advisable to give him some at any time? My Jersey cow seems to have a liking for soap. Whenever she gets hold of a piece she swallows it. What causes her liking for it? Is it harmful or beneficial for her?—E. G., Hagersville, Pa. There is probably no harm in the dog eating the mash. The major portion of a dog's diet should be milk and meat. Try increasing the variety in the ration for this cow. Allow free access to a mixture of four parts steamed bonemeal and one part salt. The soap will not cause any harmful effect.

PIGS HAVE WORMS.—We have discovered that our hogs suffer from worms. Would you be good enough to advise us how to eradicate the worms and what could be the cause of it? We feed them on a mixed formula such as cob chop, wheat middlings, oats crop, tankage, oil meal, fish meal and salt. This mixture we feed twice a day and for the last six weeks we fed them once a day green sweet corn, ear and stalk. Would very much like to know whether such green feed as sweet corn can do any harm.—H. D. Quakertown, Pa. The ration appears to be very well balanced and should result in rapid gains. We prefer to use the capsule method of treatment for worms. These capsules may be obtained from your veterinarian. Sows about to farrow should be washed, using a dip solution, hauled to a new lot and allowed to farrow on this ground that has not had pigs on it for six months or more. Plan a rotation of hog lots, growing a forage crop in the meantime which plan will lessen the danger of infestation.

TREATMENT FOR ITCHING.—My horse is having trouble with itching mane. I want to try the following recipe. A purgative of Glauber's salt 1 lb., wash of water slightly soured with oil of vitriol and rendered sweet by carbolic acid. Kindly tell me how to dose the salt and how to mix the wash.—T. M. T., Pittsburgh, Pa. You will probably find the following treatment most desirable: Wash the parts with warm water and toilet soap. Follow with a solution containing stock dip made according to directions of the manufacturer. Repeat in five to seven days. One pint to one quart of raw linseed oil will be satisfactory for a laxative.

Our Readers' Classified Advertising Department

A market place to buy or sell at little expense. Over 100,000 farm families read Pennsylvania Farmer every week. Rate 6 cents a word each for one, two or three consecutive weekly insertions. 5 cents a word each for four or more insertions. Count each number and initial. Minimum, 10 words.

SEND CASH WITH ORDER

Orders, discontinuances or changes of copy must reach us by Wednesday of week preceding date of issue. All advertisements set in uniform style, no display type or illustrations. Poultry advertising must run here, but if displayed or illustrations used must run in display advertising columns at commercial advertising rate (65 cents per agate line).

Livestock Advertising (Horses, Cattle, Sheep, Swine, Dogs, Ferrets, Poultry Breeding Stock, Eggs, etc.) not accepted at word rate. Send for special folder.

WHITE LEGHORN eggs and chicks—big discount if ordered now for spring shipment. Bred to 294 to 293 egg hens. Est. 1914 28 years. Winners 20 egg contests. Shipped C. O. D. Catalog, special price bulletin free. Thousands of pullets, hens, cockerels at low prices. **George B. Ferris, 980 Union, Grand Rapids, Michigan.**

SELECTED S. C. White Leghorn Pullets—April and May hatched. Raised on free range, from "heavy laying" strain. $1.50 each. **C. L. Taylor, Wyalusing, Pa.**

100 SINGLE COMB White Leghorn Pullets—Hollywood strain, some laying, $1.00 each. 4 mo. old pullets, $1.25 each. **I. R. Tanger, York Springs, Pa.**

CAPONS. Best large and small breeds. Lowest prices. **R. C. MacKey, Broqueville, Pa.**

BROWN LEGHORN PULLETS—12 weeks old, eighty cents each. **Helen Carver, Hublersburg, Pa.**

JERSEY BLACK GIANT COCKERELS—5 months old, $1.00 each. **Box 115, Pennsylvania Farmer.**

PHEASANTS

GOLDEN, silver, Amherst, Reeves, Ringer Soeckright, Buff Cochin, Hantams. **N. B. Custred, Oliphant Furnace, Pa.**

TOBACCO

GUARANTEED HOMESPUN TOBACCO—Chewing 5 lbs. $1.00; 10—$1.75. Smoking, 10—$1.50. Pipe free! Pay when received. **United Farmers, Bardwell, Kentucky.**

HOMESPUN TOBACCO—Smoking or chewing, 4 lbs. $1; 12, $2.25; used no money. Pay postmaster on arrival. Pipe free for ten names of tobacco users. **United Farmers of Kentucky, Paducah, Kentucky.**

SPECIAL OFFER—Leaf chewing or smoking 5 lbs. $1; ten $1.75. Cigars $1.25 for 50. Money refunded if not satisfactory. Pay when received. **Kentucky Tobacco Company, West Paducah, Kentucky.**

FRUIT TREES

PEACH TREES, $5 per 100 and up. Apple Trees, $7.50 per 100 and up. In large or small lots direct to planters by freight, parcel post, express. Plums, pears, cherries, grapes, nuts, berries, pecans, vines, ornamental trees, vines and shrubs. Free catalog in colors. **Tennessee Nursery Co., Box 124, Cleveland, Tenn.**

HELP WANTED

AGENTS—We start you in business and help you succeed. No capital or experience needed. Spare or full time. You can earn $50-$100 weekly. Write **Madison Products, 560 Broadway, New York.**

POLMET POLISHING CLOTH—Cleans all metals; lets enthusiastic attention; sells fast at 25c; agents' free. **F. C. Gale Co., 90 Edinboro St., Boston, Mass.**

CIGARS

"THE IDEAL SMOKE"—Box of 25 National Stars Cigars, direct to the last puff, $1.00 postpaid. Box of 50, $1.90, C. O. D. orders accepted. **J. C. Hiles, Brand, Red Lion, Pa.**

FARM LANDS

STROUTS NEW FALL BARGAINS—Farms with harvested crops, horses, dairy herds, equipment. Now supplementary catalog, the pick of farm values in many states. Illustrated, interesting, vital information for farm seekers. It tells of farms with sleek cattle, valuable timberlots, convenient easy homes, of barns crammed with crops, of cellars filled with barrels of potatoes, fresh vegetables, apples, canned fruit and vegetables. A suspenseful winter's living, on pg. 14 there's a farm of 112 acres averaging over 300 weekly, abundance fruit, water, wood, good 3-room house, 70 ft. basement barn, etc., motor bus service, near everything; genuine money-maker at $6750 including 4 horses, 10 fine cows, bull, hens, machinery, almost new, hay, corn, oats, wheat, potatoes, forage; see pictures. Hundreds others, all bargains. Write today for free catalog. **STROUT AGENCY, 1422-BE Land Title Bldg., Phila., Pa.**

LIST OF OVER 100 FARMS—1 to 200 acres, $1250 to $20,000. Get our folder. **Suburban Realty Co., Specializing in Farms, 400 Agri. Trust Bldg., Lancaster, Pa.**

NORTH CAROLINA FARM—Own three near Raleigh. Will sell one reasonable. Mild climate. **W. O. Pruitt, Greensboro, N. C.**

GROW with Southern Georgia. Good lands. Low prices still available. Write **Chamber of Commerce, Quitman, Ga.**

FARM—93 acres excellent buildings, land and markets, $7,000, terms to suit. **V. Eloe, Morrisville, Pa.**

HONEY

LONG'S PURE HONEY—Direct from producer, 5 lb pail, either clover or buckwheat, $1.15 postpaid. Wholesale prices on request. Satisfaction guaranteed or money refunded. **W. C. Long, Millville, Pa.**

DELICIOUS EXTRACTED CLOVER HONEY—We offer you biggest value. Write for prices. **Appel-doorn, Homer, Ohio.**

MISCELLANEOUS

FISTULA REMEDY—Physicians prescription, not a patent medicine. Used successfully 45 years. $2 per box postpaid. Satisfaction guaranteed or money refunded. **Fillmore Co., Westminster, Md.**

MOTORCYCLE BARGAINS—Used, rebuilt. Guaranteed. Shipped on approval. Catalog free. **Floyd Climer, 813 Broadway, Denver, Colo.**

VIRGIN WOOL YARN for sale by manufacturer at bargain. Samples free. **H. A. Bartlett, Harmony, Maine.**

WANTED—Ginseng, price high. Mayapple root. Beeswax. Hides. Furs in season. Write. **R. J. Feltham, Olean, N. Y.**

CROSLEY RADIO—3 tubes, batteries and phones, $50. Nattley engine, 2½ horse, $25. Letz grinder, $12. **H. VanKuren, Summerfield, Pa.**

MAKE MONEY raising canaries in spare time. We teach you how to do it successfully. Full instructions for 10c. **E. Hanna, 343 Ellicott, Buffalo, N. Y.**

FISTULA—Horses cured $5. Pay when well. **Chemist, Barnes, Kansas.**

Senior School Box Outfit

Something Real

Contains 14 articles including a brass protractor—a compass fitted with a pencil— a 7-inch rule—pencil sharpener—eraser—3 pen points in a container—a pen holder—6 high-grade lead pencils—one combination red and blue pencil—all in a handsome, silver cloth-covered box, fitted with metal clasp.

Send us four yearly subscriptions to Pennsylvania Farmer either new or renewal, at 50c each and this splendid outfit will be forwarded to your address postage prepaid. Reward No. 602.

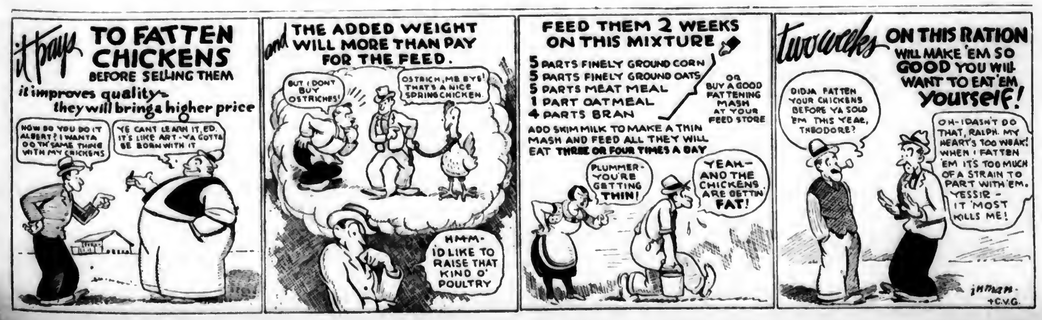
Herb the Handy Man Tells How—



it pays TO FATTEN CHICKENS BEFORE SELLING THEM
it improves quality—they will bring a higher price
NOW DO YOU DO IT ALBERT? I WANTA DO IT SAME THING WITH MY CHICKENS
YE CANT LEARN IT, ED IT'S LIKE ART—YA GOTTA BE BORN WITH IT
and THE ADDED WEIGHT WILL MORE THAN PAY FOR THE FEED.
BUT I DON'T BUY OSTRICHES!
OSTRICH, MR. BYE! THAT'S A NICE SPRING CHICKEN
HMMM-I'D LIKE TO RAISE THAT KIND O' POULTRY
FEED THEM 2 WEEKS ON THIS MIXTURE
5 PARTS FINELY GROUND CORN
5 PARTS FINELY GROUND OATS
5 PARTS MEAT MEAL
1 PART OATMEAL
4 PARTS BRAN
OR BUY A GOOD FATTENING MASH AT YOUR FEED STORE
ADD SKIMMILK TO MAKE A THIN MASH AND FEED ALL THEY WILL EAT THREE OR FOUR TIMES A DAY
PLUMMER-YOU'RE GETTING THIN!
YEAH—AND THE CHICKENS ARE GETTIN FAT!
two weeks ON THIS RATION WILL MAKE 'EM SO GOOD YOU WILL WANT TO EAT 'EM YOURSELF!
DIDJA FATTEN YOUR CHICKENS BEFORE YA SOLD 'EM THIS YEAR, THEODORE?
OH-I DIDN'T DO THAT, RALPH. MY HEART'S TOO WEAK WHEN I FATTEN 'EM ITS TOO MUCH OF A STRAIN TO PART WITH 'EM. YESSIR—IT MOST KILLS ME!
HAMAN-TCVG

GLASS CLOTH Brings 10,690 Winter Eggs

E. V. Agler had wonderful results with GLASS CLOTH last winter. He writes: "When we moved here there was no poultry house. The owner let us use the barn and garage. By taking off a few boards and replacing with GLASS CLOTH it made a fine place to handle the hens. In October we got 3826 eggs which sold for $128.55. In November, 3863 eggs, cash, $151.00. December, 3001 eggs, cash $101.55. That makes a total in three months of $381.19 which is not bad for 242 hens. GLASS CLOTH works wonders. I am not in favor of ordinary window glass at all."

FRED TURNER
Originator of Glass Cloth

Put Ultra-Violet Rays to Work for You

You can get big egg yields all winter just as easy as these folks did. Just give your hens ultra-violet light through GLASS CLOTH windows. Window glass stops these rays. Science has discovered hens will not lay without them. Put up GLASS CLOTH and the hens become active. Egg paralysis disappears. Egg glands function like it was June. High winter egg prices bring big profits. It is not uncommon for 400 hens to lay $1000 worth of eggs in the cold months. GLASS CLOTH is cheap. You can afford to use plenty of it. That is what hens need—plenty of real sunlight and exercise—plenty of ultra-violet rays. You are going to feed your hens anyway. Why not get a $5.00 roll of GLASS CLOTH and make them pay you profits? It is easy to put up. Just fasten it on home made frames. Half a million poultry raisers have taken the glass from their poultry house windows and put up GLASS CLOTH. It is the new way. The modern way. The profitable way.

"CASH IN HAND"

R. G. Hughes made this poultry house out of a corn crib. The big GLASS CLOTH windows saved him $60 over sash and glass and brought him more winter eggs than he ever thought possible. He says before he used GLASS CLOTH eggs were scarce on his farm "as snowballs in Africa." Almost at once his 100 hens "started on a laying spree" and he says, "Since then I have bought all our groceries and feed for the cows and chickens and much of our clothing from the sale of eggs. I also bought my potato seed and garden fertilizer and my wife has bought many articles for the house—all from egg money."

A $5.00 roll of GLASS CLOTH brought Mr. Hughes all this new prosperity.

He says, "It sure keeps the poultry house warm. One day it was 22° outside and 78° inside.

SPECIAL TRIAL OFFER

ON OUR NEW SUPER-STRENGTH MATERIAL

A new cloth of tremendous strength is being used in GLASS CLOTH this year. It is the strongest material of its kind. No ordinary accident will tear it. It is "tough as boot leather."

This has been done without one cent increase in price. In fact, to introduce this new material to you, we make this amazing SPECIAL TRIAL OFFER

Go to your dealer, or, if he does not have GLASS CLOTH yet, mail the coupon with $5.00 and we will send you, postpaid, a big roll of the new GLASS CLOTH, 45 ft. long and one yard wide—135 sq. ft.

Strength!

Nine people, total weight 1062 lbs., standing on a frame of the new, super-strength GLASS CLOTH. Such strength means extra life and durability. Extra value for your money. GLASS CLOTH can repay its cost many times in a single year. It is a very profitable investment.

Guaranteed

Use this material for poultry house windows, storm doors, storm windows, and barn or hog house windows. If, after ten days' use you do not find it more satisfactory than glass or any substitute, return it and we will refund your money.

Quality

GLASS CLOTH is now of such high quality you should be satisfied with nothing short of the genuine. We have placed it with thousands of dealers, all of whom now make you this Special Trial Offer. If there is not a GLASS CLOTH dealer in your town yet, order on the coupon.

Under average conditions GLASS CLOTH lasts from one to four seasons. Yet it pays such profits it would be a good investment if you had to change it much oftener.

For your protection we have placed the name "GLASS CLOTH" on every yard. It is your guarantee of super-strength, extra quality material. Avoid any material not bearing the name. Take advantage of our Special Trial Offer today.

Winter-Tight Home Brings Comfort

"Glass Cloth is great stuff," writes J. Austin. Last fall I made storm windows for our house by tacking it over the window screens and I put it over the screen door to make a storm door. I closed up the porch with it too. It was a cold winter but our house was warmer than it ever was before. It cost me $6.70. The same job done with glass would of cost $115. When I took the Glass Cloth down this spring it was almost good as new. I figure we saved on both fuel and doctor bills. We hardly had a cold all winter."

Got Eggs All Winter

"After using GLASS CLOTH two years I would not trade one frame of it for a dozen frames of ordinary glass. Last winter I had only 36 hens, but many days I got as high as 33 eggs." —W. B. Houstan

Think of the winter egg money he would have made if he had had 360 hens instead of just 36. Now that you can have GLASS CLOTH it pays to keep hens over the winter. They pay bigger profits than in summer time, due to high winter egg prices.

Every poultry raiser should see to it he gets winter eggs this winter. All you need is a few yards of GLASS CLOTH on the sunny side of the hen house. Order today.

NOTE to DEALERS

The demand for GLASS CLOTH is so great we have been forced to fill orders direct from the factory in localities where we have no dealer representative. Many excellent territories are still open. GLASS CLOTH is the kind of product you can take pride in selling. It makes a profit for you and a profit for your customer. Our new material is by far the finest of its kind. Write today for trial dealer roll and our attractive dealer proposition, or order from your hardware jobber.

Wright engineers examine Lindbergh's engine!

What their findings tell you about lubrication

In a few days of actual flying Col. Lindbergh's engine did harder work than your car or tractor will probably do in the next 6 months.

In these flights his engine usually ran with wide-open throttle under a heavy load, much as your tractor engine operates. But the load was many times greater than your tractor ever carries.

And on his famous New York to Paris flight his engine ran without stopping for 33⅓ hours, where your tractor seldom runs continuously more than 6 or 8 hours.

Shortly before Col. Lindbergh took off again for his nation-wide tour of this country, the Wright Aeronautical Corporation examined his engine.

The letter at the right explains their findings.

Col. Lindbergh uses our regular stock Mobiloil "B"—the same oil that is recommended for many farm tractors. The grade recommended for the Fordson and many others is Mobiloil "BB" which is made from the same stocks but is somewhat lighter in body. A nearby Mobiloil dealer has these oils. His Mobiloil Chart will tell you exactly which grade of Mobiloil to use in each of your engines.

The best way to buy Mobiloil is in 30- and 55-gallon steel drums with faucets. Your dealer will give you a substantial discount on these quantity purchases. He also has the 10-gallon drum with faucet and the 5-gallon tipper box.

Mobiloil may cost you a little more by the gallon but it is cheaper in the long run. Let Mobiloil banish wear in all your automotive engines just as it did in Col. Lindbergh's engine.

WRIGHT AERONAUTICAL CORPORATION
PATERSON, N. J.
U. S. A.

July 11, 1927.

Vacuum Oil Company, Inc.,
61 Broadway,
New York, N. Y.

Gentlemen:

Colonel Lindbergh's WRIGHT WHIRLWIND engine which was recently disassembled at our plant for inspection was found to be in perfect condition. No perceptible wear was found in any of the parts and all bearings were in excellent condition indicating perfect lubrication throughout approximately 30 hours of flying, including his epochal flight from New York to Paris. As Mobiloil "B" was used exclusively in this engine, the engine's condition is a splendid indication of the lubricating qualities of Mobiloil "B".

Very truly yours,
WRIGHT AERONAUTICAL CORPORATION
Charles L. Lawrance
CHARLES L. LAWRANCE,
President

JMR/CW

YOUR guide—of your car is not listed below see any Mobiloil dealer for the complete Chart. It recommends the correct grades for all cars, trucks and tractors. And remember that

609 automotive manufacturers approve it!

The grades of Gargoyle Mobiloil, indicated below, are Mobiloil "E," Mobiloil Arctic ("Arc."), Mobiloil "A," Mobiloil "BB" and Mobiloil "B".

Follow winter recommendations when temperatures from 32° F. (freezing) to 0° F. (zero) prevail. Below zero use Gargoyle Mobiloil Arctic (except Ford Cars, use Gargoyle Mobiloil "E").

The Alps Shelter Swiss Co-ops

Dairying Is Leading Business Among Snowcapped Peaks—By H. G. Niesley

COOPERATION is quite common in many European countries, but Switzerland has developed it almost as extensively as has little Denmark, if not entirely so.

The dairy business, of course, leads here. Around the 3000 or more cheese factories, of which this country boasts, are organized local societies of farmers with about 30 to 40 members in each. The first of these were organized in 1850. Many local factories are necessary, because we learned that milk used for cheese does not survive much transportation. Each local society, then, sells milk to the local cheesemaker or manufacturer. These locals were united into district or cantom (township) groups, and in 1907 a federation was effected. About 95 per cent of the dairy farmers, or 104,431, are members owning 559,695 cows.

Switzerland now is giving more attention to butter. Formerly, the manufacture of this product was considered secondary to the cheese business. Therefore, a poor quality article resulted, but economic conditions have changed it. Switzerland formerly imported 900 carloads of butter per year for local consumption.

Ice Cream Making Just Started

Cheese and condensed milk continue to be the leading dairy products. Cheese marketing is heavier due to the increased milk production and other countries, such as France, Italy, Denmark, Holland and the United States, going into the business. Emmenthal cheese is the one exported principally to America. Exports amount to about 50 to 60 cars per month. In April, just before our visit, 99 carloads found their way to the United States. Germany is the second heaviest buyer. These facts were given by Mr. G. Michand, secretary of the Central Union of Swiss Dairy farmers, whom we found very helpful in giving us all the information desired.

This Central Union of Dairy Farmers is the federation of all the district organizations and represents all the farmers of the country. In addition, the farmer manufacturer and the trade are represented by a Cheese Union. The Dairy Union agrees on the price that shall be paid for milk, while the Cheese Union handles prices of cheese to manufacturers and trade. Price changes come to farmers about twice per year.

Ice cream making has just started in Switzerland. There are only three ice cream factories. They say wine drinkers are not extensive users of sweets, but we look for great strides in the ice cream business in European countries.

Milk Is Boiled

Fluid milk consumption in Switzerland is the highest per capita of any country, about one liter (approximately one quart) per capita, per day. No milk is used raw, all being boiled before drinking. The price in Berne we found to be about 7 cents per quart to the consumer and 4½ cents to the farmer. Milk is sold "loose," that is, not bottled.

The surplus problem also affects Switzerland. December to March comprise the period of surplus. This milk is made into cheese, and farmers are required to take home a certain amount of cheese weekly for their own consumption.

Many of the cattle are moved up into the mountains about June 1, and there they remain for the summer, grazing on the mountain sides.

Electric Light Rates Are Low

Milk for fluid purposes is delivered twice daily to the distribution plant. The average test is 3.8-4.0 per cent, with an average yield of 3000 kilograms (6600 pounds).

Many farmers keep hogs to which they feed the whey, a byproduct of the cheese factory. The usual number of pigs is the same as cows (from 8 to 10 per farm).

About 95 per cent of farms in Switzerland have electricity. Thru utilization of the extensive natural water power facilities of the country a surplus of electricity is generated, and this is sold to neighboring countries for private and commercial use.

In the section around Berne, the rates for light were about 7 cents per kilowatt hour, motor 3 to 5 cents, and heat from 1 to 1 3-5 cents. Two cheese factories which are heated electrically during the night receive electricity at two-fifths of one cent per kilowatt hour.

Not Enough Farms for Young Men

"The Swiss Farmers' Union" is another type of farm organization which combines all types of organization into one central organization. Its function is both political and educational.

The important divisions are: (1) Building office. (Makes plans for farm buildings and sells them at nominal cost). (2) Political. (3) Farm records. (These records now have such recognition that they are used in land appraisals). (4) Division of loans to farmers. (To enable young farmers to purchase farms).

The average size of farms is about 13 hectars (33 acres), and the average price (land and buildings) is 500 to 700 francs per hectar (about $600).

One farm we visited sold for 10,000 francs per hectar ($1000 per acre) without buildings; later 150,000 francs were expended in constructing buildings. Of course, real small farms cost more.

There are from 75 to 100 young men for every farm offered for sale in Switzerland.

The laws concerning disposition of land at death vary considerably in the different cantons (townships). Upon the death of the owner some farms go to one son, while others are inherited by the whole family. Such an arrangement has resulted in a wonderful feeling of attachment to the land. For example, we were told of a case where a tract of 2.1 hectars, about 5 acres, was taken for government purposes. It was divided into 56 parts, belonging to 31 owners.

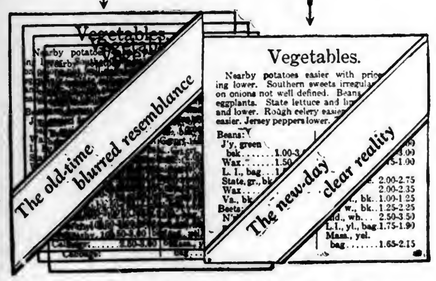
Upper—A Swiss rural farm home showing the architecture so common among the houses. Bank barns, as seen here, are general. Barn and house are under the same roof.

Lower—Cheese is assembled here for export and sale. The ripening process is continued here. Cheese is held from 10 to 12 months before being shipped.

A Simmental bull at Zollokalphin Agricultural School near Berne, Switzerland. This breed makes up fifty-one per cent of the cow population of this country; Brown Swiss is second with thirty-eight per cent.

FADA Radio

Which would you rather have?



Vegetables.
The old-time blurred resemblance
Vegetables.
Nearby potatoes easier with prices lower. Southern sweets irregular on onions not well defined. Beans, eggplants. State lettuce and lima and lower. Rough celery sauce, easier. Jersey peppers lower.
The new-day clear reality

The writer of this was a farm boy. He knows what a great thing radio is for the farm, giving the finest entertainment the big city stations can offer and last-minute market and weather reports. When it comes to choosing a set, why not do as you do with tractors, milking machines or cultivators? Demonstrations are free. But just remember this about the Fada. When you buy a Fada set be sure you buy a Fada speaker. For only a Fada speaker can bring out the fine points of a Fada set. And only the two together can give you the benefit of the exclusive Fada principle of Harmonated Reception. Until you hear a Fada set *and* speaker you cannot realize how far modern radio has advanced on the road to perfection.

GET A

Leola Self-Feeder on Trial

"Healthy, Heavy Hogs"

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for ninety days on a ration of cornmeal, buckwheat, middlings and tankage, self-fed to one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.1 lbs.	.765 lbs.
Cost per cwt. gain	$5.76	$7.12
Profit above feed cost	$7.61	$4.18

This test shows what a Self-Feeder will do for you.

We will ship you a feeder at no cost to you, freight prepaid. Give it a thirty-day trial and if not entirely satisfied, we will pay the freight. We do not ask you to pay one cent until you have tried a "LEOLA" Self Feeder.

H. M. STAUFFER & SON,
Box A-4, LEOLA, PENNSYLVANIA

SAY you saw the advertisement in Pennsylvania Farmer when you are writing to our advertisers

THE coolest August in half a century, a normal September, and the hottest October, so far, on record. That makes the fall of 1927 almost unique, and keeps farmers guessing. But the official weatherman keeps prating about this being only a normal year, and that there is nothing unusual about it. The trouble with him is that he deals in averages. Adding two extremes together and dividing by two will give you an average, but that does not tell the whole story.

✦ ✦ ✦

ALBERT gathered fifteen eggs from his flock of Leghorns the day they were five months old. That seems to us an early start, and they are not getting a laying mash either. In fact, we did not care to have them begin before they were six months old. There is danger of a heavy molt starting this fall, especially if the weather should be very warm for any length of time. Eggs are bringing a good retail price now,—seventy cents for strictly fresh, first grade.

✦ ✦ ✦

OUR trade has steadily increased at both the roadside market and on the delivery route during the summer and fall. Our greatest difficulty is in not having enough of some things. Our motto is "Good, fresh produce at reasonable prices," and we are glad to realize that our efforts are appreciated, as is shown by our trade. But the season is nearly over in many lines. We look forward to the time when we shall have developed a larger line, so that we may have a steady trade for a good part of the year. One of the essential principles of success in any line of agricultural work is to produce things so that there is a steady income thruout the year.

✦ ✦ ✦

MY TERM of service as a juror in the federal court expired on September 30th. Two weeks is plenty long enough for one stretch of that kind of work. Even that much close association with alleged crime and all that goes with the unraveling of the circumstances has a depressing effect on one who naturally loves to think well of the human race. One of the sad experiences in my life is to realize, as I have grown older, that many of the good things I believed, as a boy, about the human family are not so.

✦ ✦ ✦

AS I SAT listening to the testimony offered in the many cases,—cases relating to the misuse of the mails, postal robberies, fraudulent interstate commerce, the illegal manufacture, sale and transportation of intoxicating liquor, etc.,—the query, "why do so many people violate the laws of the land?" kept rising in my mind, and the evident answer is, "To make easy money quickly." Principle, conscience and loyalty to country, even regard for common decency, are thrown aside in order to satisfy greed. Verily, the Apostle Paul knew the cardinal human weaknesses when he wrote to Timothy, "The love of money is the root of all evil."

✦ ✦ ✦

BUT all this leaves us in a rather pessimistic mood. Is there no way by which the human race may be lifted from the sordid things of life into better things? Yes, there is. Fortunately for my own peace of mind, Mrs. Kester and I attended a picture show the evening I finished my jury duties. The title of the picture was "The King of Kings," and it portrays the life, work and teachings of Jesus of Nazareth. It is a picture which every man, woman and child should see. It is portrayed in a reverent spirit, and by masters of the art of portrayal. It revives in the mind that which we all know but sometimes forget, that only the power which He manifested and recommended can remake weak, sinful man into the being he was intended to be.

The Cheerful Plowman

Wasting Time on Extremes

JUST see those dudes! Say, why, I say, do extremes steal our time away? Dressed up? I'm not a perfect judge, I may, indeed, possess a grudge but such extremes as these, I guess, do not conform to perfect dress! Those dainty gents, I'm bold to say, waste half of every working day in dolling up and when they're thru, they look like cads, I'll say they do!

No, I've no kick on any man, from Portland, Maine, to Hindustan, who buys good clothes, that's his concern, and I've no right to scoff or spurn, but when a fellow decks himself to imitate a dancing elf, or half of Ringling's big parade, with toe as hot as lemonade, then I declare it's plain to all he's wasting time, both spring and fall, for if he dresses like a Turk he is not thinking of his work.

In this big thriving age of ours a man should give his major powers to his big task, whate'er it be, that's how the thing appeals to me, and any fellow togged like that from shoes and spats to crown of hat is thinking superficial thought, his mind's divided, like as not! I'd rather see those fellows there with blisters, palms and tousled hair, I'd rather see them painting walls decked out in sky-blue overalls than diddling down the thorofare with that extreme and silly air!

There may be truth in that old chime that no man owns another's time and no man has a right to say how other men shall spend the day, but none the less it grieves my shade to see those dudes out on parade! My, how their armor flames and gleams! They're wasting time on punk extremes!—J. Edw. Tuffi.

650,000 Satisfied Customers

Five Year Guarantee of Quality

650,000 customers—one out of every 35 families in the United States. They are not only Kalamazoo customers—they are *satisfied Kalamazoo customers.* That's the important thing—*satisfied customers.* And think of this: They are increasing at the tremendous rate of more than 50,000 *new* customers a year. Could anything more clearly or concisely prove Kalamazoo quality? Could anything more convincingly or conclusively prove that Kalamazoo is saving customers ⅓ to ½ by selling direct from factory to user?

Get Your Copy of this New FREE Book

Your **FREE** book is ready—alive with interest, full of new features. Reduced prices are in effect! A new 5-year quality guarantee is in force! See the Beautiful Porcelain Enamel Ranges in beautiful Delft blue and pearl gray—the very latest and most popular of all ranges. Look for the Mahogany Porcelain Enamel Heating stoves—the most popular of all heating stoves. Read about the new Hot Blast, improved fire box—more heat from less fuel, a clean fire without smoke or soot. See the latest improvements in warm air furnaces—pipe and pipeless.

30 Days FREE Trial

Send for this new book *now*. Learn how Kalamazoo gives you 30 days FREE trial in your own home and 360 days approval test on anything you purchase. Read how Kalamazoo is saving over $1,000,000 yearly for Kalamazoo customers.

24-Hour Service--Safe Delivery Guaranteed

Send for this book! See how close Kalamazoo is to you—24 hours shipping service saves you time. Kalamazoo goods are carefully packed to arrive safely. Safe delivery is absolutely guaranteed.

200 Styles and Sizes

No matter what you are interested in—gas stoves, coal and wood ranges, combination gas and coal ranges, oil stoves, heating stoves or furnaces (pipe or one-register type)—you will find here exactly what you want. Mail coupon today.

Cash or Easy Terms

This FREE book quotes you easy terms that are truly amazing—many as low as $3 down and $3 monthly. Nowhere in the world can you get such value, such service as Kalamazoo now offers. This new book shows you why this big 13-acre factory, now in its 26th year, is a national institution.

Quality First—Values Unexcelled

Kalamazoo values cannot be equalled anywhere. When you buy from Kalamazoo you buy direct from manufacturer. There is nothing between you and our factory—but the railroad tracks. We are not a mail order house that collects a variety of merchandise from scores of factories to sell by mail—we are *specialized* manufacturers, making Kalamazoo stoves, ranges and furnaces complete in our own highly modernized factory and shipping direct to you, thus eliminating any other manufacturer or middleman of any kind. We build in large quantities. You get better quality at lower prices from a factory whose sole interest is making stoves, ranges and furnaces than elsewhere. This new catalog proves it. Fill out coupon for your copy.

Free Furnace Plans

This new FREE book tells you how you make a double saving on Kalamazoo furnaces. First, it saves you 1-3 to 1-2 on the price of the furnace itself. Secondly, it illustrates how you save the cost of installation by following Kalamazoo FREE plans and FREE service. Thousands of Kalamazoo owners have put up their furnaces themselves.

Beautiful Porcelain Enamel Ranges

Everywhere now porcelain enamel ranges are in demand. See these Kalamazoo ranges in Delft blue and pearl gray—bright, colorful, glistening clean—as easy to clean as a china dish. *Check and Mail Coupon Today!*

Comments on the Week's News

THE Mexicans make a serious business of their elections and back their favorite candidate with bullets. During the presidential election last week a revolt developed and armed clashes occurred in many places. At this writing the news indicates the possibility of a general revolution. Three regiments of the Mexico City garrison have mutinied already and the city is patroled by 15,000 troops. President Calles claims to "have the situation well in hand," but others feel that the rebellion against the present government is ominous, to say the least.

✦ ✦ ✦

The American Legion which just closed its sessions in Paris appointed a delegation of legionnaires to visit, in a "good will" tour, some of the nearby governments. When they visited the king's palace in Belgium, several Pennsylvania delegates followed the official tourists determined to see the royal family, also. American officials who passed the visitors in at the door rejected the self-appointed callers and this caused a regrettable brawl. One Philadelphian who was most insistent used his fists recklessly, but was finally subdued and turned away. All Americans, and Pennsylvanians especially, will regret this boorish action.

✦ ✦ ✦

The new and discriminating tariff law which was recently enacted in France may be made the basis of a demand for tariff revision in this country. Already our government is considering the "flexible" tariff idea so that trade relations may be resumed on the old basis. The French government disclaims any idea of using their measure as a club to force American leniency in the matter of war debt. Their arguments in favor of their present tariff rates are very similar to those we have been used to hearing in this country. In spite of the complacent reassurance we hear that our tariff law is "all right and universally popular," the signs point towards a reopening of the subject in the next campaign.

✦ ✦ ✦

The Committee of Public Relations of the Eastern Railroads has put out a little bulletin of information, from which we extract the following:

There are 418,000 miles of track worth $10,450,000,000.

The roads have 68,000 locomotives costing $1,360,000,000.

The total value of all property as valued by the Interstate Commerce Commission is $25,795,000,000.

There are 868,601 holders of railroad stock, not counting the employes.

Railroad taxes have increased 228 per cent in thirteen years, while dividends have increased 22 per cent.

✦ ✦ ✦

The immigration figures put out by the Department of Labor show that more women than men are coming into the United States. A partial explanation of this is found in the fact that many of them come to join their husbands who came ahead, but another reason is that the male population of most of the European countries was reduced by the casualties of the great war to a greater extent than was the female population. For this reason the chances for mating are greater here than in Europe, especially since the males outnumber the females in the foreign sections of this country.

The Corn Borer Report

FOR several weeks we have been waiting for the report of the official investigators which would tell us just what was accomplished by the whirlwind efforts at corn borer eradication made last spring. Well, it has just come to hand and is entitled, "An Honest Look at the Situation." The report is made by the international corn-borer organization which met, "250 strong," the last week in September, to review the situation.

The report begins by reporting the mutual agreement that more research work is vitally necessary, and a promise to continue the present policies. The committee indorses and heartily approves the work that it has done, and especially commends the farmers who cooperated in the clean-up campaign. We quote:

"The committee reiterates its opinion that it will be impossible to eradicate the borer or even to prevent its spread to corn-growing areas not yet infested. However, it is believed that the compulsory clean-up of 1927 not only greatly reduced the rate of infestation increase, but has been successful in preventing serious commercial losses, and that the expenditure of large funds for this purpose has been completely justified."

Considerable space is given in the report to the Canadian situation, and says that corn was a total failure for three years before the clean-up methods of 1927 were inaugurated, but a fifty-per-cent reduction in damage was found this fall.

As an answer to the many complaints made by farmers about slow payment for the work they did last spring, the explanation is offered that "it was some job" to make out 180,000 checks and vouchers. They make the comment that "Rome was not built in a day." All of which will, no doubt, be sufficient to pacify the farmers who waited five or six months for their pay.

Under the heading, "Where the Money Goes," the following information is given:

$3,000,000 for equipment and machinery, including gas and oil.

$250,000 for extension and education work.

$1,250,000 for general expenses, including office equipment and salaries.

$4,200,000 for extra labor fees to farmers.

$1,300,000 for work this fall and next spring.

A National Economic Menace

IN SPITE of "blue sky" laws, government bureaus, and other agencies intended to make the selling of fake and worthless stock difficult or impossible, the business continues in such proportions as to be a real menace. Every year countless thousands of citizens are fleeced out of their savings by slick-tongued agents of fake stock firms. Of course, the buyers are also responsible for this condition. There are many people born with an over-sized gullibility, and nothing short of a personal attendant will keep them from being made dupes, while there is another class whose greed for big gains makes them susceptible to the blandishments of the unprincipled promoter.

The annual losses sustained in this way are big enough to affect legitimate business and to retard development in many ways. When a man loses $1000 which he might well have invested in his business, or in making improvements to his property and equipment, many others lose potential business also.

Fake promoters keep well informed about the condition of class prosperity. A few years ago, it was the farm field which offered the best picking. Thousands of farmers lost heavily from unwise investments following the war period. Now, it is the skilled artisan, he who has been making good money during the last five or six years. The subject is important enough to warrant the watchful oversight of civic bodies and other organizations. Whenever a raid is being made by personal solicitors, somebody in the neighborhood should raise the question of reliability and have the matter investigated.

Editorial Sidelights

"FORT NECESSITY." Those words on a sign we saw today called back rather vague memories of some of the things we learned in our first school course in history. An arrow under the sign pointed to a flagpole in a field a few hundred yards away. Evidently there is little left of Fort Necessity.

A short distance farther along the road was a marker pointing to the monument over General Braddock's grave. Someway, it seems rather hard on the British General—that he should have to remain all these years near the scene of his downfall, where that young upstart, George Washington, first made a name for himself.

Those familiar with southwestern Pennsylvania will know that we have been traveling the National Pike today, east of Uniontown. Now we are in a hotel room trying to figure out how high we would be if all the hills we climbed today were piled up one on top of another.

The climbing wasn't so bad, but the coming down again was awful. Some of those hills on the National Pike just do not know when to stop. They go down twice as far as any self-respecting hill should go, then make a sharp turn or two to throw off your guard and start going down some more. Motor trucks seldom have use for their high gear. They are always either going up or coming down,—either way they must use second or low.

Between the hills, and on top of them, are some very fine farms. Some of them are more than 2000 feet above sea level, and the progressive farmers are growing crops of potatoes, oats and hay of which river-bottom owners of the eastern counties could be proud. They love their mountains, too, and we would feel the same way about them if we lived among them. No one knows how beautiful this earth of ours really is until he has looked down upon it from the top of a mountain,—or from an airplane.

WANT NO DAIRY RELIEF

Agriculture Pays Higher Freight Rate—World Needs to Increase Consumption—Ship More Vegetables.

Washington, D. C.

THE new Ohio farm relief plan is receiving considerable attention at the Washington headquarters of the farm organizations. Being somewhat limited in their public statements by the official declarations of the various organizations they represent, the Washington representatives are inclined to await the action of their organization before taking a definite stand on controversial questions.

Nevertheless, it may be definitely stated that the dairy industry feels that there is no occasion for having dairy products included in any farm relief legislation. In the past the only request that the dairy industry has made of Congress is that its products be left out of the various farm relief bills.

Rates High on Farm Products

In reviewing the action of the Interstate Commerce Commission in making for the first time practical application of the principle involved in the Hoch-Smith resolution, in ordering reductions in freight rates on deciduous fruits from California, it is interesting to note that six years ago the National Grange called to the attention of the Joint Commission of Agricultural Inquiry the fact that the railroads were then charging an average of $3.49 a ton for the transportation of agricultural products as compared with only $2.54 a ton for carrying manufactured products.

It was pointed out at that time by the Grange that from actual official records more than six per cent of the total income of agriculture was paid in transporting about one-half of its products by rail to market, while only 2 per cent of the total income of manufacturing was paid for transportation for more than 90 per cent of the manufactured products to market.

Have Hazy Ideas of World Needs

Delegates to the world economic conference appear to have a hazy understanding of the world agricultural needs, according to a report from Asher Hobson, American delegate to the International Institute of Agriculture at Rome.

In resolutions adopted by the conference for submission to the League of Nations, it was inferred that the basic cause of the agricultural depression relates to the underconsumption of agricultural products caused largely by the inadequate demand in European industrial centers, rather than to overproduction.

Mr. Hobson says this conclusion seems to have been reached in spite of the fact that documents submitted to the conference indicated that the world production of foodstuffs and raw materials was from 16 to 18 per cent greater in 1925 than in 1913, while the world population was only about 5 per cent greater.

The leading thought of the conference seems to have been that the chief need of agriculture is to be able to produce food at lower production costs so that the people of the cities can have cheaper food.

Dr. Boyce Appointed Director

Dr. John S. Boyce, of Oregon, has been appointed director of the Northeastern Forest Experiment Station. Since it was established by the Department of Agriculture in 1923 the Northeastern Station has been under the charge of S. T. Dana, who has resigned to become dean of the new Michigan School of Forestry at Ann Arbor.

Vegetable Production Increases

The heavy drop in prices of vegetables is largely due to the vast increase in vegetable production over demand in recent years. The Department of Agriculture market specialists say that production of vegetables has been increasing from three to four times as fast as the growth of the population. This is particularly evident in statistics of carload-lot shipments of vegetables which increased from 345,572 in 1920 to 494,691 in 1924. Lettuce is an extreme case with a five-year increase for the same period from 13,788 carloads to 41,960 carolads. California, alone, shipped about twice as many cars in 1926 as were shipped in the entire country in 1920.

Disregard Appearance of Schools

Rural communities building small schoolhouses with rare exceptions do not employ the services of specialists and builders who are familiar with modern standards for school buildings, consequently, says the Federal Bureau of Education, small school buildings in rural communities continue to be built without regard to appearance or to the demands of modern methods of teaching or general hygienic considerations. This condition is being remedied to some extent by state laws providing supervision and standardization in the construction of new schoolhouses.—E. E. R.

WILL KILL DEER

Plan to Thin Out Deer Where They Do Damage—Birds and Rabbits Numerous—Will Widen Roads.

Harrisburg, Pa.

MEMBERS of the State Game Commission have determined to adhere to their policy of killing deer by their own agents in districts where the animals have been doing damage. This is the net result of the meeting of the commission here a few days ago when protests were made. It was decided to go right along with the killing in districts found to have been annoyed and if necessary to stand a test of the action in the courts. If the objections heard here are anything to go by the subject is one which will be much heard from in the next legislature. There are groups within groups which have differing ideas on the proposition. Meanwhile the killing in what are known as "restricted" areas will go on.

There Are Plenty of Birds

Reports generally coming to Harrisburg indicate there will be no lack of game birds in those parts of Pennsylvania favorable to quail and the like. Incidentally, many reports of closing of farm lands to hunting have come from the vicinity of cities and the larger boroughs and led to the usual kicks at the Capitol. Rabbits have been reported numerous in some sections and diminished by weather conditions in others.

Are Ready for Court

State attorneys have been getting ready for the new tests of the quarantine laws rumored in southern Pennsylvania. Both the cattle and beetle regulations are to be attacked and there may be some action taken in the corn borer area. At the same time counter actions in which the state will be prosecutor on its own agents' testimony will be prepared. The coming winter ought to see many questions agitated in enforcement work this summer cleared up. The Commonwealth's officers have been going into seed inspection reports and a second prosecution for sale of seed containing thistles has been heard of.

Plan to Widen Roads

According to an announcement at the State Highway Department, steps to file papers for wider roads, to be improved in the years to come, will be taken in many hundreds of miles. This means the state will give notice that people building within certain lines do so at their own risk. In time the space between the lines will be made highway. Much has already been done in the way of building wider roads, notably in the vicinity of Philadelphia, and some such work is under way in the neighborhood of the state capital. So far slightly over 200 miles of road have been marked for widening and the filing will be done shortly. Eventually about 2600 miles will be so widened, but that will take years. The state is working with local communities so development plans can be carried out without interference.—T. C.

COMPARE POWER COSTS

Work Out Rural Electrification Relations—Hold Fruit Show—Mr. Cooley Accepts New Position.

Trenton, N. J.

DEMONSTRATION farms will be selected in different parts of New Jersey this fall, upon which the newly organized Rural Electrification Committee will arrange for special studies on the use of electricity in country life. Aside from developing further use of power and light on the farm, the committee has in mind the working out of relations with public service companies so that cost and service will be comparable to that in the towns and cities. The committee is headed by Senator David H. Agans, Master of the New Jersey State Grange. The Farm Bureau, College Experimental Station and Department of Agriculture each have appointees on the committee; also some of the larger light and power companies now serving New Jersey farmers.

College Fruit Show

The Fourth Annual Student Horticultural Show comes at New Brunswick this year, October 25 to 28th. No entry fee is charged to exhibitors but the fruit becomes the property of the show unless other arrangements are made by exhibitors at the time of entry. Altho primarily staged as educational work for the students taking horticultural courses at the Farm College, the management of the show has opened the classes so that growers may compete for awards. Each grower-exhibitor must have actually grown his own fruit, and it must have been produced in the state. This annual event has grown rapidly and cups, prizes and cash awards are offered in many of the classes.—W. H. B.

Cooley Goes to N. Y. Market Bureau

L. A. Cooley, Trenton, formerly manager of the Atlantic Coast Poultry Producers' Association, New York, has become associated with the New York Bureau of Markets, Albany. In his new position, Mr. Cooley will have charge of analytical market reports and do broadcasting work for the department. This work is something new in the field of broadcasting. Mr. Cooley is particularly fitted for this job. It will be recalled that he has been active in New Jersey Agriculture for a number of years, first as county agent in Gloucester County, later as secretary of the State Farm Bureau Federation.

Adopt New Container

New Jersey cranberry growers are adopting a new style package this season for a part of their crop. A quarter-barrel box has been made and will be used quite extensively. Part of all cars of Jersey berries will be put in this new box while the balance will be put in the regular half-barrel box.—A. K.

WINS SUIT FROM STATE

Find There Was No Violation of Dog Law—League Members Receive Highest Price for Milk.

Ithaca, N. Y.

AFTER numerous cases of abuse of authority in many counties where a partial dog quarantine is maintained the year round, a Ludlowville farmer has won a suit in which the state sued to recover a $10 penalty because the owner did not keep his dog confined between sunset and one hour after sunrise. Two quarantine agents drove into the owner's yard at 4:00 A. M. and found the dog lying untied on the porch. The owner declared the dog was not running at large and there was no violation of the quarantine law. The case attracted considerable attention and the trial in the local justice court was attended by a large crowd. A jury brought in a verdict of no cause of action.

League Milk Pool Sets Record

For the eighth consecutive month members of the Dairymen's League Cooperative Association, Inc., have received a higher price than for any corresponding month in the organization's history. In the 200- to 210-mile zone the August price was $2.42 per 100 pounds of 3.5 per cent milk. This is 2c higher than the average price for the month. The volume of milk handled in August, 1926, by 10,000,000 pounds. There were 2000 more participating members than a year ago. Gross sales of July were $7,225,181. The raise of a cent a quart since this pool price was received has had a cheering effect on farmers.—M. G. F.

County News and Comment

Berks County, Pa.—We are experiencing a very dry season. At present it is too dry to plow. Most of the seeding has been done. The water supply on some farms is almost exhausted. Corp needs about two weeks to fully develop. Apples are very scarce, very little cider made and about one cooking of apple butter to a farm. Potatoes gave a 40 per cent yield. The present price is $1.25 retail. Pasture was good all summer. Most of the threshing has been done and most of the wheat sold to dealers at $1.25. We have a few farmers complaining of having smut in their wheat and in order to prevent the spread most of the seed was treated before it was seeded. The opening of school created a shortage of help on the farms for the fall work. The local Grange unloaded a car of feed and monthly shipments will be received until late in the spring season. Berks County Pomona Grange met at Leesport with a record attendance. Market prices: wheat, $1.25; corn, $1.20; oats, 60c; butter, 50c; eggs, 45c; lard, 18c.—W. N. M., Oct. 1.

Blair County, Pa.—Blair County farmers are rapidly preparing for winter. Most of the wheat is sown and a somewhat larger acreage than last year is being sown. We have had several frosts during the past week but not much damage done. Potatoes are a very poor crop this year. Some growers will scarcely have enough to do them till the next crop grows. Silo filling and threshing are the main work at present. The corn has improved greatly in the last few weeks. Most fields are very uneven as to the set on the ground and the size of stalk and ear.—H. E. H., Sept. 28.

Clearfield County, Pa.—Practically all the wheat sown and the earlier seeding is getting green. The soil is now pretty dry and seed of later sowing will not germinate quickly. Water is getting scarce on some farms and pastures are parched. Corn at high altitude is uninjured from frost and is maturing better than was anticipated. At low levels the fodder is white and dry. Buckwheat is being harvested and looks like an average crop. Oats and wheat yields seem to be only an average crop. A few farmers are lifting their potatoes and the yield is not large and a lot of injury is reported of the grub worm. There are few apples to gather in this county, some say they do not have sufficient of this prized fruit to make a pie. There are some pears and these bring from $2 to $2.50 per bushel. The new milk shipping plant at Curwensville is ready to begin business; that is of the Sheffield Company and the plan is to ship to New York.—D. H. W., Oct. 1.

Cumberland County, Pa.—The weather for September has been dry and warm. Farmers are busy seeding, filling silos and digging potatoes. Farm labor is very scarce and farmers are obliged to help each other in getting the fall work done. Corn is maturing and is promising 20 per cent more of a crop than August forecasts. Potatoes thorgly sprayed, yield 60 per cent more per acre than unsprayed. The crop is about half dug and the yield from 150 to 200 bushels per acre. Shippers are offering 75c to $1 bushel but local prices are $1.10 to $1.25. Tomatoes are very plentiful, late cabbage and celery medium. Prices: eggs, 50c; butter, 55c; wheat, $1.35.—A. L. B., Oct. 1.

Frederick County, Md.—Weather during September was dry and the last half was very hot. Grain is mostly all sowed and is looking fine but is badly in need of rain. Silos are being filled. The dry weather is holding the corn from ripening and unless the frost stays away for at least two weeks yet there will be quite a lot of soft corn cut this year. Pasture is drying up and will be short for the rest of the fall. Farmers that were wise enough to sow some soy beans are cutting a good crop even tho they were planted late. The apple crop is a little below the average. Corn is steadily ad-

(Continued on page 31)

CHEAPEST because it is so long lasting, safe and easily handled and because it comes to you *direct from the people who make it at mill-to-user prices.* Right now, in your own state, you will find much GLOBE Galvanized Roofing and Siding that has stood up stoutly to the exposure of three generations—tested and proved by satisfied users. Fire safe, lightning proof, weather proof, rat and vermin proof.

Your Cheapest Building Material

Made in Our Own Mills

SHORT SHRIFT FOR ROUP

For poultrymen who are posted, the fight on roup has been won. There is a preventive of this dreaded disease! There is a way to bring roup already started to a stop!

Pratts Roup Tablets will prevent roup. They render the bird's system resistant and tone up drooping birds. And the same remarkable tablet will recover a whole flock from roup, with an astonishingly small loss of birds too far gone.

Poultrymen who know the tonic properties of these tablets wouldn't start a season without them, or give 24 hours to any other roup remedy at any time.

Write for copy of our new free book, PROFIT FROM POULTRY, 1928.

PRATT FOOD COMPANY, Philadelphia, Pa.

Logan Spring Farm

We Check Up on Varieties and Strains

IT IS a difficult proposition to keep up to date in the matter of strains and varieties of vegetables, even when specializing in vegetable growing. One seedsman's Dwarf Erfurt cauliflower cannot be distinguished from another's Snowball in a patch I am now cutting. Both are good in this case. The name often means little. "Golden Bantam" originally meant a rather definite type and still does to most folks yet there are today strains of Bantam varying greatly from the original. "Whipple's Yellow" sweet corn, introduced only about three years ago is now in some strains showing great variation.

Everlasting vigilance is required to make even moderately certain that one is growing the best. A safe policy is to plant practically all of one's acreage from strains and varieties that have proved to be good. Then each year to test alongside these proven sorts others which we have reason to believe are especially promising.

Compare Results with Others

I have just gone over this year's seed orders and checked certain items as having proven especially good. Others received no special notation. These were neither enough better or worse, as they grew this year, to commend or condemn. Because they have proven good in the past they will be continued. A few items have been marked, "Do not order again." Ninety-nine per cent of my next year's acreage will come from this list. The other one per cent willebe the new comers on trial. But how are we "to get wise" to the good new things and better old things? We cannot test them all.

Compare results with grower friends in the neighborhood, at gatherings in the county, at state meetings, at national conventions. Read farm papers, bulletins. Your county agent may not know as much about growing vegetables as you yet a letter or call addressed to him may help solve the problem. A lot of last minute information on all sorts of subjects reaches his office. A letter to the Vegetable Gardening Department of your State College is usually productive. The more we call for service the more will be made available. Lastly the word of a good, trustworthy seedsman or seed salesman, one who knows his line and values his trade, deserves consideration.

It has been said many times, many ways and will hear many more repetitions: "At no point in the production of crops can greater results be secured with less effort than with the seed." Just yesterday, along a road I had not traveled this summer, I saw a quarter-acre cabbage patch, a total failure, or nearly so, because of badly mixed seed. Red cabbage, pointed, flat, round, early, late, all kinds in one patch along with numerous leafy giants that likely will never head. That loss was very plain. It is even easier to fall below maximum returns thru continuing to grow a strain that is only slightly inferior.

I know I have written on this subject at least twice this year. Perhaps apologies to our readers are in order. However that may be, good seed, the very best obtainable, nothing less, is the cornerstone upon which to begin building for 1928. And it is not too soon to begin searching for that seed, or to buy it where now known or when it is found.—Gilbert S. Watts.

Quality Is the S gan

"QUALITY production and sale by standard grades" is becoming the slogan of hundreds of farmers, fruit and vegetable growers, who are grading and selling a uniform product of known quality.

Eleven apple inspectors, under the direction of the Bureau of Markets, are now at work in Adams, York, Franklin and Cumberland Counties. A large proportion of all the apples shipped by the carload from these counties will be graded and inspected.

Potato growers in Lehigh, Potter, Berks and Northampton Counties are beginning work in standardizing potatoes. They hope to regain local markets lost last year to producers in other states.

All cabbage from the famous Waterford district of Erie County—one of the leading stations in the United States for the shipments of Danish cabbage—will be graded and inspected before shipment.

U. S. grape grade demonstrations are now being given to Erie County grape growers. Preliminary work has been carried on in York County in adopting the use of standard grades in the marketing of cannery tomatoes.

New Jersey Truck Escort Ends

THE State Police escort for farm trucks on Sunday nights thru the traffic jam from Woodbury to Westville in Gloucester County has been withdrawn for the season. This plan of the Gloucester County Board of Agriculture, inaugurated two years ago, has been an important factor in enabling farmers to get their perishable products to market on time. Sunday tourists around the week-ends throng the roads to such an extent that the producers cannot get their trucks to market without hours of delay. The farmers assemble at Woodbury during the summer season and under police protection pass in line thru openings made in the traffic. An average of 30 farmers used the service this year. The board plans to have it continued another season.—W. H. B.

The total amount of insurance carried thru farmer's mutual fire insurance companies exceeds $9,500,000,000. There are nearly 2000 such companies at present, and according to V. H. Valgren, agricultural economist, United States Department of Agriculture, these companies constitute an increasingly important source of insurance protection to the farmer.

The Old Orchard Prospered

THESE pictures were taken in peach orchards visited by farmers of Northumberland, Snyder and Union Counties on their tri-county tour held late in August.

The peach trees shown are not young trees, in spite of their appearance. They are more than 20 years old and are part of an old orchard that their owner, E. M. Knoebel, of Northumberland County, decided several years ago to pull out.

About 100 trees had been pulled when County Agent F. W. Myer suggested that an effort be made to prolong the usefulness of the remaining trees a few more years. Mr. Knoebel consented to the proposed experiment. The old trees were dehorned and it has required only three years to give the worn-out orchard its present thriving appearance. Three spring applications of an oil emulsion spray gave control of the troublesome peach lecanium scale.

The orchard dusting outfit shown in the other picture is owned by G. B. Frye, also of Northumberland County. The duster is operated by a power take-off from the tractor engine. Mr. Frye found that dusting controlled brown rot, altho it failed this year to control peach scab. However, the results of his first year's experience with the duster and the ease and speed with which the machine does the work have converted Mr. Frye to this method of disease control.

The tri-county tourists also visited the farms of Elias Ritter, in Snyder County, and J. L. Reitz, famed potato grower of Union County. Mr. Ritter's potato vines were still green (August 30) and a sample row dug on that date yielded at the rate of 375 bushels per acre.

Friendly Talks

By EDGAR L. VINCENT

A NEW law has just gone into effect in our state laying down very strict regulations as to packing apples. This law requires that every package shall be "faced" with apples, each one lying just so, and these facing apples must be fair samples of all that the package contains. Another new law we have tells us just how eggs shall be graded, packed and shown in the store. And we have laws governing pretty much all the farm products we grow and carry to market.

And this is not unreasonable. If we are buying things we all like to have them put up fairly, squarely and honestly, so that we may be sure that we are getting the worth of our money. One of the hardest things we have to deal with in this world is trickery in relation to our business with one another.

Should We Be Forced to Do Right?

There is something about all this, however, that makes me feel bad. I never hear that a new law has been made compelling us to do this and so that my heart does not drop down a bit toward the zero mark. For is it not a fact that these statutes are efforts to compel men to do what they ought to do without a bit of compulsion? The fruit we sell, the vegetables we take to market, the hay and the grain and everything else should be so arranged that they would show for themselves. No law should be required to force men to do right, and it is difficult to compel people to do what their hearts do not tell them is the just, the right and the fair thing.

And a great many farmers do that every time. I know of farmers that always sell more than the legal weight of apples and potatoes every time they measure out a bushel to the consumer. I have heard these men say, "I would a thousand times rather give a few pounds over weight than to have anybody ever say I cheated them a half a pound."

And these men and thousands of other farmers pack their apples and their potatoes and everything else upon honor every time, and they do not do it because the law says they must; it is just because in their heart of hearts they love to do it that way.

Honesty Springs from the Heart

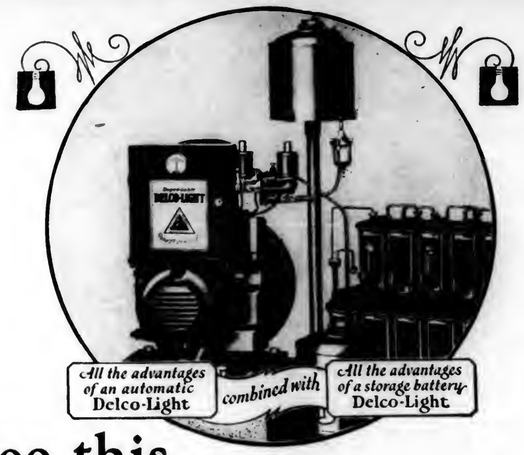
A woman came out to look at some apples a farmer and his wife had picked and were selling from house to house. The man was at a nearby door speaking to the lady of the house, and it fell upon his wife to do the bargaining with the other woman. This buyer began to dig down into the crate to see if the fruit was the same all the way thru. You know how apt folks are to do that. And the farmer's wife quietly said:

"You'll find them the same all the way thru. My husband picked them and put them in the crates."

I would far rather my wife would say that of me and my work than to feel that there were laws governing the way I put my things into the package, and that I was honest because I had to be.

For honesty is not a thing of the law; it has its springs much deeper. From the very heart it takes its course, and it reaches to the very last transaction we have with our fellow men. Haven't you had people overpay you or give you back more change than you were entitled to? Most of us have. What do we do under such circumstances? Do we stop right then and there and make it right? Sure we do; and we never think about any law, either. And it is a blessed thought that the great body of farmer folks govern their actions by a better law than any that was ever written down in a book, the law of love traced in letters of gold on the white tablets of their hearts.

"A just weight is a delight unto the Lord."



See this New Scientific Marvel

New Type Delco-Light Plant Does Everything but Think!

IF you think all farm electric plants are much alike, see this new achievement of Delco-Light and General Motors. Here is a Plant that wins alike the enthusiastic acclaim of scientists, engineers, electrical experts and laymen.

Small Loads from Battery

With this new type plant you can use up to 7 or 8 electric lamps and draw the necessary current right from the battery. Thus the engine runs unfrequently. Less fuel is used. But throw on a heavier load and the engine starts—instantly and automatically—generates enough current to carry the heavier load, *plus a surplus supply to recharge the battery!* Thus only a small battery is needed. And even this lasts longer.

Science Marvels

Even engineers who are in daily contact with the newest trends of electrical science marvel at this Delco-Light achievement. For it's almost human in its action. An automatic throttle speeds or slows the engine to synchronize with load demands. An automatic choke makes starting quick and certain—even in cold weather. Automatic pilot balls—another patented feature—show at a glance the condition of your battery. Easy to tell about. But 15 years were devoted to intensive research before this scientific marvel was perfected. Even then it was not approved by General Motors until 7 years of grueling field tests proved it worthy.

Yet, you pay no premium for all these new and revolutionary features. The entire plant—complete with 16 cell battery—is offered at a price so low that it's well within the means of all who want it.

See this new Delco-Light plant that is now being discussed so widely. Write or phone the nearest Delco-Light distributor. And remember—if this new plant doesn't exactly fill your needs, there are many other models to choose from—priced as low as $225!

For heavy duty—the power which serves industry is now available to many farms.

Electricity can give the farmer much now—and more later

THE FARMER wants new equipment. His own may be "pretty fair," but a practical sense shows him how much more could be done with better. He wants it; but he first wants to make sure.

Users of farm-electrical equipment today are reporting good results. But the development of electrical machinery for the farm has just begun. Electrical manufacturers, aided by farm organizations and agricultural schools, will continue to make better machinery, improve the old and work out and test new uses for electricity. What discoveries in farm economy may lie ahead!

The electrical industry is bringing all the weight of its industrial experience to the service of the farmer. With its vast system of interconnecting lines, it was never better prepared to serve. The farmer wants not only light but every form of power that will make life on the farm as comfortable and convenient as in the city. A rural civilization will arise, worthy in every way of the farmer's dream.

Groups of farmers who can assure their local power company of a sufficient demand for current to make a new line self-supporting will find the company glad to cooperate. Ask your power company for information.

The Committee on Relation of Electricity to Agriculture is composed of economists and engineers representing the U. S. Departments of Agriculture, Commerce and the Interior, American Farm Bureau Federation, National Grange, American Society of Agricultural Engineers, Individual Plant Manufacturers, General Federation of Women's Clubs, American Home Economics Association, National Association of Farm Equipment Manufacturers, and the National Electric Light Association.

Rambles of a Pennsylvania Fruit Grower

By S. W. FLETCHER

XXIV
The World's Peach Bowl

(Continued from last week)

MARYSVILLE peach trees are pruned much harder than we prune in the East and are renewed constantly. Perhaps this is one reason why there are a number of thirty-five-year-old peach orchards in Sutter County still bearing ten to twelve tons to the acre and why the average productive life of a peach orchard there is twenty-five years instead of ten or twelve. The absence of pests, especially the borer, must also be taken into account.

I tried to get some reliable figures on yields, profits and values. This is extremely difficult to do in California, where every other man you meet is a real estate dealer, active or potential. He may not actually tell a whopper, but he is likely to be exceedingly economical with the truth when describing to the stranger from the East the Golden Door of Opportunity which will swing open in California if said stranger but knocks thereon and produces the cash. I gathered that yields of ten to twelve tons of peaches an acre are not uncommon in favorable locations and a few of the best orchards sometimes run to twenty tons. If an orchard does not produce at least eight tons an acre it is not likely to be profitable. The average for the state in 1926 was seven and a half tons. The average for Sutter County was eleven tons. The price at the cannery last year was $45.00 a ton for No. 1 canning stock which is two and three-eighths maturing. In 1919 it was $75.00 a ton. This year the price is likely to be around $35.00 since the canners overstocked last year.

Growers Just Broke Even

The county agent produced figures to show that the cost of production, with an average yield of ten tons an acre, is approximately $25.00 a ton, thus giving a net of around $175 an acre. None of the growers, however, is enthusiastic about producing peaches at $35.00 a ton. They claim that they just broke even last year.

By way of comparison with eastern figures, I include a statement of the operating costs for a year, submitted by a Marysville grower:

Pruning, including burning of brush	$25.00
Spraying	7.50
Plowing and discing twice	5.00
Cultivation, 8 times at $1.25	10.00
Thinning	17.50 to 25.00
Che-Kent land tax	3.00
Labor irrigating, 3 times	6.00
Water	2.00 to 10.00
Picking, $3.75 per ton for 8 tons	30.00
Hauling to canners at $2.00 a ton	16.00

This statement does not include taxes, interest, overhead and orchard depreciation.

It seems rather incredible that a compact group of fruit growers like this, having a very definite community of interest, should not have made some strides in the direction of cooperation, but such is the case. The 10 canneries pull together in fixing the price, but the thousand peach growers pull separately. Practically all of them sell to the canneries individually. There is no collective bargaining. A small group of growers organized a few years ago to can their own fruit, but the enterprise is still experimental.

All things considered, Marysville peach growing looked good to me. Undoubtedly, these fruit growers have made money, no matter what they may say about the 1927 cannery price. How else can the very heavy recent planting be explained, or the bland, open-faced and unblushing countenance of the man who quoted me a price of $3000 an acre for an orchard which was by no means the best I had seen in an afternoon's travel. This may not be "the world's peach bowl," as they claim, but at least it has some of the world's best bluffers.

I should like to live here awhile, make some money raising peaches, then go back East to spend it. It is my observation that most of the people in California have reversed this process.

XXV
The Sebastopol Gravenstein

FIFTY miles north of San Francisco, amid the rolling foothills of Sonoma County, is the second largest apple growing district of California, the other being Watsonville. Like most of the western fruit districts, it has specialized in the one variety that it can grow best. Watsonville is the home of the Yellow Newton, Wenatchee of the Winesap, and Sebastopol of the Gravenstein. Nearly 90 per cent of the 14,000 acres are of this variety.

The Sebastopol Gravenstein comes on the eastern market in July and August. It is a threat to the early apple industry of the East, especially to the growers of Yellow Transparent and Duchess. Being more attractive in size and color and far superior in quality to either of these varieties, they would stand a poor chance in competition if the supply of Pacific Coast Gravensteins should become large.

Industry Is Fifty Years Old

The apple industry of Sebastopol is fifty years old. It was founded on mixed varieties of eastern origin, including the Baldwin, but practically all the planting of the past twenty-five years has been Gravenstein. This is because Sebastopol is the only region in the world, so it claims, that can ripen the Gravenstein in July. We know this variety in the East as an apple of high quality, ripening in September or October. It is still a favorite for home use, but has been crowded out of the market by such varieties as the Jonathan, Grimes and Summer Rambo. It is practically the only variety still grown commercially in America that is of European origin. Our fathers and grandfathers value it highly. I have fragrant boyhood memories of a Gravenstein tree by the stone wall on the old farm in Massachusetts. In the East it has largely gone into the discard commercially, together with many other fine old dessert varieties, although still grown for market in a limited way in New England and New York. The Gravenstein is a rich, creamy yellow streaked with crimson, and has a flavor that lingers in the memory, with just enough tartness to make it equally valuable for dessert and cooking.

If our Pacific Coast competitors can grow the Gravenstein in quantity and put it on eastern markets at a reasonable price, then we might as well say good-bye to a large share of our early apple industry. But we are not likely to be called upon to make this sacrifice. I discovered that the area on which these early Gravensteins can be grown is very limited; that seventy-five per cent of it is already planted; that the maximum production of this district is never likely to exceed 4000 cars, even making allowance for new planting. This will not seriously affect the eastern market for early apples.

Gold Ridge Takes Name from Soil

The most preferred Gravenstein land is on Gold Ridge, so called from the color of the soil. It is light, sandy loam, underlaid with clay. The rainfall is thirty to forty inches, hence no irrigation is necessary. Weather records show an average of seventy-seven rainy days a year, of which fifty-five come between November and March. There is little, if any, rain from May to October, but rains at blossoming time sometimes interfere with pollination. It seldom gets below freezing in winter. I was told by the secretary of the local Chamber of Commerce, "Our summers are never hot." I accepted the statement with gravity, if not with conviction. During the summer there is a high ocean fog every morning; this not only holds down the temperature but also makes it impracticable to grow solid red varieties.

The orchards are close planted. The newer plantings are thirty by twenty-four feet, but the older trees are sixteen feet apart, following inches. The orchards are tilled until midsummer but no cover crop is sown; the natural winter cover of weeds, which is very heavy in this mild climate, is considered adequate. Pruning is even more severe in the Watsonville district. I saw a number of fifty-year-old orchards with trees scarcely fifteen feet high, so that all the fruit is picked from a short stepladder.

(To be continued)

Of Course!

Lawyer—Will you be good enough to explain to the court how it is that you, a man of five-feet-four, could see what happened on the other side of a fence 14 feet high?

Witness—Simple enough. There was a hole in the fence.

Instructions, Please

Amateur Agriculturist—I'll take this barometer, but I wish you'd explain to me how to set the thing when you want it to rain.

Short Courses Offered

THE Pennsylvania State College, School of Agriculture, has just announced the following short courses: Sawmill Week, October 27 to 29; the Pennsylvania Cooperative Conference, November 4 and 5; Horticulture Week, November 28 to 30, and Poultry Week, December 5 to 9th.

Complete programs will be sent soon by the school to all those who signify interest in these events.

Takes the Romance Out of Husking

This outfit may take the romance out of corn husking, but it also saves many an unromantic blister and aching arm. It harvests from five to seven acres of corn in a ten-hour day, and does a better job of husking than the ordinary hand picker. A power take-off from the tractor eliminates traction drive and permits the use of the outfit on soft ground.

ATWATER KENT RADIO

A STRAIGHT answer to a farmer's straight question

"EVERY RADIO salesman," a farmer writes us, "claims his set is the best. I want the best, but cannot afford to make a mistake. I am inclined to buy an Atwater Kent on its reputation. Can you give me any facts to prove it is the best?"

To this friend and the many other rural families who are ready to invest in radio, let us say just this:

A test of any radio instrument, as of any farm or household implement, is *the way it works and the way it stands up under continued use.* So the method of manufacture is vitally important. Atwater Kent Receivers and Radio Speakers are constructed on the theory that the parts you can't see must be as good as the parts you can see. Every receiver has to pass 159 gauge and electrical tests before it leaves our factory. To this extreme care is due the comment you so often hear: "Atwater Kent Radio works—and keeps on working."

Tone is another test. Upon clear, natural tone depends the *reality* of the programs which radio brings into your homes. In the making of Atwater Kent instruments perfect tone quality is never sacrificed.

A third test is *simplicity.* Can you bring in the broadcasting stations without bother and delay? Atwater Kent ONE Dial operation lets you turn from station to station at will, selecting instantly the kind of program you like.

A fourth test is *beauty.* You are proud to show Atwater Kent Radio to your guests, as well as have them listen to it.

If you live far from broadcasting stations, *distance* is also a test. All Atwater Kent Receivers have a wide range—and there is one model specially designed for reaching distant stations.

Let the nearest Atwater Kent dealer show you that Atwater Kent Receivers and Radio Speakers meet *all* these requirements. Yet—because of large production—the price is low.

MODEL E RADIO SPEAKER. The result of nearly three years' laboratory work. With 9 feet of flexible cord. $30

MODEL 35, six-tube, ONE DIAL RECEIVER. Crystalline-finished cabinet; gold-plated ship-model name plate, decorative rosettes and power supply switch. $65

"R" POWER UNIT. Automatic control from switch on receiving set.
Type R, for 60-cycle 110 to 115 volt Alternating Current, $50.
Type S, for 25-cycle 110 to 115 volt Alternating Current, $55.

MODEL 33, six-tube, ONE DIAL RECEIVER with antenna adjustment device. Unusual range and selectivity. Solid mahogany cabinet; gold-plated name-plate, power supply switch and vernier knob. $90

MODEL H RADIO SPEAKER. Entirely of metal. Crystalline finished in two shades of brown. With 9 feet of flexible cord. $21
MODEL 30, six-tube, ONE DIAL RECEIVER. Solid mahogany cabinet; gold-plated name plate, power supply switch and vernier knob. $80

ONE DIAL RECEIVERS LICENSED UNDER U. S. PAT. 1,014,00-.

EVERY SUNDAY EVENING

The Atwater Kent Radio Hour brings you the stars of opera and concert, in Radio's finest program. Hear it at 9:15 Eastern Time, 8:15 Central Time, through:

EASY FLOCK CONTROL OF WORMS

Nothing is more important than de-worming. *Right now* before fall laying starts. Nearly every county is worm infested. Your flocks are not immune.

This is the de-wormer that absolutely does not decrease palatability of the mash. It purges birds of *all* worms—tapeworms, round worms, etc. Snaps layers into abundant new vitality. Sends 100% of the feed the egg way.

Your money refunded if Pratts fails. Write for your copy of Profit From Poultry—1928.

PRATT FOOD CO. Philadelphia, Pa.

Pratts *Poultry Worm Powder*

55 years of success and fair dealing behind the Pratt guarantee. See your dealer for a money-back trial of any Pratt remedy.

Glenview Farm

How Much Should Pullets Be Worth?

I have a number of White Leghorn pullets hatched April 7 and I would like to sell them. Can you tell me what they ought to weigh at that age and how soon they should start to lay? What ought they be worth at this age? They were raised on the regular chick mash, etc., on range.—C. F. S., Cambria County, Pa.

Well-grown Leghorn pullets hatched early in April should weigh about 3½ to 4 pounds at this time and be ready to lay. I had several hundred hatched March 15 which made this weight and were in the house laying early in August.

The selling price of pullets varies considerably. The poultry farms that make a business of selling ready-to-lay pullets ask about $2 each, sometimes more, while I have known farmers to sell at $1.25, which I think is too low. However, in some country districts this seems to be the top price.—R. L. S.-H.

Rose Bug Will Kill Young Chickens

Can you give me any information as to why a chicken will not eat when it has food and water before it all the time? Several of mine have died by drying up. They lost from two to three pounds before they died. I can't account for it unless they eat some kind of poisonous insects, such as centipedes, locusts, wasps, bumble bees, yellowjackets, etc.—R. L. N., Lycoming County, Pa.

I have never heard of chickens eating enough bees or wasps to cause the trouble you have been having with your hens. However, young stock that eat the well-known rose chafer or rose bug are often killed by this insect. It generally comes in June or July, and is found not only on roses but on grapevines, cherry trees and wild flowers such as daisies as well. If I were in your place I would cut open some of the birds that have died and see just what they have in their crops. It would also be advisable to slit the intestines and see if they have any worms there. Intestinal worms in poultry often cause birds to waste away, go lame and die. If you find such worms, start feeding tobacco dust in the mash at the rate of two pounds of dust to 100 of mash. Keep this up for several weeks. It is not expensive.—R. L. Scharring-Hausen.

Combs Lop Over

I always have some fine young Leghorn roosters around 2½ months old, shaped fine, but their combs lop over. These birds I always sell. Would the combs raise up if kept?—C. L. O., Schuylkill County, Pa.

Your inquiry concerning lopped combs in cockerels is something that I cannot help you much with. I find the same condition in my own cockerels, and as it is considered an undesirable characteristic such birds have to be eliminated as breeders. Poultry authorities state that lopped comb is a sign of lack of vitality, that is, sexual vitality. How to remedy the condition I do not know. I have never known a floppy comb to stand up, and make a practice of selling birds with such combs, altho in many cases they are fine birds in other respects. I do not know whether or not the characteristic can be transmitted to the progeny, but I would not use a male with a lopped comb in the breeding pen.—R. L. Scharring-Hausen.

Is This the Right System of Handling Pullets?

I have 250 White Leghorn pullets that have been laying for the past month and are now producing about 50 per cent. They are March 20 hatched, have been well fed all summer, averaging from 2 to 3 pounds each, a few were laying before they were housed. Since then I have fed about 13 or 14 pounds of grain per hundred. I had been feeding a good home-mixed mash containing 10 per cent each of dried buttermilk and alfalfa leaf meal but had difficulty procuring same, so have gradually changed to a good commercial mash, taking about 3 weeks for the change.

I have just completed the change the past week and now notice that about 6 or 8 birds have ceased producing but cannot see any signs of molting. They are the ones that were laying first as I handled the pullets that were laying before housing.

What would you suggest to try and hold a molt off to for December?

Do you think that the ones that ceased production will commence in the near future?

I have the buildings wired. Would you think it advisable to use them (the lights) on that lot? Would you use the lights on the old birds during October? I also want to use their eggs for hatching. I am trying to make a flock average of 175 eggs. I have 187 for the eleven months. Would the lights hold up production or force molting on the old birds?—E. B. W., Perry County, Pa.

It is always a problem with pullets to keep them up to body weight, and the tendency for them is to cease production and molt and even get sick once they become thin. Since you have lights, I think it would be advisable to use them this fall as an aid to maintaining weight. The longer day gives the birds an opportunity to consume more scratch and keep up their weight. The lights may go on at 5:00 A. M., at which time the pullets should find mash, scratch and water ready for them. You may use lights on the old hens during October as an aid to making your record without injury. One of the best ways to throw a flock into a molt is to take off the lights, so that you can do this when you want the flock to cease production.

Let me suggest that you feed 8 lbs. of scratch in the late afternoon, 2 lbs. after dark for the early feeding, and 4 lbs. when you make the rounds in the morning. A very good way to keep birds in good flesh is to feed 1 lb. cornmeal, 1 lb. ground oats and 1 lb. condensed buttermilk as a moist mash at noon. It is also good to add an extra 100 lbs. of yellow cornmeal to each 500 of mash. Many successful poultrymen now use from one to two per cent of codliver oil mixed in the dry mash.

There is a great deal of difference of opinion as to the use of lights on breeders during the winter and spring. I know of one large breeding establishment that uses lights with special conditioning methods and claims that the birds are better than if no lights were used. On the other hand, many hatcheries will not accept eggs from hens under lights, claiming that the fertility or hatchability is very low. Unless you are after early chicks, perhaps you had better keep the lights off during the winter.

It is the natural tendency of fowls to molt in the fall, and in early-hatched pullets that become adult in the summer before the molting period, it is hard to overcome nature. Even if the flock as a whole goes thru, some individuals will slack off or molt, especially the earliest producers. Keeping the birds in good flesh and good health by lights and careful feeding is the way to get around the difficulty, but it is by no means a sure thing.

Quantities mentioned in the feeding schedule are per 100 birds.—R. L. Scharring-Hausen.

Nest Box Notes

THE other day I was talking with a poultryman who has a very large flock, and he mentioned the fact that he had a little sprinkle of chicken-pox in his pens. It did not seem to worry him; in fact, he seemed to expect it. According to him, birds that were slightly out of condition are subject to this disease, and if they are carefully fed the disease does not become serious. He made no attempt to combat it except to feed carefully. His birds were getting codliver oil and green feed and he claimed that he did not expect any serious reduction in egg yield even from birds that had the scabs on the comb.

• • •

All the talk about roup and pox gave me a chilly feeling, however, because it is now the time of year when these diseases appear in the flocks. I believe myself that birds in fine condition and free from parasites are the ones that will throw off or avoid altogether these diseases. Clean, sanitary houses, well ventilated and dry; vigorous, healthy birds carefully managed, and the use of protective feeds such as codliver oil, green feed and milk are better than all the nostrums and remedies on the market.

• • •

Our mash at this time is composed of equal parts of bran, middlings, flour middlings and meat scrap, with two parts of yellow cornmeal. To this mix, weighing 600 lbs., we add a gallon of codliver oil, five pounds of salt and fifteen pounds of oyster shell meal or limestone flour. For green stuff we are using the soft and loose heads from the cabbage patch. At noon the birds get a soft mash on top of the dry mash in the hoppers, composed of cornmeal, laying mash and milk. They have been getting tobacco in the dry mash, and I see no signs of worms. The birds are in good health.

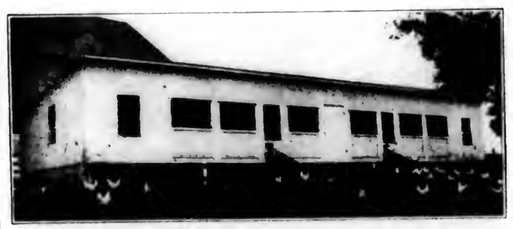
• • •

If a flock of pullets loses its appetite and acts listless, the thing to do is to give a dose of Epsom salts in the morning drinking water at the rate of 1 pound per 100 birds, and then clean the droppings and litter out and supply fresh litter. This simple treatment will often avert serious trouble.

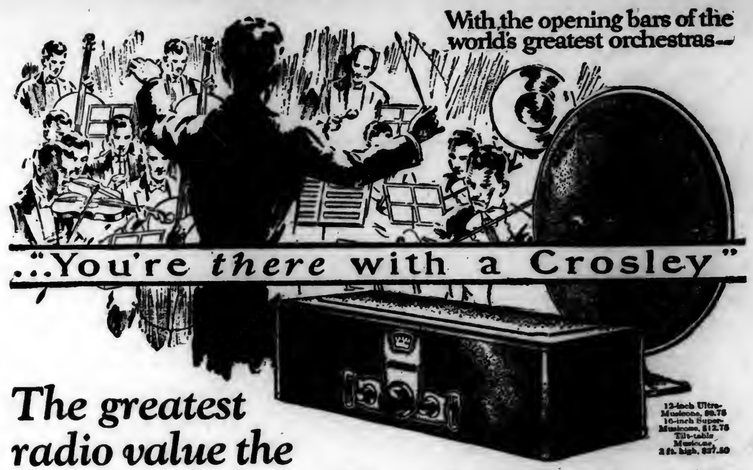
Try New Type Brooders

OCEAN COUNTY poultrymen are experimenting with the battery type of brooders. The first one is to be started on October 3 with 4000 chicks. The heat for the chicks is derived from a huge electrical battery and it has eight compartments holding 500 chicks each.—A. K.

He Works Them Overtime



Poultry house on the farm of Ira M. Eby, Gordonville, Lancaster County, Pa. The house is 20 feet wide and 60 feet long and is lighted by electricity during the winter months when the days are short. Mr. Eby keeps Leghorn chickens and at present his flock is composed of about 250 pullets and 300 hens.



With the opening bars of the world's greatest orchestras—
"You're there with a Crosley"
12-inch Ultra-Modernes, $8.75
16-inch Super-Musicones, $12.75
Tilt-table, Musicone, 24¼ high, $27.50

The greatest radio value the world ever saw. Six-tube Bandbox $55

To Crosley resources, experience, leadership and mass manufacturing methods comes the big factor that leads to paramount achievement—license to work with and to take full advantage of the research and study of the greatest of their kind—The Radio Corporation of America, The General Electric Co., The Westinghouse Co., The American Telephone & Telegraph Co., and The Hazeltine and Latour Corporations.

Wonder not then that this "Bandbox" is an amazing radio—and a phenomenal value.

Such resources at his command have resulted in the greatest Crosley triumph—a 6 tube receiver with all elements Completely Shielded—absolutely Balanced in its radio frequency stages and including features and refinements at a price of $55, which are the chief talking points of sets twice its price and more.

This Bandbox is totally shielded. Copper shields cover coils, cadmium-plated steel covers the condensers. Wiring is completely shielded from both. The Bandbox is completely balanced. It is a genuine neutrodyne.

The Bandbox is equipped with Acuminators—secondary adjustments to be used only on weak, distant signals and when cruising for far-a-way stations that ordinary one dial sets miss entirely.

The Bandbox possesses a volume control by which strong local dancing volume can be reduced to a whisper without distortion of detuning.

The Bandbox operates with a single tuning knob which turns an illuminated dial. This feature for shadowy corners is greatly appreciated.

The Bandbox is easily installed in console cabinets being so designed that a few screws removed from the escutcheon and the bottom releases chassis from the outside metal case. See it at Crosley dealers now!

Approved Consoles

Selected by Powel Crosley, Jr., as those acoustically and mechanically for the installation of the Crosley Bandbox. Obtainable in Mahogany, Walnut, Queen Anne and Modernistic. Crosley dealers secure them from these fine cabinet makers:

Best

by the *only* test that counts

PROFIT *over* FEED COST

This Larro Feeder made $172.66 per cow

Try Larro Dairy Feed any way you like. You'll find it by all tests the best ration you have ever fed, and that includes the one all-important test of *profit over feed cost.*

Look at the figures of the Bedford County (Penna.) Cow Testing Association for the Larro-fed Jersey herd of Allen Eshelman of Everett, Penna. His profit for the year was $172.66 per cow with all feed bills, including roughage, paid. The average production per cow was 8,257 lbs. milk; 429.7 lbs. fat.

Mr. Eshelman's satisfaction with Larro has been duplicated by thousands of dairymen all over the country during the 15 years in which this wonderful, profit-producing dairy feed has been on the market. In all this time Larro has always meant more milk, healthier cows, greater profits.

Developed and constantly tested at Larro Research Farm.

You can't afford to waste time and money on home mixtures or cheap rations when Larro will give you profits like those. And it *will!* Feed it according to directions and you will be delighted with the increased milk flow and improved condition of every cow in your herd.

Larro high quality, uniformity and safety will make any cow yield the biggest profit she is capable of producing every month in the year.

THE LARROWE MILLING COMPANY
Detroit, Michigan

Larro

FEEDS THAT DO NOT VARY
FOR COWS ◥ HOGS ◥ POULTRY

(755)

It is the Larro Policy to make only those rations which yield the feeder the greatest possible profit. That is why we make only one feed for each purpose, as only one can be most profitable.

Westfield C. T. A. Completes Seventh Year

THE Westfield C. T. A., Lawrence County, Pa., finished its seventh year September 1, 1927, with 23 whole-year members. In addition two members were in the association only part of the year. There were 368 cows in the association all or part of the year.

The results for the association for the seven years are as follows:

Year	Average no. cows	Pounds milk	Pounds butterfat
1921....	289.92	6218	251.0
1922....	274.0	6268	265.9
1923....	254.50	6623	286.2
1924....	265.80	6827	303.2
1925....	240.24	6927	296.6
1926....	261.14	7140	299.6
1927....	279.81	6758	287.4

The results from the whole-year members are as follows:

Total average number cows in association	279.81
Avge. per cow: lbs. of milk	6758
Pounds butterfat	287.4
Percentage of butterfat ...	4.3
Value of product	$219.04
Cost of pasture	9.41
Cost of roughage	32.31
Cost of grain	48.06
Total cost of feed	90.11
Value of product above feed cost	128.93
Returns for $1 expended for feed	2.43
Feed cost per 100 lbs. milk.	1.33
Feed cost per pound of fat.	.31

Individual cow records: Group 1, above 500 lbs. butterfat, 1; group 2, between 400-500 lbs., 13; group 3, between 300-400 lbs., 80. Total, 94.

County Agent, H. K. McCulloch; tester in charge, Charles D. Henry; figures compiled by I. O. Sidelmann.

Ten herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner			
H. A. Freed, Racine	6.58	R. & G. H.	11,339	405.3
W. McMillen & Son, Wampum	8.00	R. H.	10,962	368.1
F. B. Thompson, New Wilmington..	18.08	R. J.	6482	353.1
J. B. Elder, Volant	5.00	R. H.	10,585	343.9
Geo. Augustine, East Palestine	11.25	R. H.	9943	332.3
J. W. Bronson, New Galilee	13.42	R. J.	6506	329.1
Wm. H. Walton, Elwood city	6.83	Mixed	7361	324.4
J. W. Martin & Sons, Bessemer	28.47	R. J.	5610	304.7
H. L. McCurley, Enon Valley	18.67	R J.	5701	303.9
C. T. Douthitt, Enon Valley	8.53	R. & G. H.	7439	300.3

Asks Dairy Farming Information

I would like to have some information regarding dairy farming. If you can answer the following questions, or turn my letter over to someone who can, I will appreciate it greatly.

I would first like to know the average production per day, of the average grade dairy cow. I refer to well-cared-for animals on modern dairy farms.

Then, can you tell me, if the state condemns milk for containing tuberculosis germs, and cows are killed by the state, for that reason, whether the carcass can be sold for food?

When a herd is destroyed by the state, what does the state allow the owner per head?

When a herd is condemned and killed, for any reason, by the state, how much time must elapse before another herd can be placed on the same farm?

What is required in the way of renovating and sterilizing the buildings and equipment before the farm is restocked?

Do the same conditions or rulings on the above questions hold good in Ohio, as well as in Pennsylvania?—W. L. H., Jr., Allegheny County, Pa.

The average production per day of a good average grade dairy cow may perhaps be best estimated from the average production from all the cows in cow testing associations for the year 1926 in the state of Pennsylvania. In the cow testing associations the average production for 16,103 cows was 7585 pounds of milk and 294.4 pounds of butterfat. If the cows were grade Jerseys or Guernseys they would probably not produce quite so much milk. On the other hand, if they were grade Holsteins they might average a little higher than the figures given.

The carcass of an animal condemned for tuberculosis may be sold for food, provided the veterinarian who has charge of the slaughtering of the animal finds that the meat is fit for food.

When a herd is condemned for tuberculosis and slaughtered the animals are appraised by the owner and by the veterinarian who has charge of the testing work under the supervision of the Pennsylvania Bureau of Animal Industry, Harrisburg, Pa. After the owner of the herd has made application to the foregoing bureau to have his herd tested under the accredited herd plan the first test is conducted free of cost except that the owner must board and lodge the veterinarian who is sent to do the work by the Bureau of Animal Industry. If the owner has entered his herd for test under the accredited herd plan, blanks for which purpose may be secured from the Bureau of Animal Industry, then he will be entitled to state and federal indemnity for such animals as may be condemned. The following tabular statement according to the most recent information I have available will give the indemnity permitted by the state and federal authorities:

Source of funds	Indemnity for grades	Indemnity for purebreds
State	$40.00	$70.00
Federal	7.50	45.00
Total	$47.50	$115.00

In addition to the above cash reimbursement the owner also gets the meat value of the carcass, if it is fit for human food. However, in no case is he allowed to have over 90 per cent of the appraised value of the animal.

Another herd may be placed on the farm just as soon as the stables have been properly cleaned up and disinfected.

The disinfection of the buildings and equipment is done under the supervision of the Bureau of Animal Industry, Harrisburg, Pa. Men are sent to do the work who are familiar with the proper methods of disinfection. They do a good, thorough job of it with a power sprayer and powerful disinfectants.

I am not informed as to whether all of the above provisions hold good in Ohio.—A. A. Borland.

Treat Wheat for Smut

NEW JERSEY wheat growers are using quite generally the dry dust form of Bordeaux for the control of wheat smut rather than use the formaldehyde treatment.

The opinion among growers and some county agents is that this copper carbonate dust stimulates the wheat to grow better and yield slightly heavier when applied in the proper amounts.

At the present time, the pure copper carbonate dust containing 50-55 per cent metallic copper, is slightly more efficient in controlling stinking smut. According to Charles A. Thompson, county agent in Burlington County, care must be taken not to inhale the copper dust as it may cause sickness. One pound of dust will treat six bushels of wheat.

His Cows Were the Highest Producers

L. O. HETRICK, of Mahoning, had the honor of having the highest producing herd in the Clarion County Cow Testing Association for the fifth year of the association's work which ended July 31, 1927. The herd as a whole was unusually good from the standpoint of production; the average for the 300 cows in the association being 302 pounds of butterfat. Mr. Hetrick's herd of grade and purebred Guernseys, with some individuals of other breeds, averaged 9617 pounds of milk and 460.1 pounds of butterfat.

Mr. Hetrick's own account of how he feeds and cares for his herd is of interest.

Fed a Well-balanced Ration

"When the association started a year ago last August, I had for my cows a small patch of peas and oats, also a small field of soy beans along with the pasture. This green feed was a great help in keeping up milk production, while the pasture was short, and in saving grain. Thru the winter they had a good quality of mixed hay and well matured silage. In securing a high milk yield, I believe the biggest factor of all, along with their pasture and their roughage, was the well balanced rations the cows received. I used my own home-grown grain, corn and oats, bought some bran and mixed with it cottonseed meal and oil meal. I fed this mixture according to the amount of milk they produced, as the cow tester advised. We studied their conditions each month and by our cooperation, tried to feed for the best results possible.

"I feel that I also owe State College credit for the way one of the instructors described a good dairy cow when I was at State College. I have bought two purebred Guernsey cows since then—the one, a five-year-old cow, making 517.3 pounds of fat, and the other, a three-year-old, making 490.1 pounds of fat.

"As to breeding plans, I have purchased a great grandson of Ne Plus Ultra and I am breeding my herd to this bull. The dam of my bull has a record in Class AA of 13,341.7 pounds of milk and 682.1 pounds of butterfat.

Keeps Herd in Good Health

"My herd is free from tuberculosis and also abortion. I think one of the main points in improving the herd is keeping healthy cattle.

"We do not have drinking cups, but in the winter we water the cattle at nine o'clock in the evening. During the summer months we keep the cattle in the barn during the heat of the day and turn them into pasture when it gets cooler.

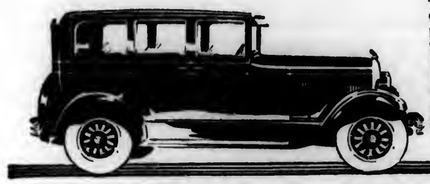
"I was very much surprised myself when the county agent, F. K. Miller, told me I had the leading herd in the association. My family has been interested in helping to make the herd what it is. What we have done with our herd, any farmer should be able to do.

"I think the cow testing association is very helpful to the farmer, as it is the only way to find out what each cow is producing. I will also say that our tester, Rudolph Williams, takes a great interest in his work and has been of much assistance in putting the herd on a profitable basis."—A. A. B.

Prove Lights Effective in Poultry House

THE Bergen County Egg Laying Contest averaged 43 per cent egg production during the period of December 1 to April 1 last year, whereas the Vineland contest averaged 54 per cent production in the same period, according to figures just worked out by the contest managements. Lights were installed in the Vineland contest, but not in the Bergen contest. From April 1 to date, however, the Bergen contest has gone nearly 10 per cent ahead of Vineland. Poultry authorities state that this bears out the contention of the Experiment Station to the effect that lights in the poultry houses during the months of high-priced eggs are effective equipment. —W. H. B.

The Great New '62'



Great New Chrysler "62"—6-cylinder motor. 7-bearing crankshaft. 62 and more miles per hour. Invar-strut pistons. Oil filter and air cleaner. Ventilated crankcase. Impulse neutralizer and rubber engine mountings. New cellular type radiator. 4-wheel hydraulic brakes. Road levelizers, front and rear.

CHRYSLER

52 $725 to $875 — 62 $1095 to $1295 — 72 $1495 to $1745 — 80 $2495 to $3595

(All prices f. o. b. Detroit, subject to current Federal excise tax)

4 Great Cars in 4 Great Markets

CHRYSLER cars are designed and built for people who want that extra something which makes all the difference between performance and value that are merely satisfactory and performance and value that are truly distinctive.

Pick-up, power and speed that amaze as much as they exhilarate—instant responsiveness to steering wheel—brakes that positively insure safety—most unusual riding comfort—marked freedom from mechanical cares—alluring smartness of line and color.

There are four great lines to meet the four great divisions of the market—"52," "62," "72" and the Imperial "80." See them. Among them you are bound to find the car that exactly fits your needs—the car that actually provides that "extra something" at a price unbelievably low.

TREAT SWOLLEN TENDONS

Absorbine will reduce inflamed, strained, swollen tendons, ligaments or muscles. Stops the lameness and pain from a splint, side bone or bone spavin. No blister, no hair gone, and horse can be used. $2.50 at druggists, or postpaid. Describe your case for special instructions. Interesting horse book 3-S free.

From a race horse owner: "Used Absorbine on a yearling pacer with strained tendon. Colt all over lameness, though for a time, couldn't take a step. Great stuff."

Save $15.00 to $25.00 per Ton Grinding Your Own Feed With
Humdinger JAYBEE CRUSHER-GRINDER-PULVERIZER

The Old Reliable "Jay Bee" feed mill is the greatest money-maker you can buy. Mills have paid for selves in a single year. 2 sizes: 7 H. P. to 30 H. P. Fordson will operate successfully.

It Has Never Failed Me—Not a Dime for Repairs
Mr. J. Shipman, Caddo Rock, Neb., says: "My Humdinger has never failed me. I have ground about 10,000 bushels of corn, and at least 600 tons of hay and fodder, and haven't spent a dime for repairs."
Over 7500 "Jay Bee" mills in use.
Easy Payment Plan for feeding husk-ers, shredders, etc. Descriptive folder, prices, terms, etc., FREE. Stock in principal cities.
Write Nearest Office
J. B. SEDBERRY, INC. 238 Hickory St., Utica, N. Y.

Cool Grinding—Makes Better Feed. The "Jay Bee" does not heat the feed. Grinds any grain or roughage UNIFORMLY, finer, faster, at less cost per ton than any other mill.
Saved $800 a Month
Bull Westergaard, Omaha, Neb., tells how one saved $800 a month on his feed mill. This saving paid for Humdinger, tractor, belt, pulley in one season.

A New Mill for You

The New Holland Hammer Mill is specially designed to grind feed more efficiently and in less time. Its swinging hammers will make quick work of corn, oats, alfalfa, fodder, anything you want to grind. It operates effectively with light power. Sturdy and strong in construction.

Make the most *of* Winter Milk prices

Here's your opportunity to cash in on winter milk prices. Make the most of this season's market by getting your production on a sound, economical basis. There's a Quaker Dairy Ration that just fits your farm, your herd! Pick your feed below:

Feed the Feed that Fits Your Farm, Your Herd!

Quaker Boss Dairy Ration is the ideal **24%** grain ration for cows receiving timothy hay, grass hays, straws, corn stover, or poorer grades of clover.

Quaker Big Q Dairy Ration exactly **20%** meets the need of those herds receiving poor alfalfa hay, fair clover hay, or real choice mixed clover and grass hay.

Quaker Dairy Ration has no superior **16%** when cows are receiving choice clover hay, good alfalfa hay, or an excellent grade of fine mixed grass-and-clover hay; a good ration for dry stock and for young growing stock.

Quaker Sugared Schumacher Feed, as the exclusive grain ration has a real place when the herd is receiving liberal quantities of the very best grade of alfalfa hay. For blending it combines beautifully with any Quaker high protein feed. For all stock—dry stock, horses, sheep, swine, and steers it is unexcelled.

All Quaker Dairy Feeds contain molasses in dried form and are rich in the minerals cows must have to make milk.

Send for the FREE book—"The Dairy Herd"—it tells you just how to meet the feed requirements of your farm, your herd.

Wants Formula for Fattening Hogs

Will you be kind enough as to suggest a good formula for fattening young hogs about ten weeks old? They should have sufficient weight to be ready for market when six months old. As a liquid we give them at present skimmilk powder, but we do not yet know what quantity of powder to use per gallon of water. The mixture we feed them now consists of the following: pure corn chop, 50 per cent; wheat middlings, 15 per cent; oats chop, 15 per cent; alfalfa flour, 5 per cent; tankage, 10 per cent; oil meal, 10 per cent; salt, 1 per cent.—H. D., Bucks County, Pa.

The combination which you are using contains more protein than is necessary for economical pork production. Practically all the feeds with the exception of the corn are high in protein which means that they are relatively high priced feed. The ration can be materially improved by reducing the amount of high protein feed.

Pigs that have been weaned will do well on a combination of 60 pounds of corn meal, 20 pounds of wheat middlings and 10 pounds of tankage, especially if some of the skimmilk powder is fed. If the skimmilk powder is eliminated the amount of corn in the combination should be reduced to 50 pounds. It is doubtful if it will pay to feed the oat chop unless it is being fed in order to dispose of it. The alfalfa flour and the oil meal may be eliminated from the combination. The one per cent salt should be continued in combination with the ration. The change suggested will materially reduce the expense because of eliminating some of the high priced protein feed. As the pigs increase in weight, increase the proportion of corn and reduce the amount of wheat middlings so that when the pigs weigh about 125 pounds they will be receiving a combination of about 9 parts corn, 1 tankage and a small allowance of the skimmilk.

The skimmilk powder is usually prepared by combining 91 pounds of water with 9 pounds of milk. This proportion provides about the same amount of food nutrients as skimmilk.—W. H. Tomhave.

Hog Cholera Less Severe

THE hog cholera situation in Pennsylvania is much better now than it was a year ago at this time. However, because of the severe outbreak late last fall, the Bureau of Animal Industry specialists are urging farmers to provide warm, dry quarters for their swine this fall and winter, so that the cold rains and severe cold weather will not reduce the vitality of the animals and make them more susceptible to hog cholera.

So far this year more swine have been vaccinated against hog cholera than during any previous similar period. Up to September 1, a total of 44,400 animals had been vaccinated as compared to 30,170 for the first eight months of 1926.

Delouse Animals Before Winter

NOW IS the time to delouse farm animals. Effective treatment is very difficult in the winter, hence it is important to free livestock of lice before cold weather sets in.

For horses and cattle arsenical dips, coal-tar creosote dips, or nicotine solutions are recommended. For dipping hogs, crude petroleum and coal-tar creosote dips are effective. Dusting powders are of some value during cold weather in holding parasites in check, but powders are not considered dependable remedies, says the U. S. D. A., Bureau of Animal Industry.

N. J. Dairymen Replace Cattle

CAMDEN COUNTY dairymen are solving the replacement problem in their herds by going to Michigan and buying direct from the farmers. By eliminating the dealers they are able to make considerable saving in the cost of the animals. In addition they are able to secure the kinds of animals they want for their particular needs. Savings of at least twenty-five to forty dollars per cow are being made by the farmers in comparison with the prices asked by dealers for similar animals.

During the last two months Howard Rexon, Stratford, and Walter Nicholson, Grenloch, Camden County, have brought in cattle from Michigan which they personally bought and had loaded by the farmers who raised the stock.—A. K.

Farmer—Samanthy, do you want me to bring you anything from the city today?

His Wife—Yes, Si; you might bring me a few jars of that traffic jam I see advertised in the papers.

They Know That Winter Is Coming

This will be a familiar scene on many a farm this fall. Not only is the woodbox in the kitchen kept filled during the long, cold winter months, but the farm woodlot is thinned out for next year's growing season.

Genuine Cork Linoleum Rugs in NEW-DIFFERENT-PRETTIER Patterns

ITS pretty patterned surface is as smooth as varnished woodwork. Dirt just simply won't grind in. Grease spots come off as easily as from a smooth china dish. As a covering for that old kitchen floor, it means an end to scrubbing.

Think of having a rug for the kitchen so pretty and colorful, (the pattern illustrated is from an old Japanese design) yet so easy to clean and *keep clean*. It will stand an amazing amount of wear, too, because it is made of genuine linoleum. Given an occasional coat of clear varnish, it will last year after year even on the most "walked-on" floor in the house.

New Jaspé Rugs

For the other rooms, there are the beautiful new Jaspé rugs with the wax finish. If you have not seen this new type of smooth-surface rug, by all means ask for them in the stores. These are made of the very same Jaspé linoleum that has become so popular in Armstrong's Linoleum Floors. The Jaspé graining is solid, right through to the burlap back—it can't wear off.

Just a light mopping makes this lovely rug gleam like new

Each of these Jaspé rugs comes with a velvety coat of wax on its surface. It will keep its original lustre and freshness indefinitely, if waxed as needed, and polished from time to time with a soft cloth.

In the large illustration: *Pattern No. 816.* Above: *Inlaid Pattern No. 1031.* Right: *Jaspé Rug No. 707.*

Jaspé rugs are distinctly an original Armstrong idea. You will find each genuine Armstrong's Linoleum Rug identified by the Circle A trade-mark stamped on the gray burlap back. Remember to ask the store clerk for "Armstrong's" by name.

Book of Rug Patterns, Free

"Rugs of Practical Beauty" is a booklet illustrating the new Armstrong Rug patterns in their original colors. You may have a copy simply by writing to Armstrong Cork Company, Linoleum Division, 1020 Jackson Street, Lancaster, Pennsylvania.

Armstrong's Linoleum Rugs

they wear and Ⓐ wear and wear

Look for the CIRCLE A trade-mark on the burlap back.

Capacity of Silos Easily Computed

MEASURING and weighing 32 silos over a period of five years by experts from the Missouri College of Agriculture, Columbia, Mo., shows that a cubic foot of settled silage at the top of a silo weighs 32 pounds to the cubic foot; 10 feet deep, 38 pounds; 20 feet down, 41 pounds; and 30 feet and below, 43 pounds, there being no apparent increase in density below 30 feet of depth.

The following table gives the number of tons of settled silage, the height measured from top of silage rather than top of silo:

Depth of settled silage	Diameter of Silo 10 ft.	12 ft.	14 ft.	16 ft.	18 ft.	20 ft.
16.....	23.	33.2	46.2	59.	74.5	92.1
18.....	26.2	37.7	51.4	67.1	84.8	104.8
20.....	29.4	42.4	57.7	75.3	95.2	117.7
22.....	32.6	47.0	64.0	83.5	105.6	130.5
24.....	35.9	51.7	70.4	91.9	116.1	143.5
26.....	39.2	56.4	76.8	100.3	126.8	156.7
28.....	42.5	61.2	83.4	108.9	137.6	170.1
29.....	44.3	63.7	86.8	113.3	143.2	177.1
30.....	45.9	66.0	90.0	117.5	148.5	183.6

If the depth of settled silage is over 30 feet, subtract the capacity at 29 feet from the capacity at 30 feet to get the increase in the last foot of depth, and multiply this by

One of the largest silos in the world, on a farm in Mercer County, N. J.

number of feet of depth over 30, and add the product to the capacity at 30 feet. This can be done because the density or weight of the silage does not increase below 30 feet. Thus suppose we wish the number of tons in a 14-foot silo with a depth of 43 feet of settled silage. The capacity of a 14-foot silo of 30 feet depth of settled silage is 90.0 tons, while that at 29 feet is 86.8 tons, a difference of 3.2 tons for the last foot. Multiplying 3.2 tons by 13, the depth over 30 feet, gives 41.6 tons in the 13 feet below 30 feet. Adding 41.6 tons to 90.0 tons gives 131.6 tons as the capacity of a 14-foot silo with 43 feet of settled silage.

Measuring the depth after it has settled 20 to 30 days is the only safe way, as it is largely guesswork measuring immediately after filling, since the amount will vary with the dryness of the silage, how much it was tramped, and how rapidly it was put in. After settling several days these factors tend to equalize each other.—I. W. Dickerson.

Man Sets Forest Fires

FOREST fires last year caused direct damage amounting to about $26,900,000 in the United States, is reported by the Forest Service, United States Department of Agriculture. Fires burned over 24,300,000 acres of forest land.

Smokers lead all others as starters of forest fires with over 16 per cent of all, railroads come next with 13 per cent, and brush burning third with 12 per cent. Lightning is known to cause about 12 per cent of the fires while man sets over 72 per cent of them.

"Heard of the latest in poisons?"

"No. What is it?"

"Airplane poisoning. One drop is usually sufficient."

BUICK *for* 1928

BUICK makes *every* road a boulevard - - -

Bumpy, rutty, uneven highways ride like boulevards in a Buick for 1928. Important improvements impart a matchless riding ease—a smoothness over any road in any weather—which assure you a comfortable trip, no matter how far you may drive in a day.

Hydraulic Shock Absorbers

In addition to Buick's famous Cantilever Springs, Buick for 1928 has Hydraulic Shock Absorbers, front and rear. These have been made an integral part of the Buick chassis, and are *standard equipment* on all models.

The Low-swung Body

Bodies swung smartly low by means of the exclusive Buick double-drop frame provide greatly increased roadability due to their lowered center of gravity.

—and Matchless Beauty, too

Long, low, flowing lines—surpassingly beautiful color harmonies, inside and out—and restful form-fitting tailored seat cushions—all combine to make every ride in a Buick for 1928 the most pleasing you have ever known.

29.....	44.3	63.7	86.8	113.3	143.2	177.1
30.....	45.9	66.0	90.0	117.5	148.5	183.6

If the depth of settled silage is over 30 feet, subtract the capacity at 29 feet from the capacity at 30 feet to get the increase in the last foot of depth, and multiply this by number of feet of depth over 30, and add the product to the capacity at 30 feet. This can be done because the density or weight of the silage does not increase below 30 feet. Thus suppose we wish the number of tons in a 14-foot silo with a depth of 43 feet of settled silage. The capacity of a 14-foot silo of 30 feet depth of settled silage is 90.0 tons, while that at 29 feet is 86.8 tons, a difference of 3.2 tons for the last foot. Multiplying 3.2 tons by 13, the depth over 30 feet, gives 41.6 tons in the 13 feet below 30 feet. Adding 41.6 tons to 90.0 tons gives 131.6 tons as the capacity of a 14-foot silo with 43 feet of settled silage.

One of the largest silos in the world, on a farm in Mercer County, N. J.

Measuring the depth after it has settled 20 to 30 days is the only safe way, as it is largely guesswork measuring immediately after filling, since the amount will vary with the dryness of the silage, how much it was tramped, and how rapidly it was put in. After settling several days these factors tend to equalize each other.—I. W. Dickerson.

Man Sets Forest Fires

FOREST fires last year caused direct damage amounting to about $26,900,000 in the United States, is reported by the Forest Service, United States Department of Agriculture. Fires burned over 24,300,000 acres of forest land.

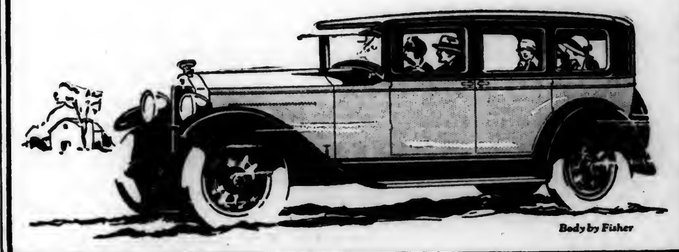
Smokers lead all others as starters of forest fires with over 16 per cent of all, railroads come next with 13 per cent, and brush burning third with 12 per cent. Lightning is known to cause about 12 per cent of the fires while man sets over 72 per cent of them.

"Heard of the latest in poisons?"

"No. What is it?"

"Airplane poisoning. One drop is usually sufficient."

BUICK *for* 1928



Body by Fisher

BUICK makes *every* road a boulevard - - -

Bumpy, rutty, uneven highways ride like boulevards in a Buick for 1928. Important improvements impart a matchless riding ease—a smoothness over any road in any weather—which assure you a comfortable trip, no matter how far you may drive in a day.

Hydraulic Shock Absorbers

In addition to Buick's famous Cantilever Springs, Buick for 1928 has Hydraulic Shock Absorbers, front and rear. These have been made an integral part of the Buick chassis, and are *standard equipment* on all models.

The Low-swung Body

Bodies swung smartly low by means of the exclusive Buick double-drop frame provide greatly increased roadability due to their lowered center of gravity.

—and Matchless Beauty, too

Long, low, flowing lines—surpassingly beautiful color harmonies, inside and out—and restful form-fitting tailored seat cushions—all combine to make every ride in a Buick for 1928 the most pleasing you have ever known.

BUICK MOTOR COMPANY, FLINT, MICHIGAN
Division of General Motors Corporation
Canadian Factories: McLAUGHLIN-BUICK, *Oshawa, Ontario*

WHEN BETTER AUTOMOBILES ARE BUILT, BUICK WILL BUILD THEM

LET US TAN YOUR HIDE

Fox, Coon, Mink, Skunk, Muskrat, etc., dressed and made into latest style Coats (for men and women), Vests, Caps, Neckpieces and other Garments. Horse, Cow, Bear, Dog or any animal hide tanned with fur on, made into Robes, Coats, Rugs, etc. Hides tanned into Harness or Sole Leather. FREE CATALOG AND STYLE BOOK gives prices, when to take off and ship hides, etc.
TAXIDERMY and HEAD MOUNTING
FURS REPAIRED OR REMODELED.
Estimates gladly furnished. Send us your furs for Summer Storage in Automatic Cold Vault.
THE CROSBY FRISIAN FUR COMPANY
Largest custom tanners and taxidermists in the world.
564 LYELL AVE. ROCHESTER, N. Y.

Yarns of Pure Wool Worsted for Hand Knitting—also Rug Yarns for Hooked Rugs. Use 1 oz. skein. Orders sent C. O. D. Write today for free samples. Ask about our WOOL Blankets.

INTENTIONAL SECOND EXPOSURE

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

"LIKE you, sir," I wound up, "I am somewhat of a friend of the conservative party, altho it seems my attitude has been misunderstood. But perhaps I should add I am only a lukewarm friend, for it seems to us that these people have indeed been used very hardly by King's officers."

This was exactly his opinion, according to my fellow prisoner. Fanning was a scoundrel; so was Prohawk; as for the governor—a vain-glorious fool. But the Regulators were fools, too. Mobs could not correct injustices. Tying sheriffs to trees and whipping them wouldn't help. No, things like that made the gentlemen of the seaboard think all were ruffians in the back country. Back country fellows had it harder than the men of the coast. Three years from now, or five, Jones and Ashe and Moore would be ready to take up arms against a King's governor. Not now. These Germans, these Irish, seem like foreigners to them. If our Regulator friends would bide their time, they would have the colony with them. Now they would only have the colony to their hanging.

"I take my own road," he finished. "These Regulators go too far or not far enough. They will not rebel violently enough to be defeated and hanged."

He fell a musing after that, and only broke silence to ask whether I had noticed the looks of any of the men who had met me the night before. I said I had not, at which he shook his head and grimaced.

"If these are Fanning's rascals, then chances are that Hamar is with them," he concluded. "This Hamar, for several reasons, may be kind to me."

Upon this, he began a great battering on the door. When someone approached, he changed calling for his friend Hamar. And after a good bit of this, the door opened and he was invited out.

He waved his hand to me as he left. "Stay out of this," he warned in a whisper. "Lie to Fanning for all you're worth, get clear and hide out till the trouble's over."

WHEN he did not come back, I guessed he had won freedom. From that time on, I had nothing to do except wait. Some food was pushed in at noon, and a striped chipmunk came out of a hole in the corner to survey it and me. I spent some time coaxing him with crumbs and had my hand, with a piece of bread in it, within an inch of his long nose when somebody banged on the door.

Two men entered and gruffly bade me get up and follow them. They paid no attention to my questions.

It was dusk outside. The barnyard was now a small camp, with a dozen fires over which men were cooking supper. Muskets were stacked in one corner, with a guard over them, and out in the road another walked post.

We went into a crowded farmhouse kitchen, where half a dozen stout fellows bawled orders at a bewildered housewife. On the farther side was a door. One of my guards opened this and with the words, "The prisoner, sir," pushed me into the room beyond.

THE room was the ordinary frontier sort, with a puncheon floor and a bunk in the corner. But in the center of the room was a small table on which two candles stood to shed a yellow light over a mass of papers. Seated by the table was a handsome gentleman, of about 10 years my senior. As to dress, I had not seen anyone so fine since I left Philadelphia. His stock was white and without a wrinkle. His laces were clean and newly pressed out. Tho he avoided the foppery of a wig, his own hair was tied in a neat queue and freshly powdered.

After I had waited a minute, he raised his head and I saw that his full face was not so pleasant as his profile. His cheek and jaw hones sloped suddenly back from a thin nose and chin, and his eyes were hard. Yet when he spoke his voice was pleasant enough.

"Pull up a stool," he said. "I have been wanting a talk with you."

The surprise of this drove what I had intended to say out of my head. And I was still worse confounded when he put his hand on my arm in kindly fashion as I sat down, and gave me a friendly smile.

"I am Colonel Fanning," he announced. "And I swear that those scoundrels have used you badly."

I asked him what scoundrels.

"Those cursed Regulators," declared the colonel and he seemed to be in some heat. "Here they take a boy like you and force him to carry a message for them, will he nill he. I warrant you have wished a thousand times you never saw one of them."

"You are right there, sir," said I, still marveling.

"My men said you were like the rest," the Colonel went on, "but I knew better. I learned something of your life in Philadelphia and I can swear that His Majesty and His Majesty's representatives have no better friend than yourself."

I found the statement a bit strong. "This trouble here is not my quarrel, sir," I answered. "I was forced into it and would be glad to be quit of it."

"I knew it," cried the Colonel with a hearty laugh. "We'll send you back to Newbern and get you aboard a ship for Philadelphia. Hang me, sir, Edmund Fanning fights fair and I know an enemy when I see one and a friend."

He motioned for me to be patient and wrote busily for a minute or two.

"CALL that fellow outside the door," he asked and when I had done so and the paper had been handed over, "That had to do with you," he added with a meaning glance.

I thanked him and stumbled in doing it. Indeed I was too confused to be able to think at all. Fanning, I had heard of as an arch-scoundrel, yet here he was doing ten times more for me than I could possibly have hoped.

The Colonel waved aside my thanks. "Well, that's over," he declared, "and now we can be easy. I suppose you discharged your obligations to the Regulators satisfactorily, so you feel quits with them."

I nodded.

"We'll have them all rounded up next week," the Colonel went on; "but I do confess to some curiosity as to what business it was they went to so much bother about. Was it money from the north?"

"Not money," said I.

"Powder and ball then, I guess," the Colonel went on easily, 'and that was to be sent to the Regulators at—?"

I was on the point of saying "Cross Creek" but checked myself.

"Since the information was given me in confidence, sir," I replied with a smile, "perhaps I had better ask to be excused from answering.

THE Colonel's face changed suddenly. He leaned across the table and gripped me by the shoulder. His voice was harsh.

"Don't try to play with me, you hound," he growled. "Tell me where they are to land that powder."

I shook my head. In a second, I saw his whole game. The friendly attitude had been a pose, a ruse to wheedle the secret out of me. I struck off his hand and rose.

He started at me and saw all this in my face, I think. At any rate, his cruel mouth curled again and he rapped out a short command.

Two guards entered.

"Carry out the instructions," he ordered. And to me, "If I ever see you again, you will think differently."

I was too angry to be cautious. "You may see me again if you look over your shoulder the next time you run away from the Regulators," I cried. "You have just made a rebel out of a King's man, sir."

"A dead rebel, perhaps," Colonel Fanning said with a smile and went back to his work.

There were only three men in the kitchen when I came out. One was a fat fellow whose face seemed familiar. As he came up to me, I remembered why. He was the deputy I had tricked at Butler's home.

"I told you I would see you hanged," this one told me, "but it seems as I was wrong. The Colonel prefers shooting."

He ordered the others to bring me outdoors. It was not quite dark yet, but the deputy grumbled about the bad light.

"That hay stack will stop bullets," he decided finally. "Bring the fellow over to the fire while I read him the orders."

There were two men roasting pieces of meat on sticks over the fire we came to. I remember how they looked up at us and at me with a certain horror. Yet even then I did not guess what was in store.

The deputy folded up the paper in a silence so intense I could hear my heart beat.

"Take him over by the straw stack," he ordered, "and take post three yards in front of him, with muskets at the ready. See that your priming is fresh."

As we went, one of the men twisted a rope about my wrists and bound them behind me. Another would have bandaged my eyes but the deputy forbade him.

They pushed me back into the straw. The four men lined up in front of me. The deputy stood to the left.

"We'll make it a short five minutes," said he. "What have you to say, prisoner?"

I could not have spoken if I had wanted to. I seemed to be suffocating and had hard work to keep from panting with my mouth open. For the rest I was only conscious of the straws pressing into my neck from behind and of the four quiet figures in front of me.

"Two minutes more," warned the deputy.

Could I hold out that much longer? Every second seemed a year. Life seemed so sweet and death like this so horrible. I feared to weaken and yet at the same time hoped I would.

"One minute."

I shook my head.

The deputy turned to the squad. "Make ready," he ordered. "Aim at his heart and fire when I give the word."

A form loomed up thru the dusk. I heard the clatter of a sword striking up musket barrels.

"What's all this?" asked a voice.

"Colonel's orders, sir," responded the deputy.

"Then the Colonel is getting reckless again," said the newcomer. "The rebels will have prisoners of ours before we get thru. We can't afford to be idiots."

TO BE moderately brave for five minutes at a stretch seems to be about my limit. Anyway at that, I went over in a dead faint. From freedom to a firing squad and back to life again in a half hour was too much for me.

When I came to, I was over by the fire again and a gentleman in the uniform of a major of North Carolina militia was looking down at me. As our eyes met, his jaw dropped and a comical look of amazement came over his face.

"Curse me, it's the Philadelphia bantam," he cried.

"You're alive," I exclaimed and began to weep. For the man was Major Dunston, he whom I had fought in Philadelphia and whom I thought to have killed.

"Don't bawl about it, man," chided the Major. "Your nerves must be shot. Need a good stiff drink. Jim, go get a flask out of my saddle bags."

"By George, I did myself a good turn when I got you loose just now. It wouldn't do to have you shot. Folks would say I was afraid of you. Not a bit of it. I was drunk that night or you would never have gotten away. I still wheeze a little from that bullet of yours. Soon as you get out of this, we'll try it again.

"Here you fellows, take Mr. Craig back where you got him, and see that he's comfortable or I'll take your hides off."

So I was carried back to my prison again, two extra blankets were found for me, and the men detailed to kill me laid them over me with solicitude and asked me if I were comfortable, before they left.

In the morning came a breakfast better than any I had eaten for some time, and after it Major Dunston. How my heart warmed to the sight of his red face. I could hardly believe that this was the man I had tried to kill a month before. Yet his words showed plainly that only the fact that I had tried to kill him endeared me to him at all.

"I have seen Fanning," he told me after he had lit his pipe, "and he is going to save you for trial with the other rebels we are to capture. He had a rare fright when I told him you had been killed. It seems he was sure you would weaken. So I held forth what His Excellency would think of such high-handed methods and almost had him ready to embrace me when I told him you were still kicking."

He puffed a moment in silence and eyed me with some commiseration.

"Tryon will hang you, tho," he added and shook his head at my protest. The riot law, it seemed, was conveniently framed. Hanging could be meted out to almost anyone the governor disliked.

Suddenly Dunston laughed and slapped his knee.

"I heard from your uncle," he declared. "Soon as I got back here I sent word to him by one of your Regulator friends that I had had a meeting with you, that you were gone, and that I would like to finish the matter. I suggested that he would do as well and invited him to take your place."

I asked what my uncle had replied. Still laughing, Dunston drew a very soiled paper from an inside pocket.

"I'll read it to you," he offered. "Here it is, 'Honored Sir: Your very kind message came to my hand last week but press of business has delayed my answer. I regret that my nephew has chosen to waste his time brawling with you. As to myself, I am probably a much better shot than you and should doubtless kill you at the fire. Yet there is always the chance of accident in such affairs. My life, as it happens, is worth something to the cause in which I am engaged; your removal, it seems to me, would greatly enhance the merits of His Excellency's forces. Since I should cripple the Regulators by being killed, and benefit Governor Tryon by killing you, I can see no good reason why I should consent to a meeting. Your obedient servant.'

I laughed too. "That is a very practical way of looking at it," I commented.

"Your uncle has been in the backwoods too long," Dunston insisted. "He talks like a trader instead of like a gentleman. While you and I—you are a good lad, and I would like nothing better than to stand up to you again. Keep your heart up. I'll fix this yet."

And with that, he knocked his pipe out on his heel and was off with an air of great determination. What he was after I had no idea, but I trusted in the friendliness of his manner even tho his harping on another duel did not altogether please me.

I coaxed the chipmunk out again and whiled away the time till late afternoon. Dunston came in finally about four or five, but with his crest greatly fallen.

FANNING, I gathered, was the most unreasonable man in the world. No sense of honor, or pride. "Why I challenged the fellow after he had refused my request, and he wouldn't fight me. And all I asked was that he turn you loose so we could finish up our little affair. If you came off whole, you were to go free, of course. But he wouldn't hear to it. He even had the impudence to say I ought to be grateful to him for locking you up."

The Major walked up and down the room and fumed. It was a downright insult to a loyal officer. And that wasn't the worst. Fanning was the kind to make a story out of it, to tell how he had been urged to lock me up to save the Major's hide. The story would go all over the colony. Dunston would have to fight the whole army to quiet it.

"No one who knows can doubt your courage sir," I put in.

"Thank you, sir, thank you." The Major was appreciative. "But you are a gentleman and this Fanning—"

He turned to me suddenly and slapped his hand against his thigh.

"By George, sir," he cried, "I'm going to see that you escape. I'll make Fanning sick that he ever crossed me."

HE BEGAN to plan out loud, while I waited in a turmoil of hope and apprehension. Fanning would suspect him, of course. Very well, he would play cards all evening with the Colonel. His boy should get a horse for me, saddle him and tie him to a tree in a grove a mile down the road.

He took me to a window to show me. "Follow down the road south till you come to a lane coming in from the right. Turn down that lane and go fifty paces. Then turn to your right again for fifty more paces. Your mount will be there as soon as it is dark."

I asked him how my escape was to be managed. Nothing, it seemed could be easier. These broken men who made up Fanning's company would do anything for money. Five shillings in hand would make the guard unbar the door.

"Wait till things are quiet," the Major warned. "There is a sentry by the road. You must dodge him. When you get free, best ride south and west. There are parties out east of here and north. South and west will take you across the front of Tryon's forces, but ride hard and you will be clean past by daybreak."

"And then," he continued with more warmth, "goodbye until our next meeting." Upon my word, he took me affectionately by the shoulders, "I'm getting quite fond of you. Take care of yourself and don't let these devils catch you again."

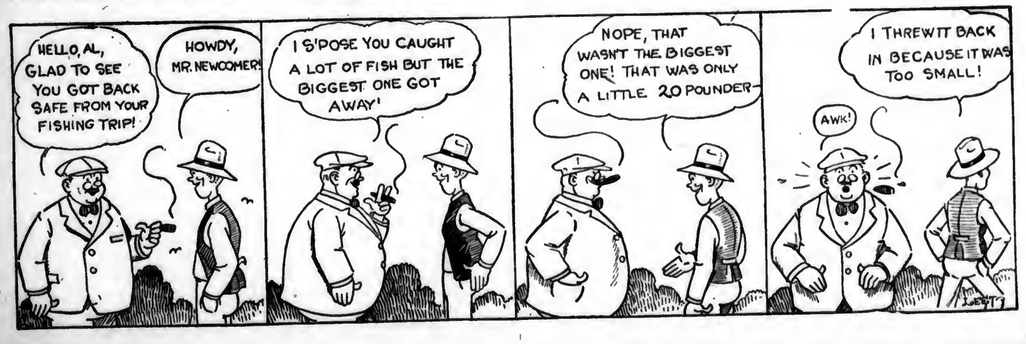
With that he left me. Rummaging in my coat after he had gone, I found in one pocket a handful of coin. This he must have slipped into my pocket when he bade me farewell. It was a kindly act for which I was more than grateful for a penniless fugitive finds always a hard road.

I was still doubtful as to the rightness of the Major's judgment on the readiness of the sentry to be purchased. Events proved that I need not have worried. Along about dusk, a face slid up to my window and a whisper reached me.

"About an hour, it said and the face vanished.

(To be continued next week)

Activities of Al Acres: *Al Is Some Kidder, Too* : : : : : : : By Leet



HELLO, AL, GLAD TO SEE YOU GOT BACK SAFE FROM YOUR FISHING TRIP!
HOWDY, MR. NEWCOMER!
I S'POSE YOU CAUGHT A LOT OF FISH BUT THE BIGGEST ONE GOT AWAY!
NOPE, THAT WASN'T THE BIGGEST ONE! THAT WAS ONLY A LITTLE 20 POUNDER—
I THREWIT BACK IN BECAUSE IT WAS TOO SMALL!
AWK!

He Dusted His Potato Field

H. K. Martin, of Goodville, Pa., dusted his potatoes this year. This picture shows the efficiency of modern dusting equipment. Note the width of the dust area and the density of the dust. Very few spots were missed after Mr. Martin had covered the field.—L. W. K.

Where It Landed

Little Boy—Please, may I have my arrow.

Lady of the House—Why, certainly, where did it fall?

Little Boy—I think it is stuck in your cat.

Did you ever hear this one?—

From the Wings

A country motorist, attempting to turn around in the middle of city traffic, was side-swiped and upset by a hook-and-ladder fire truck on its way to a call.

Striding over to the overturned car, a traffic policeman poked his head thru a broken window and demanded, "What do you mean by blockin' traffic like this?"

"You let him alone," said a female voice from the back seat. "How did he know those drunken old painters were going to run into us!"

Ingenious

Young Father—That luminous paint I just bought is a splendid invention.

Bachelor Friend—What do you use it for?

"We paint the baby's face so that we can give him his bottle during the night without turning on the light!"

Wife—Sh! The maid has sharp ears.

Hubby—Yes, I noticed the doors were scratched around the key holes.

Not His Fault

The jurymen had retired to consider their verdict. When they reentered the court the judge asked the foreman if they had arrived at a unanimous decision.

"No, your Honor," he replied, "we haven't. I have never met 11 such obstinate men in all my life."

"Did your watch stop when it dropped on the floor of the stockroom?"

"Of course it did. Did you think it would go thru?"

A New Definition

Rastus—Whah yo' all gwine?

Rufus—I'se gwine to de hardware store to get some Ku Klux metal.

Rastus—What yo'all mean, Ku Klux metal?

Rufus—Sheet metal, man, sheet metal.

Friend (to man who is shaving in his backyard)—Do you always shave outside?

Man—Certainly, do you think I'm fur-lined?

Two Spendthrifts

Suburbanite (reading from seed catalogue)—This magnificent plant from a single seed bursts into an avalanche of glorious bloom in June, giving the garden the splendor of a billowy, surf-swept coast or miles of great rolling snowdrift, emblazoned by the setting sun.

Wife—Oh, Henry, let's buy 5c worth of that!

Impressive Looking Plumber—I've come to fix that old tub in the kitchen.

Little Gladys—Oh, mamma, here's the doctor to see the cook!

Properly Shocked

The emigrant to America was buying his ticket at the shipping office.

"And what about your trunk?" demanded the clerk.

"For what would I be wantin' a thrunk?" asked the bewildered emigrant.

"To put your clothes in' ,of course."

"What?" cried the scandalized emigrant, "and go naked?"

OUR YOUNG PEOPLE'S FORUM.

Letters From Forum Members and Friends

Dear Cousin Ruth:—I am going to tell you about my week's vacation. I took from August 13 until August 21st. I went with my uncle to a camp along the Juniata, 10 miles beyond Everett, Pa., to a camping site known as Cyphers Beach. There we were joined by two other families from Johnstown. We arrived at camp Saturday afternoon and got our cabin in order and Sunday we went to Everett to church and Sunday school. Then it rained during Sunday afternoon and the water in the Juniata was muddy and high but we went boating in a canoe. During the week we were swimming, fishing, playing ball, pitching horseshoes and hiking. My uncle and I went out in the canoe to fish. My uncle caught a bass 15 inches long. I could not catch any fish as it was my first trip fishing. There were several other fine specimens of fish brought to camp.

My cousin from Johnstown was there, too, so you know what a fine time we had. Some folks think boys from the country do not care as much to go camping as boys from town or the city, but such is not the case. I live on the farm and it was my first trip camping and I enjoyed it immensely and hope to go camping some more. Now I am back home helping to do the chores at the barn and work on the farm seems easier; not so much of a task.—J. Geary Critchfield, (X), Somerset County, Pa.

You surely must have enjoyed your camping trip. I hope you're able to go next year, too.

THE FORUM EDITOR.

Dear Forum Friends:—We have a brook. When it is clear we go in wading. My sister, Mildred, sat down and it went up to her neck. We went under the bridge and standing up it was up to my waist.—Cora Douglass, Monmouth County, N. J.

Dear Forum Friends:—This is my first letter to the Forum page and I have enjoyed reading letters from other Forum friends. We have three fields of wheat and two of corn. I help plow and hoe corn. I also help put up hay.

We have a thresher and tractor and thresh for ourselves and for neighbors. We have two cows. They were tested for tuberculosis and have passed the test. I am enclosing a picture taken on our farm last year. —Louisa Bertovich, Fayette County, Pa.

OUR POTATO PATCH
Louisa Bertovich, Fayette County, Pa.

Dear Forum Editor:—One rainy day while I was sitting in a barn I noticed a spider building a web in a corner. I thought I would wait and see what he did. He spun up and down, here and there, and soon had a web something like a trap. Then he disappeared into a crack. Soon a fly came by, and trying to get its dirty feet into everything, flew right into the web. The spider saw her trying to get away. Down he came from the crack! The fly struggled to get away but the spider spun a web around her and choked her. Then up the web into the crack he started, dragging the fly behind him. There she disappeared and the spider, I suppose, had a good meal. Soon he was awaiting anxiously for another absent minded fly.—Peter Spewak, (X), Wayne County, Pa.

Dear Forum Editor:—I received my membership pin and thank you for it. I am going to school now. I wish you would be at my place now. We have a lot of cantaloupes and watermelons. I like watermelons best but cantaloupes are good, too. I have a small patch of peanuts and they look nice.

For pets I have a black cat. Its name is Jimmy. When the wind

A HAPPY QUARTETTE
Roy E. Melhorn, (X), York County, Pa.

blows some grass and he sees it he will play with it.—Roy E. Melhorn, (X), York County, Pa.

I'd like to visit you, Roy, but I'm afraid you'll be kept very busy with school work now and I'll be busy, too, in the office this winter.

THE FORUM EDITOR.

Dear Forum Friends:—I have a pet cat named Spotty. She had four kittens but three died so we have one left. I also have a pet dog named Laddie. My father has six acres of tomatoes, one acre of peppers, five acres of wheat and ten acres of corn. I have a little sister two months old. I would like you to come down to see her.—Phoebe Ella Simkins, eleven, Cumberland County, N. J.

There's a membership pin waiting for you but you did not give your address. My chances for coming to see your sister, Phoebe, are slim for I'm kept very busy in the office. Why not send me a picture of baby? I'll try to use it on our page.

THE FORUM EDITOR.

Dear Forum Friends:—I haven't written to the Forum page in a long while so I thought I had better do it today. I just came home from school. I am in the seventh grade and I think the work is harder than I expected.

Here is the recipe for chocolate jumbles. I like them very much.

CHOCOLATE JUMBLES

½ cup shortening
1 cup sugar
2 squares of chocolate
2 eggs
2 teaspoon baking powder
2 cups flour and enough more flour to roll out
1 tablespoon milk

Mix in order given and roll to one-quarter inch thick. Cut with cookie cutter, then dust with granulated sugar. Put in hot oven and bake ten minutes.—Ruth M. Gordon, (X), Monmouth County, N. J.

Hello, Forum Friends:—I haven't written in a long time so I think I will write a few words. Altho I haven't written I have read all the forum letters. I saw letters on the Forum page from two of my classmates. Why don't more boys and girls write to the Forum? Let's all write letters and boom the page.

I suppose most of us are busy because school is starting. Soon winter will come and snowflakes will be fluttering everywhere. Then the children will be happy.—Lucille Post, Lackawanna County, Pa.

Everyone Is Invited to Our Make Believe Party

DEAR FORUM BOYS AND GIRLS:—Slowly and surely the days are quietly slipping by and before we fully realize what has happened Hallowe'en will have come and gone. No doubt you are busy now planning your costume. Just as soon as you decide how you're going to "dress up" write and tell me about it. Wouldn't it be wonderful if every single Forum friend accepted the invitation to our Make Believe Party? All you have to do is write and describe the kind of costume you're going to wear. There's nothing at all hard about that, is there? When I print the list of those who are coming to our Make Believe Party I'm going to tell you too what each one is going to wear. It will be the very nearest thing to a real party you've ever had. When you write your letter describing your costume remember there's going to be a prize for the most original, one for the most popular and one for the funniest. If you haven't yet mailed your letter you'd better do so immediately for there are only a very, very few days left now before our contest closes.

DEAR LITTLE FOLKS:—Did you ever get all mixed up when you tried to answer a question in school, or maybe at home when there was important company for dinner? Most of us have, I know, and what usually happens is that we run things together which do not belong together. Something like this is the matter with the puzzle this week. What you need to do is to hunt around and find out in which sentence the word written in big capital letters—EDISON, PEACHES, and so forth—should be used. If you really think that WASHINGTON discovered America in 1492, why, then, I suppose, you'll leave his name in that sentence. But, as a matter of fact, I don't believe the Little Folks who think that will be answering this puzzle. Most of you know that the word HENS should be in the third sentence instead of the word HOGS, but I mustn't tell you any more. When you have straightened out all this mixture, please let me have your answer, either on a postcard or in a letter so that it reaches me by October 22nd. (They say that is the day Colonel Lindbergh is to be in Philadelphia, and if I happen to see him, I'll let you know it.)

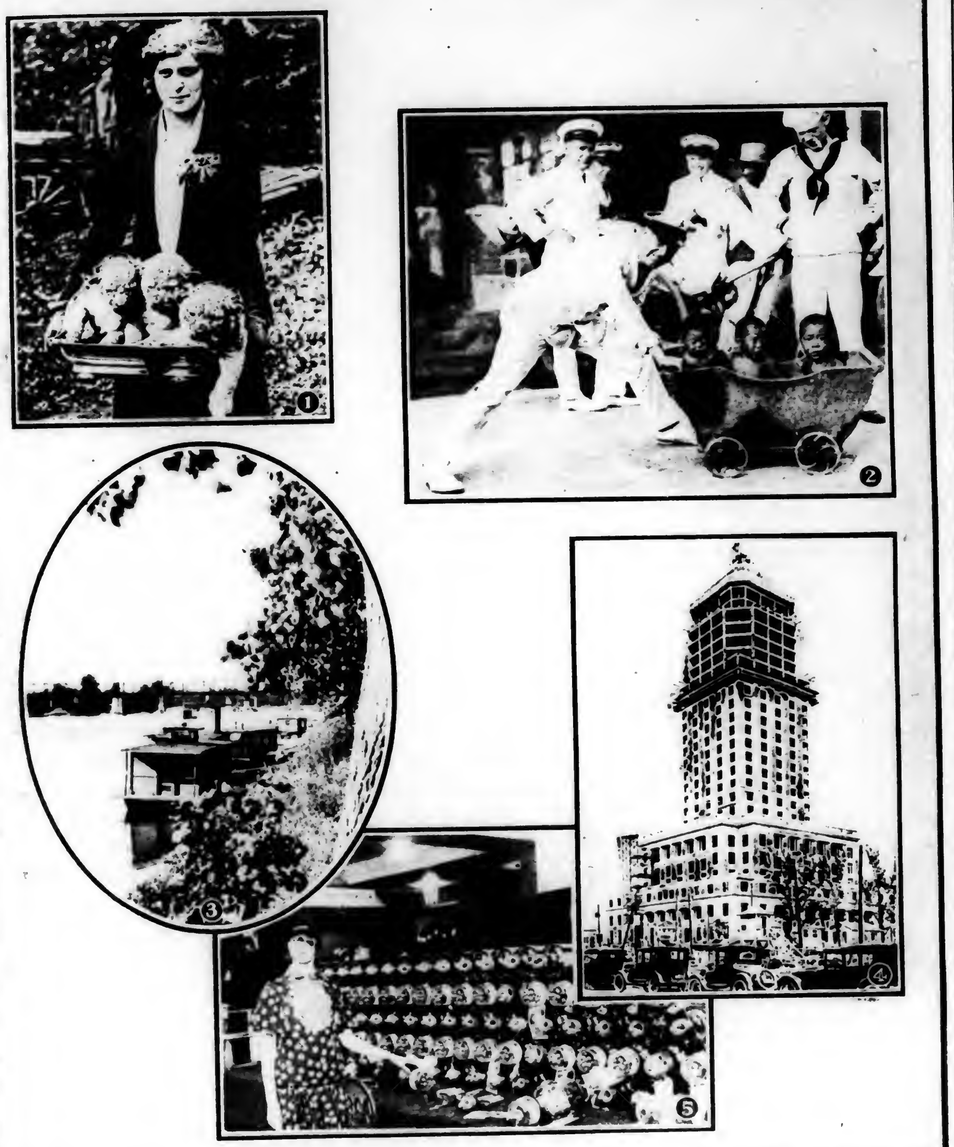
PLEASE TELL ME WHEN YOUR BIRTHDAY COMES, HOW OLD YOU ARE, AND THE NAME OF YOUR COUNTY. The ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance, will receive prizes. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the arithmetic puzzle in the September 24 issue is: 1111 plus 11 minus 1111 equals 11.

The prize winners are: Elizabeth Allen, age 10, Ormond, Fla.; Pearl Allen, age 10, Meadville, Pa.; Pauline Clanton, age 12, West Chester, Pa.; Leona Guris, age 11, Auburn, Pa.; Sarah Koch, age 13, Auburn, Pa.; Hattie A. Kramer, age 12, Allentown, N. J.; Alice Sybrant, age 13, Townville, Pa.

1. WASHINGTON discovered America in 1492.
2. COLUMBUS invented the phonograph.
3. HOGS lay better if their houses are well lighted.
4. CHESTNUTS are covered with a soft fuzzy skin.
5. EDISON was called the "Father of His Country."
6. PEACHES supply us with pork, ham and lard.
7. HENS are covered with prickly burs.

PASSING EVENTS IN PICTURES



(Copyright by Underwood & Underwood)

1.—"The Three Musketeers," a trio of lion cubs, born in Kent, England, are in careful hands.
2.—Not quite "three men in a boat," but three Chinese babies getting a ride in something which could float. These U. S. sailors found the triplets not the least interesting of the sights of Chefoo.
3.—A view looking north from Main Street, Terre Haute, Indiana, shows houseboats on the banks of the Wabash River which was made famous by a song.
4.—Miami's prisoners will need wings or parachutes to escape from the city's new jail. The floors above the fourteenth of the recently-constructed, 27-story courthouse building will be devoted to "guests of the city." They will contain separate county and city jails, a hospital, detention ward and the warden's quarters.
5.—Officials of the Radio Fair, searching for a left-handed, red-headed girl, found Miss Isabel Lambert, of Brooklyn, who fits the qualifications. The red hair was necessary for a color scheme and a new machine which tests radio tubes required a left-handed operator.

Parents Need Good School Habits Too

Time to Dress—The Lunch Box—Games

PARENTS, as well as children, need good school habits, according to the New York State College of Home Economics at Ithaca, N. Y. School habits which parents should develop are: get the children up in time to dress and eat breakfast without hurrying to get to school, and provide the youngsters with the right sort of lunch.

The children have to eat from their lunch box the meal which at home is often the most substantial one of the day. To get the foods which they need mainly from sandwiches requires careful planning.

The college says vegetables should be included. Vegetable sandwiches can be made of lettuce and sliced tomatoes, chopped celery or cabbage combined with salad dressing and pimento or chopped green pepper, sliced onions and even grated raw carrots which combine well with raisins. Spinach is another vegetable which can be used in sandwiches; when it is cooked, chopped, seasoned and combined with minced bacon or hard cooked egg it is a favorite. Another way of including vegetables is in salads which may be carried easily in the lunch box in a small screwtop glass jar.

Milk is another item that should not be overlooked. A small thermos bottle is convenient for carrying hot or cold milk, milk soups and cocoa. Milk may also be included in the form of cottage or cheddar cheese or baked in custards which are easily carried in individual custard cups.

When whole wheat or other whole grain bread is used for the sandwiches and some fruit is in each day's lunch the child is not likely to lack minerals and vitamins.

Visiting Is Important

Several weeks of school have already sped by, and do you know the children's teacher? Have you been to visit the work of the school that has so much to do with molding the lives in which you play an active part, in which you have the chief responsibility? Have you watched Billy as he works in school? Have you compared him with other youngsters of the same grade and age? How does he measure up?

During my September visit at school, the one thing that was most evident was the dulness of about one-third of that group of thirty-five. Fully a dozen of them were extremely inalert. They had eyes that saw not, ears that did not hear. I felt certain as I watched them that their senses had never been aroused. There may never have been a need for concentration in all their lives before. But there is now.

Home Games Teach the Senses

When I was teaching, I found those few moments that I devoted daily to sense-training by games to be very valuable. If you parents will play them with your children, you will soon see how rousing they are—how they lead to watching carefully, to listening attentively, to individual thinking and to a great awakening of the memory. They will benefit each of you, old and young, so play them daily.

Game 1.—From among bright pages in last season's seed catalogs, select from six to a dozen fruits, vegetables or flowers. Mount each on stiff paper or cardboard, so that they will stand against the wall or a ledge. Any one who knows all pictures by name may act as teacher. Teacher calls on one to touch and name his favorite picture QUICKLY. The next person called touches and names that same one and then his favorite. The third player touches and names those two favorites in correct order, and then his own favorite. Continue in this manner until all pictures have been chosen. Be sure to insist on correct order of naming pictures, and if players hesitate and study for a moment, the teacher calls on the entire group to tell instantly what picture should have been named.

Game 2.—Using the same pictures, let the players study the placing or order of pictures as they stand on the ledge. Then the players "sleep" while teacher mixes them. When ready call someone to rearrange them quickly. Have it done without any hesitation, or call another to finish the game.

Game 3.—Study the placing just as in Game 2. Teacher then removes one (later on more than one) picture while players "sleep." Wake and have the player chosen name the missing picture instantly and place it in original position.

Game 4.—Remove all the pictures while players "sleep," and call a player to set them up in proper places.

Game 5.—Another time if there are plenty of players let folks hold the pictures. You can then play the four games given above and this additional one. While the players sleep let those holding pictures not only exchange pictures but even places. This gives double work to the one called. He must arrange correctly both pictures and holders.

Note:—These games are ideal for teaching many things besides sense-training. For but a few cents, you can secure pictures of birds, trees, leaves, animals, artists, musicians, great men in history, etc. Mrs. Stew art has the address of a reliable firm handling pictures of all sizes varying in price from one cent to five and ten cents per picture. Clip this note and write her, sending a self-addressed, stamped envelope for reply. —Betsey Ford, Md.

Sauces Give Zest to Plain Food

BUTTER sauces always are delicious served with fish, asparagus, baked eggs, broiled sweetbreads and other delicacies.

Drawn Butter Sauce

One-third cup butter, 3 tablespoons flour, 1 cup hot water, ½ teaspoon salt, ⅛ teaspoon pepper. Melt one-half the butter, add flour with seasoning, pour hot water in gradually, boil 5 minutes and add remaining butter in small pieces.

Lemon Butter Sauce

Add 1 teaspoon lemon juice to 4 tablespoons butter and mix well. Dot the hot fish or broiled steak with this just before serving. A salmon loaf that might be unpopular otherwise becomes a favorite with the family when served with this lemon butter sauce.—Myrtle Van Horn.

Color Plays An Important Part

A CHEERFUL home dress brightens the dull days of fall and makes the task less difficult. Ever notice the effect colors have on your viewpoint toward life in general and the job in hand?

This attractive model was made of a novelty check gingham in shades of violets and green with a thread of black running thru it, and trimmed with plain green gingham. Gingham is most satisfactory for workaday clothes because it wears well, is tubfast and sunfast, but it must be shrunk before being made up.

Pattern No. 5410, which may be made with long or short sleeves, sizes 34, 36, 38, 40, 42 and 44, was used for the model illustrated. It may be obtained from the Pattern Department, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa. Price 10 cents.

The Kitchen Cabinet

A FAMOUS old cook gave me her secret for making custard pie. I had previously used only two eggs for a pie. She told me to use three large eggs and two large cups of sweet milk that has been scalded. (The latter prevents the pie "wheying off.") One-half cup of sugar to which one tablespoon of flour has been thoroly mixed, should be added to the filling, also a small pinch of salt and a sprinkling of nutmeg. When this mixture is placed in a rich, unbaked piecrust, and baked in a moderate oven, the pie will delight the entire family.

• • •

If a little cream has turned sour, do not discard it, but add enough prepared mustard to make it look like mayonnaise, and use it the same as any salad dressing.

• • •

A dainty dessert for children's parties is made by splitting a round cake—sponge or angel food—and between the two sections putting a layer of ice cream an inch or two thick. Put on the top layer, cover with whipped cream, dust with ground nut meats and serve in pieces cut as you would any cake.

• • •

On baking day cover the bottom of a flat pan with a thin layer of bread dough, sprinkle liberally with brown sugar, dust with cinnamon and over the top put a layer of chopped raisins. Cover pan tightly and bake in moderate oven. (Unless covered the raisins will harden.) When done cut the cake in halves, lay one over the other and serve.

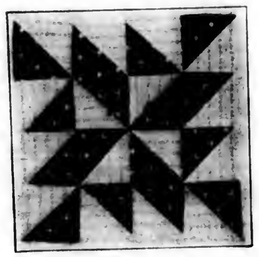
• • •

If an especially light pastry is desired, fill a round glass bottle with ice water, cork it tightly and use instead of a rolling pin.—L. M. T.

Quilting Time Is Here Again

THE WINDMILL

THIS attractive old pattern works up into a fascinating quilt. It is just another two-color combination that helps empty the scrap bag. The finished block measures ten inches square. Diagonal measurement is fourteen inches and the blocks may be used in either style of placing.



The windmill

While this pattern is usually put together with alternate blocks of light color, thus bringing out the dark windmill, I was particularly pleased with a dear old quilt on exhibition recently, and it was made block after block of just the pieced blocks. Ivory white and deep rose were the colors used.

THE SAIL BOAT

Let the little folks sail into dreamland under this favorite quilt. They not only like it on their beds, but are happy while helping cut and piece the blocks. What a pretty Christmas gift for Jack or Jane! Two colors are used, making a block six and one-half inches square.

For either of these two new patterns, send 15c cents and a self-addressed envelope to Quilt Pattern Service, Pennsylvania Farmer, 261 S. Third St., Philadelphia, Pa.

Eleven other patterns are available at the same price. They are Tree of Paradise, Tulip Wreath, Grandmother's Basket, Ohio Star, Letter Tray, Shield and Star, Maple Leaf, Air Ship, Pacific Queen, Double Cross, and Country Woman's Puzzle. Pictures will be furnished on request.—Gertrude S. Stewart.

IT IS said that four out of ten people who live on the farm go to town on an average of once a week to shop. During the week of October 24th, it is expected that this number will be greatly increased for it will be Farm Home Week in all our many Stores. It will be the BIG WEEK of the year for hundreds of thousands of our friends in the country.

It will be the week when the farmer and the members of his household will renew their acquaintance with our standard quality clothing, hats, furnishings, shoes and home needs at prices made possible only by our extensive co-operative buying resources.

This is our suggestion: Take advantage of the good roads while they are good and visit our Store nearest you during Farm Home Week. Come prepared to take time to look around the Store, inspect our goods, make comparisons of quality and price, and then, if you are pleased, make such selections as you and your family think advisable. It will be a pleasure to us to serve you when you call.

TYPICAL NATION-WIDE VALUES TO BE HAD IN ALL OUR STORES

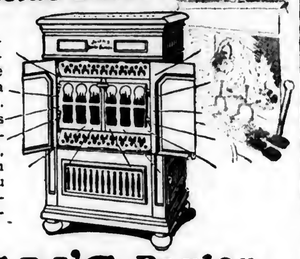
Oldtime Fireside Cheer

A patented Allen Feature



ALLEN'S Parlor Furnace combines the radiance of the open fireplace with the efficiency of a modern heating system. With the outer doors closed, ALLEN'S resembles a piece of beautiful, period furniture. When the doors swing open, you have the cheer and restfulness of the old-fashioned fireside.

ALLEN'S Parlor Furnace

HEAT RADIATING FINS

In this important, new improvement, ALLEN engineers increased the heat radiating surfaces 100%, thereby adding strength to the castings and longer life to the furnace. This exclusive ALLEN advantage gives greater heating capacity with positive fuel economy.

BURNS WOOD

Large double doors and oval firepot permit the use of wood. All other fuels may be burned with economy.

ALLEN'S heats the whole house with circulating, moist, warm-air. Replaces a number of stoves and eliminates dirt and drudgery. The porcelain, Allenamel finish can be quickly dusted and polished.

If there is no ALLEN Dealer near you, write direct for complete information.

Cut-away view showing the Fin Construction of the heating unit in Allen's Parlor Furnace. Only in Allen's do you get this big improvement.

Keep Your Butter Uniform and Hold Your Customers

Don't wait for your customers to complain about the variable color of your butter. Keep your butter that golden June color everybody likes by putting a few drops of Dandelion Butter Color into the churn. It is purely vegetable, wholesome and absolutely tasteless. It meets all State and National Food laws. All large creameries have used Dandelion Butter Color for years. It does not color buttermilk. You can get the large bottles for 35c from all drug or grocery stores.

GRANDPA'S WONDER PINE TAR SOAP

There's a Style Here for You

A Wide and Varied Selection Is Offered for Your Choice

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5912.—Six sizes: 34, 36, 38, 40, 42 and 44 inches bust measure. A 38-inch size requires 3½ yards of 36-inch material with ⅛ yard of contrasting material. Price 10c.

5707.—Four sizes: 2, 4, 6 and 8 years. A 4-year size requires 1⅞ yard of 36-inch material. Price 10c.

5921.—Eight sizes: 28, 30, 32, 34, 36, 38, 40 and 42 inches bust measure. A 34-inch size requires 3¼ yards of 40-inch material together with ½ yard of contrasting material. Price 10c.

5753.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 2¾ yards of 40-inch plain material and 1½ yard of figured material. Price 10c.

5931.—Five sizes: 1, 2, 3, 4 and 5 years. A 4-year size requires 2 yards of 27-inch material if made with the bertha. If made without the bertha 1½ yard is required. Price 10c.

5928.—Four sizes: 14, 16, 18 and 20 years. A 16-year size requires 2⅞ yards of 40-inch material with ½ yard of contrasting material. Price 10c.

5932.—Three sizes: 2, 4 and 6 years. A 4-year size requires 1⅞ yard of 36-inch material and ¼ yard of contrasting material. Price 10c.

5593.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2¾ yards of 40-inch material with ¾ yard of contrasting material. Price 10c.

5052.—Five sizes: 4, 6, 8, 10 and 12 years. To make the garment for an 8-year size as illustrated in the large view will require 2⅝ yards of 36-inch material. If petticoat is omitted 1⅜ yard will be required. Price 10c.

5919.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 38-inch size requires 3 yards of 36-inch material and ⅛ yard of contrasting material. Price 10c.

5923.—Four sizes: 6, 8, 10 and 12 years. A 10-year size requires 2 yards of 36-inch material together with ⅝ yard of contrasting material. Price 10c.

5743.—One size: medium. It requires one yard of 36-inch material with ⅝ yard of contrasting material. Price 10c.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Eyes They Have, But They See Not

By Dr. E. M. GRESS, Pennsylvania State Botanist

A TOAD is a queer little animal whose food is chiefly insects which it catches while the insect moves about. An insect that does not move before the toad is perfectly safe; but if it moves, quick as a flash the toad's tongue is thrust out in a peculiar manner and the insect becomes part of his dinner.

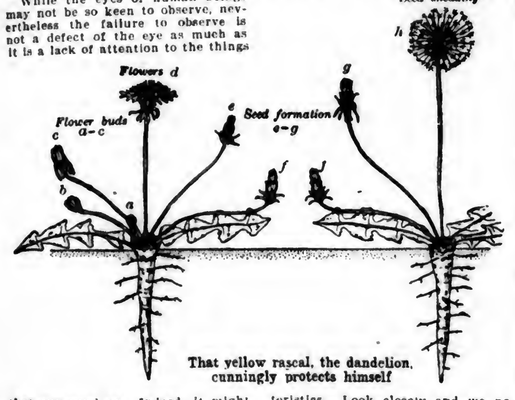
Indeed the eyes of most animals, including man, are not so keen to discern still objects. We notice quickly the rabbit as he springs out from his hiding place, or the bird as he flits from bush to bush, or the snake as it glides across our path; but how easy it is to pass unnoticed the same rabbit sitting quietly beside a bunch of grass of similar color, or the bird perched quietly on the branch of a tree, or the snake lying quietly along the path.

While the eyes of human beings may not be so keen to observe, nevertheless the failure to observe is not a defect of the eye as much as it is a lack of attention to the things that surround us. Indeed, it might well be said of many people, "Eyes have they, but they see not."

A few years ago the president of a college stood in the lawn of his own institution, and when his attention was directed to the beautiful tulip tree then in full bloom, he remarked, "I never knew that the tulip tree bore such beautiful flowers." For years he had passed beneath that large tulip tree almost daily and yet he had not noticed it in bloom.

Men, women and children pass daily along some road, street or path, neighborhood. We were not satisfied merely to know the names of the different members of the family, but we wanted to know something about each individual. We learned to like John a little better than Bill because John had a little better disposition. His habits and conduct were a little more pleasing. So it is when we learn the names and characteristics of the plants, insects, birds and other animals about the premises.

There in the yard is that little yellow rascal, the dandelion. We frown upon him because somebody has called him a weed. Have we ever tried to become acquainted and really know his habits? Maybe we will really love him when we know how cunning he is in protecting himself. We can scarcely help believing that he has some almost human characteristics. Look closely and we notice (as is shown in the illustration) how the short curved stem holds the flower bud close to the ground, down among the cluster of leaves where animals can tread upon it without injuring the plant in the least. When the bud opens the stem elongates and stands upright, bringing the yellow flower high enough to attract the insects, which carry its pollen from one flower to another. After it has received its insect visitors the flower closes up like a bud and the stem again bends over, bringing the closed up flower close to the ground so that it will again be protected while the seeds are developing. When the seeds are ripe once more the flower opens and the stem again stands erect and elongates so that the wind may catch the white, fluffy ball and carry the ripened seeds far and wide.



That yellow rascal, the dandelion, cunningly protects himself

Over there by the side of the road is the common milk-weed in full bloom. It is an ordinary weed, a nuisance in the hay, because it is difficult to dry. It contains a milky, acrid, sticky juice so that one dislikes to touch it and, of course, the cattle and horses don't eat it. But let us stop and notice how busy the honey bees and other insects are in getting food from it. Have you ever looked closely to see what may happen to the insect? How his feet slip into the little crevices (see illustration) in the flower and how he is sometimes held a prisoner and murdered because he is too weak to free himself; or, if he is strong enough to pull himself loose, he may have pulled off one of his legs and left it sticking in the slit of the flower. Surely it is not a very courteous way for a flower to treat its benefactor.

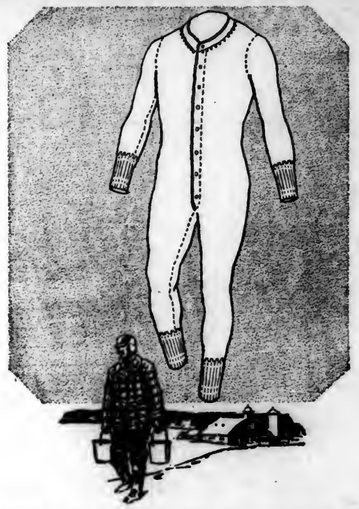
The discourteous milkweed murders its insect friends

On the other hand, we meet daily about the premises, along the road, in the vacant lot, or on the farm, plant or animal acquaintances whose names we have never learned. We pass them daily, maybe, with admiration, with indifference, or with real disgust. It is pretty certain that if we were to learn their names and but few can name the trees, flowers or birds met on those walks.

He who has tried to become acquainted with the plant and animal life in his back yard or around the farm buildings or, if he happens to be a city dweller, in the vacant lots, will be surprised at the host of friends that are anxiously awaiting his acquaintance.

As boys on the farm, we well remember how we liked to slip over to Miller's who just moved into our

(Continued on page 32)



"To keep well in winter," *say authorities on health,* "change the underwear often"

IT IS a scientific fact that the oftener underwear is changed, especially in winter, the better chance a person has of avoiding colds and sickness.

The reason for changing underwear often, the authorities say, is because clean underwear is highly absorbent. It takes up body moisture. It keeps the skin warm and dry. It prevents sudden chilling.

These facts make it very apparent that Wright's Health Underwear is the safest and best you can buy. It is even more absorbent than ordinary underwear. It is made of wool, a very absorbent material. It is knitted with a patented loop-stitch *which actually increases the natural absorbency.* It is soft about the neck and doesn't chafe. It is well tailored and fits snugly about the ankles and wrists. There is plenty of leg and chest room, no bunching and binding. Your family will like to wear it.

You don't have to look over every garment for possible snags and rips. Wright's Health Underwear is honestly and carefully made. It doesn't tear easily. If there should be a snag it won't run. That is because of the patented loop-stitch with which it is knitted. Buttons stay on. Buttonholes don't tear.

Go to your store today and ask for Wright's Health Underwear. Moderately priced. All-wool or wool-and-cotton. Three weights, medium, heavy and light. Union suits or separate garments. Wright's Underwear Co., Inc., 345 Broadway, New York City.

FREE—*Write for booklet, "Comfort," which gives you many interesting facts about Wright's Health Underwear. Please mention your dealer's name.*

Ducks, White Pekins, 4 lbs and over, 24@25c; puddle, 4 pounds lbs and over, 22@23c; Muscovy, 4 lbs and over, 22@23c; all kinds, smaller, 15@18c. Guineas, young, 1¾ lbs and over, 45c; smaller, 50@60c. Pigeons, young and old, pair, 25@30c.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This Week	Last week	Month ago	Year ago
Butter, 92 score creamery extras (N. Y.)	$ .49	$ .49	$ .44½	$ .46½
Eggs, fresh gathered extra firsts (N. Y.)	.44	.41½	.35½	.44
Potatoes, 120-pound sack (Philadelphia)	2.62½	2.67½	2.72½	3.25
Steers, good to choice (Lancaster)	11.62½	11.87½	12.37½	9.75
Hay, Number 2 timothy, baled (Phila.)	16.50	16.50	17.00	23.50
Wheat, No. 2 red winter (Philadelphia)	1.39	1.37½	1.29	1.41½
Oats, Number 2 white (Philadelphia)	.61¼	.60½	...	.55⅝

Markets Continue Steady

Review of the Week Ending October 8

POTATOES—Prices held practically steady during the week but the demand was slow. Supplies in most markets were moderate to liberal with the lack of trading on the Jewish holiday causing accumulation of receipts. Shipments increased during the week with Minnesota shipping as high as 458 cars a day. Prices at Maine shipping points held about steady but there was a weaker tone at New York points. Rail movement from Pennsylvania ran around 25 cars a day but dealers reported heavier arrivals by motor truck. The quality of the Maine potatoes arriving on most markets has improved to some extent. Pennsylvania stock has been irregular in quality but some very good potatoes have been offered. Potatoes from some counties have shown more hollow beart than usual.

BUTTER—The eastern butter markets were firm and prices were unchanged thruout the week. Supplies of fancy butter were limited but more stock was withdrawn from storage. Receipts of butter were somewhat heavier than the week previous on practically all markets except Philadelphia. Production conditions appear to be favorable and the fact that forage crops were large should encourage feeding.

EGGS—The New York egg market was quiet toward the close of the week. The Jewish holiday caused some accumulation of receipts. White eggs from nearby states sold rather slowly but selected stock held firm. Prices were slightly lower on the smaller sizes. Storage eggs were quiet with comparatively little trading.

POULTRY—The live poultry market in New York was steady. There was a fairly active demand for fancy fowl and chickens but poorer grades were slow and dull. The market for dressed poultry was steady with fowl prices firm.

LIVESTOCK—The Chicago hog market was firm with prices somewhat higher than last week. Beef steers were irregular while she stock was lower. Vealers and heavy calves declined while stockers and feeders were about steady. Fat lambs and yearling wethers were weak but feeding lambs showed some improvement.

HAY—The markets were generally firm with light receipts. Unfavorable weather and farm work interfered with country marketings. There was a slightly better demand for the top grades of timothy on most eastern markets. Alfalfa hay was firm with the best grades selling readily.

FEED—The feed market was generally steady. Offerings of bran and middlings were slightly larger, but the demand was fairly active. Linseed meal prices were lower on account of increased production. Hominy feed prices were lower due to lower grain prices.

GRAIN—The grain markets were firmer. Wheat prices advanced on account of the unfavorable harvesting weather in Canada and to the strengthening of foreign markets. Corn was firm and higher both for cash and future sales. Oats and rye were also slightly higher.

APPLES—Receipts of nearby apples in Philadelphia and New York were liberal but the market was generally steady on the best fruit. Poor and ordinary stock sold very slowly. Both truck and rail shipments of Pennsylvania fruit increased.

NEW YORK MARKETS

PRODUCE

Butter—Quiet; creamery, higher than extras, 49¼@50c; creamery, extras, 92 score, 49c; do, firsts, 88@91 score, 41½@46c; packing stock, current make, No 1, 24½@25c; do, No 2, 24½c.

Eggs—Irregular; fresh gathered extra firsts, 42@46c; do, firsts, 35@40c; do, seconds and poorer, 31@34c; eggs in storage, extra fancy, 35@37c; do, fancy, 33@34c; nearby henmry whites, closely selected extras, 63@67c; nearby and nearby henmry whites, firsts to average extras, 59@62c; nearby pullets, 37@40c; nearby henmry browns extras, 54@62c; Pacific Coast whites, extras, 59@62c; do, firsts to extra firsts, 45@57½c; do, nearby, pullets, 32—56c.

Cheese—Steady; state, whole milk flats, fresh, fancy to fancy specials, 27@28½c; state, whole milk, flats held, fancy to fancy specials, 27@29c.

Live Poultry—Irregular; fowls, by freight, 25@28c; do, by express, 27—32c.

Dressed Poultry—Quiet; chickens, fresh 24@30c; do, frozen, 20@35c; fowls, fresh, 19@22c; do, frozen, 18@31c; roosters, 15@20c; turkeys, fresh or spring, 30@40c; turkeys, frozen, 30@43c.

LIVESTOCK

Cattle—Steady; steers, $9@9.35; state bulls, $4@7.75; do, by express, $2.25@6.25.

Calves—Steady; vealers, common to prime, $9@18.50; lightweight bulls, $9.50@10.50; buttermilks and fed calves, $7@8.25.

Sheep and Lambs—Steady; sheep, $2.50@5; culls, $1.50@2.50; lambs, choice to prime, $14@15; mediums, $11@13; culls, $8@10.

Hogs—Steady; light to medium weights $11.50@11.90; pigs, $12@12.25; heavy hogs $11.25@11.50; roughs, $7.75@8.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt or early shipment: Cash bran, $36; middlings, $37.50, in 100-lb sacks; red dog, $42, nominal; western feed bran, $35, 100-lb sacks; standard middlings, $37.50; flour middlings, $43; red dog, $51, all in 100-lb sacks, all rail and lake-and-rail shipment; white, hominy feed, $43.75, nominal, in 100-lb sacks; cottonseed meal, 36 per cent protein, $43.75; linseed oil meal, 34 per cent protein, $51.80 in 100-lb sacks.

Hay and Straw—Hay, old or new, large bales, timothy, No 1, $24@25; No 2, $23@24; No 3, $21@22; No 3 and poorer, $18@20. Straw, large bales rye, $22@23; oats, $12@13.

Grain—WHEAT, No 2 red, c i f, dom, $1.45¾; No 1 dark spring, c i f, dom, $1.44¾; No 2 hard winter, f o b, export, $1.43¾; No 1 North Manitoba, in bond, f o b, export, $1.63¾. No 2 mixed durum, c i f, domestic, nominal. CORN, No 2 yellow, $1.16¾; No 3 yellow, $1.06¾. OATS, No 2 white, 61½c; No 3 white, 59½c; No 4 white, 58@58½c; ordinary white, clipped, 61¾@62¾c; fancy white, clipped, 66¾—68¾c. RYE, c i f, export, $1.07¾. BARLEY, malting, c i f, domestic, 90¾c.

CHICAGO LIVESTOCK MARKET

Hogs—Top, $11.75 paid for hogs scaling 220@240 lbs; 150@200-lb averages, $10.85@11.50; 210-lb weights up to $11.45; butchers, 250@300 lbs, $11.35@11.65; few big weight butchers under $11; meat packing sows, $9.85@10.15; choice slaughter pigs, $9.75@10.25.

Cattle—Compared with week ago: Strictly choice-fed steers strong; others 50@75c off; western grassers, mostly steady; fat cows and heifers, 50@75c lower; vealers, $2.50 down; heavy fed steers reached $16.90, highest in 7 years; all killing steers bringing new time prices; top yearlings, $16.45; medium weights, $16.50; weighty Montana grass steers up to $13.50; bulk, better grades, $10.50@12; most fed steers, $12@15.50; best grass cows, $10; heavy heifers, $11.50; western cows and heifers, $7@9 and $8.50@10.50, respectively; vealers closed at $14.

Sheep—Week's top prices: Fat range lambs, $14.15; fat native lambs, $14; slaughter yearlings, $10.75; fat ewes, $6.75, range feeding lambs, $14.

WOOL MARKET

Boston, October 8, 1927.

Domestic: Ohio and Penna, fleeces—Delaine, unwashed, 46@47c; ½-blood combing, 45½@46c; ⅜-blood combing, 46c; ¼-blood combing, 46c. Michigan and New York fleeces—Delaine, unwashed, 45@46c; ½-blood combing, 45c; ⅜-blood combing, 46c; ¼-blood combing, 46c. Wisconsin, Missouri and average New England—½-blood, 43@44c; ⅜-blood, 44@45c; ¼-blood 44@45c.

GRASS SEED—WHOLESALE PRICES

Toledo, Ohio, October 8, 1927.

Cloverseed, cash, imported, $14; October, $16; December, domestic, $16; December, imported, $14; March, domestic, $16.10. Alsike, cash, $14.80; December, $14.90; January, $15.05. Timothyseed, cash, $1.65; December, $1.70 bid; March, $1.90 bid.

36 per cent cottonseed meal	44.20@44.50
41 per cent cottonseed meal	47.00@47.20
43 per cent cottonseed meal	48.00@48.20
34 per cent linseed meal (f o b Buffalo)	47.00

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

THE exporting of American apples to European markets has increased greatly during the past few years and conditions in these countries are coming to have more and more influence on the marketing of our fruit. The United States Department of Agriculture has stationed men abroad to study crop and market conditions in order to further develop the outlet for the apple crop.

This evening I read the report of one of these representatives and the thing that interested me most was the effect that labor conditions, weather and even taxes have on the prospects for marketing American apples in these foreign countries and even on the price of apples in our own markets.

British dealers report that the home-grown crop is much larger than was expected but that the rainy season has resulted in poor quality. The growers are marketing this stock and are not taking any chances on storing it. The apple harvest ends around the last of September but this stock will be around for some time and will probably interfere with the marketing of imported apples. These dealers claim that there is a shortage of fancy highly colored fruit.

In England and Scotland industrial conditions are not very favorable as shipbuilding has been very slow and the coal industry is dull. The cotton trade is also poor. The apple crop in Holland, Switzerland and northern Italy is heavier than was anticipated and prices are quite low. If Germany industrial conditions are brighter and this will probably affect the nearby countries to some extent. In general, conditions do not look very bright and it is fortunate that American growers do not have excessive quantities to market abroad this year.

Fruit was Marketed Green

Many of the early exports this season sold at very unsatisfactory prices but according to this representative it was due partly to the fact that much of this fruit was picked before it had developed any color and arrived on markets already overcrowded with green and unattractive apples. He believes that there is a possibility that conditions may improve by the time that the attractive red eating apples arrive on these markets.

A report from Denmark states that last season between 50,000 and 60,000 barrels of American apples were imported in addition to 125,000 boxes, and that in general dealers are well satisfied with the way that these shipments have been handled. The fact that prices are now about 80 per cent higher than last season may cut down consumption to some extent, especially as competition from other European countries is growing stronger.

Another item that interested me was that for the first time in many years Russian apples appeared on the Copenhagen market and they were packed in boxes similar to those used in this country. About 25,000 boxes were imported and they sold at prices ranging from $2.13 to $2.39 per box.

The Pennsylvania farmer and his neighbors in the nearby states should be interested in these foreign conditions since he is in a more favorable position than his western competitor. He needs to study the preferences of these countries for they offer a great opportunity, especially in years of heavy crops.

County News and Notes

(Continued from page 7)

cheap, $8.50@10 for extra good; potatoes, $1@1.25; sweet potatoes, 50c basket; chickens low, around 20c; eggs going up, about 33@35c; steers for feeding, 8@8½c and hard to get.—R. J. W., Oct. 4

Fulton County, Pa.—September has been quite warm and dry. This weather has helped to mature the corn. Farmers are cutting corn and seeding. Corn is about 75 per cent of normal. Much cloverseed is being made. Potatoes nearly all dug. Yield was fairly good. Owing to good pasture the milk production is keeping up. Melon and pumpkin crop is an entire failure. Young poultry is scarce. Very few turkeys were raised.—T. H. T., Sept. 27.

Gloucester County, N. J.—Fall work is progressing very nicely and the farmers are taking advantage of the ideal weather conditions that are now prevailing. No frosts, very little rain and plenty of sunshine. No better combination could be secured under any circumstance. The harvesting of the sweet potato and apple crops are in full swing. The sweet potato growers are in the dumps with low prices and a light crop while the apple growers are picking a full crop and prices were never higher at harvest time. Sweet potatoes are dragging on the market at 85@90c a bushel, while apples are bringing $1.50 in the orchard and buyers are snapping up many fine lots for speculation. Corn is ripening up fast and it looks like a big crop in most fields. The crop was planted on time last spring and despite a cold and wet spring, the presence of plenty of moisture and sunshine during July and August has resulted in the development and ripening of a big crop. Farmers are still picking tomatoes and peppers. The canners are open for every tomato they can get at about equal the contract prices. A few have closed up for the season but most of them are still in operation. Another week will see the end of the season even tho frost should hold off. Pepper prices have been high all the season with good stock now bringing 75c@$1 per bushel basket. Poultry prices are firm and a big demand exists for fresh eggs. On roadside markets the price is 65 cents a dozen with 50@55c the average for wholesalers who have a special trade for real fancy eggs.—A. K., Oct. 6.

Lawrence County, Pa.—Warm, dry weather continues. Two light frosts within the past two weeks did but slight damage except to the tomato and pickle vines. Potato digging and corn cutting is now on, not average crops. Threshing mostly done. Oats a fine turn out; wheat below average. Apples in some sections of county are a splendid crop. Peaches not so plentiful. Abundance of grapes and quinces. Cider making seems to be on the decline. Coal bins are being filled from coal head mines. Veal calves much in demand. Dressed poultry brings 50@55c, good country butter, 55c; eggs, scarce, 45@50c.—M. L. V., Sept. 30.

Union County, Pa.—Ralph Erdley, of East Buffalo Township, is the first boy in the county to qualify in the Boys' Acre Potato Club. His acre produced 424.3 bushels of potatoes from a measured acre. He left four rows unsprayed which yielded at the rate of 208.5 bushels less per acre. The citizens of Hartley and Lewis Townships will hold a one-day fair in Mrs. Carrie Lincoln's park near Laurelton on the 8th of October. Upon petitions of the citizens of East Buffalo and Buffalo Townships the Citizens' Electric Light Company has agreed to extend its lines to these townships and villages. At the few farm sales held this fall grade cows sold from $175 to $211. Second-crop clover hay is being made and some cloverseed made. Potatoes are being dug as the stalks have nearly all died. Wheat is being seeded on very dry soil so that the grain has not all sprouted.—J. N. G., Sept. 27.

Westmoreland County, Pa.—September was a good month for the farmer. Wheat seeding is well under way. Threshing most all done. Oats turned out well, some claim a yield of 70 bushels per acre. Wheat was not extra good this year. New clover fields are looking good. Apples seem to be the main fruit crop this year with the exceptions of a good grape yield. Farmers are making cider. It is retailing at 50c per gallon. Crab cider is selling at $35 per barrel. Farmers are preparing to fill silos. Potatoes, $1.60; apples, $2; oats, 52c; wheat, $1.25; eggs, 60c; butter, 55c.—L. C., Sept. 30.

FAMOUS Ohio SPREADERS

This Spreader Costs Less Per Load Hauled

It isn't the first cost of the spreader that counts—it is the number of loads of manure you can haul with it.

Many farmers are using Famous Ohio Spreaders this fall, which they bought eight years ago—and they look good for as many years more.

The spreader we are building now is even a better one—steel chassis—steel frame—steel beaters and distributors.

You can use the Famous Ohio with your tractor and it will stand the gaff. It costs less per load of manure than any spreader you can buy.

MARTIN METAL Brooder Houses

Stop Your Baby Chick Losses

Raise 2 lb. broilers in 8 weeks—buy or hatch your chicks earlier and get higher prices. You can if you have a Martin.

Mooresville (O.) Hatchery writes—"Raised 97 per cent." A. J. Swineford writes—"Had 2 lb. broilers in 8 weeks." Mrs. W. Loffler writes—"Expect to buy another Martin in the spring." Brooding chicks in a Martin is safer, easier, surer. FIRE-PROOF, rat and weasel proof, sanitary, dry, warm—even in zero weather, stove in center, no corners—prevents crowding.

"Col-O-Glass" Windows

let in the Violet Rays of the sun. Ideally ventilated—no drafts. Sizes, 500 chicks and up. Skinned knuckle down—easy to put up. Last a life-time. Write for illustrated folder and price.

MARTIN CORN CRIBS

save all the corn. Protect against rats, mice, fire and mould. Write for low prices.

THE MARTIN STEEL PRODUCTS CO.
Dept. 220, Mansfield, O.

ROSS METAL GALVANIZED ROSS BROODER HOUSE PREVENTS LOSSES

Near round—an open-air brooder house—fireless—rat and vermin proof. New exclusive idea in roost ventilation. Combination ventilator and stove flue. Glass windows. Diameter 12 feet. Capacity 500 chicks. Built sectional—easily enlarged.

NEY

Making the Milk Pail Produce More Profits

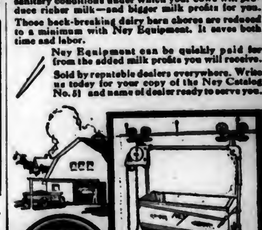
PROGRESSIVE farmers are now making better profits from their milk by improving the sanitary conditions of their cow barns.

Ney Dairy Barn Equipment provides the healthy sanitary conditions under which your cows will produce richer milk—and bigger milk profits for you.

Those back-breaking dairy barn chores are reduced to a minimum with Ney Equipment. It saves both time and labor.

Ney Equipment can be quickly paid for from the added milk profits you will receive.

Sold by reputable dealers everywhere. Write us today for your copy of the Ney Catalog No. 31 and name of dealer ready to serve you.



THE NEY MFG. COMPANY
Est. 1879 • Canton, Ohio • Est. 1879
Minneapolis, Minn.
Council Bluffs, Iowa

Complete Dairy Barn Equipment including stalls, stanchions, water bowls, pens, litter carriers, "Keips" ventilators, etc. Ney Forks, hay knives, etc.
Complete line of Heating tools including hay carriers, hay forks, hay knives, etc.

Keeping ahead of the wood-box

"WHEN is it most convenient to cut wood?" *Never*, you may say. But you are thinking of the days of the old bucksaw, when the wood-box always seemed empty. On the electrified farm a motor belted to a saw cuts the winter's supply of wood in a few hours.

The same motor can be used for grinding feed and hoisting hay. Other motors run the milking machines, the cooler, and the water pump, and yet the cost is but a few dollars a month.

"Back-work" disappears when electric power comes to the farm.

If you are on an electric line or hope to be soon, ask your electric power company for a copy of the G-E Farm Book which explains many uses for electricity on the farm.

On motors—large and small—Wiring System, vacuum cleaners, MAZDA lamps, and refrigerators, the G-E monogram means endurance and service to the millions of people who are living better with the help of electricity. Look for it when you buy anything electrical for the farm.

GENERAL ELECTRIC

hinge joints

CAMBRIA FENCE

cut stays

helps your stock pay dividends

With Cambria Fence erected on your pastures, your stock is secure and under your control at all times.

Good fence is your greatest aid in giving the personal supervision essential to making your stock pay dividends.

Cambria Fence is a standard field fence, made of the highest quality steel wire heavily zinc-coated by our own process. Its hinge joints, cut stays and tension curves keep it permanently uniform and tight.

Ask your Dealer for Cambria Fence—it pays dividends

Fancy Birds Shown at Trenton Fair

THE poultry show at the Trenton Fair this year was strictly a Standard Bred Show, that is, there were no classes for production birds, the show being on a fancy rather than a utility basis. In the breeds common on our farms, the Rocks, Reds, Giants, Wyandottes and Leghorns, some very handsome individuals were shown. Mr. Clifton Lambert, of Wilburtha, N. J., a young man who has been breeding Rhode Island Reds for four years, captured most of the prizes for that breed.

Anyone interested in seeing unusual and obscure breeds of poultry would have had an excellent opportunity to do so at the fair, owing to the presence of a "String Man," i. e., a person who devotes his time to collecting a large number of birds of different breeds for the purpose of exhibiting at poultry shows, making a profit or a living from prize money won. This exhibitor showed a large proportion of the birds in the cages, and if anyone was anxious to see Blue Laced Golden Wyandottes, Golden Frizzle Polish, Mahogany Orleloffs, Brown Red Games or White Laced Red Cornish, why they were all right there.

At a meeting of the New Jersey State Branch Standard Bred Poultry Association held during the fair the following officers were elected: Dr. J. A. Dalling, Stillwater, president; T. W. Brice, Brielle, vice president; A. L. Clark, Crosswicks, secretary-treasurer. Harvey G. Rogers, Hamilton Square; Charles Pierson, Princeton; M. L. Chapman, Robbinsville; William Hobbs, Madison, and Melvin Cosh, Vineland, were made directors.

Marketing Car Showed Candling

Among junior exhibitors, boys of the Pennington Road section, Mercer County, N. J., were important winners. William Tharp won first for Single Comb R. I. Red hen, and in Rose Comb Reds; second for cock, first and second for hen and first for cockerel; first and second for pullets; first for old pen and first for young pen. Howard Schaible, of Ewing, in Barred Rocks, took first for hen and first and fifth for cockerel; second for pullet and fifth for pen. Paul Illian stood third with a pen of White Leghorns. Elmer Dill, of Ewing, took first S. C. R. I. Red cock and third for pen. Charles Middagh, of Ewing, took second and third with White Wyandotte hens, and Douglas Hewetson took second S. C. R. I. Red hen. These boys are very enthusiastic about their poultry club work and account for a good many prizes and not a little cash during the course of a year.

The Marketing Car that has traveled so extensively in South Jersey was on a siding at the fair. Of particular interest to poultrymen were an egg candler with various grades of eggs, showing the poultryman the basis for making the classes; an egg scale which tells the weight per dozen of an egg that is placed on the pan; and a crate showing the proper method of packing eggs to reduce loss in transit. In the car at the time that I went thru were several of the officials who planned the tour and the exhibits in the car: Mr. Duryee, Secretary of Agriculture; Mr. Mercker, chief, Bureau of Markets, and Mr. Jones, who has charge of the Poultry Certification work, which afforded the opportunity for a pleasant little chat.—R. L. S-H.

Announce Winter Courses

TWENTY-NINE winter courses in agriculture are offered at the Pennsylvania State College. Classes begin January 5 and end March 2, 1928.

The same instructors who teach the longer term students have charge of the winter short courses. Every facility of the institution, including laboratories, classrooms and apparatus, is at the disposal of the student. Those who have definite farm problems to solve are given individual aid. This feature alone makes the eight-week course exceedingly enriching to the practical farmer.

of the farm boy and girl who may not have had an opportunity to complete a high school and college education.

Eyes They Have, But They See Not

(Continued from page 29)

get better acquainted with their habits and characteristics our feeling toward them would be changed. Maybe our admiration would be so great that we would protect them as useful friends or our disgust so deep that we would look upon them as foes and would drive them from the neighborhood.

We will remember, as boys on the farm, when a stranger appeared in one of our fields. He was a pretty, rugged blue-flower plant which father and the boys rather admired. However, we looked upon him with some suspicion just as country people often look upon the well-dressed, glib-tongued stranger who has something to sell. We should have made his acquaintance immediately and learned his name and something of his habits and characteristics, but instead we admired his neat appearance and held ourselves aloof. In a few years we found that he was making himself at home and was almost taking possession. Then we began to inquire who he was and to our disgust we found that he had made trouble wherever he went and that he, of course, would do the same on our farm. That was over a quarter of a century go and no doubt Chicory or

Chickory, or "Blue Sailors," is still swindling the farmer out of hard-earned money

"Blue Sailors" is still residing on that farm and is swindling the farmer out of some good, well-earned money annually. How much better it would have been to become well acquainted with this plant on its first appearance and to have driven it from the farm before it got a foothold!

It Will Be a Pleasure, Not a Task

Anyone who undertakes to acquaint himself with the plant and animal life which he meets daily will be surprised at the great number of plants, insects, birds and other animals which are found in his immediate vicinity.

The list of birds in two or three months will perhaps include more than fifty different kinds, the flowering plants more than double that number. The task, which is really not a task, but a pleasure, will not require extra time. Keep the eyes and ears open and direct attention to these things while walking to and from work or while working about the farm. Invest a little money in a few books or secure them from the library, to which nearly everyone now has access. Make a mental record of the observations made out of doors and in the evening or at some leisure time refer to the books for the added information. The reward will be not only a great amount of added pleasure but may often be of real economic or monetary value.

"Go South, Young Man"

Show Fine Jerseys at Knoxville, Tennessee, Fair

HORACE GREELEY'S famous advice, "Go west, young man, and grow up with the country" might bear readjustment as to the direction to take if the young man were looking for an opportunity in dairying. The South has many dairy advantages, among which may be mentioned a short winter, an abundance of roughage easily grown, a long pasture season, low labor costs and a rapidly developing market.

Tennessee, for example, is just in the beginning of a large dairy development. A year ago not a milk condensery was to be found in the state. Now there are three in operation and several others under consideration. Bordens, the Carnation and the Pet condensed milk companies have located plants in central and eastern Tennessee, while the southwestern part of the state, near Memphis, has developed into a market milk region. The National Dairy Exposition, to be held at Memphis, October 15 to 22, should bring added impetus to dairying in that section.

Was a Great Day for Old Sam

Tennessee is a land of Jerseys, 83 per cent of all the cattle in the state being of that breed. The Eastern Division Fair at Knoxville last week naturally brought out a great Jersey show. Many of the classes included fifteen to twenty-five animals, nearly every one of them looking like a prize winner.

The Jerseys exhibited by the Berry School, Mt. Berry, Georgia, were deserving of special mention since they were of unusual merit and were fitted and shown by the students. Berry School is the realization of a girl's ambition to provide facilities for a higher education for the boys and girls of the mountain districts of Georgia. The school was founded in 1902 by Miss Martha Berry and now enrols over 800 boys and girls, more than half of whom are working their way thru. The course includes instruction equivalent to the first two years in college and the school is supported largely by endowment funds and by the products from the farm. The Jersey herd is an important source of income since the animals are not only exceptional from the standpoint of type but are also high producers.

As in the case of other noted herds a single animal was responsible to a large extent for the general excellence of the herd. One of the boys when asked concerning the sire of the outstanding animals on exhibition replied, "Old Sam sired nearly all the prize winners in the herd." Upon further investigation Old Sam's real name was found to be Leda's White Hall Raleigh 177654, a bull whose superior breeding would lead one to expect much of his offspring.

Old Sam might well feel proud of the showing made by his sons and daughters at the fair for his son, a two-year-old, was the grand champion bull; another son was first in the three-year-old class; his daughter, a senior yearling, was the grand champion female; four of his sons and daughters constituted the group winning first prize in the "get-of-sire" class; and two of his daughters were the first prize "produce-of-dam" group. It certainly was a great day for Old Sam and for the Berry School.

Calf Club Class Well Filled

Echo Farm, of Long Run, Kentucky, secured a majority of the blue ribbons in the Holstein classes including the junior, senior and grand champion bulls and the junior, senior and grand champion cows. The grand champion bull, Lyon Mutual Burke, was an outstanding individual with straight top line, level rump, deep middle and a lot of quality with all his size. The grand champion Holstein cow, Echo Colantha De Kol Pet was also exceptional in size, top line and middle and had just completed a yearly record of nearly 750 pounds of butterfat.

The calf club classes were well filled. One attractive yearling that won first prize for its owner, Alberta Metler, a ten-year-old girl of Fountain City, Kentucky, had been so small and weak at birth that it was unable to nurse its mother. Alberta cared for the calf as tho it were a real baby, held it in her lap several times a day during the first three weeks of its life and milked into its mouth. Her reward came last week when the calf won for Alberta a free trip provided as the first prize in the contest.—A. A. Borland.

The Farmer Needs to Distribute Labor Uniformly

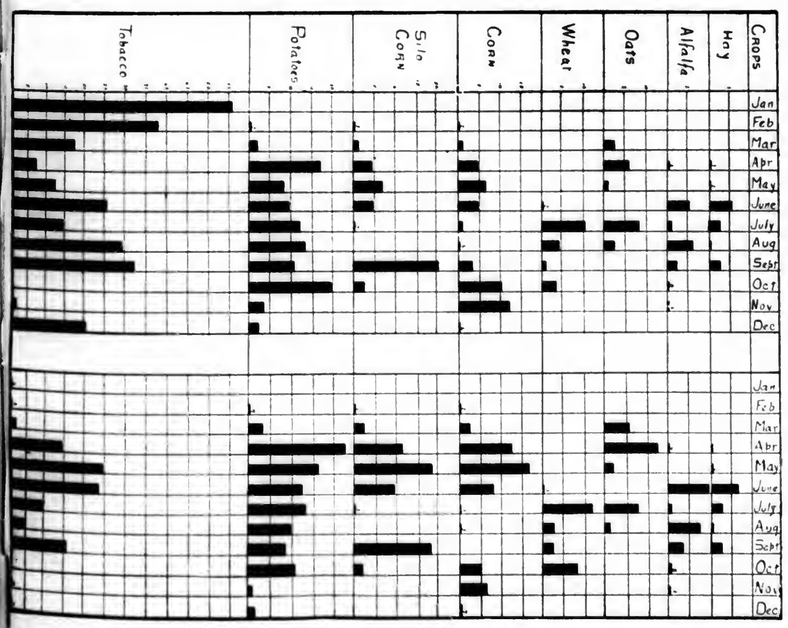
THE chart shows a comparison of the average number of hours required per acre on the various crops. The columns on the top show the man labor and those on the bottom the horse labor.

This chart was compiled from the monthly labor records kept by farmers in Lancaster County in their cost of production on crops. The solid columns represent the number of hours of labor per acre on the crops indicated at the left of the chart.

A study of the chart shows tobacco has a higher man labor requirement during the winter months and low during the months of April, May and October, when corn, potatoes and wheat require a large amount of labor. It balances the labor load at times of the year when it is light, and a small amount when other crops are larger. The labor on oats, wheat, hay and alfalfa runs high during the months of June, July and August. The bulk of the labor on corn and silo corn comes during the spring and fall months. Potatoes show a large amount employed during the summer but a larger amount in spring and fall.

The months of April, May and June show larger amounts of horse labor used. After a study of these charts, one could arrange his crop acreage and rotation to employ labor more uniformly thruout the year. As farm labor is becoming more restless and hard to handle, steady employment would help hold the men and keep them better satisfied.

The more progressive farmers are keeping a complete record of their farm business and a labor and cost account of the more important farm enterprises. By doing this, they are able to check on the results of each enterprise and manage the farm more efficiently for larger net returns.—H. S. Sloat.



Distribution of crop labor on Lancaster County farms. Upper chart: Man labor. Lower chart: Horse labor.

The Question of Heat

The health and comfort of your family through the winter months is largely a question of proper heat and ventilation of your home. If you are "getting along" with old fashioned heating methods, suffering the consequences of cold corners, drafty rooms, sudden changes of temperature and extravagant fuel costs, you should go and talk to your nearest "Farm Service" hardware dealer about modern ways of heating. His valuable service and information costs you nothing and his advice is worth everything to you.

Basement Heating Plants

Large homes with basements can best be served with basement heating plants, either hot air furnaces or hot water with radiators. The kind that you install depends upon many things, such as available fuel, installation requirements and the general construction of your house.

Parlor Furnaces

The modern parlor furnace circulates the heat into every corner of your house, making it comfortable, saving fuel expense and adding to its beauty. For smaller homes and those without basements, it is a wonderful heating apparatus.

You Can Also Have Gas Heat

For spring and fall days or extra cold ones in winter a Radiant Fire Heater brings wonderful comfort and convenience. They are portable so you can use them in any room. They burn ordinary automobile gasoline, are absolutely safe and simple to use.

Whenever you have a question of heat take it up with your nearest "Farm Service" Hardware Man. Buy from him and save time, trouble, disappointment and expense.

Your "Farm Service" Hardware Men

Preserve your home as our forefathers safely preserved the stately beauty of their Colonial mansions — by painting with lead. Your painter will tell you it pays to paint with lead paint, made with Dutch Boy white-lead.

CAN you answer the many questions that rise up when you decide to renew the paint covering which protects and beautifies your farm house? Our booklets, "Handbook on Painting" and "Decorating the Home" (printed in colors) will help you answer a great many of them. These booklets give valuable information about the use and application of paint and the selection of distinctive color treatments for the interior and exterior. Send to our nearest branch for these helps and a decorator's data form for use if you desire the help of our Department of Decoration on any special decorative problem about the farm.

DUTCH BOY WHITE-LEAD

A New Pair FREE if they Shrink

The Only Overall with this Iron Clad Guarantee

"Look for the Crown Trade-Mark and Guarantee before you buy".

CROWN SHRUNK OVERALLS

NO "ifs" or "ands" or "buts" about it — "a new pair FREE if they shrink". That's the CROWN guarantee, sewed on every pair of Crown Shrunk Overalls.

Crown Shrunk Overalls keep their size and shape because they cannot shrink. They keep their color because they cannot fade. Made with more pockets and more special features, they are the best-looking, longest wearing, most comfortable and economical overall you ever put on.

Every pair is made of super strong 8 ounce quadruple dyed denim, manufactured and shrunk by a secret process in Crown's own denim mills which not only shrinks the fabric but also sets the dye, making the color permanently fast! You cannot get this denim in any other overalls — it is exclusive with Crown Shrunk, yet Crown Shrunk Overalls cost no more than ordinary overalls.

Two More Qualify for 400 Club

J. CLAYTON BRUBAKER and Harry C. Swaar have qualified for the 400 Bushel Potato Club this year. Both are farmers near Lancaster, Pa. Mr. Brubaker has the highest yield to date, 566.2 bushels. The vines were sprayed 16 times and a weeder was run thru the field 8 times. Mr. Brubaker planted 28 bushels of Cobbler seed to the acre on April 10, with 16-inch spacing in rows 30 inches apart. He applied 1200 pounds of a 3-12-5 fertilizer in the row.

Mr. Swaar grew 542 bushels of Russets on a measured acre. His potatoes were planted at the same time as those of Mr. Brubaker. He used 18 bushels of seed in 9 lb. 33 by 161 inches. He sprayed 10 times and used the same amount and formula in fertilizing his crop that Mr. Brubaker did.

Senator Capper Gets No. 1

WHEN the admission cards for the seventh degree ceremonies of the National Grange were received from the printer last week, card number one was reserved for Senator Arthur Capper, of Kansas, well-known farm legislative leader. Senator Capper is a Grange member in his home state and has stated that he wanted to come to Cleveland and become a full-fledged member of the National Grange.

Must Clean Up Refuse

FARMERS in the corn borer infested area of the northwestern half of Pennsylvania are reminded by the Department of Agriculture that corn must be removed by December 1 from all land subject to overflow.

Regulation 8 of the corn borer quarantine reads: "All corn and broom corn plants or crop remnants including stubble, stalks or any other portions of these plants, and all coarse-stemmed, pithy weeds in cornfields, on lands subject to overflow from any river, creek, or other stream or body of water, shall be removed beyond reach of high water, or completely destroyed by burning, prior to December 1 of each year."

Attention is also called to Regulation 9 which states that "Corn crop refuse or waste, including stalks or parts of stalks, cobs, or any other portion of corn plant, and weeds growing in cornfields, shall not be dumped or allowed to be dumped into any river, creek, or other stream or body of water at any time thruout the year."

He Sells Queens to Beekeepers

LAST year Ellwood L. Hallopeter, of Clearfield County, entered a bee club under the supervision of County Agent W. O. Mitchell. With the price of queens rather high he decided to raise his own. He sold a few queens at one dollar each and immediately decided to launch into the production on a large scale. At the present time his apiary promises a good yield of honey and also a supply of 15 to 20 queen bees which he is shipping to all parts of the state.

Salem to Stage Fair

SALEM will stage its annual fair at Salem on October 18, when the county as a whole, and not the agricultural interests alone, will put on one of the biggest fairs in the South Jersey counties this year. No concessions of any kind will be allowed in Johnson Park this season. The boys and girls are arranging an extensive series of exhibits, including the display of livestock from the county which was shown at the Trenton Fair this last month. Prize ribbons will be awarded in all classes of exhibits, and local business houses have offered valuable prizes. The banks are cooperating closely with the fair management to make the show a success.—W. H. B.

Eastern States Farmers' Exchange

Makes Milk at Low Cost

William Noonan of Addison County, Vermont, is solving the problem of dairying at a profit even though milk brings a low price by making a lot of milk at a low cost. The 1926 cow test association report shows that Noonan's 15 Holstein cows (15 of them first calf heifers) averaged 8951 lbs. milk at a feed cost—hay, pasture, grain, and silage included—of 63c per cwt. They averaged 296 lbs. fat at a feed cost—all items included—of 28.2c per pound. Although his milk goes more than 300 miles to reach the New York market, Noonan makes money selling on that market and his return over feed cost in 1926 on milk bringing him about $2.85 per cwt. was $160 per cow.

There are several factors which play important parts in Noonan's success. First of all, he is a good farmer, a good operator of his farming business. This factor is responsible for his realizing the value of cow test records and for his using the records effectively in improving his stock and his feeding methods.

His cows are good ones. The 15 first-calf heifers in 1926 averaged 7675 lbs. milk. A 12-year-old made 14,191 lbs. milk, 501 lbs. fat, at a total feed cost of 77.4c per cwt. and of 22c per pound, respectively.

For roughage Noonan provides his cows with excellent pastures, corn silage, grain, and good quality hay (mostly legume). For grain he has standardized since the autumn of 1922 on Eastern States Farmers' Exchange rations. The 12 year old cow mentioned above has been on these feeds since that time and as a 12 year-old produced 14,191 lbs. milk receiving Eastern States Milkmore when on mixed hay and Eastern States Fulpail when on legume hay, 1 lb. of grain to 4½ lbs. of milk produced.

Where records are kept, Eastern States Open Formula Feeds prove their worth.

Men like William Noonan would continue to make substantial profits from their dairy herds on any grain ration they might select. The fact that so many successful cow test association farmers like Noonan are standardizing on Eastern States feeds helps to account for the steady increase in the demand for this cooperative feed service.

For information on the Eastern States feed service for horses and poultry as well as dairy cattle, the service which should not be confused with car door service offered by manufacturers through dealers or groups of farmers, write the office.

Veterinary

Conducted by Dr. J. F. Shipley
Associate Professor of Veterinary Medicine, Pennsylvania State College, and Veterinarian in charge of College Hospital.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical compendiums a farmer-stockman can obtain.

PIGS HAVE WORMS.—We have three-month-old pigs which cough. One is growing fine; one stays lean. They eat well. We feed a good balanced ration of mixed pig feed besides all the fruit and vegetables they will eat. Can you tell me the cause and a cure? We suspect worms in one.—F. V., Beverly, N. J. It is very probable that these pigs have worms. As you know, a part of the life history of the round worm is spent in the liver and lungs. The lung invasion, together with the larvae in the bronchial tubes will result in coughing. These pigs should be treated, preferably using a capsule. These may be procured from your veterinarian who can also advise you as to rotation of hog lots and the handling of the sow at time of farrowing.

KITTEN HAS FITS.—What can I do for a kitten that gets fits? Their mother just died from that and in her case I thought worms brought them on. Is milk the proper food for kittens?—M. T. M., Steinsburg, Pa. Have your local veterinarian or nearest small animal specialist treat this kitten for worms or parasites. It is probable that this is the cause of the fits. Milk is the proper food for kittens. Keeping the sleeping quarters clean and frequently disinfected will be an aid in preventing reinfestation.

No Shine Wanted

A minister, in addressing his flock, began: "As I gaze about I see before me a great many bright and shining faces."

Just then $7 powder puffs came out.

A Run for His Money

Hunter—Have I purchased everything I can possibly need to insure a successful bear hunt?

Salesman—You may want a pair of running shoes, a road map and a book of bear tales.

Free Transportation

Street-car Passenger—Do you charge for children?

Conductor—Under six, we do not. "Well, I have only five."

Unanimous

Boss to boy seeking job—And so you were born in Utah? What part?

Boy—All of me, sir!

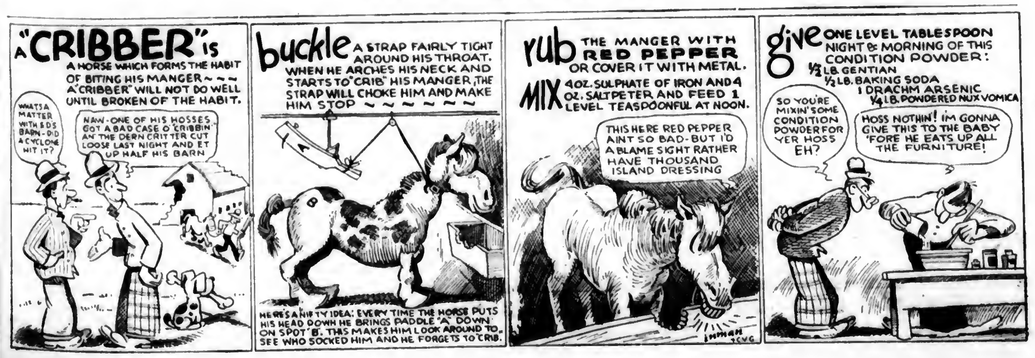
Herb the Handy Man Tells How—



Results of tests conducted on our research farm at Ashland, Ohio

It will pay you to find out

why these pigs—in 95 days—gained 160 lbs. more than these

These shoats look pretty sorry, don't they? But better times are coming. They're going to have Dr. Hess Improved Stock Tonic added to their feed. See what a difference it makes! Look at the picture below.

These shoats are in better shape. They're going to get capsules—just to see which is better for hogs—Dr. Hess Improved Stock Tonic or capsuling! The pictures and the figures tell the story.

These six scrawny shoats weighed 406 pounds on the first day of October.

These shoats received Dr. Hess Improved Stock Tonic regularly for 95 days.

These shoats consumed:

118 pounds tankage — 43 1/7 bushels of corn
1112 pounds middlings — Cost of Tonic, $2.35
Total cost, $45.59

These shoats gained 1017 pounds in 95 days.

These six scrawny shoats that received Dr. Hess Improved Stock Tonic regularly, made a gain of 26 2/3 pounds more per hog than the shoats that were capsuled. The cost of Tonic for each hog during the entire period was 39c.

These six shoats weighed 423 pounds on the first day of October.

These shoats were treated with capsules, a treatment employed to expel worms.

These shoats consumed:

103 pounds tankage — 39½ bushels of corn
984 pounds middlings — Cost of capsules, $1.50
Total cost, $39.90

These shoats gained 857 pounds in 95 days.

The records of these two pens show what Dr. Hess Improved Stock Tonic is worth to every hog raiser. It made a difference of 160 pounds of pork here! A profit of $19.20 for the Tonic pen over and above the capsuled pen!

Dr. Hess Improved Stock Tonic

Appetizer—Worm Expeller and Mineral Balance —all combined in one product

It supplies Tonics—to keep the appetite on edge and promote thrift.

It supplies Vermifuges—to expel the worms and control reinfestation.

It supplies minerals—calcium carbonate, calcium phosphate, potassium iodide and others, to build bone and body tissue, to promote more vigorous growth, and to meet the mineral deficiency in the ordinary ration.

Costs little to use. The first extra pound of pork a hog gains each month pays for the Tonic.

***Remember*—When you buy Dr. Hess Improved Stock Tonic, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.**

We reimburse the dealer without questioning.

Ninety-five days have made a big difference, haven't they? Only Dr. Hess Improved Stock Tonic did it! These pigs have gained 1017 pounds since the other picture above was taken. They are thrifty and fat.
With Tonic these hogs gained 1017 pounds

And here are the capsuled hogs! They didn't fare so well, in spite of their start. The shoats that got Dr. Hess Improved Stock Tonic beat them by 160 good pounds. Or by about $19.20! The day of capsuling is over!
With capsules these hogs gained 857 pounds

PRICES: 25-lb. pail, $3.00; 100-lb. drum, $10.00; 500 lbs. at 9½c; 1000 lbs. at 9c; ton lots at 8½c per lb.
Except in the Far West and Canada

Camel wins on quality!

THE greatest cigarette success ever known is Camel—the quality smoke. Camel brought the world a new understanding of smoking pleasure and the world raised it to first place. No other smoke can compare with Camel in popularity, and it is climbing higher and higher in favor every day.

We invite you to try Camels for just one reason—enjoyment. You will revel in the taste of these choice tobaccos. Always so mild and smooth, there never was a smoke that could compare with Camel in lasting satisfaction. Smoke as many as you will, your enjoyment will grow keener every smoking hour.

Regardless of how much you pay, there is no better than Camel. Camel leads the world!

Sells Poultry to the U. S. Soviet of Russia

DAN MAHAR, owner of the Quality Poultry Farm, Princeton Junction, just outside of Trenton, has had the distinction of selling some fine poultry to the U. S. Soviet of Russia for their Experimental Station in Northern Russia. Fifteen birds were seelcted for the trial shipment, consisting of 12 pullets and 3 cockerels.

This flock was selected for the foundation of the new Russian Experiment Station Poultry Department. The selection was made following a visit to 22 states by the Russian delegates, who finally came back to New Jersey for their stock. The officials wanted 30 birds, but could not find just what they wanted with the limited amount of funds available for this purpose as the stock they did buy represented more money than they had anticipated would be needed for this purpose.

This is the same line of foundation stock that is owned by Prof. James Rice, the noted poultry judge from Cornell University. Mr. Mahar had bought his stock from the Rice flock. The birds were shipped on October 7 and the inspection of the stock was personally conducted by Allen E. Jones and A. E. Mercker, of the Department of Markets, State Department of Agriculture.—A. K.

Damages Plants in Using Nitrate of Soda

Will you tell me how to use nitrate of soda on plants? How much should be used and how often? I have done much damage so far, and no good results. What kinds of plants does it help?—J. F. R., Tioga County, Pa.

The wrong use of nitrate of soda may easily injure plants, but when rightly used it is highly beneficial to such crops as need readily available plant food. At Neshaminy Gardens we apply it to newly set plants, such as cabbage, cauliflower, tomatoes, etc.; also to young beet plants early in the season.

To set plants we apply a small teaspoonful around the plants about two inches from the stem and cover it with a hoe afterward. To close-planted crops we sprinkle it alongside of the rows and cultivate. Usually, one application of 100 to 200 pounds per acre is enough. But if the season is very dry, or unusually cool, two or three applications may be given. Nitrogen in any form grows stalk, stem and leaf, therefore, it is good for all crops of this nature. We also usually give cantaloupes and melons one dressing after the true leaves start.—R. P. K.

Produce Fine Honey

USERS of honey will be delighted with the high quality of Jersey's offering this year, according to Elmer G. Carr, deputy bee inspector for New Jersey. The honey season in the state has been remarkable for several reasons. The weather conditions were adverse early in the spring so that bees did not increase as rapidly as is best. Then the small amount of nectar-secreting plants in evidence was far from encouraging to beekeepers. When clover bloomed the weather was again unfavorable. Notwithstanding these handicaps, New Jersey has gathered a fair crop of honey. The outstanding feature of the season is the high quality of the honey produced. Particularly is this true of the honey gathered the latter part of the season.

Usually goldenrod honey, as produced in New Jersey, is a pronounced amber color and has a rather high flavor. This year, however, the color is quite light and, altho the flavor is distinctive, it is quite delicate and pleasing.—J. G. P.

The Mystery Clears

John—I'm going to bring this razor back. It doesn't cut at all.

Johanna—Why, John, you don't mean to tell me that your beard is tougher than the linoleum I cut with it this morning.

Better Eggs Will Go to New York

Producers Located in the "Nearby Egg" Territory Should Profit by New Law

By H. DEANE PHILLIPS

THE new regulations governing the sale of eggs in New York State, recently made effective, are causing much comment among egg shippers and are probably destined to have some far-reaching effects in the egg trade because of the importance of New York as a market for eggs from all sections of the United States.

Under this new plan all eggs, except those of the vendor's own production, sold in New York State direct to consumers or to retail dealers, must be offered and sold on the basis of specific grades, based on quality as determined by candling. Sales of eggs to wholesalers or jobbers are not affected. In other words, these are retail grades only and they provide a special exemption for the farmer or poultryman selling eggs produced by his own hens.

Based on Quality

The grades themselves are based on the U. S. Standards of Quality for Individual Eggs, as proposed by the United States Department of Agriculture. The detailed grade specifications are given in the accompanying table.

One of the important points in these New York egg regulations is the provision limiting the use of the term "fresh" when applied to eggs. Formerly any edible egg which had not been in cold storage could, for all practical purposes, be sold legally in New York State as a fresh egg. This is no longer true. The new law removed eggs entirely from under the provisions of the cold storage law and placed the sale of all eggs, cold storage or otherwise, on the same basis, namely, quality as determined by candling. Only eggs, free from objectionable odor and flavor, meeting the requirements for either Nearby Fancy Grade or Grade A may now be legally sold as "fresh," or under any similar designation, such as: "Strictly fresh," "Day-old," "Hennery," etc.

This removal of the restrictions on the sale of cold storage eggs is, of course, a very radical change and one apt to have far-reaching effects. For one thing it is quite probable that it will increase the price of eggs during the period of surplus production in the spring and lower the price during the fall and winter months when production is lowest, tho, of course, Fancy eggs will continue to sell at a high premium at all times of year.

Affects Western Eggs

On the other hand, the new standard for fresh eggs will also, undoubtedly, have some far-reaching effects of its own. The so-called "Western Fresh" eggs, for example, are sure to be affected. Especially during warm weather the great majority of the eggs which formerly traveled in the markets under this name are too low in quality to class better than Grade B or Grade C under the new standards. They can, therefore, no longer be legally sold as fresh eggs. The same thing is true for many carelessly gathered and (to page 21)

New York State Retail Egg Grades

Each lot of eggs offered or sold under these grade designations must be uniform in size, except in the case of Grade C and Unclassified Grade when they may be variable in size.

Grade factors (tested by candling)	(1) Nearby fancy grade	(2) Grade A	(3) Grade B	(4) Grade (C)
Shell	Clean, sound.	Clean, sound.	Clean, sound.	May be clean or, dirty, sound or checked.
Air-cell	⅛ inch or less (depth), localized, regular.	¼ inch or less (depth) localized, regular.	⅜ inch or less (depth) localized, may be slightly tremulous.	May be over ⅜ inch, may be bubbly or freely mobile.
Yolk	May be dimly visible.	May be visible.	May be visible, mobile.	May be plainly visible, dark in color, freely mobile.
White	Firm, clear.	Firm, clear.	Reasonably firm.	May be weak and watery.
Germ	No visible development.	No visible development.	Development may be slightly visible.	Development may be clearly visible but no blood showing.

(5) Unclassified Grade:—No fixed standard, except that the eggs may not be below the requirements for Grade C; includes eggs of variable quality and size, unsorted or too variable in quality or size to be sold under any of the other grade designations. Shells may be clean or dirty, sound or checked.

Note:—For Nearby Fancy Grade, Grade A and Grade B, ten eggs in each dozen must meet the standard for the grade given above. Two eggs in each dozen may be below the standard but may not be below the standard for the next lower grade. For Grade C and Unclassified Grade, twelve eggs in each dozen must meet the requirements as given.

We Need to Fight Weeds in 1928

This Prophecy Is Not Based on Goose Bone or Woolly Caterpillar Superstitions

By Dr. E. M. GRESS,
Pennsylvania State Botanist

GARDENERS and farmers are going to have a fight against weeds during the summer of 1928. This is, perhaps, a long time prophecy but it is not based on goosebone or woolly caterpillar superstition as is done in predicting a warm or cold winter, or the number of snows that will fall between Thanksgiving and Easter. The unfailing sign is one that can be seen now by any one. It is the millions upon millions of seeds that are maturing so nicely on the crops of weeds that can be seen now in almost every garden, lawn and truck patch, along the fence, in the city vacant lot and on many farms.

There stand the pig weed and lambs quarter with their wand-line flower cluster, each plant ripening thousands of seeds, the prickly lettuce with its fluffy seed that may be carried many miles by the wind, the rag weed, that hay fever pest which we pass unnoticed and then blame the innocent goldenrod for the sneezing and coughing, and that ubiquitous galinsoga, that South American pest full of lit le flowers with their yellow center and white edge.

There in the lawn is the crab grass, spreading out and taking roots at the joints and sending up its purple finger-line flower parts, which matures seeds by the thousands, and which smothers out all the good lawn grasses and leaves bare spots for next summer.

All of the above plants, and many others, are annuals. That is, no part of the plant lives over winter except the seed, and still they give us trouble, and cause much loss every year because we allow them to sow their seeds so abundantly every fall.

Why Don't We Have More Weeds?

We often hear the gardener or the farmer ask, "Where do all the weeds come from?" If the seeds produced by one of these plants were counted and the number found multiplied by the number of weeds growing on a square yard and that number again multiplied by the square yards in the garden or field, the wonder would not be where do they all come from, but why don't we have more weeds?

The truth of the matter is that most of those seeds never get an opportunity to produce a plant. Some of them are destroyed by birds and other animals, some start to grow before winter and the young plant is destroyed by the freezing weather. Others become so deeply buried that the young plant can't push its way out of the ground; some may lie in the ground for years awaiting favorable conditions for germination and growth. Thus a great many of the seeds will never cause any trouble and indeed many more could be dealt a death blow by the farmer or gardener.

First of all—prevention of the maturing of seeds should be given careful consideration. Cut, pull or destroy the weeds before, or by the time they begin to form seeds. If it is impossible to do this because of the nature of the growing crop, then after the crop is harvested, gather them together and burn, or otherwise destroy them as soon as possible thus killing many of the (to page 21)

Comments on the Week's News

THE Government's case against Harry F. Sinclair, which has been drawn out by appeals, has been finally decided by the Supreme Court. The court's decision annuls the famous, or infamous, Teapot Dome lease, and says it was secured thru the actions of a "faithless public officer," meaning Fall. Thus the public's fear that the matter would be hushed up for political reasons proves to be unfounded. Neither position nor fortune is favored when the government goes after crooked work.

♦ ♦ ♦

The latest crop report shows that favorable weather in September and October has improved the corn crop prospects to the extent of nearly 147,000,000 bushels. The spring wheat crop was also benefited and the estimate now is for a total yield of 866,538,000 bushels,—33,000,000 bushels more than was produced in 1926. On the other hand, potatoes deteriorated and the "guess" is down by 5,000,000 bushels, indicating a yield of 395,000,000 bushels. Among all the crops, the apple crop is the smallest, the figures showing only about 41 per cent of a normal yield.

♦ ♦ ♦

The Journal of Commerce quotes a New England manufacturer as saying that the present is "an era of profitless prosperity," and goes on to say that labor is getting a disproportionate share of the profits of business, and that the farmer is now getting a larger share than he has been getting. The claim is made that, while there is abundant activity with production and sales at a high level, capital is not getting a fair share of the returns. Well, turn about is fair play. It is only a few years ago that "a living wage" was the boasted largess of capital towards labor. All things come to him who waits,—if he lives long enough.

We know the value and power of advertising, but the following incident gives an added emphasis:

A father of eight children was arrested for stealing oranges. When questioned at his trial, he explained that he had been reading advertisements of a noted brand of oranges which stated the health value of the fruit for children. Two of his children were sickly and, being too poor to buy oranges, he took the chance and stole them to give to his children. The judge is investigating.

♦ ♦ ♦

The railroads show by their reports that the passenger traffic is gradually lessening. When compared with the same months a year ago and two years ago, a difference of several millions in income is seen. In the same mail which brought the report, came information from a national automobile and truck association telling of the growing popularity and use of automotive vehicles. Not long ago we read of complaints made by the manufacturers of ice to the effect that the consumption of ice is on the wane. Other literature tells of the growing popularity of home cooling systems. Again, we learn from the meat packers that the per capita consumption of meat is falling off, but, on the other hand, the producers of poultry, eggs and milk are jubilant because the consumption of these foods is on the increase. There is a noticeable lessening of the demand for potatoes in the market, while every year shows a greater quantity of greens and vegetables is eaten, no doubt caused to some extent by the feminine quest for "that boyish figure." Markets are neither constant nor consistent.

The Public Will Be Served

THOSE who have followed closely our editorial expressions on the subject of testing cattle for tuberculosis know that we have, from the first, approved it as being the best known method of eliminating diseased cattle from herds. No one claims that it is 100 per cent efficient, but no better method is known, and until there is a more certain test provided the present test should be used in the endeavor to eliminate diseased cattle from the meat and milk producing animals.

There has been much opposition to the test in some sections. This opposition is based chiefly upon the losses suffered by those whose cattle are condemned. True, there is an effort made to discredit the effectiveness of the test, and to minimize the danger of transmitting the disease to human beings. But both these latter contentions have been disproven by the weight of scientific opinion as well as by practical tests and results. As to the former objection, the state and federal governments have cooperated to partially reimburse the losers. Few will contend that the public should bear the full loss sustained by the destruction of tubercular cattle.

But whether or not the test is fully efficient, and whether or not there is serious danger of transmitting tuberculosis to human beings, the consuming public is more and more demanding that its milk be from healthy, tested cattle and is eliminating, by legislation and by refusal to buy, the milk from untested herds. What the public demands, it will have; and dairymen have no alternative. The testing of cattle is the only means of insuring a continued market for milk and its products. This has been our stand from the first, and we still hold the opinion. We sympathize sincerely with those who are unfortunate enough to lose heavily by the work. We know how discouraging and sometimes fatal it is. But business is not based upon sentiment. On the other hand, we admire those who, years ago, were the pioneers in the elimination of tubercular cattle,—many of them bearing the entire loss themselves.

Roosevelt's Birthday—October 27

NO WORDS we can write would so well describe the inspiring character of Theodore Roosevelt as the following description. It was adopted as a resolution of tribute by the National Council of the Boy Scouts of America in 1919.

He was found faithful over a few things and he was made ruler over many; he cut his own trail clean and straight and millions followed him toward the light.

He was frail; he made himself a tower of strength. He was timid; he made himself a lion of courage. He was a dreamer; he became one of the great doers of all time.

Men put their trust in him; women found a champion in him; kings stood in awe of him, but children made him their playmate.

He broke a nation's slumber with his cry, and it rose up. He touched the eyes of blind men with a flame that gave them vision. Souls became swords thru him; swords became servants of God.

He was loyal to his country, and he exacted loyalty; he loved many lands, but he loved his own land best.

He was terrible in battle, but tender to the weak; joyous and tireless, being free from self-pity; clean with a cleanness that cleansed the air like a gale. His courtesy knew no wealth or class; his friendship, no creed or color or race. His courage stood every onslaught of savage beast and ruthless man, of loneliness, of victory, of defeat.

His mind was eager, his heart was true, his body and spirit defiant of obstacles, ready to meet what might come.

He fought injustice and tyranny; bore sorrow gallantly; loved all nature, bleak places, and hardy companions, hazardous adventure and zest of battle. Wherever he went he carried his own pack; and in the uttermost parts of the earth he kept his conscience for his guide.

Editorial Sidelights

WE RETURNED from the trip which took us past Fort Necessity and General Braddock's grave by way of the William Penn Highway, much of the way thru the rain. We enjoy driving in the rain, except at night, and were glad to find the downpour so welcome in the western counties following the warm spell.

Several farmers we talked with casually exclaimed, "That's a fine rain, isn't it?" If we had been back in the city an equal number of the cliff dwellers would have growled, "This is a nasty day." It is all in the point of view.

THIS is an age of chance, as far as agriculture in the eastern United States is concerned. The men who are changing are prospering. Those who cannot or will not change are slowly going under; many have already disappeared, leaving idle fields and abandoned buildings as evidence of the lost struggle.

A trip across Pennsylvania will convince anyone that there is prosperity for the farmer who will conform to the times. That means growing what the market wants, growing a lot of it on each acre, and growing it with the minimum amount of human labor.

The day of "general farming" is past, if that term is understood to mean indifference to market conditions, haphazard planting, low yields, neglect of seed treatment, spraying, etc.

We are prompted to make this little preachment by what we saw on this trip across the state. It would be difficult to draw any other conclusions when we found that the farmers who are up-to-date in their methods have fine homes, every convenience the city affords, sons and daughters in college, money in the bank. The point was emphasized all the more when these fine farms were nearly surrounded by abandoned farms,—grim reminders that the old type of "general farming" cannot survive present-day conditions.

ASK TARIFF INCREASE

Regulations Protect U. S. Producers from Foreign Pests —Fire Loss Needless— Prove Contracts Valid.

Washington, D. C.

IT IS interesting to note that representatives of a large group of southern farmers have been in Washington recently asking for an increase in tariff rates on the various crops they produce. The citrus growers and growers of pineapples, tomatoes, onions and other vegetables, are all asking for a boost in tariff rates on these products. The potato growers are especially insistent in their demands for tariff protection. From the Northwest and Middle West come demands for higher tariff rates on butter and cheese, corn and flaxseed, while the Pacific Coast farmers are asking for higher tariff on many of their products.

Quarantine for Insect Protection

Our quarantine regulations are for the purpose of protecting American producers from injurious insects, not foreign competition, according to Secretary of Agriculture Jardine, who says that insect damages in the United States exceed $2,000,000,000 annually, and many of the more destructive pests are foreign importations.

Since 1906, state and federal authorities have spent $31,500,000 to eradicate the cattle tick, an imported insect, which has caused a loss of $26,000,000 a year. The hoof and mouth disease, outbreaks of which have been eradicated at great cost, is traceable to imports of meat products. The federal government spent $10,000,000 this year in an effort to eradicate the European corn borer.

On the other hand, Secretary Jardine says that foreign countries are very particular as to the imports they receive from the United States. Germany, Switzerland, Holland and Belgium have an embargo on all plants from this country. And France excludes all live animals. These quarantines by foreign countries are far more rigid as regards the importation of American plants and animals than our quarantines are on their products of the farms.

Farm Fire Loss Heavy

Fire prevention week gave Secretary of Agriculture Jardine an opportunity to stress the seriousness of fire losses on American farms. Last year, he said, fires on farms and in rural communities were responsible for the loss of 3500 lives, and destroyed property of a value estimated at $150,000,000.

The secretary points out that this loss was more serious than these figures indicate, because in addition to the loss of life and property, food supplies were spoiled or lost, gainful production operations were curtailed, families were rendered homeless, and potential manufactured products of increased value were lost.

This annual farm fire loss is all the more deplorable when it is realized that such waste is essentially needless and could be prevented to a very large extent by the elimination of carelessness and the adoption of effective and recommended equipment and methods which have been proved effective. Every farmer is urged to give attention to fire prevention, not only for one week, but during the entire year. It is his responsibility and duty to himself, his family, his neighbor and his country to do his utmost in reducing the enormous annual fire waste.

Penna. Second in Road Construction

Highway construction work under the federal aid arrangement is being pushed with vigor. Construction work completed in 39 states since the beginning of the present fiscal year beginning July 1, totaled 812 miles. The greatest value of work in progress is in New York where estimated costs are over $40,000,000. Pennsylvania ranks second with over $18,000,000. Other states with projects under way costing over $10,000,000 are Illinois, Indiana, Iowa, Kansas, Michigan, Nebraska, Ohio, Texas and Wisconsin.

Enforce Pool Contracts

Farmers who sign contracts to deliver their products to pools or other cooperative marketing organizations are learning that such contracts are not mere scraps of paper to be disregarded at will. The Bureau of Agricultural Economics reports that the Kansas Wheat Growers' Association has obtained a judgment from the Kansas Supreme Court in a suit to recover damages arising because a farmer member had failed to deliver his wheat to the pool in accordance with his contract.

The pool lost in the trial court, but won in the higher court. The defense claimed that the contract was void because of the anti-trust laws of the state. The court held that even if the pooling system tended to create a monopoly it did not void the contract.—E. E. R.

NUISANCES MUST GO

Will Improve Wheat—Bulletin on Grades Released—Farm Show Plans on Way—Find Stored Eggs Sold As Fresh.

Harrisburg, Pa

PLANS for improving the general output of wheat in Pennsylvania, especially to get rid of certain nuisances, are being developed at the State Capitol in conjunction with various organizations and it is probable the program will be announced shortly. Data showing pollution of grain, ravages of diseases and pests have been prepared and the actual loss in dollars and cents is to be driven home. Millers are interested in the plan and will give support, while the state government will have its field men call attention to possibilities.

Losing No Time in Filing Papers

The State Department of Agriculture has lost no time in getting ready its general schedule of filing papers to establish widths for future building of roads and according to announcements at the Capitol will move in twenty or more counties, giving notice of intention to widen designated roads. On some of these the widening will start next year. This is the result of careful studies of local conditions.

Make Grade Announcements

The state has prepared a bulletin dealing with grades, giving the information on six vegetables and fruits and also outlining what has been done in the case of poultry and chicks. Attention is being devoted to the better chick plan and according to figures progress has been made in numerous counties. The bulletin has been given prominence in announcements at the Capitol.

Farm Show Plans Develop

The State Commission in charge of the Farm Show to be held next winter is out with a statement that the show will cover about 120,000 square feet and that in addition to the cups and other trophies, $10,000 in prizes will be awarded. Hundreds of baby beef calves will be shown. The commission at its recent meeting heard reports from many counties and its members are confident of a wider diversity of exhibits.

Bring About Egg Suits Again

Agents of the state have swooped down upon stores in quite a number of the smaller towns and brought suits for the sale of stored eggs as fresh. A general drive along this line is forecast at the Capitol where reports have come showing disregard of the law requiring stored eggs to be properly marked. Judging from what is heard the law is more honored in the breach than observance even in districts where there are abundant supplies of fresh eggs.

Money in Selling Flowers

Figures indicating many dollars were turned by farmers' families in sale of flowers at homes and at local markets have come to Harrisburg and some effort to find out the extent of the business will be made. Roadside sales of fall flowers have been unusually large, especially along the much traveled main highways.

Is All-year Quarantine

The state authorities in charge of the Japanese beetle quarantine have called attention to the fact that the restrictions on nursery stock, soil, etc., continue thruout the year, also the other quarantine regulations on this pest end this month until spring. The corn borer regulations are being actively enforced and a general burning up of wastes is insisted upon with considerable support among northwestern farmers.—T. C.

FEWER APPLES STORED

Most of Crop Sold from Orchards —Discuss Wide Range of Topics at State Poultry Meeting—Imposed Fines.

Trenton, N. J.

APPLE growers in southwestern New Jersey counties have been accepting cash for their apples this season rather than storing to the usual extent. In the Glassboro area many growers have already disposed of their entire holdings. In early October, current offerings of $1.50 per bushel in the orchard were taken up quite rapidly, the growers figuring that event in the face of a light crop cash looked better than speculations. Country storage houses have been quite upset by the trend of the market as growers have cancelled storage space right and left. A large amount of fruit is moving into immediate consumption in the normal apple consuming markets and large blocks of New Jersey apples have gone thru export channels to Great Britain and the Scandinavian countries.

Poultry Association Meets

Atlantic City housed one of the biggest poultry meetings in New Jersey, October 12 to 14, when the New Jersey State Poultry Association held its annual convention. The program assumed national scope when speakers from western poultry areas and Canada contributed to the meeting from their experience. A wider range of poultry topics was discussed than in previous years. The exhibit of poultry products and eggs staged in conjunction with the association meeting was also of wider scope than in former years. Other features of the convention were ringside judging, a state-wide egg show and a large display of commercial exhibits including incubators, poultry feeds, brooders, houses and fencing. County and local poultry associations thruout the state aided the state association in its program and exhibits.—W. H. B.

Jersey Flocks Make Higher Records

In the Vineland Egg Laying Contest which closes this week, sixteen pens of ten birds produced over 2000 eggs each with several other running close to this mark. In the top list, mentioned above, 10 flocks went beyond 2100 eggs and the highest pen is exceeding 2600 eggs. Six states and Canada are represented in the contest with practically all of the high records being made by New Jersey flocks. Indications point to a greater number of applications than can be accommodated at the contest.

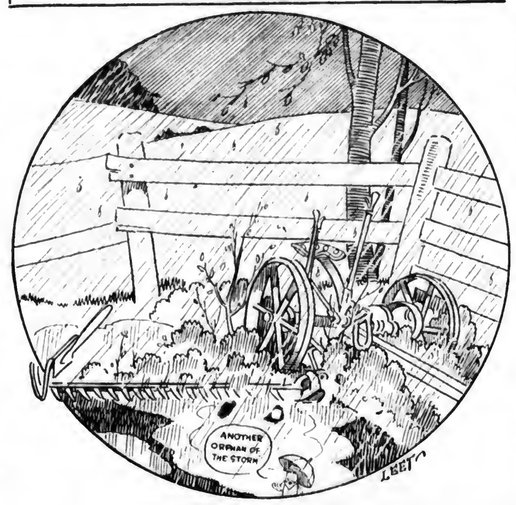
Fine Quarantine Violators

Heavy fines have been imposed on a number of parties who have trucked or hauled fruit and produce over the Japanese beetle quarantine lines during the past summer. Fines ranging from $1 to $150 have been imposed in different courts where violations of the quarantine regulations have been discovered. The higher fines were imposed in cases where the law was violated with full knowledge of the requirements. One truck driver was fined $150 on a load of 185 baskets of peaches worth $175 because the driver refused to drive back a few miles and secure an inspection and a permit. The placing of fines on representatives of the express companies instead of the company is likely to have a far-reaching effect on observance of the quarantine regulations. Following the disposition of three cases in South Jersey the American Express Company has notified all of its express agents that the violation of the regulations regarding the Japanese beetle would be considered a personal matter and they would be dealt with by the courts, rather than the express company. The court ruled in these cases that the only way to break up this practice would be to hold the agents responsible.

Conduct Sweet Potato Experiment

Sweet potato growers from every important section in New Jersey attended a state demonstration on the John Wolferth farm, near Swedesboro, on October 7th. On this farm a large number of experiments to find a method of controlling or eradicating the stem rot in the sweet potato are being conducted. This is the largest sweet potato demonstration in the United States and it has attracted nation-wide attention from commercial growers. Dr. William H. Martin, state plant pathologist, New Brunswick, is in charge of the test plot for the state. The results at the test showed that no one method has as yet been devised that will eliminate this disease.—A. K.

FARM TRAGEDIES NUMBER 2



Feed your Fall litters

Quaker PIG-N-HOG meal

There's nothing just like this wonderful balanced ration for little pigs—even before weaning—for it's the *complete* feed, the *profitable* feed. Quaker Pig-N-Hog meal contains *tankage! oatmeal! alfalfa meal! wheat flour! Cod Liver meal! barley! hominy!* and *iodized salt!* Just the right bulk, the right proteins, and the all-important minerals! All ready for your use—no labor, no fuss.

Top the Market—

by feeding your Spring hogs this same meal with corn to build the fine finish that gets best prices. Just follow suggestions, and watch the pork profits go up!

Near you is a dealer who sells Quaker Feeds. See him right away about a supply of Quaker Pig-N-Hog Meal.

Giant Grip

Shoes and Calks

Increase Horse Power

WINTER holds no fear for you if your horses are shod sharp—if they have on Giant Grip shoes and calks. Safe footing and sure tractive power increase their capacity for work. Calks can be changed easily without removing the shoes. Calks are interchangeable in all Giant Grip shoes. Your horses can always be shod sharp. Giant Grip calks *stay in—wear sharp* and *wear longest*. They are your sure protection on icy hills, and your guarantee that your horses will not be working under strain.

Your blacksmith has Giant Grip shoes and calks. Have him put on a set *now* when sure footing is needed most.

Giant Grip Mfg. Co.

OSHKOSH. WISCONSIN.

THE CALK IN THE YELLOW BOX

THERE is something in the autumn that is native to my blood—
Touch of manner, hint of mood;
And my heart is like a rhyme,
With the purple and the yellow
and the crimson keeping time.
The scarlet of the maples can shake me like a cry
Of bugles going by.
And my lonely spirit thrills
To see the frosty asters like a smoke upon the hills.

There's my sentiments, but I could not have expressed them so well. How I would like to be able to stay out of doors all the time and drink in the beauty nature spreads before us so gorgeously! What normal person can behold it and not wonder?

✦ ✦ ✦

EIGHT days of unusually warm weather in October, following as it did a mild September, has made tens of thousands of bushels of corn that was almost despaired of earlier in the season. It is what farmers were hoping for; in fact, it makes the difference between failure and success this year on many farms.

✦ ✦ ✦

THE lawn about the new house at Neshaminy Gardens is now green and the grass has been clipped once. The seed was sown about a month ago (September 8) and favorable weather gave it a good, even start. The establishment of a good green about a home is uncertain work. The next thing now is to get the right kind of trimmings and shrubs planted. Several kind neighbors have offered us plants, etc., but the placing and setting of ornamental plants about a home requires the eye of an artist, if the whole is to be pleasant to the eye in later years.

✦ ✦ ✦

I SEEM to be singled out of the multitude of pedestrians in a city as an easy mark by the down-and-outers. Every once in a while, no matter how good are the times, nor how plentiful is work, I will hear a piteous voice by my side mumbling, "Mister, won't you slip me a dime so's I can get a cup o' coffee, or a sandwich. I'm jes' about starved." Fortunately, they have to sidle up to you and speak close and low so as to escape the vigilant eyes of the police, as these latter gentlemen enjoy running in a "panhandler." Being close to me I get a whiff that makes me speed up and I soon walk away from them without melting. The breath of the booger in pre-prohibition days was bad enough, but compared to that of the drinker of modern hootch it was lilac perfume.

✦ ✦ ✦

NO DOUBT I have an unsophisticated appearance among a crowd of city people is the reason they pick me out for a strike. Maybe my gait gives me away, or perhaps it is my clothes, or my vacuous countenance. I like to think they size my face up as kindly, but I know well enough that they have watched me at least a few minutes and conclude that I am simply "easy." But they are mistaken. I haven't shelled out in a single instance to such an invitation for four or five years.

✦ ✦ ✦

I AM also on several sucker lists in this country. Pretty often I receive thru the mails glowing offers to sell me something which will turn in a profit of several hundred per cent in a few weeks or months. If I will but "embrace the opportunity" I will start at once on the sure road to independence. But I have never bitten on one of them. I am by nature a most cautious person. I would not have made a good gambler, even if scruples did not hold me, because I am not built with any inclination to take long chances. Sure things must be doubly sure, and then guaranteed.

The Cheerful Plowman

Taking Chances

THAT kid takes awful chances, the gritty little knave. I know he'll drive me goofy and put me in my grave! He risks his life each minute, he makes himself a pawn, he'll break his neck some morning, or evening, on the lawn. I preach a sense of danger, I say, "You little clown, you'll bust your skull to pieces next time you tumble down! Don't climb that shaky rafter, the blooming thing will bust! Come down this very minute! I tell you that you must!

Hey, boy! That tree's decaying, it's nothing but a shell, it doesn't have the fibre it had when young and well, so please don't climb its branches, and please don't perch so high; take on a sense of danger, for death is lurking nigh! Who made those stilts, young fellow, who made those stilts, I say? You'll fall and strain your liver, so lay those things away! When I was young and chipper I took a chance or two, I tried to do, I'm saying, the very things you do! My father tried to stop it, he warned me every day, but I refused to listen to what he had to say; one day I took a tumble and broke a collar bone; the folks in lower China could hear me squawk and groan!

It was three weeks, remember, before I played again, but even then I harkened to no advice from men! I took my stilts and used them in spite of dad's decree,—nobody ever living could throw a scare in me! I used those stilts for ages, I climbed, and crawled and sprang, for dad's eternal counsel I didn't care a whang! Alas, the risk I carried, the chances that I took, would fill the double pages of any normal book! So boy, you see my warnings are given now to you because I took long chances when I was brave and new! So ditch those stilts, young fellow, don't take so wild a chance!" Yes, that's the way I lecture with useless song and dance.—J. Edw. Tufft.

Friendly Talks

By EDGAR L. VINCENT

YOU cannot make yourself a better man by changing your clothes.

A man moved into our neighborhood. He bought a good farm. He equipped it with good implements. He stocked it up well and had a span of fine horses to do the work. When he dressed up and went to town, he and his folks rode in the best car there was anywhere around.

Everybody expected that man would make us all ashamed of our poor farming, because he would do so much better than we possibly could; and we were ashamed, but for a very different reason. Our new neighbor had not been with us very long before we began to see some things about him and his work that caused us to be sorry; for he had a fine opportunity to make good. I am not going to tell all the bad things he did, but he was cruel to his horses and his cattle. His boys and girls were afraid of him. He did not prosper as a farmer; and we learned that in the country from which he came, he was just the same sort of man he was after he changed his location. His new clothes had not made his heart a particle better.

Change Must Come from the Heart

And when you and I set out to do better we have got to do more than put on a stovepipe hat and stand-up collar. There must be a change deep down in the heart.

Across the sea there is a man who has done wonderful things in building up cows that are free from the disease tuberculosis, which is costing us so much in this country to get rid of. This man's work has been so good that a number of countries have adopted his methods. His plan is simply this: He starts with the idea that every calf at birth is sound and free from tuberculosis. By taking these new-born calves and feeding them pure milk and keeping them away from stock that is affected with the dread disease, in a few years he succeeds in producing a herd that is sound and free from tuberculosis. We cannot help seeing that this goes right to the bottom of things.

Let us step up higher and see how this would apply to the improvement of human beings, not only physically, but in the very best sense of the word.

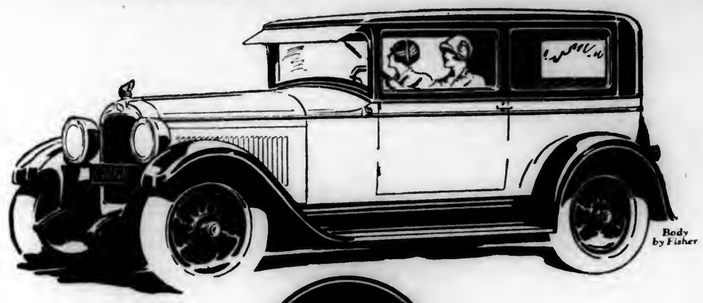
What if we were to bring up our boys and girls in such a way that they did not know the touch of evil on their hearts. "Impossible!" do we say. "In the world as things are today, such a thing is absolutely out of question."

Have We Ever Tried It?

But have we ever tried it? Have we, so far as we ourselves are concerned, done our best to safeguard our children from things that would mar and stain their lives? If you and I tried, honestly and faithfully tried to do that, it would not be long before others would be trying, too; and when we all put the best there is in us into the great work of bringing up boys and girls that will be clean and good and true, we shall see a different world morally.

The other night we had in our home a little bit of a chap only seven years old. That boy knew all about what was done at that disgraceful fight in Chicago. All the terms used by the sporty class were at his tongue's end. It made my heart ache. What kind of a home did that boy come from? We can make a pretty good guess. And the terrible side of it is that they tell us that 50,000,000 people were listening over the radio that night.

The home is where the better world for which we long must begin. Our boys and girls must have a chance to grow in their heart-life, as well as in their arms and their legs. And when we succeed in that, we shall see a stronger, healthier race of people than now lives on the old earth. God speed the day!



$745
2-DOOR SEDAN

Now-

Your dollar buys more than ever

with a Finer Pontiac Six selling at lower prices

Ever since it flashed into the field, the Pontiac Six has won its success on the basis of dollar-for-dollar value. When introduced, it represented a new idea in low-priced sixes—the idea of truly high quality in design, performanceandappearance. And it won world record public acceptance almost overnight.

Yet now your dollar buys more than ever—for today's Pontiac Six embodies many improvements in the original Pontiac Six design. It is now offered with beautiful new Fisher bodies in new Duco colors and every body type has been reduced in price!

You may have heard that the Pontiac Six is a marvelous car for performance.

You may have admired the sparkling beauty of its Fisher bodies.

You may have read that a new measure of value was created by this finer Pontiac Six selling at lower prices—but until you actually see today's Pontiac Six, and actually sit at the wheel, you cannot know how fine a six can now be bought for $745!

New lower prices on all passenger car body types

The Chug, Chug, Chug

That Means So Much and Costs So Little!

WITH the sturdy, rugged McCormick-Deering Engine pumping the water, running the washing machine, etc., you *know* the work will be done. And without the engine overheating or running up the operating expense. Every part of the McCormick-Deering is built for steady, important work.

Dirt, sand, and trash mean little to the McCormick-Deering, as the crankcase is enclosed. The cylinder is removable; in case of wear a new one can be inserted at low cost. The large water hopper permits a generous supply. The engine operates at the most efficient temperature.

Thousands of McCormick-Deerings have been chugging along for years, and the satisfaction they're giving is reason enough for you to go to a McCormick-Deering dealer when you need this kind of power. Sizes: 1½, 3, 6 and 10 h.p. Most dealers are in position to show and supply these engines on a minute's notice.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

Is Planting Patch for October Strawberries

STRAWBERRIES and cream in October! And they certainly were good! The other day I searched my patch in the hopes of finding a chance berry from a late blooming plant, as sometimes occurs, but I was doomed to disappointment. Imagine my surprise when a few hours later my father paid us a visit and brought with him a superb quart of everbearing strawberries bought on the Franklin, Pa., market. They were delicious and fully the equal of any June berries I ever tasted. Next spring we shall plant some of these, partly for home consumption and partly as a commercial venture in connection with the roadside market. Yields are not comparable to the spring sorts, picking is more tedious and dry weather may prove serious in late summer. Marketing in pint boxes should aid in the realization of maximum returns.

This reminds us that the weed battle in the new berry patch may not yet be won even the hard frosts are in season and have killed many of these plant pests. Chickweed and some others flourish during the cool fall weather. About September first I thought my troubles almost over in this respect, but now find several hard days' work with the fingers and the sharp little half-moon hoe will be required to put the patch in proper shape for winter and for mulching.

Growers of cucumbers in frames and greenhouses will be interested in the statement by the Massachusetts Market Garden Field Station that young cucumber plants receiving too much nitrogen are inclined to produce practically all female flowers. Lack of pollen then results in failure of many blossoms to set fruit or in misshapen cucumbers. The following suggestions are quoted from the same source. "In case the soil is so fertile that only a few male flowers are being produced, later plants may be started in pots and allowed to grow up so that the foliage becomes quite yellow. Such plants produce practically all male flowers. These pots can then be distributed in the greenhouse to provide pollen for the bees to carry to the female flowers. When preparing the beds in which the plants are to be set, phosphate and potash fertilizers should be put on before setting, but soluble nitrogen fertilizers should be put on before the plants are starting to flower. Then nitrogen fertilizers should be put on sparingly but should be repeated every two or three weeks.

From various sources comes favorable comment on Sunshine sweet corn, a comparatively new one, developed at the North Dakota Agricultural Experiment Station. It is reported to be earlier, larger and of about the same quality as Golden Bantam. Several seedsmen expect to offer this variety next year. It is a promising novelty.

Some growers of quality celery are wrapping almost their entire output in parchment paper. This is entirely apart from the celery heart idea and is practically the only way to insure really high quality celery reaching the consumer at its best.

A dealer who twice a week buys a truck load of mixed produce in Altoona and sells to stores in a town 50 miles distant stopped here on his return trip. In the bottom of the practically empty truck, altogether unprotected, lay a bundle of one dozen celery, beautiful, long, showy stuff weighing well over a pound to the stalk. That celery had ridden several hours without wrapping or other protection on a sunny, breezy day and when picked up was as stiff and straight as a bundle of lath. It was still as salable as it ever was, even if hardly eatable. This dealer complained that "home-grown celery would not hold up." The only way out that I can see is to wrap with parchment, harvesting our celery in its prime, before it has become over mature and hardened in fibre. Incidentally some prefer No. 30 rubber bands to twine or braid for tying wrapped celery.—G. S. W.

Rambles of a Pennsylvania Fruit Grower

By S. W. FLETCHER

XXV The Sebastopol Gravenstein

(Continued from last week)

THIS light soil requires heavy fertilizing. Formerly, horse manure was used, but the replacement of horses with tractors has brought about the general use of chicken manure. This is secured from nearby Petalauma, which calls itself "the world's egg basket," and proclaims that it is the first county in the United States in poultry production, with products valued at $15,000,000 a year. Poultry manure may be had for cleaning up the roosts and hauling, or it may be bought for five dollars a ton. An average application is two to five tons an acre annually, but some growers apply ten tons, and a few as much as thirty tons. Too much poultry manure makes a rank growth of tree and the fruit, tho large, is poorly colored and does not stand up well in shipment.

Here, as elsewhere in California, spraying is not such a vital problem as it is in the East. Few of the growers spray over twice a year. The codling moth is not serious; even unsprayed trees have less than ten per cent wormy fruit. There is no scab and but little aphis. Nicotine is not used. If aphis does become threatening an oil spray in late spring controls it. Mildew may be bad in rainy years. The standard spray schedule is a clean-up spray in late fall, using lime sulphur and petal-fall spray, using wettable sulphur with a spreader and lead. Lime sulphur is not used for the petal fall spray because the Gravenstein is russetted by it. Spray guns do not find favor here for the same reason.

The crop is thinned severely when necessary. Growers are finding Gravenstein a poor pollinizer and some large blocks are being partially top-worked to Jonathan and Delicious as pollen producers. Unlike the fruit growers of the Santa Clara Valley, bees are valued as pollinizing agents. Growers pay two dollars a colony for their services during the blossoming season. There has been but one complete crop failure in twenty-five years; this was in 1925. The fifty per cent crop of this year will yield 650 cars, as compared with 1200 cars last year. A good yield here is ten boxes a tree and 700 boxes an acre.

Sales Policy Is Muddle

Normally, the shipping season is July 5 to August 10; it is ten to fourteen days late this year. Practically none of the growers pack on the farm; the fruit is hauled to one of the many central packing houses in the district.

The sales policy in the Sebastopol district is a complete muddle. Here is an area having practically a monopoly on one of the best opportunities in apple growing, yet it has allowed its sales methods to become so completely demoralized that very few growers have made any money for a number of years. With but one variety, a waiting market and a compact area, surely conditions are exceptionally favorable for profitable cooperation, but the old Adam in human nature has prevented this.

The Sebastopol Apple Growers' Union was organized fifteen years ago, with a membership of eighty-five per cent of the growers. All went well for a number of years while sales were on an f. o. b. basis, then the directors became careless, doubtless thinking that they could sell without making any special effort to expand the market. When the pinch came, they turned to consignment. This was a fatal mistake. The split came in 1921 and only about thirty per cent of the membership stayed with the union. This gave the dealers a chance to come in. Now there are three struggling cooperative associations and eight packers who buy or solicit consignments. The result is a distribution that is competitive with itself. Last year the union returned only forty-two cents a box to its members; many of the independents got only seventeen cents, and some got red ink returns. Since it costs at least fifty cents a box to produce Gravensteins and put them on the packing house floor, there is little encouragement in these returns.

Hope to Cooperate Soon

An attempt is now being made to pull these clashing groups together in the "California Gravenstein Apple Growers," a non-stock association composed of representatives of each of twelve "units." A unit is a cooperative association, dealer or grower who ships thirty or more cars. The association, or Central, will not itself pack or sell the fruit, but will establish a brand, prescribe the grade, set a minimum f. o. b. price and act as a clearing house, meeting daily during the shipping season to report sales, so as to prevent dumping. It is not effective in any year unless eighty per cent of the expected pack is signed up to be sold thru one of the units represented in the association. This looks like a rather impracticable scheme, but it may lead to something better later on when, as one of the exasperated growers sweetly put it, "a few strong-minded and stiff-necked personalities who have prevented effective cooperation thus far, have either been eliminated or, better yet, have passed to their reward."

Burbank Caught Popular Fancy

I stopped in the nearby town of Santa Rosa to spend a moment by the grave of Luther Burbank, who lies under a widespreading tree of the home he made famous. Contrary to the popular conception, he was not a great plant breeder. He made no records, contributed practically nothing to the science of the subject and his productions that are really valuable are few indeed. Many other men among his contemporaries have made far more notable contributions. But he caught the popular imagination and created a widespread public interest in plant breeding. A well-meaning man, it was his misfortune to be over-exploited by the ubiquitous California boosters. Not the least of my regrets about Luther Burbank, and the trait of his character that I find most difficult to understand, is that he died an avowed agnostic, questioning the existence of the Creator who fashioned the plants with which he worked.

So now it is good-bye California and we travel northward thru surpassing beauty of land and sea, on the Red Wood Highway. From time to time I have launched a few harmless shafts of sarcasm at California, at its over-weening self-sufficiency and its insistence that all climate outside of California is but a pale copy of the real thing. Nevertheless, at the parting of the way, I take off my hat to a great state which is making good in a large way, and especially in horticulture. I see now why all the newsboys on the trains call out "Fancy California Fruit," even tho occasionally some of it really comes from Pennsylvania. True, I would rather live in Pennsylvania; to which my California friends retort that there is no accounting for tastes.—S. W. Fletcher.

Better Lights Outdoors and in

With these fall days comes the necessity for better lights. It will be dark before you get the work in the barn and outdoors done—are you going to stumble around in the dark or with the dim light of an old lantern?

A modern gasoline lantern, one that will give you a brilliant light, will make your work twice as easy, help prevent accidents and the waste and damage that so often occur when you have to feel your way. They are absolutely safe, cheap to operate and are unaffected by cold, wind or rain.

In the house you can have good lights, too, for the evening reading and sewing. Your "Farm Service" Hardware Man has several different kinds that he will be glad to demonstrate to you to show you what a saving of eyesight good home lights will bring.

Don't forget the electric flashlights. There are times when they are worth a hundred times what you pay for them, for they give instant light that you can use with safety in the hay mow, closet or even around leaky gasoline tanks.

You can get lighting equipment to the best advantage at your nearest "Farm Service" Hardware Store.

Your "Farm Service" Hardware Men

KINNEY SHOES

ONE OF OUR 280 STORES NEAR YOU

$3.98

Women's Patent Leather 3-button pump. Cut-out strap. Good-year welt construction. Leather Cuban heel with rubber top lift. Same model in Black Kid.

$1.98

Misses' Tan or Gun Metal Blucher Oxfords. Rubber Heels. Sizes: 11½ to 2—$1.98. Same model for Growing Girls. Sizes: 2½ to 7—$2.49. Similar Styles in High Shoes—$2.29.

Serving In Shoe Values For More Than Thirty Years

KINNEY can give you more for your shoe dollars. The reason is apparent to more than 6,000,000 Kinney shoe wearers. Making its own shoes in its own five large factories, selling them exclusively in its own 280 stores, this great national institution commands economies impossible to many.

It is not the price that stamps the quality of Kinney shoes. It is an invisible, though tangible, value built into every last, every sole, every stitch. Kinney can give you more because it GIVES and does not mark price as high as quality. Kinney passes on the benefits of its great resources to the shoe wearer.

At Kinney's you are *certain* of fit, *certain* of satisfaction.

There is a Kinney Store near you. You will find there prompt, courteous and efficient service.

Watch your cow's health

ONE or two cases of garget will lop off five or ten dollars from your monthly milk check. Garget is one of the meanest troubles with which the dairyman has to contend. It is no respecter of cows and is just as likely to take the best cow in the row as only a fair milker.

Unless cows with garget are carefully handled, and that means time and work—money to the business farmer—a quarter is apt to be lost, and with it a large part of the sale value of the cow.

One of the most common causes of garget is a poor grain ration. If it is not properly balanced in amount and sources of protein, the milk secreting organs are upset and garget is likely to result. Protein from some sources is notorious as the cause of garget and bad quarters.

UNION GRAINS, the oldest mixed dairy ration, has a remarkable record in preventing inflamed udders. That is why so many dairymen who feed for heavy production use UNION GRAINS exclusively.

UNION GRAINS is mixed right. This feed is not only balanced right in the proportions of protein to carbohydrates, but the protein comes from a variety of sources that will protect the cow's health and keep the epithelial cells (the vital factors in milk secretion) free from congestion and in the pink of condition—so essential for the maximum flow of milk of which the cow is capable.

Feed UNION GRAINS and keep your cows up to a high level of health. It will show in the milk check throughout the year.

UBIKO *Dairy Service Bulletin Free*

We will send our new bimonthly publication, the "UBIKO Dairy Service Bulletin," regularly to dairymen who ask for it. Each issue will contain a helpful article on some phase of dairying written by a recognized authority — also other up-to-the-minute information regarding feeding, health, etc. Write today.

Head of the Department of Dairy Husbandry, Pennsylvania State College

The Clarion C. T. A. Reports

THE Clarion County Cow Testing Association finished its fifth year July 31, 1927, with thirty whole-year members and five part-year members. There were 410 cows in the association during all or part of the year.

Nine of these men were operating with the Venango-Clarion Association and several of the members in the association were in for the first year, otherwise the result would have been considerably higher.

Year	Average no. cows	Lbs. milk	Lbs. butterfat
1922-1923	236.01	5816	272.9
1923-1924	237.18	5341	267.5
1924-1925	208.82	6762	287.9
1925-1926	337.02	7206	309.1
1926-1927	300.59	7159	302.0

The result for the whole-year members is as follows:

Average number of cows in the association	300.59
Avge. per cow: Lbs. of milk	7148
Pounds of butterfat	301.5
Percentage of butterfat	4.2
Value of product	$255.59
Cost of pasture	8.77
Cost of roughage	39.56
Cost of grain	48.49
Total cost of feed	96.82
Value of product above feed cost	158.77
Returns for $1 expended for feed	2.12
Feed cost per cwt. of milk	1.35
Feed cost per lb. butterfat	.32

Two herds with an average of less than five cows exceeded an average production of 300 pounds butterfat.

Following is a grouping of all cows producing over 300 pounds of butterfat. These cows are grouped as follows: Group 1, above 500 lbs. butterfat, 5 cows; group 2, 400 to 500 lbs. butterfat, 26 cows; group 3, 300 to 400 lbs. butterfat, 97 cows. Total, 131 cows.

F. K. Miller, county agent; Rudolph Williams, cow tester in charge; figures compiled by I. O. Sidelmann.

Sixteen herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge. no. cows	Breed	Lbs. milk	Lbs. butterfat
L. O. Hetrick, Mahoning	7.25	G. & R. G., R. H. & G. J.	9617	460.1

Can You Over-feed on Ensilage?

How much ensilage is it safe to feed a milk cow per day?—A. J. B., Crawford County, Pa.

The usual allowance of silage per cow ranges from 20 to 40 pounds per 1000 pounds of live weight. A common amount of roughage is 10 pounds of hay and 30 pounds of silage per day per 1000 pounds of live weight. If you feed your dairy cows a fair amount of grain, say 1 pound of grain to approximately 3½ pounds of milk for Jerseys and Guernseys and 1 pound of grain for approximately 4 pounds of milk for Holsteins, your cows will not very likely over-feed on silage if you give them all the hay and silage they will eat up clean two or three times daily. Clover or alfalfa hay is the ideal roughage to go along with corn silage.—A. B.

Professor Bang Says Abortion Control Plans Ideal

PROFESSOR B. BANG, of Copenhagen, Denmark, a world-wide authority on the control of animal disease, recently referred to the Pennsylvania plan for the control of bovine infectious abortion as ideal. He stated that the use of the agglutination blood test and the separation of the reactors, which are the basic principles of the Pennsylvania abortion plan, constitute the best method of control and eradication of the disease.

Prof. Bang recently came to America to attend the annual meeting of the American Veterinary Medical Association in Philadelphia. During his week in Philadelphia, he visited two herds from which infectious abortion has been eradicated by the Pennsylvania plan. He expressed himself as much delighted with these visits and well pleased with the results which had been obtained.

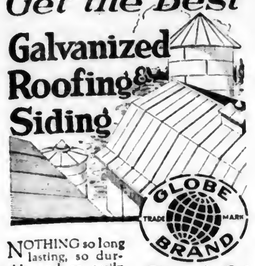
The Pennsylvania abortion plan was recently adopted in the state of Washington and is also being used in other states.

The Bureau of Animal Industry, Pennsylvania Department of Agriculture, developed the abortion plan in 1924 in the hope of finding a practical and effective way to control and eradicate the infectious abortion disease, which takes a tremendous toll from the dairy herds of this state each year.

Plans Farm Exposition

THE Mercer County Board of Agriculture, cooperating with the County Grange and the County Poultry Association, is developing a farm exposition to be held at Hightstown, N. J., November 15 and 16th. Prize premium and specialty lists will be drawn up shortly, with sufficient inducement to attract the best in potatoes, corn, fruit and poultry in the county. In the poultry classes, awards will be made both for show birds and general utility fowls. The intention of the management is to make the show almost exclusively a local affair, so that in the strictest sense of the word it will be an intra-county event, without competition from outside professionals. It is thought in this way to secure the highest educational value from the exposition.

Get the Best Galvanized Roofing & Siding



NOTHING so long lasting, so durable and so easily handled for covering buildings as good Galvanized Roofing and Siding. And you certainly can afford *the best* when GLOBE, the old reliable—offers you its products on a direct mill-to-user basis.

Straight from the Mill that Made It

Make your barns—houses—sheds—silos—corn cribs—grain bins, etc., fire safe, lightning proof, weather proof, rat and vermin proof, with the famous GLOBE Galvanized Roofing and Siding. Tested and proved in your own state by three generations of satisfied users. Made in our own mills, formed in our own shops, subjected to every test possible—and backed by the wisdom of years of manufacturing experience.

Adopt N. J. Farm Relief Program

THE joint legislative conference of the New Jersey Farm Bureau and the State Grange at Trenton, on October 7, was marked by the adoption of a farm relief program that will be of vital importance to every farmer in the state. By practically a unanimous vote, the delegates, representing every agricultural organization and every section of the state, went on record favoring an immediate repeal of the law that exempts automobiles from the personal property tax. This law passed last winter by the legislature is taking from $8,000,000 to $10,000,000 from the tax rateables of the state and the municipalities are feeling the pinch of this loss very keenly.

Another subject of importance to the New Jersey farmer was the appointment of a taxation committee to study the taxation system of New Jersey. It was proven to the delegates that the farm land tax rate in New Jersey is the highest in the United States and that if it is not reduced or made more equitable, agriculture in this state is lost. Thousands of farms in New Jersey are being taxed on their real estate value rather than their ability to produce crops. The contention of the delegates was that farm land should be taxed only in its farm value or its ability to produce crops. The committe, headed by Dr. Frank App and Senator David Agans, Master of the State Grange, was instructed to make a complete study of the whole tax structure in New Jersey and to take steps to bring about a more equitable system.

Two pairs of twins

The marketing of milk and the establishment of a uniform system of barn inspection for dairymen drew fire from the farmer delegates at the meeting. Steps were taken to bring about a uniform system or code for the state regarding the inspection of dairy barns. Under the present system the State Board of Health has no control on the inspection of barns where milk is produced. The local boards of health in the various municipalities have sanitary codes for milk production.

Ask Membership on Milk Committee

The convention also went on record as asking for membership on the Milk Marketing Committee of the Department of Agriculture. It was the contention of the milk producers that the big milk marketing corporations have a greater representation on this committee than the producers, and the final action of the convention called for three representatives on the committee with one from each of the three breed associations. A request will be made to the milk marketing committee to have these farmer representatives put on the committee on an equal voting basis as the present members.

Compulsory automobile insurance was again endorsed by the farmers as the only means of protecting innocent persons for loss of property and for injuries sustained by careless drivers.

The subject of an honest pack law was discussed, and a bill this winter to cover this subject is likely to be introduced and its passage demanded.—Amos Kirby.

How many Cows do You Need — *to make a good living?*

That's a live question today. And more than ever before, the answer depends on feeding for highest profits *per head.*

A dairyman in Jones County, Iowa, cut his herd from 20 cows to 13 and made 50% more money the third year! You too can make more money with less work and worry, by following modern feeding methods. Improve your stock — but first learn how to feed better animals profitably. Mail the coupon for big free booklet containing practical, tested rations for dairy cows and other farm animals.

Only genuine smoke can give a genuine smoke flavor

"We used Old Hickory Smoked Salt and our ham and bacon are well cured. The smoke flavor is right through the meat; not just on the outside."—*Mr. and Mrs. C. Earl, Swan Lake, Manitoba.*

Nothing but genuine wood smoke can give a genuine wood smoke flavor to your meat. Old Hickory Smoked Salt does this and more because it is the highest purity meat salt smoked with genuine hickory wood smoke. The delicious smoke flavor goes all the way through the meat because the smoke penetrates every tissue.

A million farmers have proved that Old Hickory does away with all the fire risk, dirt, work and excessive shrink of the smoke-house method. It gives a better cure at less cost and a rare old country flavor that fairly makes your mouth water.

You, too, can get that flavor by using the original and genuine smoked salt. Your dealer can supply it. You will know that it is the original and genuine when you see the yellow and blue label on every drum—with the Old Hickory Trade-Mark exactly as it appears here.

When Black Witches Ride and White Ghosts Stalk

OF ALL gala seasons, none finds us with a greater longing to be "a child again, just for tonight," than does Hallowe'en. No memories are more fixed in my mind than several Hallowe'en parties. Let me help you plan a little entertainment for this occasion soon to be with us.

The attic, the basement, the barn floor, or the living room well emptied of furniture makes an ideal place for this frolic. Start off with mystery by writing your invitations with white ink on black cards. You might, even cut witches riding on broomsticks using a black construction paper.

Decorations for the chosen place may include shocks of corn, real pumpkin jack-o'-lanterns, autumn leaves, black cats, witches and ghosts. Have candles burning here and there for lights. Very attractive holders may be made by scooping the centers out of nice fat carrots. Potatoes or turnips make good holders, too. Large bouquets of autumn flowers add charm to the place of meeting. Light the yard and house entrance with jack-o'-lanterns and station ghosts at various places in the yard to point the way to the house.

When all guests have arrived, a witch (the host or hostess) appears in the dimly lighted room and separates the players. Then partners may be chosen by looking at the shoes. There is weird, slow music and a grand march follows. Do not have guests uncover until all stunts are ended, then let the unmasking be done one at a time.

The Mystic Rhyme

Blue being the well-established color for love, use a ball of blue yarn or cord to play the mystic rhyme. Give each guest in turn the ball, and let him toss it out of an open window, keeping hold of the loose string. All repeat slowly with the hostess, "If Fate be kind, my Fate I'll find, on the ball of blue I quickly wind." When the end appears, the guest will find something tied to it signifying his or her future. A helper is on the ground who attends to this trick, and some things appropriate are: a coin for wealth, airplane for flyer, ring for marriage, bluebird pin for happiness, potato for a cook, thimble for the bachelor, fool's cap for the jester, mitten for the flirt, and so on.

Give each guest in turn a teaspoon of rice and have her run 'round the room three times. Those spilling the fewest grains will be first to marry. Those spilling a great deal will have a stormy matrimonial career. Persons spilling all will never marry. Reveal the fortune after all have run, and each is holding his spoon.

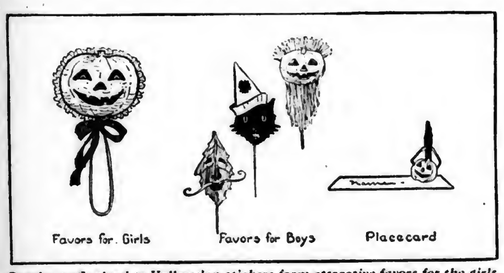
Let Each Learn His Fortune

Another jolly fortune game is played using three saucers. Place sugar in one, lemon juice in another and salt in the third. Guests are blindfolded one at a time and led to the saucers now in a row. The blindfolded one learns his fortune by touching a saucer. If he touches the sugar, "The future will be sweet for him." Salt brings health and long life, lemon points to a romance of sourness. Another saucer game uses milk in one, bringing wealth; water in the second, poverty, and the empty saucer implies single blessedness.

Quite the nicest way to serve the midnight lunch is to arrange a very gay table searing all the guests at once. If this cannot be done, then let them sit in a circle on chairs or right on the floor, and have witches do the serving. Let them bring first brown bread sandwiches with cream cheese. Use paper plates decorated with Hallowe'en stickers. Cups of paper with sticker decoration will hold fine cold cider. Pass doughnuts on a broomstick and serve pumpkin pie on a nice big cabbage leaf. Buttered pop corn will wind up a jolly party.

The accompanying illustrations may be suggestive for table decorations. If your local shops cannot furnish the helps needed to make these attractive trimmings send a self-addressed envelope to Mrs. Stewart, care of Pennsylvania Farmer, 261 South Third St., Phila., Pa., and let her advise you where you may secure such equipment. — Betsey Ford.

An easily made centerpiece is formed of orange and black crepe paper, the wire arms of the paper figure at the top holding a cat and a bat



Powder puffs glued to Hallowe'en stickers form attractive favors for the girls. The boys get jolly stickers fastened to pins to wear on coat lapels. A tiny black candle attached to a white card lights the way to each guest's place

Black cats fashioned from paper, cattails and a paper jack-o'-lantern covering the light add to the festiveness of the crepe paper tablecloth

"Just Two Cups" Was His Secret

PROBABLY there are as many ways of making a cup of good coffee as there are women—or men—who make it. A cup of good coffee tops off a meal and leaves a finished taste. I have had coffee served me that was rank when everything else was of the best.

Scientists tell us that if coffee is served immediately after it is made there is nothing harmful about it, but coffee that stands or boils too long is dangerous.

Last winter, while having a day's train journey across my state, I recalled that I was never served poor coffee in a dining car. The coffee was delicious and I asked if I might interview the cook on the subject of coffee.

I was taken to the kitchen and learned his way of making excellent coffee. He never makes more than two cups of coffee at a time and always serves it immediately after three minutes of percolating.

"But," said I, "what if an irate passenger is in a hurry and cannot wait for that coffee to 'perk'?"

"Oh," replied the god of the kitchen, "that particular passenger HAS something to kick about then, because he gets coffee that has stood, perhaps."

That cook serves from thirty to forty each day for lunch and he makes but two cups of coffee at a time. I looked at his small coffee pots—and as soon as I got home I visited a hardware store and purchased two small coffee percolators, each holding two cups of coffee. (They look like toys.) I had never known before that coffee pots of that size were made.

The coffee "perks" so much more quickly in the small pot and I have decided that coffee made in small quantities is superior to that made in the large coffee pot.—May H. Mumaw.

Men's Ties Clean Readily

A BIG tie rack full of soiled and mussy ties is enough to cause any man to lose his humor, especially when they can be cleaned and pressed in a "jiffy."

If you have time and patience to give them many repeated airings, then gasoline is as effective as any cleaner. I prefer to use a non-inflammable cleaning fluid which can be secured at any drug store. Often the soil is just where the tie has been handled in tying. This comes off quickly with application of the fluid in long, swift rubbing motion. Many crepe ties keep their shape perfectly after being washed and pressed while damp.

Always press ties with a paper over them. It is better than cloth. Expensive ties that have faded a bit may be turned by ripping open the neckband, taking out the padding and just turning them. I do not change the hem on the outer edge.—Edith R. Dilts.

Do You Know That—

A bit of thyme, butter and milk put a good taste into canned lima beans?

• • •

The addition of sugar, bacon drippings and toasted or fried bread cubes will lift corn a variation out of the class of ordinary food?

• • •

Oranges and lemons will be much juicier if rolled and soft before extracting the juice?

• • •

The juice of tomatoes, well seasoned and sugared will make a delicious salad when stiffened with gelatine?

• • •

Home canned sausage can be made to taste quite sufficiently if simply heated in a white sauce?

• • •

Stale bread can be utilized by slicing and covering with grated cheese, browning in the oven and serving with white sauce?

• • •

Cheese put thru the food chopper is just as satisfactory for most things as grated cheese?

• • •

Grated potatoes raw with the addition of an egg, seasoning and a very little milk make an unusual pancake?

• • •

Stale bread, soaked in cold water, and added to the above will make it even better, and added to ground meat will increase the number of meat cakes as well as give a distinct flavor?

• • •

A bouillon cube added to canned soup adds to the flavor and nutriment?—Katherine W. Hill, Pa.

Chilly Days Bring Warmer Clothes

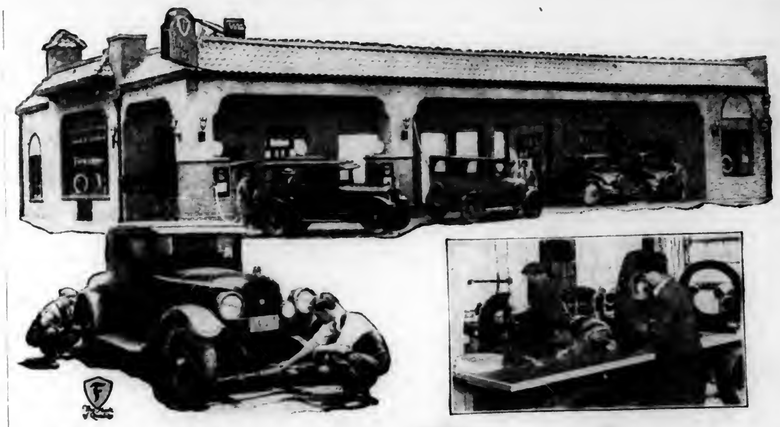
Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist; patterns waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5930.—Four sizes: 2, 4, 6 and 8 years. A 6-year size will require 2 yards of 36-inch material. Pattern, 10 cents.

5911.—Three sizes: 16, 18 and 20 years. An 18-year size will require 3 yards of

40-inch material with ¼ yard of contrasting material for facing on collar, cuffs and belt. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.



Firestone Dealers

Are Trained and Equipped to—

Save Motorists Money and Serve Them Better

Firestone Dealers have attended Tire Educational Meetings, conducted by factory trained men, throughout the country, and have been shown by means of motion pictures, charts, tire samples and complete engineering data, the details of tire design and construction.

Already almost a thousand of these meetings have been held and they are still in progress—giving Firestone Dealers in every important city and town in the United States the advantage of greater tire information.

Tire Dealers who have such up-to-date knowledge of the construction and care of tires will naturally lead the way in providing the best service stations with facilities to help you get more mileage out of your tires, thus saving you money and serving you better.

The Firestone Dealer receives fresh, clean stocks of Gum-Dipped Tires—and he can also secure Oldfield Tires, designed and built by Firestone, direct from the nearest of 148 Firestone Factory Warehouses. Take advantage of these fine facilities and secure the comfort, safety and economy that only Firestone Gum-Dipped Tires can give you.

Light Up!

Electric Light and Power *for only $295!*

No farm is modern without electric power. Why should you try to get along with old-fashioned oil lamps and lanterns for lighting and with hand power for all your small machinery? Oil lamps and lanterns are dangerous around a barn and oil lamps are unsatisfactory in the home. Do away with them by installing a Genco Light Generator Light and Power Plant No. 600 is efficient and economical. Its gasoline motor can be used to furnish power for many small jobs while it generates electricity—that means a saving in operating cost.

These Suggestions Will Help You with the Decorations

The room should be weirdly decorated with black and yellow crepe paper, owls, bats and cats. Grinning jack-o'-lanterns dimly lighted will produce a rather spooky effect. If you find you're unable to secure a supply of crepe paper and if you find it impossible with the materials you have to fashion the owls, the bats and the cats you'll want to use another kind of decoration.

If this is the case, then I'd suggest that you stroll off to the woods a few days before Hallowe'en and gather autumn leaves. They make very, very attractive decorations. You may arrange the leaves in urns (of course, any sort of crock or jar will serve the purpose) about the room and when the lights are dimmed you will discover the leaves throw queer, fantastic shadows on the walls and ceiling.

Decorations for a Hallowe'en party would not be complete if you neglected to go out into the cornfield to gather the familiar shocks of corn. These will be used to best advantage if they are placed in each of the four corners of the room. At the base of each shock you'll want to place a fat pumpkin.

Again, I wish to remind you not to have bright lights in the room for your decorations will be much more effective with the lights dimmed. You'll want to have two or three of your friends standing idly around dressed as ghosts to greet the guests as they arrive. At the door of the room where the party is to be held another ghost is placed. A white kid glove which has been filled with sawdust, iced and put on a stick, is

Here is an idea for a doorway decoration

extended toward the guest. The guest, supposing it to be the hand of the ghost, takes it. As he touches the clammy hand he will experience uncanny shivers.

Ghosts and Witches Delight in Playing These Games

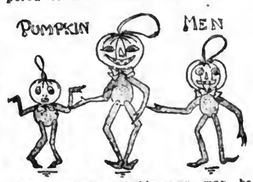
Spirit March—

When all the guests have arrived in the dimly-lighted room, a witch appears on the scene to take care of the games. First there is the grand march of the spirits. Following the march a number is pinned on the back of every guest. Every person is given a pencil and paper and told to write the name of the person opposite the number. A prize is given to the guest who identifies the most persons.

Three Fates—

The guests are then directed by the witches to sit in a circle to play "Three Fates." There is a witch for every one of the "three fates." One goes around the circle and whispers the name of a girl to every boy and the name of a boy to every girl; the second whispers the place of meeting; and the third whispers when they will marry. After the witches have been around the circle, every person repeats what has been whispered to him. This creates much

Apparently the trees are enjoying this solo, too.



These comical pumpkin men may be tucked in anywhere among your decorations

laughter, especially when the timid guest says, "My future wife's name is Mary. "I shall meet her at a skating party in July and we shall never marry."

Telling Fortunes—

Tell fortunes in this way. Stretch a cord tightly across the doorway and attach other cords from which are suspended a doughnut, a ball of cotton, an apple and an orange. Kneeling and with eyes blindfolded, the players endeavor to snap one of the swinging objects. If the orange is caught, the fateseeker will enjoy wealth; if the doughnut, life for him will be sweet and easy; if the apple, happiness is in store, but anyone biting the cotton will die unwed.

Brownies—

Provide wire, tissue-paper, mucilage and so on, and see who can in fifteen minutes fashion the cleverest peanut brownie. Allow every person to choose the unshelled nuts which he wishes to use. One large peanut forms the body. Small nuts are used for the head, arms and legs. Wire the peanuts together. With tissue paper and mucilage make a dress. A prize may be awarded for the best.

An Obstacle Race—

Obstacles such as pillows, chairs and so on are scattered here and there around the room. Four contestants are allowed to walk in and out among the obstacles. Then they are blindfolded and are told to repeat the performance without touching any of the obstacles. Meanwhile the objects have been removed.

A Rocket Game—

Every answer to these questions contains the word "rock." Give the guests slips of paper with the questions and blank spaces for the answers.

1. A song babies love (Rock-a-bye).
2. An important spot in early American history (Plymouth Rock).
3. A kind of fowl (Buff Rock)
4. A kind of melon (Rocky Ford).
5. A hymn (Rock of Ages).
6. A plaything for children (Rocking horse).

If you are interested in making any of the decorations illustrated on the page, let me know. All four can be made from a combination of crepe paper and cardboard. If you'd like to know how to make these novelties, write me. I'll be glad to give you more detailed information.

OUR YOUNG PEOPLE'S FORUM.

Our Hallowe'en Make Believe Party

It Wouldn't Be a Party Without Refreshments

Peanut Butter Sandwiches
Nut Cookies Fruit Cider
Candy Cake

In making the sandwiches it is best to use crackers but if this is not possible you may substitute wheat bread thinly sliced. The peanut butter spread is delicious.

* * *

At this time of year you may have quite an assortment of fruit. By all means have apples. I'm sure most of you will be able in addition to have at least two of the following fruits—bananas, grapes, oranges, pears, dates.

NUT COOKIES

½ cup butter substitute and add
1 cup sugar, gradually
2 eggs well beaten
1½ cup flour, sifted with
2 teaspoons baking powder
½ teaspoon salt and
2 tablespoons milk and
1½ cup flour and flavoring. Add
2 cups chopped nuts

Work until creamy—

Place in a cool place until chilled. After chilling you will find the mixture to be quite stiff. Take a small portion at a time—place on floured cloth—roll until thin as paper. You may then shape your cookies as you wish. Place on greased tin and bake about 8 minutes in a moderate oven. This recipe makes five or six dozen cookies.

MOLASSES CANDY

2 cups molasses
1 cup sugar
1 tablespoon vinegar
Butter size of a walnut

Boil ingredients together until mixture will become brittle when dropped into cold water. Remove from fire. Stir in one-third teaspoon baking soda. Cool in buttered pan sufficiently to pull.—Florence Engleman, (X), Bucks County, Pa.

CHOCOLATE CAKE

2 cups granulated sugar
½ cup butter
1 cup buttermilk
4 eggs
¼ cake chocolate
1 teaspoon baking soda
2 cups flour
1 teaspoon vanilla

Cream butter and sugar. Now add egg yolks and melted chocolate. Mix baking soda in buttermilk and add to the creamed butter. Then add sifted flour, lastly fold in egg whites beaten stiff. Flavor with vanilla. Bake in layers. Ice with a white or chocolate icing.—Annabelle Seltzer, (X), Schuylkill County, Pa.

HICKORY NUT CAKE

1 cup sugar
2 eggs
½ cup butter
1 cup milk
2 cups flour
1 teaspoon baking powder

Beat all together and add 1 cup chopped hickory nuts and teaspoonful of vanilla. Bake in moderate oven.—Inez Vanderpool, (X), Bradford County, Pa.

I'm Giving You An Extension

DEAR FORUM BOYS AND GIRLS:—This week the Forum page is devoted entirely to our Make Believe Hallowe'en Party. I do hope you have a good time arranging the decorations, playing the games and preparing the refreshments.

When the first announcement about the party was published, if you'll remember, I promised to announce the costumes you'll wear. The list will read something like this:

Philadelphia County: John Smith, (X), clown.

Since many of you are going to wear your costumes to a real party several have asked me not to publish the list until after Hallowe'en. Therefore, the list will not be published until the first issue in November. This gives all of you more time if you wish to enter the contest. Just as soon as you decide the kind of costume you're going to wear, write and describe it to me. There will be prizes awarded just as tho it were a real party. I'll give you until Hallowe'en to mail your letters. I wonder who the winners will be this time?

THE FORUM EDITOR.

Did you ever see the old witch's house? Notice the tiny lantern hanging in the doorway, the owl on the roof, the pumpkin boy in the yard.

PASSING EVENTS IN PICTURES

(Copyright by Underwood & Underwood)

1.—Ruins left in the wake of the four-minute tornado which struck St. Louis, Missouri, a few weeks ago. Several thousand workmen are clearing away the debris.

2.—Freshmen at Wellesley College are not allowed to have automobiles, but that doesn't worry them. They ride bicycles.

3.—Lloyd Lillie, a nineteen-year-old Boy Scout, of Portland, Oregon, is now a full-fledged Indian Chief, with the name Chief Eagle. He and President Coolidge are the only Americans so honored by the Blackfeet Indians of Montana.

4.—Captain Cyreno Brett, United States Army, holds a unique record—the altitude record for five-ton tanks. Captain Brett has driven his tank over twenty-seven pounds of TNT. The explosion blew the tank five feet off the ground. Captain Brett is called "the Army's most durable soldier."

5.—The palace of President von Hindenburg in the Wilhelmstrasse, Berlin, Germany, is set in a beautiful garden. It formerly belonged to the royal family of Prussia. President von Hindenburg celebrated his eightieth birthday recently.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

Continued from last week

By A. E. DEWAR

The Story Thus For

"BOY, I'm your uncle," he said. How I stared at the roughly dressed backwoodsman who had forced his way into the house. I reckoned myself a young gentleman of Philadelphia. Could kin of mine be nothing but a trader of the frontier?

It was true enough. Worse yet, it was he who had supplied my income since my aunt died. And he planned to take me back with him some time to Carolina.

Some matter connected with the Regulators, rebels against the authority of His Excellency, Governor Tryon, called him back before he could carry out his threat to take me south with him.

Circumstances made it necessary for me to leave Philadelphia sooner than I had ever anticipated. Within a few weeks from the time of my uncle's unexpected visit I was well on my way to Carolina, with a message to Hunter, Chief of the Regulators. Many and varied have been my experiences on this journey. I have made strange acquaintances and at times it has been difficult for me to distinguish friend from foe. Krafft, a friend, handles me roughly during a narrow escape from the king's soldiers and I become angry.

I finally decided to leave Krafft and travel the remainder of the journey alone. I did not, however, travel any great distance by myself. It was two days later that I came upon Zion Alexander.

Alexander quarreled with one of Governor Tryon's men and for several days after we kept to the side roads. After parting from Alexander at Fort Lewis, I met another traveler, Haddock by name, who was in sympathy with the Regulators. From him I learned more about the situation in Carolina. That night we stopped over with Jim Butler, a friend of Haddock.

That night a group of Colonel Fanning's men seized Butler on a charge of treason. Haddock and I escaped and gathered together about forty Regulators who followed Fanning's men to Jackson's place where they were resting for the night. They released Butler. After I received a fresh mount I continued on to Hetharaba. I reached Hastings about noon the next day completely exhausted. As I ordered a fresh horse I dropped to the ground to take a two-hour rest.

When I reached Hetharaba at dusk, I stumbled into the tavern and into a group of Fanning's men. Krafft appeared. As I was too weak to go on, I gave Krafft the message to Hunter and collapsed. When I came to I was a prisoner.

Fanning tried to trick me into revealing my message to Hunter and when I refused to tell the secret ordered me to be shot. Just when the word to fire was about to be given, Major Dunston, whom I thought I had killed in a duel in Philadelphia, appeared and ordered the execution stopped. I was sent back to the guardhouse. Because Fanning had offended him, Dunston made plans for my escape.

---

cautiously and started for the tangle. This would be poor business if the alarm went on, for I could not run faster than a snail in that jungle. Yet if I won thru it, I would be past the sentry and for the moment, at least, safe.

In a second I was forcing my way thru the brush. What panic seized me as those thorns first gripped my clothing. There was an almost overmastering impulse to run, to break thru at any cost. Somehow I managed to restrain myself.

One step at a time I advanced, stopping between each step to disentangle briers from my clothes and to open a further passage thru the brush. Every sound I made was alarmingly distinct in the quiet night. Once a dog began to bark, and I thought I was lost. Some soldier, angered at being waked from a sound sleep, swore at it and the dog subsided.

How long I was getting thru the patch is hard to say. I remember that I began to wonder if I could make it thru before the guard was changed and my escape discovered. Yet even while I was thinking this, my outstretched arms found nothing but space. I freed myself from the last embraces of the thicket and stepped out in the deeper darkness of the grove.

THRU this I went slowly, bearing to the left and bumping my head a score of times against trees I could not see in the dark. It was only a few minutes, however, before a gray light began to show up ahead. Cautiously I came out into a narrow road, deep rutted, with star light faintly showing its grassy outline and marking the deep shadows of the trees on either hand.

I was well past the camp and accordingly set out briskly to find the lane the Major had told me of. It appeared promptly after I had walked ten minutes and I followed it back into the woods again. Fifty paces into the woods and a horse nickered. I got him in an instant, pulled loose the tie-rope and led him hastily to the lane. Then, altho with some fear of meeting Fanning's horsemen on their rounds, I walked him back to the main road and turned south. Dawn found me still riding hard, pretty sore about the thighs, but south of Tryon's camp in Wake County, out of the immediate danger zone and still free.

TOWARD noon, I stopped at a tavern, got something to eat and a bit more to put in my pocket, parried the inquiries of the tavern keeper as to my business and went on a few miles. Where thick woods came down to a creek, I dismounted, led my mount back a mile from the road, unsaddled and hobbled him and lay down to get some of the rest I needed.

Yet it was an hour or more before I could go to sleep. The events of the last few days kept racing thru my mind. I told Fanning he had made a Regulator out of me, yet in retrospect I was not so sure. Fanning, I felt, represented the worst of the governor's faction. With the gentlemen of the seaboard, I felt I had a closer kinship than with the backwoodsmen among whom I had been traveling. Perhaps yet I might find a way to make my peace with the governor and in some fashion regain my old position in Philadelphia. With Major Dunston alive and I no longer a fugitive from justice of Pennsylvania, all things seemed possible.

As to my course of action, I was at sea. My course south had, I reckoned, brought me within striking distance of Cross Creek. It occurred to me that I might ride on there, perhaps find Carnes and the powder, and get some word of where my uncle was. Before any final course was decided upon, I needed to have a talk with him.

AS EVENING came on, I started south again, ate and baited my horse at a hospitable farmer's and rode on until late. Then I repeated my practice of the day before, and went deep into the woods to sleep.

The next day I found the road I followed tending to the west and I followed it, since west was my ultimate direction and since I dared not ask too many questions. It was still early morning when a man on a thin pony and preceded by a lightly loaded pack horse came into the road from a lane leading from the south and took the road ahead of me.

He looked more like a back country man than the small farmers I had met on the road south. Coonskin cap, dirty buckskin shirt and leggings, moccasins in the stirrups, and a long Decker rifle balanced across the saddle in front of him stamped as of the frontier. My relief at seeing someone who pretty obviously was not likely to be of the governor's party made me greet him like an old friend.

He waggled his gray whiskered jaws and spat before he answered me, and his eyes took me in very carefully.

"Where's your gun, young fellow?" he asked. "Taint safe to go traipsing around these parts no more without something to give you authority."

I told him that I had none, and that it and other things had been taken from me by force. Made cautious by the man's own caution, I took care not to say whether Regulators or the governor's men had robbed me. In conclusion, I asked him if I were on the road to Cross Creek.

At this, he swore violently. "Just came from there," said he, "and if you take my advice, you'll stay away. A gang of confounded militia men prowling around and asking questions that ain't none of their business. Will you believe it, they wouldn't sell me even a flash of powder. Claimed the governor had forbid anybody to sell powder or ball till he said different.

"By cracky, I never took no part in these squabbles. I don't like these farmers any better than I like sheriffs. They scare out all the game. Figure next spring mebbe I'll go over on the Holston or maybe farther, where Dan'l Boone aimed he was going last year. But if that blamed governor won't let a man have powder to earn an honest living, danged if I ain't got a notion to ride up north to have a shot at him just for luck. You can tell Mr. Tryon, if you meet up with him, that old Jarvis Jennings is a mean man to cross."

There was little chance of my meeting the governor I told him, since I had just escaped out of Fanning's hands. Jennings nodded.

"Plenty of fighting due soon, I reckon. My idea is that I'd like to see the Regulators lick. If Tryon beats and the sheriffs stay in office and rob and shreve like they always have, about this whole back country'll just pack up their traps and go over the mountains. That means a longer way for me to go to find good game country and a longer way to pack my skins back to market."

Zion Alexander had said something like this, I remembered. I asked Jennings more about the over-mountain country. It seemed that Boone and others had gone on hunting trips there often. James Roberson, a young fellow from up by the forks of the Yadkin had started out on a trip there the year before. Somebody had said there were even a few settlers on the forks of the Holston. The country didn't belong to North Carolina, either, altho it was hard to tell, so far off, whom it did belong to — Virginia, probably, altho anybody who went there would have to make a new treaty with the Cherokees and maybe the King's Indian agent down on them.

I BEGAN to wonder. Perhaps this trouble of the Regulation would deflect that stream of people who had been coming south to the country across the mountain. For years wagon after wagon had been coming down the great road to Carolina. What if that road were to swing sharply west and take the horde of newcomers across the mountains to this new land?

Jennings shook me out of my reverie with a hand on my arm.

"What's that in the bushes?" he whispered.

As I looked, my companion shook fresh powder into his priming pan and swung his rifle to his shoulder. I followed his gaze into a thicket by the roadside.

"Come out of there with your hands up before I let daylight thru you," ordered Jennings crisply.

The bushes shook, two hands protruded from the top. There was more thrashing around in the brush and then a very ragged man, still with his hands up, stepped out into the road.

"I hope your governor feeds his prisoners before he hangs them," this fellow observed. He retained a certain crabbed humor even tho his clothes were badly torn and his hatless head torn raw with brambles. "Don't take too much credit for capturing me. I was coming out anyway and take a chance on whether the first man I saw held for the governor or the Regulators."

Jennings sniffed. "Put your hands down," he ordered. "I'm getting old and nervous. You couldn't hurt a fly. Seems to me there's a little jerky in my pouch. Here."

He tossed a piece of meat to the ragged man. He nodded his thanks and began to wolf it down.

"Who's been after you?" Jennings asked.

"The whole confounded militia of North Carolina, I think," answered the other between bites. "Got thru Cross Creek all right, but about twenty miles out here comes a gang of them. They chased me like I was a fox, killed one horse for me, and if I hadn't run and dodged and hid like any rabbit, they'd have got me long ago. At that, I think they ran me thru every swamp and every thorn patch in the state."

HE FINISHED the jerked meat and rubbed his stomach. "That makes a new man of me," he declared, "now to business. Do you side with the Regulators?"

"You might say yes," admitted Jennings.

"I'll chance it then. I need a horse and about five more good men. We've got to get that powder back."

"Powder?" I cried. "Why you're —you're Carnes."

He stared in his turn and then began to laugh.

"Sure enough, and you're the Philadelphia dandy who fixed the Major. Well, we've both changed. From the looks, they've been coursing you with hounds, too."

I asked him eagerly about the powder shipment and his face fell. The transfer from ship to barges at Wilmington was accomplished easily. At Cross Creek, Carnes got it unloaded and in wagons for the march across the country. But then—

"I was too slow," I broke in and reproached myself.

"You or Hunter. Anyway we had no guard, and maybe none could get thru Waddell's army at Salisbury. "But it looked safe enough for a time."

A DAY or so out of Cross Creek, however, the convoy was overtaken by a body of mounted men. They began to ask questions—queer ones. Was this the train General Waddell was looking for, the train from Charleston? Carnes had told them no, there was salt in the barrels for Wilcox's posts out farther in the hills.

"The captain swore it looked like powder to him, and tore the lid off a barrel. He said that time I was over the fence and away. There was no use in trying to fight, with only me and the wagoners against that lot."

Now the job was—Carnes was very emphatic about this—to find the line of march of the wagons, and recapture them before they got to Salisbury. For that, men were needed who knew the country and were not afraid of odds.

Jennings had listened to the story in silence. Now he got into action.

"I'll trade horses," he offered. "You take this critter I'm riding and I'll try the pack horse. Nothin' in the packs anyway much, and we'll just hide 'em back in the fork of a tree out of sight. And then we'll do a little riding.

When this was done and we were off, Jennings took the lead. We bore north and west. At the foot of the next steep hill, while the horses walked, he spoke again.

"I figure this is like chasing a rabbit and getting a bear," he declared. "We've stumbled onto something, guess I'm mighty far wrong. There's a train of powder coming up to Waddell from Charleston. Heard about it in Cross Creek. Those fellows you met were ordered out to escort it. Now what I think is that they probably took your wagons, and hit across country to join up with the other train. Maybe they sent word ahead for the first train to wait. And now they're going into Salisbury together."

He began to chuckle. "Unless that powder gets to Waddell, he can't fight, and Tryon's counting on him pretty strong. Unless some of that powder gets to the Regulators, they can't do much. It looks to me as if we had a pretty good chance to spoil a few plans. Them militia fellows will wish they had sold me some powder before I get thru."

We pressed on at a good pace. Twice we changed horses at friendly farmsteads and at each place Jennings made inquiries.

"The White boys?" the farmer would ask. "Yes, I reckon." And he would go on to give detailed directions that meant nothing to Carnes and to me, but that seemed to chart Jennings' course for him.

The sun was sending slanting golden light across red plowed fields that turned to a deeper crimson when Jennings turned aside into a narrow lane and was greeted by the barking of a dozen dogs. We pulled up, at the trapper's signal, and waited.

FOR several moments nothing happened. Dogs snuffled around in front of us, but at a safe distance, back at the little log house, no life showed. I noted Jennings casting repeated but covert glances at a knoll to the right of the house, where a tangle of pea vines covered the ground. Finally he nodded as if satisfied.

"Come on," he said. Within a rod of the house he raised his voice.

"Oh, Jim—Jim White."

A woman came out of the door and stared at us. Jennings spoke first.

"I hanker to see your husband's brother, Mis' White. Is Jim any place around?"

I could see the woman's hands twisting a fold of her linsey-woolsey dress. She shook her head.

"Jim ain't here."

"Will or John would do."

"None of 'em ain't here."

"We'll wait," declared Jennings and swung off his horse. He did not offer to come closer to the house. "Mebbe you can send somebody to tell Jim that Jennings is here and wants to see him on mighty important business."

To this he got no answer. The woman went back in the house. We heard the bar drop.

Carnes began to expostulate at the delay. I was curious. Jennings seemed not in the least perturbed.

(To be continued next week)

Fisherman's Luck

"I think the man you married is a fine-looking fellow."

"Ah, but you should have seen the one that got away."

Activities of Al Acres: *Look out for the backfire, Slim* : : : : : : By Leet

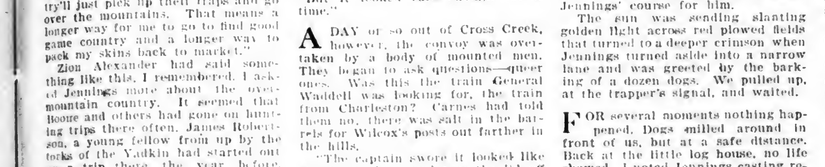
THIS IS REAL STUFF, SLIM! IT ISN'T EVEN DENTED!
LEETO



DEAR LITTLE FOLKS.—It's strange what we can learn about people if we notice what they do and how they do it. Many mornings on my way to the office I see the same people going, I suppose, to their offices, and often there are little things about these unknown friends that tell me something of their dispositions, their likes and dislikes. That really has nothing to do with Lucy Davidson, whose name you see below. She is a big sister of some Little Folks, and she works in a candy store. Did I hear anybody say that would be a nice place to work? Well, I believe Lucy thought so, too. She was always very neat and clean and treated everybody as if she really like them—and I rather think she did. At any rate she liked the bright-colored candies and the gay patterned boxes she packed them in, and she certainly won the picture of health. But when someone asked her what she weighed, what do you suppose she said? I am not going to tell you but you can find out if you will count out the letters which spell her name and take the letters which correspond to the figures on the candy-box lid below. For instance, the figure "6" must stand for the letter "A," since that is the sixth letter in Lucy Davidson's name. You may have to rearrange the letters a little, but when you have once found what they are I think you will know how to arrange them just as Lucy knew which candies to put on the different layers in the box. When you have found this answer, let me have it—either on a postcard or in a letter—so that it reaches me by October 29th.

PLEASE TELL ME HOW OLD YOU ARE, WHEN YOUR BIRTHDAY COMES AND IN WHAT COUNTY YOU LIVE. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all replies to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the October 1 issue (when you followed the path thru the maze of the mulberry bush) is: The letter "S".

The prize winners are: Dominic Casetta, age 12, Hammonton, N. J.; Jane Counsellor, age 8, Quinton, N. J.; Jimmy B. Fulkner, age 8, Bethlehem, Pa.; Helen Hankovsky, age 11, Lemont Furnace, Pa.; Paul Heins, age 11, Norristown, Pa.; Bruce Huckenberry, age 11, Port Royal, Pa.; Mildred Shepler, age 12, Reynoldsville, Pa.; Ora Smith, age 11, Knox, Pa.; Bernice Yough, age 9, Dushore, Pa.; Mary Wiles, age 10, Chambersburg, Pa.

WHAT DID LUCY DAVIDSON WEIGH?

The Vacuum Failure

"This cleaner was brand new a month ago, and now it just won't work," complained the woman to the repair man.

The mechanic tested the vacuum cleaner thoroly. The motor hummed and the suction was perfect.

"There's nothing the matter with it," he declared.

"There is," insisted the woman. "Look, it won't get an ounce of dirt out of this carpet now, but when we first used it there was almost a pound!"

Quite the Opposite

A harassed-looking gentleman was rushing round the big store.

He dashed from the third floor to the basement. Then he appeared again on the second floor, short of breath, his tie disarranged, his hair on end.

A floor-walker approached him.

"Are you looking for something in men's clothing?" he asked suavely.

"No, no," roared the man; not men's clothing—women's clothing! I've lost my wife."

Big Hearted

A newly-married couple were approaching the train gates, when the bride, glancing at her husband's hand, exclaimed, "Why, Jack, you've only bought one ticket!"

"Oh!" he said, "so I have. But you'll find that's just like me; I'm always forgetting myself."

At Washington

Amateur Gardener—Can I see the Secretary of Agriculture?

Office Clerk—Well, he's very busy, madam. What was it you wanted to see him about?

"About a geranium of mine that isn't doing very well."

Keep Him Guessing

"What kind of watch have you got?"

"A wonder watch."

"Wonder watch! Never heard of that kind before."

"Well you see, it's this way. Every time I look at it I wonder what time it is."

No Better Than He

Book Agent (to farmer a few days after the farmer's children had started to school)—Now you should buy them an encyclopedia.

Farmer—Buy them an encyclopedia! Hanged if I do. Let them walk like I did.

His Reward

Salesman Sam—So you've taught your wife poker?

Clerk Cal—Yes. It's a great scheme! Last Saturday night I won back nearly $5 of my salary!

Heard by the Clerk

First Customer—I had a grand piano, but I lost it.

Second Customer—My goodness, how did you ever lose a grand piano? It's so big!

"Oh, I stopped payment on it."

The Right Start

College Graduate's Mother—Here's a letter from our boy at last.

His Dad—Has he got a job yet?

"Yes, he's washing dishes in a restaurant."

"That's good. He told us he was gonna clean up a million."

Believe It or Not

The biggest men this world ever knew were born barefooted.

The bird illustrated above is one of the Larro Research Farm flock raised on Larro Chick Starter and Larro Growing Mash.

GIVE those pullets the right start *now* with Larro Egg Mash! You've spent good money getting them ready for fall and winter production. Don't take chances with your investment. Make *sure* of the big extra profits they can produce for you by feeding them the one laying mash that will make them do their best.

Larro Egg Mash is a modern ration, developed at Larro Research Farm by poultry experts of national reputation and manufactured in the world's most modern feed plant. Every ingredient is standardized by special processes used only at the Larro Mill, so that the quality, analysis and feeding value of Larro Egg Mash does not change from one year's end to the next.

More money left after the feed bills are paid than from any other ration—is our claim for Larro Egg Mash! Results obtained by thousands of Larro feeders substantiate this claim. Get a trial order from your Larro dealer today. The results you get in production, flock health and increased profits will quickly convince you of the economy of Larro Egg Mash.

All Larro Mashes contain the correct amount of dried buttermilk—minerals—vitamins. Results prove they have everything necessary in just the right proportions to make an ideal feed.

THE LARROWE MILLING COMPANY
Detroit, Michigan

Larro

FEEDS THAT DO NOT VARY
FOR COWS • HOGS • POULTRY

(261)

It is the Larro policy to make only rations of such quality as to yield the feeder the greatest possible profit. That is why we make only one feed for each purpose, as only one can be most profitable.

Nest Box Notes

IF THE lots and ranges have not yet been seeded down, there is still time to disc or plow and sow rye or wheat. But the work should be done immediately, before it gets too late in the season. It doesn't take much time or money to do this job, and the hens will pay for it several times over in the spring.

* * *

How about the roofs—are they tight? Last call for this work. We went over ours one warm still day and now have them in shape for the winter.

* * *

Now for litter. There is nothing that helps more with the health and production of the flock than plenty of clean, fresh litter. It should be changed at frequent intervals, as soon as it becomes soiled, damp or broken up; and to do this during the season that the birds are in the houses will take a lot. It is a very good idea to have a good supply ahead in the barn, so that there will be dry litter available no matter what the weather may be. Straw is the best, but waste hay is not bad, altho it must be changed more frequently. The thing to do is to get plenty on hand, and if it must be purchased, why there is no time like the present.

* * *

We have a nice patch of late cabbage that was planted last July for winter green stuff. The birds are getting the waste heads now, and pretty soon the good hard heads will go into storage for cold weather. This is one of the best forms of green stuff, and hens are very fond of it. If you forgot to set any when I did, perhaps there is some in the neighborhood that can be bought. It is usually cheapest at harvest time and can be stored in barrels in a cool, damp cellar or put in a pit outdoors. I don't know whether Mr. Watts ever reads this column or not, but if he does perhaps he will tell us in his department just how to store cabbage for the winter.

* * *

Egg prices have been on the climb lately and we are getting about a nickel apiece wholesale and six cents retail. Our early pullets that started in August are still hard at it and have given us eggs to sell as the old hens slackened off. The later pullets, housed early in October, will give us winter eggs. I am waiting to see if the early pullets molt. If they do, they will come into production again with the old hens, and if they don't, they will lay all winter, which will be so much the better.

* * *

The other day a city man dropped in and got some eggs. I sold him pullet eggs and explained that I had provided pullets to lay at this time of the year when the old birds were getting their winter clothes. He was interested to learn that farmers sometimes farmed with their heads as well as with various other portions of their anatomy. It is a good idea to devote a part of the time to skull practice, as the football men call it.

* * *

Our hens were culled every week until the first of October, and most of those remaining at this time are going into the breeding pens. They are going to be blood tested and inspected by the state shortly and as soon as that is done I hope to tell the readers of the poultry page all about it. We have started a number of projects to improve our flock from a breeding standpoint this year and blood testing is just one of them.

The Pullets Will Need Clean and Comfortable Houses

SOME of the work connected with getting the houses ready for the new pullets is hard and disagreeable but in doing this job I am always aided by the feeling that we are getting ready for a new year in which we can profit by the mistakes of the past and apply those new things that we have learned thru experience, study or observation. It is something that all of us farmers have—the feeling that the future is going to be an improvement over the past. Perhaps it will and perhaps it will not. At any rate, in so far as the pullets are concerned, we can do our best toward making the houses clean and comfortable for them; and then if the birds are well bred, well grown and properly managed we can be pretty certain that they will be profitable.

The first thing to do is to give the house a thoro cleaning. Pullets always seem more susceptible to disease than hens and to prevent danger of infection sanitary conditions should prevail. All the litter and droppings should be removed and floors and dropping-boards scraped to remove any material that has stuck fast. A spade with a sharp edge is an excellent tool to loosen such accumulations and a putty knife or small scraper will get stuff in the corners and odd places that the larger tool misses. Roost and side walls should next be brushed down, removing any movable fixtures such as nestboxes to allow a thoro cleaning. The floor is then swept carefully and then the whole interior is whitewashed, using some strong disinfectant in the mixture. There are many good disinfectants which can be used and I recently saw another different type, depending upon chlorine, that is highly recommended by some of the largest poultry farms in the country. I like to whitewash not only the walls and ceiling, but floors, dropping-boards and roosts as well, in order to seal in dirt and dust and fill up cracks that otherwise might harbor red mites. This whitewash can be applied with either a sprayer or a brush.

As soon as the house is thoroly dry, it is ready to receive the litter. This should be clean, dry and sweet. There is nothing better than clean straw for litter and most farmers have plenty of it.

Sometimes it is desirable to make changes or repairs in a house, and this ought to be done before the pullets are put in, as they are inclined to be nervous at first, and any sort of stir and bustle will disturb them.

Lice Banished by This Treatment

The best time to house pullets is just as they are sprouting combs and starting to lay. Of course, with late-hatched birds the pullets must be put in the houses before the weather gets bad—October at the latest, especially if they are roosting out at night. The young birds should be sorted and put into pens according to their development, as those which are about to lay will require somewhat different treatment from those which are not fully developed.

We catch the pullets up in crates and take them to the poultry house where they are given a dusting with sodium fluoride in order to rid them of lice. As we rear our young stock away from the old birds, we seldom find lice present in any number, but we always dust as a precautionary measure and in consequence our flocks are never lousy. We find it very handy to hook up the roosts and place the crate containing the pullets on the dropping-board which places it at a convenient height for operations. A quantity of the powder is emptied out on a piece of board or a can lid and each pullet is handled separately, holding the bird by the legs with the left hand while a small pinch of the material is rubbed into the feathers next to the skin in each of the following places: one on the head, one on the neck, two on the back, one on the breast, one below the vent, one on each thigh and one on the under side of each outspread wing. If many chickens are being treated, it is advisable to hold them over a large, shallow pan in order to save any of the fluoride which otherwise might be wasted.

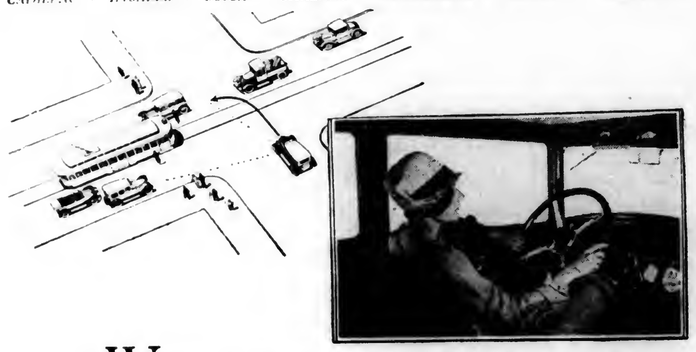
Body Weight Must Be Maintained

In feeding the newly-housed pullets it is essential that they be kept in good body weight if they are to lay steadily and avoid molting. As a rule, pullets are fattened somewhat off range before they are housed, and by continuing to feed heavily on grain this body weight can be maintained. I think it is a good practice to add 100 lbs. of extra yellow cornmeal to each 500 lbs. of mash for the same purpose. Most poultrymen now are using cod liver oil in the mash from one to two per cent by weight, as the vitamins the oil contains promote the health and vigor of the birds. The use of cod liver oil is rather a new thing, but it seems to be one of the big steps in the keeping of poultry and is in no sense a fad. The pullets will also require green feed, which they will not eat readily at first, and plenty of oyster shells, in order to make up for the drain on the calcium content of the system that egg laying entails. It is also surprising how much water a hundred pullets will drink. Water is about the cheapest thing that they require and they certainly ought to have their drinking pans full of clean, fresh water at all times.—R. L. S.-H.

This house has a clean, whitewashed interior, is well lighted and well arranged, with nests, hoppers and fountains off the floor, giving the maximum amount of floor space to the pullets.

Clear Vision in *Every* BODY *by* FISHER

CADILLAC • LASALLE • BUICK • OAKLAND • OLDSMOBILE • PONTIAC • CHEVROLET



WHEN you sit behind the steering wheel of a car with Body by Fisher, note how unobstructed is the view in front and to both sides.—Two features combined to create this greater safety and greater enjoyment in motoring.—One is the Fisher Vision and Ventilating Windshield, which affords vision through a single pane of plate glass, without metal or rubber strips to interfere with the clear view.—The other feature which makes Fisher-equipped cars safer and more pleasant to drive is the use of narrow front pillars of unusual strength, which eliminate the "blind spot" in driving.

The VV Windshield—This remarkable contribution of Fisher to greater motor car satisfaction not only assures perfect ventilation and complete weather protection—it is also safer and more convenient because it may be raised or lowered vertically with one hand while the car is in motion.

Plate Glass—Crystal plate—or thick window glass—is never used in Fisher Bodies. The diamond-like polish of the genuine plate glass used in every Body by Fisher affords perfect clarity of vision—another highly desirable safety feature of every Body by Fisher.

BODY by FISHER

GLASS CLOTH Est. 1916—Pat'd

Admits Ultra-Violet Rays

Brings Winter Eggs

Hens quit laying in winter because glass, windows stop the sun's ultra-violet rays. Give them a GLASS CLOTH scratch shed and they start laying like it was June. GLASS CLOTH admits ultra-violet light freely. Hens exercise. Egg paralysis disappears. Egg glands function. It is common for 100 hens to lay $100 worth of eggs in the cold months. A $3.00 roll of GLASS CLOTH makes you tremendous profits. Half a million successful users. Try it this winter. Make big egg money. Order a roll at once.

Make Your House Winter-Tight

Simply tack GLASS CLOTH over your screens to make fine storm doors and windows. Admits abundant light. Brings comfort. Shuts out cold. Saves fuel and doctor bills. Ideal for enclosing porches and sleeping porches. Like adding new rooms at small cost. Violet rays are healthful for humans, too.

New Super-Strength Material

Our new material is the strongest of its kind on earth, "tough as boot leather." Lasts longer. No increase in price. Genuine GLASS CLOTH is made only by Turner Bros. Patented. No other has our weather resisting formula. Transparent, waterproof and weatherproof. To protect you against imitations we place the name "GLASS CLOTH" on every yard. Look for it when buying. It is your guarantee of quality. Originated in 1916 and proven by eleven years' success.

SPECIAL TRIAL OFFER • 3½c PER SQ. FT. •

$5.00 brings big roll 45 ft. long and 34 in. wide. (Covers scratch shed 9x15 ft.) If, after 10 days' use, you do not find it better than glass or any substitute, return it and we will refund your money. Common sense instructions, "Feeling for Eggs," and catalog, showing uses, on request. If your dealer does not have it order direct from us.

Dressed Poultry—Chickens, $1@2.50 ea; springers, 50c@$1 ea; ducks, $1.50@2.25 ea; squabs, 25@45c ea.

Vegetables—Beans, string, 15@20c ¼ pk; beans, lima, 10@15c pt; beets, 3@5c bch; cabbage, 5@15c hd; carrots, 5c bch; cauliflower, 10@25c hd; celery, 5@15c bh or stalk; cucumbers, 5@10c ea; corn, 25@30c doz; eggplants, 10@25c ea; endive, 5@10c hd; lettuce, nearby, head, 5@10c hd; Iceberg, 10@25c hd; mushrooms, 25@30c pt; onions, 20@25c ¼ pk; green onions, 8@10c bch; potatoes, 20@25c ¼ pk, $1.10@1.25 bu; sweet potatoes, 20@25c ¼ pk; parsley, 2@5c bch; peppers, 5@10c bch; radishes, 5c bch; rhubarb, 5@10c bch; spinach, 10@15c ¼ pk; tomatoes, 10@15c ¼ pk; turnips, 15c ¼ pk.

Fruits—Apples, 25@40c ½ pk; crabapples, 15@20c ¼ pk; grapes, Concord, 20@25c 3-lb bskt; peaches, 20@25c qt; pears, 15@25c qt; plums, 10@20c qt; quinces, 25@30c ¼ pk.

LIVESTOCK

Review of local market for week ending October 15, 1927: Beef steers strong, compared with week ago, 25@50c higher; good and choice grades all weights showing maximum advance, part load 1110-lb averages $13, top medium weights, $12; bulk of sales, $10.50@11.25. Bulls, she stock and all cutters fully steady; bulk medium bulls, $7.25@8; butcher cows, $6.50@7.25; cutters, $5@6.25. Stockers and feeders steady to weak; liberal spring; choice quality 800@950-lb Canadians in run, bulk of sales, $8.50@9.50. Calves, steady; top vealers, $17.50; tops slow, steady to strong; heavyweights, 25c higher.

Receipts for Saturday's market: Cattle, 55 cars; 17 Canada, 7 St Paul, 5 Virginia, 2 West Virginia, 1 Tennessee, 1 Chicago, 1 St Louis, 1 North Carolina, containing 1052 head, 50 trucked in. Total cattle, 1062, 10 calves, 90 hogs. Receipts for week ending October 15, 1927: cattle, 275 cars, 8s Canada, 83 Virginia, 41 St Paul, 21 Chicago, 15 West Virginia, 11 Tennessee, 5 Penna, 3 Mississippi, 2 St Louis, 2 Kentucky, 1 North Carolina, 1 Indiana, 1 Maryland, containing 5915 head, 154 head trucked in from nearby farms. Total cattle, 6070 head; 163 calves, 321 hogs, 162 sheep.

Steers:—

Good, 1300@1500 lbs	$12.00@13.25
Good, 1100@1300 lbs	11.75@13.25
Good, 950@1100 lbs	10.75@13.00
Medium, 950 lbs up	9.75@11.75
Common, 950 lbs up	8.00@ 9.75
Cows:—	
Choice	7.50@ 9.00
Good	6.00@ 7.50
Common and medium	4.50@ 6.00
Low cutter and cutter	3.00@ 4.50
Vealers:—	
Good and choice	15.50@17.50
Medium	12.50@15.50
Cull and common	8.00@12.50
Hogs:—	
Heavyweights, 250@350 lbs	10.50@12.50
Mediumweights, 200@250 lbs	12.25@13.25
Lightweights, 160@200 lbs	12.25@13.25
Rough stock	8.50@10.50

HAY AND GRAIN

Wheat, Hay and Grain (prices paid to farmers)—Wheat, $1.20, hay, baled, timothy, $12@15; straw, $8 @ 9.

Feeds (selling prices)—Bran, $38@39; **shorts, $39@40**; hominy, $48.50@49.50; middlings, $45@46. linseed, $56@57; gluten, $46.50@47.50; ground oats, $46@46; alfalfa, regular, $40@41.

The Trend of the Markets

THE figures in the following table represent the approximate unweighted average prices of the commodities and grades specified. The prices are based upon quotations from the market page of Pennsylvania Farmer.

	This Week	Last Week	Month ago	Year ago
Butter, 92 score creamery extras (N Y).....	$ 48¾	$ 49	$ 46	$ 46¾
Eggs, fresh gathered extra firsts (N Y).....	47	44	43½	46
Potatoes, 120-pound sack (Philadelphia).....	2.50⅞	2.52½	2.42½	
Steers, good to choice (Lancaster).....	12.00	11.62½	11.75	9.50
Hay, Number 2 timothy, baled (Phila.).....	17.00	18.50	16.50	23.50
Wheat, No. 2 red winter (Philadelphia).....	1.39	1.39	1.35½	1.46
Oats, Number 2 white (Philadelphia).....	.59¾	61¾	.58	.57

Potato Market Advances

Review of the Week Ending October 15

POTATOES — Potato prices advanced at practically all shipping points throughout the country during the latter part of the week. The consuming markets, however, were irregular. Conditions in Philadelphia and Baltimore were dull with limited trading but New York, Boston and Chicago reported a better demand despite the liberal supplies. Prices at shipping points in many cases were such that potatoes would cost more delivered in terminal markets than they were bringing in those cities. This means that prices will have to advance during the coming week or large losses will be inevitable. Shipments continued heavy with the heaviest movement coming from Minnesota and Maine. The shipments from Long Island increased rapidly while Pennsylvania's were somewhat lighter.

BUTTER — The butter markets were unsettled and prices showed considerable fluctuation. Prices in New York and Philadelphia dropped about 1c per pound during the week but were about firm at the close. The chain stores and other large buyers are using storage butter and this results in accumulation of fresh butter.

EGGS—Receipts of fancy fresh eggs were light in New York and the market was firm with prices somewhat higher. Large fancy nearby white eggs were in demand with the market firmer. The average run of offerings sold rather slowly. The smaller sizes were dull early in the week but sold more readily toward the close.

POULTRY—There was a good demand for choice live fowl and prices showed a stronger tendency. Poor fowl were fairly plentiful and sold slowly at low prices. Many of the chickens offered were poor and hard to sell The best Leghorn fowl and chickens were steady. Receipts of fresh dressed poultry were moderate and the market steady under an active demand.

LIVESTOCK—The Chicago hog market was firm and the top price was higher than last week Beef steers advanced 25c to 50c while heifers, cows and vealers were higher. Feeding lambs advanced while sheep were steady.

HAY—The hay markets in the East were generally steady but prices were slightly higher at some cities. The scarcity of top grades resulted in an improved demand for medium and lower grades. Alfalfa was stronger due to a better demand.

GRAIN—The grain market was unsettled but wheat prices were slightly higher toward the close. Cash corn was relatively steady on account of the moderate offerings but future prices dropped around 6c per bushel. Oats were somewhat lower while rye was firm under a moderate demand.

FEED—The mill feed market was firm with wheat feeds quiet. Cottonseed meal was steady to slightly higher while linseed meal was generally steady. Gluten feed was in good demand. Hominy feed prices were about unchanged but the influence of the lower corn prices was felt to some extent.

BALTIMORE PRODUCE

Butter—Creamery, fancy, 48@48½c; choice, to fcy, do, good, 44@46c; do, prints, fancy, do, choice, 47@48c; do, good, 44@46c. Nearby and Penna rolls, extra, 46@47c; do, choice and W Va rolls, 43@44c; storepacked, fancy, dairy prints, 43@44c; prints, choice, 41@42c.

Eggs—Steady; selected, small lots, to arrive, 50@52c; candled, to arrive, 48@50c; higher.

Live Poultry—Hens, heavy, 3 lbs and over, 28@29c; do, 4 lbs and over, 28@29c; do, 5 lbs and over, 28@29c; other light stock, fowls, old roosters and mixed, 19@21c; do, Leghorns, 24@25c; young chickens, colored, 3 lbs and over, 28@30c; smaller, 27@28c; Leghorns as to size, 22@25c. Ducks, White Pekins and mixed, 22@24c; mixed, 19@21c; Runners, young, 17@18c; old, 15@16c; Muscovy, 14@15c and over, 12@13c. Geese, 16@18c. Guineas, young, 1½ lbs and over, 75@85c; smaller, 50@60c. Pigeons, young and old, pair, 25@30c.

YORK PRODUCE

Butter and Eggs—Country butter, 50c; creamery, 55c; eggs, 55@60c; pullets, 45@52c doz.

Poultry—Hens, 16@22c, springers, 18@22c; dressed, 22@24c lb.

Vegetables—Potatoes, 150@200 lbs, $2.50@3.25 bu; cabbage, 1½@2c lb; cucumbers, 30@40c bu; celery, 5@10c stalk; onions, 5c bch, boiled, 2qt bu, plate; turnips, 1@1½ qt; carrots, 5c bch; parsley, 5@10c bu; lima beans, 20@25c qt; tomatoes, 15@18c ¼ pk, 50@75c bskt; cauliflower, 15@25c hd; corn, 100@35c doz; spinach, 10c ¼ pk.

Fruits—Apples, 50@60c ½ pk, $1.2 bu; peaches, 15@30c ½ pk.

Wholesale Grain Market—Wheat, $1.20; corn, $1.10; rye, 80c; oats, 40c; bran, $31 ton; middlings, $45 ton.

NEW YORK MARKETS

PRODUCE

Butter—Firm; creamery, higher than extras, 48½@49½c; creamery extras, 92 score, 48½c; creamery, firsts, 88@91 score, 42@47½c; packing stock, current make, No 1, 24½@26c; do, No 2, 23½c.

Eggs—Firm; fresh gathered extra firsts, 45@46c; firsts, 36@44c; seconds and poorer, 25@34c; eggs, in storage, extra fancy, 35@37c; do, fancy, 29@34c.

Nearby hennery whites, closely selected extras, 55@60c; nearby and nearby western hennery whites, firsts to average extras, to 54c; nearby pullets, 33@38c; nearby hennery browns, extras, 50@52c; Pacific Coast whites, extras, freight, 61@ 62c, to be by express, 66c; Pacific Coast whites, firsts to extra firsts, 47@49c; do, seconds, 44@46c.

Cheese, firms, state, whole milk, flats, fresh, specials, 25½@26c; do, average run, 24½@25c; do, whole milk flats, held, fancy to specials, 26@26½c.

Live Poultry—Firm; chickens, by coop, 25@26c; fowls, by express, 17@ 27c; do, by freight, 14@24c; broilers, by express, 31@40c; do, by freight, 26@ 30c.

Dressed Poultry—Quiet; chickens, fresh killed, do, frozen, unquoted; fowls, 15@20c; old roosters, 18@21c; old cocks, 16@21c; turkeys, fresh, spring, 30@40c; do, frozen, 30@42c.

LIVESTOCK

Cattle—Steady; steers, $9@14, state bullocks, $10@12; cows, $2.50@6.50.

Calves—Steady; veals, common to prime, $5@18; culls, $4; buttermilks, $10@12; grassers and fed calves, $5@7.

Sheep and Lambs—Steady; sheep, $2@6 per cwt; lambs, $12@14.25; choice to prime southerns, $14.50@15.25; mediums, $13@14; culls, $8.50@10.

Hogs—Steady; light to medium weights $11.50@11.90; pigs, $12@12.50; heavy hogs $11.25@11.50; roughs, $7.75@8.25.

HAY AND GRAIN

Feed—Quotations were as follows, all prompt or 30-day shipment: City bran, 43c, middlings, $47, in 100-lb sacks; red dog, $48, nominal, western feed bran, $35, in 100-lb sacks, standard middlings, $36; flour middlings, $42; red dog, $48, all in 100-lb sacks; all-rail red dog, $48, prompt shipment, white hominy feed, $42.25, nominal, in 100-lb sacks; cottonseed meal, 36 per cent protein, $47.75, prompt shipment linseed oil meal, 34 per cent protein, $51.80 in 100-lb sacks.

Hay and Straw—Hay, old or new, large bales, timothy and light mixed, No 1, $23@24; No 2, $21@23; No 3 and poorer, $18@21. Straw, large bales, rye, $22@23; oat, $12@13.

Grain—WHEAT, No 2 red, c i f, domestic, 1.41¾; No 1 dark spring, c i f, domestic, 1.42¾; No 2 hard winter, f o b, export, 1.42¾; No 1 North Manitoba, in bond, f o b, export, 1.64¾; No 2 mixed durum, c i f, domestic, nominal. CORN, No 3 yellow, 91.06¾; No 3 yellow, 91.04¾. OATS, No 2 white, 52¾c; No 3 white, 50@51c; No 4 white, 47@48c; sample white, 62¾c; fancy white, clipped, 62¾@ 63c. RYE, c i f, export, $1.05¾. BARLEY, malting, c i f, domestic, 90c.

WOOL MARKET

Boston, October 15, 1927.

Domestic—Ohio and Penna fleeces: Delaine, unwashed, 46@47c; ¾-blood combing, 46@46½c; ¾-blood combing, 46c. ¾-blood combing, 46c. Michigan and New York fleeces: Delaine, unwashed, 45@46c; ¾-blood combing, 45@46c; ¾-blood combing 46c; ¼-blood combing, 46c. Wisconsin Missouri and average New England: ¼-blood, 42@44c; ¾-blood, 45@49½c; ¼-blood 45c.

Clothing, cash, imported: $14.25; October, $17.70; November, domestic, $17.30; December, imported $14.25 bid; March, domestic, $17.35. Alaska cash, $14.90; December, $15.10 bid; January, $15.30 bid. Timothyseed cash, $1.80 bid; December, $1.87½ bid; March, $2.05 bid.

CHICAGO LIVESTOCK MARKET

Hogs—Top, $11.20 paid for choice 200@ 250-lb weights; no strictly choice, 250@ 280-lb here; bulk, $11@11.15; 280@300 lbs, $11@11.05; most 140@170-lb averages, $10.75@11.10; pigs steady, bulk, $8.50@ 10.50; packing sows, largely $10@10.40.

Cattle—Stockers and feeders, medium to good, $6@7.50; few choice, best heavy steers for week, $10.80; medium weights, $9.50@10.75; few, $11; best western steers, $12.25; heavy heifers, $9.50; practically no choice yearlings, $9.75; few, $10; bulk western slaughter steers, $9.50@10.50; heifers, mostly, $8.50@9.50; cows, $6.50@8.

Sheep—Week's top prices: Fat range lambs, $14.25; fat native lambs, $14; slaughter yearling wethers, $13; fat ewes, $6.50; range feeding lambs, $14.25.

FEED PRICES

The prices below are for prompt shipments delivered on payment on arrival of cars as quoted by the Philadelphia jobbing trade to retail feed dealers on Monday, October 17, 1927. Quotations cover sold car lots for delivery at Philadelphia or Scranton rate points:

Pure spring bran	$34.50
Spring bran	33.50
Soft winter wheat bran	33.75
Hard winter wheat bran	34.00
Standard middlings	34.00
Soft winter wheat middlings	38.75
Flour middlings	41.00
Red dog flour	46.00
White hominy	41.25
Yellow hominy	40.50
Gluten feed	41.30
36 per cent cottonseed meal	44.00
41 per cent cottonseed meal	47.00
43 per cent cottonseed meal	48.35
34 per cent linseed meal	51.20

For Baltimore, Cumberland and Williamsport rate points, subtract 20c per ton (for cottonseed meal 40c per ton); for New York, Newark rate points, add 40c per ton (for cottonseed meal 60c per ton); for Woodbury, Bridgeton rate points, add $1.00 per ton; for Freehold, Toms River, Cape May rate points, add $1.90 per ton.

County News and Comment

Armstrong County, Pa.—Practically all sweet corn has been seriously injured by frost. There is very much of such corn that is slightly beyond the milk stage, consequently its feeding value will be low. The fall seeding of wheat and rye was done at a standard period and yet was done at a standard period and yet both grains have made a very disappointing start. Fall pastures are short and the feeding season will open early. Potatoes are all dug, almost all surplus potatoes have been marketed. Apple picking well advanced, crop an unusually light one and quality low. Fruit very poorly colored. Corn husking has begun with the outlook for a light crop. Tomatoes also are making a good growth under ground. The amount to pass certification shows a big drop from other years. There has been so much leaf roll that hundreds of acres have failed to pass the inspection. All farm activities are centering on the Solon County Fair for the 8th of October. This is the renewing of the old time agricultural fair. The business interests of the county are joining hands in making this a real celebration. There is a strong demand for fresh eggs. Prices are advancing and the buyers are coming to the farms and getting them almost as soon as they are laid. There seems to be plenty of poultry on the farms this season and the prices are continuing fine for the time of the year.—I. M. B., Oct. 6.

Sullivan County, Pa.—Many farmers are now engaged in digging potatoes in our county they seem to be just an average crop. If frosts will hold off for two weeks we will have a good corn crop. As yet it is unripe and very little silo. Apples are a total loss; no apples even for cider. Buckwheat is a very good crop. Late oats turned out fine but early oats was a poor crop. Winter clover is a poor crop but spring wheat was an absolute failure.—M. G., Sept. 30.

Susquehanna County, Pa.—September has been cool so far with two light frosts, doing damage only on the low lands. It is now thought that there will not be one-half a crop of potatoes as they are not filling well and are rotting very badly. Oats are all cut and some threshed, while other farmers wait and thresh oats and hay altogether. Apples are a light crop and of poor grade. Pears are small but plentiful. Milk production is holding up good. Most farmers are grading their cows. Corn is developing slowly. Silos now are filled. Eggs, 46c; potatoes, $1.90; onions, $1.30; pears, $2.—J. A. G., Sept. 26.

The Market Place

By W. R. WHITACRE
Pennsylvania Bureau of Markets

A WRITER once stated, "Nothing is given so ungrudgingly as advice." While this is true it is especially difficult to advise a man when you are not familiar with his problems. Often we receive letters from farmers asking for the names of reliable commission merchants and how they should proceed to market their products on the Philadelphia market. They neglect to tell us whether they have eggs, butter, livestock or fruits and vegetables and also do not mention how much they have to offer.

I believe the fact that California, Florida and other distant states ship fruits and vegetables to Philadelphia and other eastern markets gives Pennsylvania farmers the impression that they can profitably do the same. Sometimes they can, but it depends upon what they have to sell and whether they have a nearby market that will get a larger profit.

Last year I received a letter from a grower in northern Pennsylvania who stated that he had fifty pounds of dried beans and wanted the names of dealers in Philadelphia who might handle them. I found that there were several small cities close where he could undoubtedly sell to better advantage. If he had five hundred pounds then he might find it more profitable to ship to the distant market.

Transportation Is Expensive

Transportation is expensive and one of the best illustrations of this came to my notice early this summer. A grower in South Carolina shipped ten barrels of white potatoes to Philadelphia by express. When express charges and commission were deducted he had about $1.00 per barrel clear. The same day a shipment was received by boat from the same section of South Carolina. This grower's potatoes sold at the same figure but he had $4.00 per barrel clear.

The grower with only a comparatively small quantity of produce will generally profit by selling on his local markets. If he ships a small quantity a long distance he usually must use express or parcel post. The cost of transportation is likely to cut down the profit to far below what he would have received closer home.

There are some instances when this does not hold true. When the value of the commodity is exceptionally high it may pay to ship to a distant market. For instance, Florida can profitably express small quantities of strawberries to Philadelphia and New York during the winter months when the price is around $2.00 per quart but they would not consider it when prices were around 25c. Eggs are another product that the individual can ship a distance, but they have a relatively high value as compared with the cost of transportation.

The grower or group of growers that can assemble a carload of produce has an entirely different proposition. The cost of transportation per package is lower and the chance of finding a favorable outlet is greater. When a locality specializes in a certain crop such as potatoes or tobacco it attracts dealers to that section and that again is another situation.

The motor truck is often economically used for transportation over considerable distances. This year strawberries were hauled from North Carolina to Philadelphia, a distance of over 500 miles, but the same principle holds true for they were bringing higher prices.

One Rule Won't Fit All Cases

It would be hard to set down a procedure that would apply to anyone that wished to ship to a distant market. It would depend upon the commodity, market conditions and the locality as well as many other factors. In general, the grower who wished to determine whether it would pay to ship to a more distant market would find the following procedure safe. First obtain a list of reliable commission merchants or dealers handling the line of produce he has to sell. He could procure this thru his county agent, farm paper, or Department of Agriculture. He would next determine what he could get for his produce on his local markets. The freight or cost of transportation to the distant markets should be learned. By following the federal or state reports which are issued he could learn what market conditions and prices were prevailing in the city to which he planned to ship. Then if the probable price which he would receive, minus transportation and a ten per cent charge for commission was enough larger than the price he would receive nearer home it would probably pay to ship, remembering that prices are as likely to drop as to advance or hold steady by the time his produce was sold.

Better Eggs Will Go to New York

(Continued from page 3)

marketed eggs from eastern farms, tho because of nearness to market they have an advantage over the western farm eggs so that a larger percentage will still be able to meet the requirements and be sold as fresh.

There are various other provisions in the law and in the regulations which are of importance to egg producers and dealers located in New York State, but those which have been given are the essential ones so far as producers and shippers outside the state are concerned—except, perhaps, the provision in the law which makes it a misdemeanor, and provides a heavy penalty, in case any egg unfit for human food is sold or offered for sale for eating purposes.

It is thus apparent, in spite of many rumors to the contrary, that these New York State Grades and Standards for Eggs do not directly affect egg producers and shippers outside the state, except in case they sell direct to New York State retailers or consumers. Even then they are not directly affected if they sell eggs of their own production, unless they attempt to sell inedible eggs or call them fresh eggs when they do not meet the standard.

"Fresh" Eggs Must Be Fresh

It is the indirect effect of this law and these regulations, however, which is the important one and, because of the importance of New York State as a market for eggs, this is apt to be felt over a wide territory. It is plain that the requirement for the sale of eggs to retailers and to consumers on the basis of grades based on quality, the special restrictions on the use of the term "fresh," and the heavy penalty attached to the sale of inedible eggs,—all these, are bound to result in a demand for quality eggs which will be felt thruout the wholesale channels of trade wherever the New York market has its many extended sources of supply.

Here then is the real opportunity for the egg producer in the so-called "Nearby Egg" territory. His nearness to New York markets gives him a tremendous advantage in supplying eggs which will meet the higher grades when they are displayed in a retail store. If he is a careful producer, uses modern methods of flock management, gathers his eggs promptly, protects them from heat and moisture, markets them frequently, he is quite apt to profit from the change which has come about. If he is careless, gathers his eggs at infrequent intervals, markets them haphazard, attempts to remove the results of slovenly production methods by washing them, ships incubator eggs, or does any of the hundred and one things that the careless producer is so prone to do, he can expect to be penalized as to price when he ships to New York markets far more than he ever has been in the past.

We Need to Fight Weeds in 1928

(Continued from page 3)

mature seeds before they got into the soil. This should be done not only in the garden and the field but along the fences, the roadside and in waste places, so that the seeds cannot be carried from place to place during the winter by the drifting snow and over the hard frozen crust.

Secondly, every garden, truck patch and field in which an early spring crop is to be planted, should be plowed in the fall. In doing this, conditions will be made favorable for the germination of the seeds and many of them, instead of wintering over in the seed form in which they can withstand the freezing conditions of winter, will start to grow and produce a young tender plant that cannot endure the rigors of winter.

Destroy Plant While Young

Many of the covered seeds that do not start to grow in the fall will begin growth very early in the spring and a thoro preparation of the seed bed before planting the spring crop will destroy the young weeds; for there is no better time to destroy a weed than shortly after the seed has germinated, while the plant is young and tender and has not yet developed leaves and a root system. The plowing of the ground in the fall will not only help to kill the weeds and thus lessen the next summer's work and loss to the growing crop, but it will also put the soil in better condition to store up the water from the winter snow and rainfall.

Moisture is one of the leading factors in limiting the growth of plants and if the amount can be increased by storing up a little more during the winter the farmer and gardener will be more than repaid for his plowing in the fall.

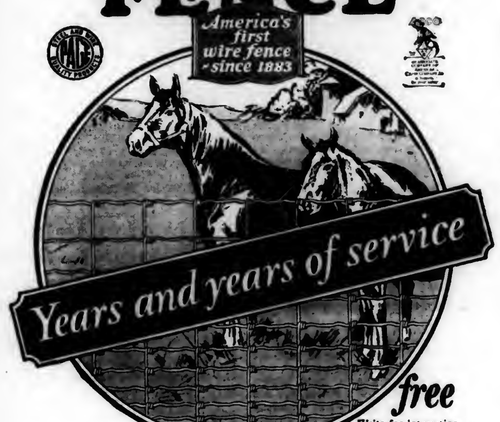
Keeps Down Perennials, Too

This fall plowing will not only kill many of the weed seeds and store up more moisture for the next year's crop, but it will strike a very hard blow to the roots of persistent perennial plants, such, for instance, as garlic, Canada thistle, horse nettle and other noxious weeds. Perhaps 75 per cent of the bulbs of garlic will be killed by the alternate freezing and thawing during the winter, if the fall plowing has been done at the proper depth so as to expose the greatest possible amount of bulbs.

The destruction of weeds, particularly in waste places and along the fences will, perhaps, tend to lessen the number of injurious insects for next year. Many of the insects that are protected and harbored in the weeds will be more exposed to the weather so that many of them will be killed that would have lived over winter in the weeds.

Let us, therefore, clean up in the fall and plow our gardens, truck patches and fields in which we expect to grow corn, so that next summer we will be able to raise better and cleaner crops with less work in keeping down the weed and insect pests.

PAGE FENCE



free

Write for interesting literature describing Page Fence in detail

When you erect Page Fence you are sure of many years of economical service. Long life is built into it. It is easily adaptable to rough or hilly ground—and it is protected against rust by a heavy coat of galvanizing over wire made of high quality steel. Obtainable in either the Lion staple tie type or the New Pagewrap stay type of knot. Ask your dealer to show you—he carries the pattern you need.

Penn State Students Study Marketing Methods

THE class in marketing from Pennsylvania State College spent October 13, 14 and 15 in getting first-hand information on the marketing of farm products in Philadelphia. The first point visited was the P. R. R Produce Terminal where carlots of fruits and vegetables arrive and are sold both at auction and private sale. The B. & O. Cold Storage and Produce Terminal were inspected and at this time George Morrison, president of the Philadelphia Carlot Receivers' Association, explained the workings of the market.

The next stop was Girard Point where the large export grain elevators are located. The grain inspection offices of the Commercial Exchange of Philadelphia were also visited. The wool yarn plant of S. W. & H. W. Fleisher, Inc., and a visit to the offices of the Interstate Milk Producers' Association completed the day.

Visit Dock Street Market

On Friday the Supplee-Wills-Jones Milk Plant in Camden, N. J., Campbell's Soup Company, Abbott's Ice Cream Plant, Horn & Hardart Baking Company, the warehouse of the Great Atlantic & Pacific Tea Company, Baynk Brothers' Cigar Factory and Leaf Warehouse and Freihofer's Bakery filled the day and illustrated the marketing of a variety of farm products.

Saturday morning the students took a trip thru the Dock Street market where the nearby fruits and vegetables are handled and also thru the poultry section. Earle Roberts, vice president of the National Association of Commission Merchants, told how these products are handled. The office of the United States Bureau of Agricultural Economics was next on the schedule and the gathering and preparing of market reports was explained. The final stop on the official insection trip was the Grain Trading Floor of the Commercial Exchange, but a large delegation decided to continue the trip to Franklin Field where Penn State met the University of Pennsylvania on the football field.—W.

Conduct Delaware Wheat Tests

FOR the past three years experimental work has been conducted in the Newark, Middletown and Cool Spring areas of the state by the Agronomy Department of the University of Delaware Experiment Station to determine the most profitable varieties of wheat to plant on Delaware farms. The results of these tests have shown that certain varieties and strains will yield more in some sections and less in other areas in the state.

As a more direct means of determining the best varieties of wheat for the Dover area and central Kent County, a test plot has been established this fall on the farm of D. M. Wilson & Sons, near Dover, where some exceptionally high yields of wheat have been harvested during the past two years.

Will Study Variety Yields

Thru the cooperation of Prof. George L. Schuster, agronomist, of the Delaware Experiment Station, arrangements were made by Kent County Agent Russell E. Wilson whereby this variety experiment would be conducted on this particular farm this coming year. The two varieties of wheat that are being sown are the Pennsylvania 44 and the Forward, which are being planted in comparison with the Leaps Prolific. Leaps Prolific is one of the varieties most generally planted in the Dover area.

Observations will be made concerning the growth and development of these varieties of wheat during the coming fall and winter months. At harvest time a record will be secured of the yields from the three plots, each of which comprises an area of about six acres.—R. E. W.

Why Burn Coal?
or Wood in Your Cook Stove or Heater when you can have instant heat with convenience by installing a Uni-Hete Kerosene Burner in five minutes' time!

For a limited time we offer to send C.O.D. the $15.95 burner complete — including flexible fuel supply tubes, regulating valves and galvanized iron tank, ready to install, for only $9.95.

Fits Any Stove or Range
Fully guaranteed against defective workmanship and material for one year. Any part that proves defective, if returned, will be replaced free of charge.

New 1927 Uni-Hete Burner Outfit

vaporizes kerosene or distillate, mixes it with air producing an intensely hot, clean, smokeless, silent burning flame. Heat can be regulated to any degree by fuel controlling valves. Has been in use three years. Have been manufacturing burners for thirty-three years. We make this offer for a limited time only. Satisfy it for ready cash or heater.

ACORN BRASS MFG. COMPANY
1234 Acorn Building Chicago, Illinois

Olson Barn Equipment

It will pay you to find out about the OLSON No. 5 cow stall. It is strongly built and has the new improved two way stanchion. The cows always put their heads in the right place in a two way stanchion.

Olson Water Bowls

Guaranteed for life against breaking, because they are made of malleable iron and with the famous "Never leak Valve." OLSON Equipment costs less in the long run. Write for catalog.

OLSON MANUFACTURING COMPANY
630 Broadway Albert Lea, Minn.

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

COW NOT DOING WELL.—I have a big Holstein cow that about a month ago commenced to wabble in her hind quarters. Have had veterinarian here to see her and have treated her ever since but she is no better. She is very greedy for her feed and gives a good mess of milk. She will not freshen until spring. I never knew of her getting hurt anyway.—J. T., Union City, Pa. It is possible that improvement might follow feeding a mixture of four parts steamed bone meal and one part salt. This mixture may be placed where the animal will have access to it or one tablespoonful may be placed on the feed twice daily. See that the animal has a variety in her ration.

CALF HAS FIVE TEATS.—At present I have in my stable a heifer calf about one week old. Its size and type is the makings of a good cow, but its mother does not milk over 25 or 30 pounds per day. The calf has a well proportioned udder as to placement to make a good milker but has a fifth teat close to one of the four. Could the one teat be removed and make no difference?—H. N. H., Washington Boro, Pa. It is probably a good plan to keep this calf provided that there is evidence of good milk production on the side of the sire. Twenty-five to thirty pounds of milk is good, provided this cow maintains a uniform milk flow over a ten-month period. The extra teat can be removed surgically, but should be cared for by your nearest graduate veterinarian.

Make It Snappy

Publisher (to author)—You'll have to rewrite this novel, Mr. Scribbler. If you want it to sell. The Boston police have positively refused to suppress it.

Taking No Chances

Sonny—Must I sleep in the dark?
Mother—Yes.
Sonny—Oh, then, let me say my prayers over again—more carefully.

No Sales Resistance

Jack—How did you come to marry a girl you didn't particularly care for?"
Tom (gloomily)—I attribute it to the fact that she wanted me worse than I didn't want her.

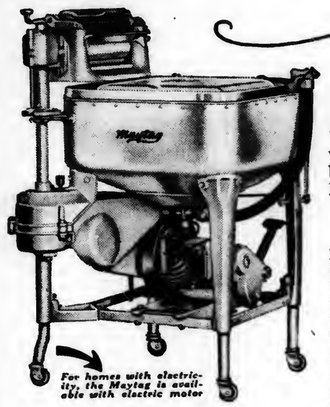
Announcing the NEW MAYTAG

"I want to give every home an opportunity to try my greatest achievement—the NEW Maytag. It sets a New Standard in Washers"

F L Maytag



For homes with electricity, the Maytag is available with electric motor

AGAIN the Maytag writes washer history! Over a million owners, including many farm homes, have testified that the Maytag Gyrafoam Washer, introduced five years ago, was the height of perfection in washers. Now five years of research work have produced a new and still better Maytag—a washer as far in advance of the times as the former Maytag was five years ago.

An Improved Gasoline Multi-Motor

For over ten years the famous Maytag Multi-Motor has solved the washer problem for farm homes without electricity. The Multi-Motor on the New Maytag embodies engineering refinements that make it the most modern small gasoline power unit available. It is a part of the washer—not a separate unit with belts to line up. The housewife can start and operate it as easily as she can an electric motor, and it is quite as compact, simple and noiseless.

The New Maytag has a Roller Water Remover with a flexible top roll and a firm bottom roll. Its larger working surface hugs every fold of the clothes, giving greater efficiency without pressing in hard-to-remove wrinkles and without danger to buttons or laces. It has Safety Automatic Feed Board, self-reversing drainboard and self-adjusting tension.

See a New Maytag—the only washer with a roomy, lifetime, cast-aluminum tub; that does a big washing in an hour or two without hand-rubbing anything.

FREE TRIAL

Wash with a New Maytag without cost or obligation. Simply phone or write a Maytag dealer. If the Maytag doesn't sell itself, don't keep it.

In the Pennsylvania hills

The apple tree will not be a suitable shelter for the machinery this winter. Senator Capper reviews the Teapot Dome deal. ***Page 3.***

"Cow Chow is a good feed, but it's too high"

Don't fool yourself! Purina is *not* too high. When men like these—your neighbors under ordinary farm conditions—can make more money by feeding Cow Chow, *you can too.*

Mr. Frank Kitchen, of Halifax, Pa., made a net profit of $2908 on thirteen cows with Cow Chow, according to the Dauphin County Cow Testing Association last year.

The Beaufort Farms, at Harrisburg, Pa., have been producing grade A milk with Cow Chow for several years now and are mighty well pleased.

Aaron Erdman, of Dauphin County, Pa., had the high cow in the Cow Testing Association last year and produced milk for $1.09 per cwt. grain and roughage included.

Stanley Smith, at Lewisburg, Pa., has eight cows that made an increase in net profit per month of $110.70 on Cow Chow.

Frank Jessup, of Pemberton, N. J., brought his 50 head up 1¼ cans per day and showed an extra net profit of $192.20 per month with Cow Chow.

Melvin Rush, Washington, N. J., increased his production on 15 cows, 70 pounds in three days at no extra feed cost. His extra net profit was $42.00 per month.

These men are saying a feed which lowers the cost of production *cannot* be too high. They say the feed which pays the most profit is the cheapest you can buy. All of them are feeding Purina today.

Thousands of dairymen say—

"Cow Chow is the best feed, because its the cheapest milk producer"

Let Bulky-Las work with Cow Chow in increasing your milk production.

GET A
Leola Self-Feeder on Trial

We WILL ship you a feeder at our cost to you, freight prepaid. Give it a thirty-day trial and if not entirely satisfied, we will pay the return freight. We do not ask you to pay one cent until you have tried a "LEOLA" Hog Feeder.

"Healthy, Heavy Hogs"

WHAT STATE COLLEGE FOUND

Two lots of fifteen hogs each were fed for ninety days on a ration of cornmeal, buckwheat, middlings and tankage, self-fed to one group and hand-fed to the other. Here was the result:

	Self-Fed	Hand-Fed
Gain per day	1.3 lbs.	.58 lbs.
Cost per cwt., gain	$6.76	$7.17
Profit above feed cost	$7.62	$3.15

This test shows what a Self-Feeder will do for you.

Educate People to Buy Good Fruit

IN THE Pennsylvania Farmer issued last week I note that you had an article entitled, "Windfall Apples Equal the Best if Cooked or Canned in Time." As a nursery salesman, and one coming in contact with the large and small fruit growers, I do not approve of this article, for many reasons.

Many copies of your paper are delivered to homes in suburb residences of districts near large and small orchards. It will only tend to educate the people to go to orchards and request windfall apples which should be kept off the market. People should be educated to purchase only good, clean fruit.

I have conversed with fruit growers and as a while they disapprove of this article. Educate the people to buy good fruit and educate the orchardist not to sell windfalls and poor grade fruit. I would not be surprised that you will receive many letters of complaint on this subject in the near future. Cooperate with fruit growers and educate folks to purchase none but the best fruit, thus keeping a price that will bring profit to fruit growers.—C. N. S., Montgomery County, Pa.

How Can I Keep the Hired Man?

I HOPE you will be able to help me with a few "hired man" questions. I have come to realize that the hired man of today must be treated differently from the hired man of yesterday. I have a farm of about 100 acres of tilled land, practice general farming and milk about ten cows.

In the first place, should the hired man have regular hours,—like the man working in the city?

How many hours' work in the field should be required of a good man?

What days and half days belong to him?

I have a good man in prospect to hire by the month and would like to keep him and make him satisfied as long and as far as possible.—M. R. W., Maryland.

Anyone who evidently is as thoughtful in the matter of a hired man's working hours will have no trouble in keeping a good man. But you are fortunate, indeed, if the question of hours is left for you to decide. In most places, recently, the wages and hours of labor are fixed by those who condescend to work on the farm.

However, the questions are legitimate, and when farmers are willing to act in accordance with changed conditions, the farm labor problem will be much nearer solution. There is no question but that we are past the old-time sun-to-sun schedule. If all farmers would adopt for themselves and their help a definite number of hours for a day's work, say nine hours, and stick to it, it would do much to solve the question of surpluses and also of prices. Farmers are producing the disastrous surpluses by working over-time.

Holidays Depend on Work in Hand

As to holidays and half-days off, that is difficult to arrange ahead. There are times when a set day, or half-day, off would seriously interrupt important work such as in harvest and seeding time. Again, when a man is working the year around on a farm, there are more idle spells caused by bad weather than the city man gets with all the holidays and half-Saturday off. However, it is good business to voluntarily give a day or half-day off now and then.

Under the old order it was customary for farmers and their help to work in the fields until suppertime, the day being from seven in the morning to six in the evening, and then do the milking and barn work after supper. But that time is past. No business can get good help and keep it which is run on a time schedule so far out of tune with other productive industries. It is not worth while for farmers to rail against it. It will do no good. Shorter hours are here to stay, and the sensible thing to do is to adjust farm work to meet the conditions.

Shorter Hours Would Cut Surplus

The objection raised against the adoption of the present standard working hours for the farm is that farm incomes are too much below the returns to industry to stand such a change. But I wish to repeat a former statement. When all work on all farms is stopped at a reasonable hour in the evening it will naturally curtail production, and that is the first and biggest step towards getting better prices, and consequently bigger incomes. It beats all the schemes for handling the surplus which have been proposed.

It will also help to solve the question of keeping the young people on the farm, and change the farmer's own mind towards his business. It is time to stop bragging about working "sixteen hours a day." The world discarded legal slavery practices years ago, and those who voluntarily adopt them are foolish. I am well aware that these sentiments will bring criticism and reproach from those who have not waked up to time's changes, but I write them in the belief that they are in the interest of better, happier and more prosperous farm homes.—R. P. K.

He Puts Turnips into Cold Storage

A NEW wrinkle in the storing of turnips has been worked out by Felix Behl, Hurffville, Gloucester County, N. J. Instead of burying the turnips for the winter trade, Mr. Behl puts them in cold storage. In this way he has them ready for market and the weather is never too rough or disagreeable to get a load out in a few minutes' time.

He now stores them during the fall months when it would be disastrous to put them in the pits. Mr. Behl grows a great many acres of turnips. He has them ready for market by the middle of August. The market may not be taking turnips at that time, so instead of letting them grow too big, he puts a big force of men in the field, tops the turnips when they are in their prime, packs them in bushel hampers and puts them in a nearby cold storage house. They are washed before going to storage and are ready for market at any time.

They Keep in Perfect Condition

If the market should improve in a week or so they are immediately taken out and sold. Should the markets continue low and turnips not wanted, they are left in storage until mid-winter or early spring. They keep in perfect condition in cold storage. Turnips in storage for five months come out just as firm as when they went into storage.

With this method of storing, it is possible to rush a load into market, even tho the weather be bitter cold and the ground covered with snow. There is no trench to open, no roots to wash or tops to cut. They are taken direct to market without any further handling. The cost of storing remains stationary regardless of whether they are held for two weeks or six months and the twenty cents per bushel storage more than pays for the saving in labor or burying, and later digging, washing and cleaning. This farmer now has over 4000 bushels in storage awaiting a market next winter.

He has followed this system for a number of years and it meets with success each season.—A. K.

Is Your Machinery Under Shelter?

Farm Tools That Are Exposed to Snow and Rain Will Have a Short Life

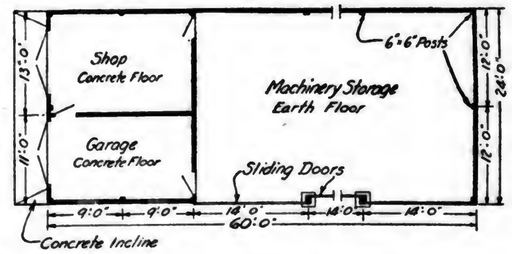
A FEW farmers still hold that it is cheaper to let a machine stand out the year around than to go to the expense of sheltering it, but it is easily shown that sheltering pays, when one considers longer life, better appearance, lessened draft at the beginning of a season, and less time lost in getting the machine ready for efficient use.

At this time of year, every implement not needed further should be safely under shelter with a card made out specifying what adjustment or other overhauling is needed and a list of any badly worn or broken parts that need replacing.

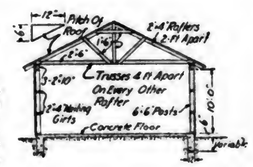
Type of Shed to Build

The type of machine shed to build will depend largely on whether first cost or annual cost is the important thing. Even a well-roofed straw shed is better than none, but an open shed does not protect from blowing rain or snow, animals, chickens, and so on. Usually it costs less per year over a period of say twenty years if the building is well constructed of material which lasts well with the minimum of painting and other upkeep, and which is reasonable in first cost. The best material to use in any particular case will depend a good deal on local conditions. Where sand and gravel can be had for the hauling the foundation, walls and floors might well be of reinforced concrete. Close to a tile factory, hollow building tiles probably would be the best selection. Where timber is plentiful, the posts might be of osage orange or of other timber creosoted, the framework of wood and the walls and roof perhaps of corrugated galvanized iron. Proper consideration must be given as to how the machine shed harmonizes with the other farm buildings.

I think without much question the most convenient and usable shape of building is one from 18 to 30 feet wide and as long as may be necessary to house the machinery on hand, and with doors along the side. A width of 16 feet can be roofed without the need of trusses and will take care of two rows of most implements with their tongues lapped, but is hardly wide enough for a



This shed has a repair shop and garage and is wide enough to store practically any farm implement.



any farm implement, but will require trussing the roof, altho this is a simple matter.

The objection to a square machine shed is the inconvenience in getting the machines in and out and the necessity of moving several machines. Often it will be necessary to keep a driveway open thru it, which means a very serious waste of valuable space. Some have even advocated a round machine shed, but the arguments are even stronger against that than the square type. One point very much against either the square or round shed is the difficulty of adding to it in case more room is needed, whereas the long, narrow shed can be started small and added to.

Determine Size Needed

The size of shed needed will be determined by the amount of machinery and other equipment to be sheltered. A list should be made of these and the space each requires should be estimated. The following table showing the amount of floor space required by different machines is taken from Special Bulletin 115, "Machine Sheds," put out by the College of Agriculture, St. Paul, Minnesota:

	Feet
Automobile	7x10
Binder	8x16
Buggy	7x12
Corn binder	7x10
Corn cultivator (one row)	5x 6
Corn cultivator (two row)	6x10
Corn planter	6x 6
Disc harrow	5x 9

(Continued on page 12)

There Is a God in Israel!

"WITHOUT authority of law;" thru the "fraud and corruption" of "a faithless public officer," —said the United States Supreme Court a few days ago canceling the lease of the Teapot Dome naval oil lands in Wyoming, made by Albert B Fall as Secretary of the Interior, to Harry F. Sinclair, in April, 1922.

"Consummated by conspiracy, corruption and fraud," said the same court last winter annulling the lease of the Elk Hills oil reserve in California, made by the same Fall to E. L. Doheny.

Both decisions were unanimous and were long ago confirmed by the court of public opinion.

Incidental to these illegal transactions between Fall as a cabinet officer, and the two oil men almost six years ago, Doheny sent Fall $100,000 in a "little black satchel" in exchange for Fall's personal note. And three weeks after Sinclair's lease was signed, Fall's son-in-law, Everhart, appeared in Pueblo with $230,500 in Liberty bonds, which the government traced by the coupon numbers to a Canadian oil company in which Sinclair, in a devious way, was interested.

Everhart, standing on his constitutional right that a man cannot be compelled to give testimony which will incriminate him, has steadfastly declined to testify in regard to his possession of these bonds, altho it is plain if Fall's son-in-law came by them in an honest way there would be no need of hesitancy.

Also it is equally plain that if the Teapot Dome deal had been on the square, it would not have been necessary for three big oil men to leave the country to avoid testifying, nor for two of them to live in Paris for the last two years. It was this remarkable phase of the oil scandal litigation that forced Congress to pass the Walsh law under which witnesses fleeing the country are subject to confiscation of their property up to $100,000 if they resist a subpoena on foreign soil.

Innocent men do not act in this manner.

Justice Cannot Fail Here

"The clandestine and unexplainable acquisition of these bonds by Fall," said Mr. Justice Butler, "confirms the belief, generated by other circumstances in the case, that he was a faithless public officer. There is nothing in the record that tends to mitigate the sinister significance attaching to that enrichment."

So ends the dirty business of the civil proceedings to reclaim the government's rich oil lands and restore them to the people. It includes a back payment to the government for oil, of approximately thirteen million dollars from Doheny, instead of the 100 million dollars he boasted he expected to make; and about five and a quarter million dollars to the Government from Sinclair. The amount of compensation to be allowed the two oil men for storage tanks, pipe lines, and other "improvements" placed on the property, must be decided by Congress.

Meanwhile the oil scandal has come to the final show-down in the Supreme Court of the District of Columbia in the trial of Fall and Sinclair for conspiracy to defraud the government. The first of these bribery trials resulted in an acquittal of Fall and Doheny by a mystified jury, but that was before the blistering decisions of the Eighth U. S. Circuit Court of Appeals had been rendered and the two sweeping decisions of the United States Supreme Court. It now seems hardly likely that justice can fail here.

To me there is a mighty compensation for this humiliating chapter in our history: it has proved that neither millions of dollars nor political pull could consummate this dishonor. It was first unearthed by a Senate investigating committee and afterward was tenaciously prosecuted by the Department of Justice against great odds.

You can convict a million dollars in the United States if it breaks the law. There is a God in Israel!

OUR JOB is to serve our readers. Whenever you are puzzled write to us and we will help you if we can.

When befriended, remember it, when you befriend, forget it.—Franklin.

Comments on the Week's News

A FEDERAL law prohibits the transportation of pictures of prize fights from one state to another. Government agents seized movie films of the Tunney-Dempsey fight as they were being shown in three theaters in Philadelphia the other day. The theater owners are suing for the recovery of the films, claiming that the letter of the law was not violated because the positive films were made in Philadelphia. The fight occurred in Chicago. The films were shown in Philadelphia. The question is, how did they get here?

✦ ✦ ✦

Speaking of prize fighting, some of us can remember vividly the attitude of the general public towards it only a generation ago. It was considered to be the lowest form of sport, engaged in only by the brutally minded, and conducted with great secrecy. But in some way or other it has been popularized. Thru the patronage of the public it has become the best-paying "entertainment" in America. What has changed the minds of tens of thousands of people so that they either secretly or openly show such enthusiastic interest in it, and why has the strong protest against it almost ceased? Is it beeause the public was wrong in its estimate of it before, or is it due to skilfully conducted propaganda in favor of it?

✦ ✦ ✦

Can the chestnut tree come back? That question has been asked by thinking people ever since the blight wiped out that beautiful and useful tree in the eastern part of the United States. We have heard of several sprouts which have attained a height of eight to fifteen feet with no sign of disease showing as yet. In a few instances, burrs with nuts in them have been reported on the new growth. There are two possibilities which may account for this and for the reestablishing of this tree. One is that new trees may be immune from the disease, and the other is that the destructive spores may have run their course, or been subdued by some natural enemy. We should be glad to have reports from many sections of our field as to the growth of young chestnut trees.

✦ ✦ ✦

Those who are keeping tab on the dairy industry say that the increase in the consumption of dairy products has increased about twice as fast as the population has increased during the past few years. The increase in the consumption of whole milk has been about twenty-five per cent, but the increase in the use of creamery butter has been forty per cent. But the United States is still a small consumer of cheese. Compared with European countries, this country ranks low in the list as eaters of this food. There is room here for some energetic work on the part of dairy organizations in educating the public similar to what has been done in regard to milk and butter.

✦ ✦ ✦

The Pennsylvania Federation of Women's Clubs which recently held its annual session in Pittsburgh gave expression by speech and resolution to many vital suggestions for the improvement of the home and the race in general. Those who, a few years ago, believed that women would tamely accept the opinions and positions of men on public affairs have had to change their minds. Incidentally, they had the nerve to protest against the observance of "Mother's Day" as "sentimental nonsense." Many earnest protests were voiced, and one woman expressed herself as believing "that it is really a commercial affair anyway." Another said it is an unnecessary emphasis of a status that exists all the year.

✦ ✦ ✦

From the tabulation of statistics on farm labor and wages in the United States, as compiled by the U. S. Department of Agriculture, we learn that they are about eighty per cent higher than in pre-war times. In the North Atlantic and the Far Western States the highest wages are paid. In the former group the wages by the day, without board, are given as $3.62, and in the Far Western States as $3.45. The average for the United States is $2.53, while $1.75 per day is paid in the South Central group. On the whole, the farm labor supply is larger than a year ago.

✦ ✦ ✦

An average of sixty-seven people were killed every day in August in the United States, or a total of 2080. This is the same number reported for August in 1926. Altho traffic has increased by several per cent during the year, the indications point to a slightly lessened number of fatalities for the year. This encouraging condition is believed due to the greater care exercised as a result of the agitation for safety by different organizations thru the publicity they give.

Maine Believes in the Primary

SO FAR as we know, Maine is the only state to vote on the question of annulling the direct primary law and going back to the old convention system. The vote in that state the other day resulted in a majority of two to one in favor of retaining the primary election system of nominating candidates. If the old political slogan, "As goes Maine, so goes the nation," is true, then the political bosses who have been arguing for a return to the boss-ridden convention system are out of luck. Of course, the results hoped for thru the adoption of the direct primary law are not yet realized, nor will they be until there is a livelier sense of civic responsibility in the citizenry. But no law produces perfection. The fundamental question in the matter is the justice and the democratic principle involved. No other system is consistent with the principles of government upon which this nation is founded. It may cost more, and it may cause more trouble,—especially for the bosses,—but it is a right of the American people to have a say in who shall be the candidates of their party. Every politician who favors the abolition of the direct primary should be looked upon with suspicion.

Bootleg Gas and Oil

THE newspapers carried the story the other day of the arrest of five men caught in the act of filling a "station" with cheap, bootleg gas. Out of this was developed the statement that much of the oil sold in some rural service stations is largely composed of the drainings of crank cases. In some instances it was found that as high as 60% of the amount furnished was of this used stuff. Many cases are on the books for trial in which garage men are charged with substitution of gasoline and oil. The Sterling Act provides a fine of not less than $200 nor more than $500 for the first offense. Drivers of cars will do well to watch for such work when being served at unknown stations. No one can afford to run the risk of ruining the engine and bearings of a good car by the unscrupulous actions of such "service" men.

Should More Labor Be Admitted?

THERE is a general agreement to the fact that farmers cannot pay the prevailing industrial wages and make a profit under present conditions. It is clear that most general farmers must either reduce their operations to what can be done within the family, or they must be supplied with labor that is willing to work for a smaller wage than is asked today. Under the immigration laws as they exist, there is little possibility of this. The question then arises, shall these laws be modified so that competent and willing farm workers from Europe may come into this country? Will organized labor continue to act like a dog in the manger in this matter? Everybody knows why the restrictions on immigration are as close as they are today, but, like excessive tariff rates, they will eventually be the cause of the undoing of those who seek protection.

Hard on the Nurserymen

THE quarantine against shipments of nursery and greenhouse stock, sand, peat, compost and manure, from the Japanese beetle quarantine area is to continue thruout the year. The quarantine against transportation of fruit, vegetables and cut flowers is now off, but anything that grows in soil or other material cannot be moved outside the proscribed lines. Since the territory covered by the quarantine contains many large and excellent nurseries and greenhouses the prohibition is a serious handicap. Because of this, and because buyers living within the quarantine limits run no risk in getting what they probably already have or will have, we bespeak for the nurseries within the territory the loyal patronage of nearby buyers.

More Money Needed for Repairs

THE depression that has existed during the last eight years is given by Dr. G. F. Warren, of Cornell, as the reason why farm buildings and equipment have not been kept in good repair, or replaced by new ones. "But," he says, "when prices of farm produce again become remunerative, farmers will make the necessary repairs." That expenditures for this work have not been great recently is easily seen in many rural sections, if one takes time to observe.

ARE IN FAVOR OF BILL

Unite in Farm Legislation—Grape Growers File Complaint—Find Less Crime Since Prohibition.

Washington, D. C.

THE American Farm Bureau Federation favors the McNary-Haugen bill, according to Chester Gray, their Washington representative. Any plan to take out of the farm relief legislation the equalization fee feature will not meet with the approval of the organization. There are no indications that President Coolidge is any more favorable to the equalization fee plan than when he vetoed the McNary-Haugen bill last session.

Not All Campaign Money Used

There still remains $1,200,000 of the $10,000,000 appropriated for the 1927 corn borer control campaign, is the report of Dr. A. F. Woods, director of scientific work in the Department of Agriculture.

Farm Organizations Work for Unity

A conference of representatives of the National Grange, American Farm Bureau Federation and National Farmers' Union will be held in Washington on November 9, in an attempt to work out a unified program of farm legislation for presentation to Congress.

Favors Big Flood Control Program

Senator Norris, leader of the progressive group, favors a program of flood control that includes dams, reservoirs, irrigation and hydro-electric power plants in the entire Mississippi basin. He wants a commission appointed to study the whole problem of control, so that the flood waters may be held back at their sources and harnessed for irrigation and power.

Want Freight Reduction on Grapes

Organizations of grape growers in the Lake Erie grape belt have filed a complaint with the Interstate Commerce Commission for a reduction in freight rates on grapes from producing points in New York and Pennsylvania to the various consuming markets. They claim that the present rates are unreasonable and that they are discriminatory in comparison with rates on grapes from California, which were recently ordered reduced by the commission.

There Is a Decrease in Crime

The Department of Justice has announced that its legal records for the fiscal year ending June 30, 1927, show a noticeable decrease in criminal business over the year 1919 when the prohibition law went into effect.

Must Give Crop Information

Missouri has a state law making it a criminal offense for farm owners to refuse information to county assessors for crop reporting purposes and this statute has been upheld by the State Supreme Court.

States Standardize Rural Schools

State departments of education in 31 states are promoting standardization of rural schools, according to information received by the Federal Bureau of Education. It is with the improvement of the small one-room rural schools, particularly those where consolidation is not feasible, that standardization is most concerned.

Give Reports of Imports

Of the total agricultural imports into the United States, 15 per cent were crude rubber, 16 per cent raw silk, 12 per cent coffee, 10 per cent sugar, 4 per cent hides and skins and 3 per cent wool.

Doctor Howard Retires

Dr. L. O. Howard, chief of the Bureau of Entomology, has retired after 33 years of service in the Department of Agriculture, and is succeeded by Dr. C. L. Marlatt, who for the past five years has been associate chief in charge of the regulatory work of the bureau, and also chairman of the Federal Horticultural Board.

Government Operation May Result

Government operation of Muscle Shoals appears to be the probable outcome of the long controversy over the disposition of the power and nitrate plants at that point. It is now proposed that the government should operate the big plants for five or ten years.—E. E. R.

FARMERS KILL DEER

Check Outbreak of Rabies—Issue Information on T. B. Work—Extend Forest Reserves—Starlings Spread.

Harrisburg, Pa.

ACCORDING to reports coming to the State Game Commission there are some farmers in Pennsylvania exercising the right to kill deer destroying crops and damaging their fields or orchards and in September over 100 were shot by owners or tenants while actually invading farms.

Exhibits Shown This Winter

Under arrangements being discussed the exhibits prepared by the state to illustrate the habits of the Japanese beetle, the corn borer and other pests and to familiarize people with their appearance may be kept traveling about during the winter. These exhibits have been features of the work of the Department of Agriculture during the summer and have been shown to many thousands of people at their county fairs. It is an interesting fact that the corn borer has reached the Susquehanna Valley counties, while the Japanese beetle has been turned up in Adams County.

To Combat Smut

Efforts of the State Bureau of Markets to secure better grades of wheat are being seconded by other branches of the Department of Agriculture in the form of a crusade against smut.

Rabies Outbreaks Checked

State reports indicate the outbreaks of rabies causing some alarm during the summer have been checked and that valuable material for future studies has been obtained in the handling of cases. Each outbreak has been followed up and data prepared as to cost.

Issue Pamphlet on Cattle

The State Bureau of Animal Industry has announced publication of a pamphlet dealing with cattle tested for tuberculosis, covering regulations for removal of infected cattle and all details in the way of information.

Cooperate in Purchases

Arrangements have been worked out for cooperation in the buying of lands by the forestry and game branches of the state government. Extension of forest reserves is about to start and the Game Commission in buying its lands for more preserves will link up where possible.

Interstate Oleo Law Holds

Attention has been attracted here by reports to legal officials of a test of interstate oleomargarine laws brought about by a prosecution in Erie. The action is the first in a long time and effect on enforcement of the oleo law is to be observed.

Are Studying Birds

State officials are about to supplement the studies made of crows and sparrows of recent years by a study of the spread of the starling and what effect it has upon market gardening, farming and the like.—T. C.

FIGHT TAX RATE

Discuss Feed and Feed Problems—Call Special Meeting of Grange—Growers Consider Spray Residue Problems.

Trenton, N. J.

IN THE program for agricultural development of affiliated farm organizations in New Jersey, a foremost effort this season will be a drive on farm taxes. Five years ago, the federation points out, the taxes took approximately one-sixth of the net acre profit, while increase in both tax rate and assessed valuation in many instances now wipes out the entire net profit.

Feed Dealers Convene

The Fifth Annual Convention of New Jersey Feed Dealers was held on October 20 at the State College of Agriculture in New Brunswick. This annual event is bringing about a better understanding between farmers and the trade, and each year the convention more nearly approaches the status of a business council on feed and feed problems.

Spray Residue Investigation

The New Jersey Experiment Station is now actively under way on its study of the spray residue situation in New Jersey, as made possible by an emergency fund of $6000 granted last month by the State House Commission.—B.

Short Courses Open

The short courses in agriculture at Rutgers University open fr twelve weeks, beginning on November 12th. Courses in vegetable gardening, fruit growing, poultry husbandry, dairying and general farming are offered.

Plan Special Session

A special session of the New Jersey State Grange is being planned for November to be held in Gloucester County to initiate another class of candidates before the annual meeting at Atlantic City in early December.

Leaves on Trip

Howard B. Hancock, Bridgeton, president of the Farm Bureau, is leaving the state for a year's trip to California, the Pacific Coast and Canada, where he will study the cooperative movement as it has been developed in the West.

Meet to Consider Spray Residue

The New Jersey Horticultural Society has called a meeting in Camden to consider the spray residue problem on fruit that is to be exported to Europe this winter. It is reported that some New Jersey fruit shipped abroad this summer contained an excessive amount of spray residue and the growers are expected to take steps to remedy the situation.

Start Drive for Members

The New Jersey Farm Bureu has started an intensive drive for members. A trained team of farmer-salesmen is visiting every farmer in the state to solicit their membership in the organization. It is teh plan of Secretary Harry E. Taylor, of the Farm Bureau, to visit every one of the 29,000 farmers in the state.—A. K.

MILK PRICE LOW

A Real United Dairy Organization May Result from Studies—New York Needs Better Grading of Products.

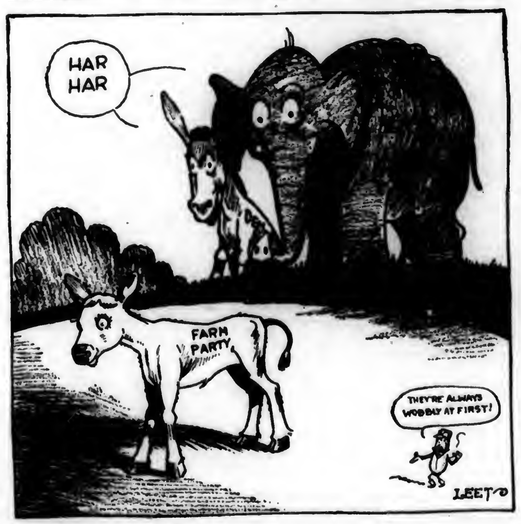
Ithaca, N. Y.

THE new advisory board which was supposed to represent all the dairy interests of the state and which really represents but two of the minor buying agencies, has lately announced its belief that farmers should have more money for milk and recommends an increase of 47 cents a hundred to take effect November 1st. This recommendation comes tardily, as the dairymen's own organization recommended such a raise to take effect August 15 and after attempts on the part of the above agencies to block it, according to published statements, the raise did go into effect on August 21st. The march of events of this sort but make more certain in time a real united dairy organization which will represent all producers and protect the industry in the East.

Needs of New York Agriculture

At a regional meeting of the farm and home bureaus and junior project interests in Cortland recently, Dr. Carl E. Ladd, state director of extension, enumerated the needs of agriculture of this state as better grading of hay, apples and potatoes in order to hold the market in these commodities, thousands of dollars in repairs to farm buildings, tile drainage and the use of more lime on the farms.—M. G. F.

SPEAKING OF THIRD PARTIES, WHY NOT THIS ONE.



"I've discovered a new feeding wrinkle!"

On thousands of farms where real milk profits are being made during the winter months the old order of depending solely on the food ration for milking results has passed. Besides providing good feed dairymen now give equal thought to what happens to their expensive feed after it is consumed.

The systematic conditioning of the dairy herd to keep *assimilation* at top notch is the new way of realizing regular, uniform profits. Kow-Kare is a highly concentrated regulator and conditioner of the milk-making organs. It enables cows to stand unusual forcing strains without breakdowns or milking slumps.

The regular use of Kow-Kare costs only a few cents a month per cow. A tablespoonful in the feed one to two weeks each month is all the average cow needs to keep her healthy, vigorous, productive.

Freshening Cows need Kow-Kare

To insure a healthy, vigorous cow and calf—and freedom from disorders that sap your profits, feed Kow-Kare for two or three weeks before and after freshening. It costs little—pays big.

Kow-Kare is your reliable home aid in such cow troubles as Barrenness, Retained Afterbirth, Abortion, Scours, Bunches, Milk Fever. Never be without it. Feed dealers, druggists and general stores have Kow-Kare. Large size $1.25, six cans $6.25. Small size 65c. We mail, postpaid, if your dealer is not supplied. Write us for our valuable free book, "More Milk from the Cows you Have."

NESHAMINY GARDENS

WHERE AN EDITOR WORKS AND THINKS

BY R. P. KESTER

TABULATION of our poultry experience to date:

Number of chicks bought May 3	510
Of this number we raised	494
Number died by accident and ennui	16
Cockerels sold	250
Number of pullets	244
Culled out	4
First egg laid	Sept. 10
Eggs laid first half of October	637
Per cent production on Oct. 17	33

I am not bragging; I am just telling you.

◆ ◆ ◆

FROM the above results it should not be concluded that chicks hatched May first will always do likewise. In the first place, ours are Leghorns and are well bred. In the second place, they were put in a new house located on grounds on which chickens never before grew. And in the third place they had such care and attention as few chicks get at the start. They are now five and one-half months old and weigh four to five pounds each.

◆ ◆ ◆

I DO not understand why there is not a greater use of creosote paints in the construction and renovation of poultry houses. We got the tip for its use at the New Jersey Experiment Station when there last spring. It is sold in most instances as shingle stain and may be had in a number of shades. It is thin and very penetrating and makes a splendid wood preservative. We used a brown shade on our poultry house and painted the perches, nests and dropping boards with it. No mites, lice or other vermin will thrive there.

◆ ◆ ◆

IS IT possible that quarantines may solve the traffic speeding problems after while? I see by the control committee's report that a total of 3,379,679 automobiles were stopped and examined by inspectors in the corn borer section last summer, and 5651½ dozen ears of corn were found and confiscated. When we add to this number the cars that were stopped by other inspectors to examine for Japanese beetles, and those held up by enforcement agents looking for booze, it is altogether possible that in another year or two other quarantine inspections may make automobiling as slow and safe as was traveling in the horse and carriage days.

◆ ◆ ◆

I AM not much given to prophesying except about sure things, but I will prophesy now. Next year there will be an over supply of sweet corn and a tremendous slump in prices. Why? Because the price was good this year, and the plungers, seeing this, will jump in over their ears next year. They always do that. So long as farmers do not use their heads in the matter of producing, no farm relief measure Congress can pass will do an iota of good towards stabilizing prices.

◆ ◆ ◆

THE roadside market at Neshaminy Gardens is closed for the year. Many people still call at the place for produce, but the stand is not kept supplied and attended. It was a satisfactory season, considering the kind of weather that prevailed a good part of the year. During September and the first half of October it was fine, the traffic was good and the sales many. A large number of our regular customers began to buy of us last year. We find that most people are attracted by one thing and, stopping, buy others. We plan to erect an attractive shelter next year, and arrange for better display. We, also, expect to put up better signs. In these days of automobiles it is necessary for people to have several hundred feet of distance in which to make up their minds.

The Cheerful Plowman

At The Big Hotel

I THINK I acted pretty well when stopping at the big hotel. I am a farmer, that is true, but I am proud, I'm telling you, and when it comes to city stuff I do not, will not, take a bluff! I marched into the lobby there with quite a nifty, lordly air, my trousers pressed with style and charm, light overcoat across my arm! I acted just as if I knew the process there from B to Q, I tried to make the people see that this was old, old stuff with me!

When I stepped in, I tell you what, the bell-hops sprinted to the spot, they all laid hands upon my grip, I gave each one a fancy tip! "A room with bath!" I told the clerk, "A quiet room where I can work; back from the street, clear out of bounds of all disturbing traffic sounds!" "The seventh floor, is that all right?" "Yes, that will do me for tonight, but if there's too much noise, I feel, tomorrow you will change the deal!"

"Yes, yes, indeed!" he answered me, "our telephone, you know, is free; our dining-room I know you'll like, as fine a place as you will strike! You'll find our service just as nice, our bell-hops just as full of spice, as you have found them in New York, Jerusalem, Hong-Kong or Cork! You'll find them just as good, you will, as you found down in Louisville or Birmingham, or Saskatoon, or Winnipeg, Des Moines, or Boone!"

I didn't hunt a cheap cafe when meal time came, I rise to say; I marched down to the dining-room as dignified as any groom who ever stood before a bower on his most fateful wedding hour! I ordered all I wished to eat and left a tip both large and neat! I read the paper with the air of one who'd spent a lifetime there! When I checked out I paid my bill as tho I owned a mighty till, I hired a taxi to the train while bell-hops jumped with might and main! I tell you what, I take no bluff, I'm up on all this city stuff!—J. Edw. Tufft.

Get the Best Galvanized Roofing & Siding

NOTHING so long lasting, so durable and so easily handled for covering buildings as *good* Galvanized Roofing and Siding. And you certainly can afford *the best* when GLOBE, the old reliable—offers you its products on a direct mill-to-user basis.

Make your barns—houses—sheds—silos—corn cribs—grain bins, etc., fire safe, lightning proof, weather proof, rat and vermin proof, with the famous GLOBE Galvanized Roofing and Siding. Tested and proved in your own state by three generations of satisfied users. Made in our own mills, formed in our own shops, subjected to every test possible—and backed by the wisdom of years of manufacturing experience.

Garden and Truck Crops

GILBERT S. WATTS, Staff Contributor and Adviser
Logan Spring Farm

It Is Time to Get Root Crops into Storage

I HAVE just added to my small library a most interesting book, "Root Development of Vegetable Crops," by Professors Weaver and Bruner of the University of Nebraska; publishers, McGraw-Hill Book Co., Inc., New York.

Many surprises were in store. The root activity of a number of vegetable crops at depths below plowing levels is much greater than might be imagined, frequently reaching depths of 5 to 8 feet. The roots of a maturing lima bean plant ramified thru 200 cubic feet of soil. The roots of a ten-week-old garden beet had an extreme spread of eight feet and reached a depth of five feet. The main tap root had elongated at the rate of nearly an inch a day. Photographs of some crops showing the mass of roots exposed by washing away a few inches of top soil illustrate vividly the damage which may be done by cultivation that is too deep, especially as the plant approaches maturity.

• • •

Today, October 17, we picked all large tomatoes both green and colored, more than 100 bushels of them, for Jack Frost will certainly not hold off much longer. Frost data for Altoona, nine miles distant, record during the period 1896 to 1920 only two seasons in which killing frosts have been so long delayed. These dates are October 17, 1898 and 1900. The record of those years now practically stands broken as it will certainly not freeze today, this being written at noon.

The long growing season has indeed been welcome compensation for the backward weather experienced during the spring months. In spite of an unfavorable outlook at the beginning we have harvested one of the heaviest yields of tomatoes ever grown on our farm. Some fields of sweet corn planted so late there seemed no hope are matured. All of which illustrates how dangerous it is to make predictions.

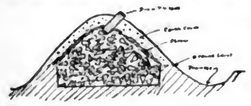
• • •

Tomorrow we expect to begin digging and burying carrots and will start storing our largest celery in trenches. A little early, perhaps. Perhaps not. A week or ten days of rainy weather would bring the first of November dangerously near. It will feel good to have at least a part of these crops stored in time to eliminate serious risk from freezing.

• • •

A reader inquires, "What is the best way to store carrots for winter use and sale?"

The method shown in the sketch has been used successfully for beets, carrots, parsnips, turnips, rutabagas, even potatoes and apples. The length of the pit will depend upon quantity to be stored. Select a well-drained location and with a common plow make two rounds, turning the furrows together. In making the second furrow of the first round run the plow close in to the first furrow to ineure cutting out the middle. If the plowing is properly done we will now have a shallow trench about 8 inches deep, 3½ to 4 feet wide and filled with loose soil. Both edges are square cut and perpendicular. If we had thrown the furrows outward in the first place the edges would have been very ragged. By now running the plow the other way much of the loose soil may be shoved out of the trench. The remainder will be well pulverized, making it a light, fast job to finish clearing the trench with a shovel. It is important that the bottom of the trench be smooth and even. Then next winter when it is cold and stormy the contents of the pit may be removed cheaply and comfortably with a potato scoop.



Storage pit for root crops

• • •

Some growers prefer to put straw in the bottom of the trench. I have never been able to observe any benefit from this practice in the case of root crops, apples, of course, would be kept cleaner, and the straw is not only a nuisance when removing the roots but seems to harbor mice, rats and moles.

After the roots have been piled as high as they will stay without rolling down the whole is covered several inches deep with straw or hay, the longer the better, and then 4 to 6 inches of soil is placed over the pile. This covering soil is taken in such a manner as to open a shallow drainage ditch around the pit. Ventilation may be provided by inserting a four-inch drain tile in the top of the heap every 10 or 15 feet. If the tile is inclined at a sharp angle with the open end turned away from the prevailing direction of heavy rains, little water will enter. Or small peratures with attendant sprouting and possible decay.—G. S. Watts.

• • •

When hard freezing is in prospect the open ends of the tiles may be plugged with handfuls of straw. I prefer not to give any additional protection until the earth covering is practically frozen thru. In years of heavy snowfall I have often applied no further litter. In any event one must be guided by conditions. If manure is used it should not be put on so heavily as to heat. Too much protection will result in rising temperatures in the pit with attendant sprouting and possible decay.—Gilbert S. Watts.

Give Radio Talks

THREE radio talks on apples are scheduled to be broadcast from Philadelphia during National Apple Week which will be observed from October 31 to November 5th.

Mr. R. G. Bressler, Deputy Secretary of Agriculture of Pennsylvania, "Where do your apples come from?" to be broadcast from Station WIP, Gimbel Brothers, Philadelphia, October 31 at 6:50 P. M.

W. R. Whitacre, Pennsylvania Bureau of Markets, "What variety of apples shall I buy?" Broadcast from WIP, Tuesday, November 1, at 4:00 P. M.

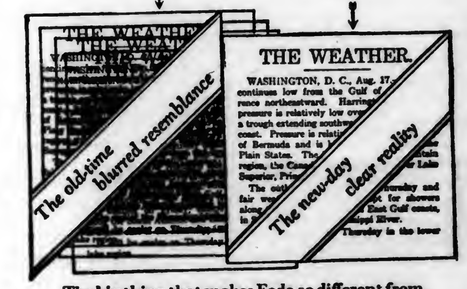
Dr. S. W. Fletcher, Pennsylvania State College, "A trip thru the apple orchards of the nation." Broadcast from WIP, Thursday, November 3, at 6:50 P. M.

Urge Use of Certified Sweet Potato Seed

THE use of certified sweet potatoes, treatment of the seed, dipping the plants before setting in the field, and the use of the multiple planting method were advised by Dr. William Martin, state plant pathologist, at the demonstration meeting on the John Wolferth farm, Gloucester County, N. J., October 7th. This is the largest sweet potato experiment plot in the United States and it draws visitors from many of the leading potato states of the country. This year's experiment shows that considerable gain has been made this year in solving some of the potato problems. Dr. Martin advised the growers to buy certified seed if they did not care to go to the trouble and expense of splitting the stems of the plants to see if they are free from the disease commonly known as stem rot.—A. K.

FADA Radio

You decide yourself



The big thing that makes Fada so different from ordinary radio is the exclusive Fada principle of Harmonated Reception. Because of this master stroke of radio engineering, Fada gives you the whole range of both the musical and vocal scale without "defaulting" on the very high or very low notes. Everything comes through, clear as the chime of a brand new bell, even to the delicate overtones which elude most radio sets and speakers. The Fada receiver and the Fada speaker have been harmonized and synchronized to a degree of perfection which experts did not believe possible. When used together, they are electrically and musically one instrument, giving you a reality you have never dreamed possible. Remember, however, that only the Fada receiver with Fada speaker give you real Harmonated Reception. Hear this finest modern radio at any Fada dealer's before you decide. Then enjoy the pleasure and profit of hearing the world's best music, the big sports events and news items, the latest market, weather and crop reports every day at your fireside.

F. A. D. ANDREA, INC., Long Island City, N. Y.

Licensed under Hazeltine, Latour, R. C. A., Gen. Elec. Co., Westinghouse Elec. & Mfg. Co., Amer. Tel. & Tel. Co., patents only for Radio Amateur, Experimental and Broadcast Reception

OUR YOUNG PEOPLE'S FORUM

Letters From Forum Members and Friends

Dear Forum Friends:—I would like to become a member of the page. I have a cat named Stripple. He sure does like you to pet him. He won't catch peeps. He lays with the peeps and they all flock around him.

EGG LEMONADE

1 egg
1 cup cold water
Juice of 1 lemon
3 tablespoons sugar

Beat egg thoroly, add sugar and strained lemon juice. Add water

NIMBLE DIME
PLACE A DIME UNDER A GLASS IN THIS MANNER
SCRATCH ON THE TABLECLOTH JUST OUT SIDE THE GLASS
THE DIME WILL COME OUT TO YOU

gradually and stir until well mixed. Serve cold.—Marion Sike, (X), York County, Pa.

Dear Forum Friends:—I would like to become a member of the Forum friends. I am sending some recipes.

STUFFED STEAK

3 pounds of round steak one inch thick
Make a stuffing of bread, one half a loaf or more mixed with medium-sized onion.
½ teaspoon salt
2 tablespoons melted butter.

Stuff steak and sew, put in roaster with 1 cup of water. Roast until steak is tender and brown.

SCALLOPED TOMATOES & CORN

In a buttered baking dish put alternate layers of soft sifted bread crumbs, sliced tomatoes and green corn cut from the cob. Season with scraped onion, five chopped green peppers and salt. Have the last layer of tomatoes covered with three-quarters of a cup of cracker crumbs mixed with one-third cup of melted butter. Let cook about one-half hour.—Dorothy Edwards, (X), Fulton County, Pa.

Dear Forum Friends:—When we get Pennsylvania Farmer the first thing I look at is the Forum page. As I read over the letters I came to Irene Zimmerman's letter saying she wished other Forum friends would give their opinions about country life and city life.

Well, I cannot say anything more about the great picture you see in the country but what Irene said is very true. If it were not for the country people the city people would have nothing to eat and would not have any good friends to go to visit in the country. The scenery would not be pretty if there were no farmers to plant large fields of corn, oats or wheat.

I am like Irene. I hope others will tell their thoughts about the same thing and I am sure you will. I like my school very much and also my teacher. The leaves are getting yellow, soon the mountain will be a golden brown. I think fall and winter are the best seasons of all.

As I read on the Forum page I saw there will be another contest. I wonder who will win this time?—Alenna Mae Rhine, (X), Juniata County, Pa.

I'm sure other Forum friends will write giving their opinion of country life and city life.

I received your letter describing the costume you're going to wear to our Make Believe Hallowe'en Party and I've entered your letter in the contest.

THE FORUM EDITOR.

Dear Forum Editor:—Have you room for one more? I have two pet dogs. One is named Rock and the other is named Sugar Lump. I call her Sugar Lump because I think that is a nice name; don't you? I had a pet cat but she ran away. She liked to jump broom handles and jump in windows.—May Harris, (X), Caroline County, Md.

I suppose you miss your pet cat very much. Did it take a lot of time and patience to teach pussy to jump broom handles?

THE FORUM EDITOR.

Dear Forum Friends:—On September 16 our teacher suggested that maybe we could get a truck and go to the Jennertown Fair. We all agreed to go. We had lots of fun. We saw bears, deer, monkeys, raccoons, porcupines, race horses, ponies, mules and wildcats. Three of us bought a ring to remember the fair. I wish we could go to a fair again. Were any of you Forum cousins at the fair?—Mary Umberger, (X), Somerset County, Pa.

Dear Forum Friends:—I guess you thought I was dead but I am well and I hope all the Forum friends are the same. I was very busy all summer and did not take time to write. I am going to join your Make Believe Hallowe'en Party. We had a big time on Friday, the 14th, at Spring Mills. It was community day. Every school in Gregg Township had to bring things to put on exhibition. —Thelma Beck, (X), Centre County, Pa.

I haven't yet received your letter describing the costume you're going to wear to our Make Believe Hallowe'en Party. Better send it along soon for there's only a few days left now.

THE FORUM EDITOR.

Dear Forum Editor:—I am sending you a picture of our barn and cattle which I think is very good. I got a new express wagon for my birthday. I also have a Collie dog whose name is Micky, and a little yellow kitten whose name is Fusty.

PART OF OUR HERD
Grace Thompson, (X), Kent County, Del.

—Grace Thompson, (X), Kent County, Del.

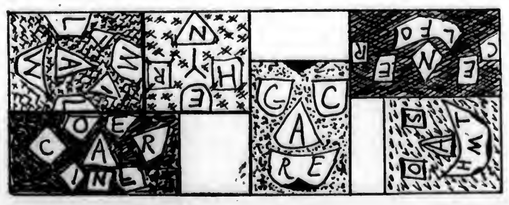
Dear Forum Friends:—I am still wearing my Forum pin. I have been reading the Forum letters for a long time. I have been reading about your Make Believe Party. I think it will be grand.

I am going to take music lessons next summer.—Helen Beck, (X), Centre County, Pa.

I'm glad you're interested in our Make Believe Party. Have you mailed your letter describing your costume?

THE FORUM EDITOR.

DEAR LITTLE FOLKS:—Here we are at our Hallowe'en party and some of Our Little Folks—three boys and three girls—have prepared a surprise for us. Away last week they got their mothers to give them cardboard boxes. The boxes are different sizes, as you can see in the puzzle, but that doesn't matter because the children are different sizes, too. Then these Little Folks cut holes and slits in these boxes and covered the holes and slits with thin paper on which they had painted letters which, if correctly arranged, will spell the name of the child who made the box-lantern. Now, there they are, all lit up with candles inside and there is much giggling and chuckling among certain of our little friends as we begin to guess who made which box. They told me that they had put the queer-looking marks on the boxes to make them look extra spooky but that needn't keep you from having a good time trying to find out which box belongs to which youngster. It may look as tho you had to stand on your head to read some of them, but you needn't. Just turn your paper around and some letters will grin out at you right side up.



When you have found the names of these three girls and three boys, send them to me either on a postcard or in a letter so that your answer reaches me by November 5th. But, for goodness sake, don't make me guess which one of you is sending the answer, and please tell me your age, when your birthday comes, your address and the name of your county. The prizes go to the ten children, sending in the correct answer, whose cards or letters are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 241 South Third Street, Philadelphia, Pa.

The answer to the puzzle in the October 8 issue (the puzzle about the words which you changed into the names of animals) is: BEAR, HORSE, BIRD, HORNET, FISH, DOG, COW, CHICKEN, LION, KITTEN, WHALE, SHEEP.

The prize winners are: Dorothea D. Benner, age 10, Coopersburg, Pa.; Jeanne Louise Dunlap, age 7, Blairsville, Pa.; Harry Floyd, Jr., age 7, Columbia, Pa.; Hanna E. Gongaware, age 8, Mt. Pleasant, Pa.; Edith Hagan, age 7, Newtown, Pa.; Arthur Hottenstein, age 11, Overton, Pa.; Ruth Linde, age 9, Orefield, Pa.; Anita V. Marvel, age 11, Townsend, Del.; Thomas Musser, age 9, Rebersburg, Pa.; Clarence Ruth, age 7, East Earl, Pa.

Hallowe'en Games

Drawing Contest—

Give every child a pencil and a piece of white cardboard and let him try to draw a bunny or a chicken. Give a prize for the best drawing.

Blind Man's Buff

A handkerchief must be fastened over the eyes of some one of the party who has volunteered to be the blind man; after which he is turned around three times, then let loose to catch any one he can. As soon as he succeeds in catching some one if he is able to mention the name of the person caught he is allowed to remove the handkerchief. The person caught then takes up the game and so on until everyone has had the opportunity to play the "blind man."

Another Fortune Game—

The game of fortune telling always causes lots of amusement. Cut off the top of a small pumpkin and scoop out the inside. Write the fortunes on small slips of paper and place them in the hollow pumpkin. During the course of the evening the pumpkin is passed from guest to guest and each one draws a slip containing his or her fortune. The following suggestions may help you in writing fortunes:

"You will have many ups and downs in life. You will go upstairs to bed, and come down stairs to breakfast."
"You will brighten the world wonderfully—if you use the right kind of polish."
"You'll remain an old maid, as mother had bid
To the end of your days, you'll be glad that you did."
"A bachelor you'll be as sure as fate
So give up seeking a life-long mate."
"The future will see you owning a bank
But you must be careful or you'll be a crank."
"Time will find you upon the stage
A Prima Donna of the age."
"A long life and a happy life
With friends loud and true.
Abundant wealth and best of health,
The future holds for you."

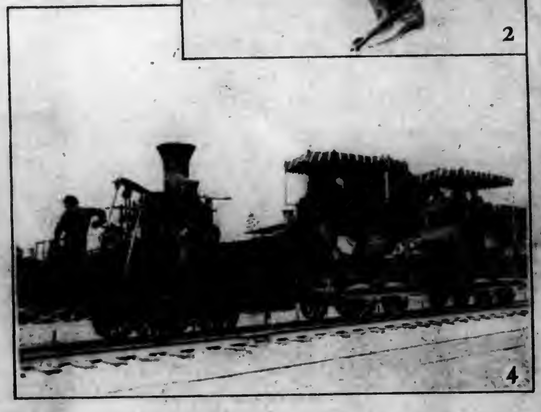
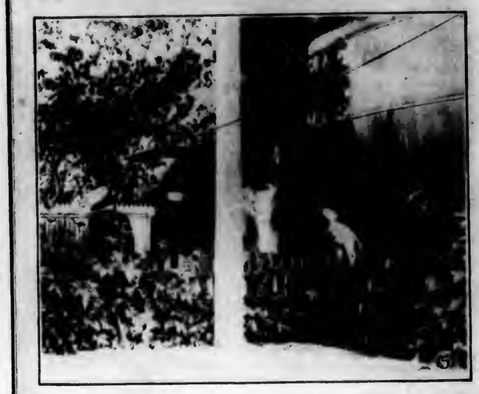
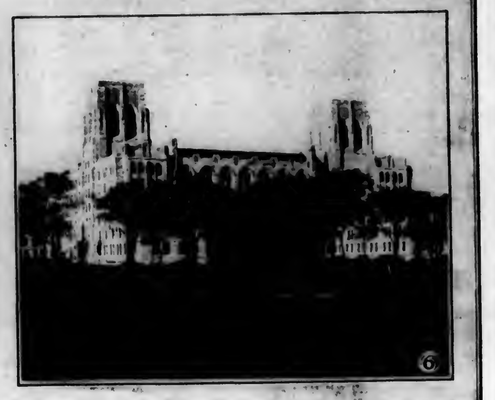
PASSING EVENTS IN PICTURES







(Copyright by Underwood & Underwood)

1.—American Legionaires took part in several important public functions while in London. The women flag-bearers marching toward Westminster Abbey are from New York and Philadelphia.

2.—Nine-year-old Betty Lou Coupe is a student in an aviation school in Los Angeles. When she completes her course she will qualify as a full-fledged pilot.

3.—Governor Fisher, of Pennsylvania, throwing out the first ball at the beginning of the opening game of the World Series at Pittsburgh. Barney Dreyfuss, owner of the Pirates, is beside the Governor.

4.—Our great-grandfathers traveled in this style a hundred years ago.

5.—Fighting between the Northern Chinese and the Cantonese troops at Chinkiang, China, early this month, threatened great loss to American property. A shell passed thru a huge oil tank, causing an explosion which ripped off the top of the tank. British and American sailors joined forces in fighting the fire which resulted.

6.—The Albert Merritt Billings Hospital, recently completed, is being used as a clinic by the University of Chicago.

One Hundred Dollars Offered!

Here Are Seven Prizes for Beautifying Your Home Grounds

The Awards

First Prize . . .	*$50.00*
Second Prize . .	*25.00*
5 Prizes each of	*5.00*

The rules are simple:

1. A good, clear picture of the "eye-sore."
2. A good, clear picture of the beautiful scene.
3. A story telling all about it—not more than 300 words.

Contest starts today, and closes November 1, 1928.

NOW for a unique contest. Usually contests say $25.00 for the best, $10.00 for the next best, and so on. But this contest is different. For several months it will have to do with the very worst corners or rows about your home. Have you an "eye-sore" in your surroundings? Many farm homes have. Is there an old dilapidated fence crumbling to earth, and making a fine hiding place for hundreds of miserable weeds? Perhaps an old tumble-down building is disgracing your grounds. Maybe there are piles of refuse, tin cans, etc., or long neglected corners and paths, even driveways, have become wild riots of weeds. If you have one of these or any other "eye-sore," get your camera and take a good clear picture of the spot. That's the first part of the contest. Better do this right away, for spring is such a busy time, and it looks worse now.

That done, start planning and studying how to beautify the chosen spot. If you want suggestions and help, do feel free to write the Home Page Editor. If this fine autumn weather continues, you might even plant tulips before the ground freezes. If Jack Frost comes, arrange for spring planting and sowing. The contest will continue till November 1, 1928, so that the very latest flowers will have time to enter. After that time all letters and pictures will be judged.

Beautify your chosen place as best you can, and take a picture of the flowers in their prime. We need the two pictures, one miserable," one beautiful, together with a story of what you did and how you did it.

Men, women or children may enter. Why not enlist the interest of the whole family? Fifty dollars is a neat family purse just before Christmas. And best of all will be the priceless reward gained from transforming a homely spot into a bower of beauty. Get busy now, today, with cameras, and send in this photo with your full name and address. That means you have entered, and we may be able to help you from month to month.

Address Home Page Editor, care of Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

Yard showing the effective screening of out-door toilet by the use of lilacs and high-growing shrubs.

She Admits He's Right

HUSBANDS like to crow over a victory in some domestic problem, and when the victory is for good of all, it's fun to crow with them. For seven years, my husband has urged that we have no "big dinner" on Sunday, as he expressed it. Until recently I kept putting off planning that way but now we have real fun eating what's in the ice box.

Saturday I do what cooking is necessary, preparing a good roast, a meringue, custard pudding, baking cake and cookies, and see that fruit is on hand. When Sunday comes, we go to church and Sunday school, and come home to a picnic lunch or take it off to the woods. For an outdoor jaunt, the gallon thermos carries something hot, or we have bacon with eggs, or cheese toasted between slices of bread on a long fork.—E. R. D.

Beauty Begins with Soap and Water

AN OLD proverb has it that beauty is in the eye of the beholder. Another way of saying the same thing is that the lover sees all things thru rose-colored glasses. The woman who appraises herself in the mirror, however, is a beholder with clear and critical eye. She seeks beauty, perhaps, but she sees her shortcomings. She eyes a tableful of cosmetics and wonders where to begin.

If she is wise she will begin with soap and water, and pretty nearly end with them, too, for given good health, a well-behaved digestion, a degree of outdoor exercise, the average complexion will take care of itself. All the beautifying it needs is the daily application of warm water and soap to keep it clean.

No Short Cut to Cleanliness

"There is an unfounded fear of the effect of soap on the skin of the face and scalp," says Dr. William H. Park, director of laboratories in the New York City Department of Health. "As an ordinary hygienic measure the face should be washed once a day with warm water and a good quality of soap." Even in this day of good and short-cuts, of labor-saving devices, there is no shorter cut to cleanliness than simply—cleanliness.

The method is so simple that it is usually tried only as a last resort and after much urging. Many women prefer to experiment with heavily scented cosmetics, put up in exotic containers and sold for several dollars. Some of them serve a purpose, many of them are useless, and few of them have for most skins the simple cleansing ability of the time-honored face wash. Those who suffer from facial blemishes, such as pimples and blackheads, should certainly try the soap and water cure, for theirs is a situation in which cleanliness is next to godliness. The soap used should be mild, and the warm water should be followed by a cold rinse.

Type of Skin Decides Type of Soap

The choice of a soap must be a matter of experiment, depending upon the state of one's skin, whether it be dry or oily. The dry skin needs a particularly mild soap, which may be followed by rubbing in a little cold cream. Neither the color nor the scent adds to the cleansing ability of the soap, tho they add to the pleasure of using it. These are matters of personal preference and taste. That many women like a delicate fragrance is evidenced by the tremendous popularity of colognes, toilet water, bath salts and perfumed soaps.

The care of the scalp, like the care of the skin, begins with cleanliness. It should be shampooed often enough to keep the hair lustrous and healthy. The nightly forty strokes with the brush are not to be despised even in the "bob" age, and it is well to remember that the comb and brush should both be thoroly washed in warm suday water at least once a week. It takes only a few minutes and it makes a great difference to the scalp.

Soap and water as aids to beauty are still for most women the best applications of all. Cleanliness is fundamental to beauty. It gives a daintiness of body as subtle as that daintiness of personality called charm.

Six Best Doctors

THE six best doctors anywhere,
And no one can deny it,
Are Sunshine, Water, Rest,
Fresh Air,
Exercise and Diet.—Mrs. C. C. Garey.

Result Depends on Temperature

WHIPPING cream must contain 30 to 35 per cent milk fat and must be held at ice cold temperatures for several hours previous to whipping to obtain the best results.

Whipping should be done when the cream is cold, and better results will be obtained if the bowl and whipper are cooled with cold water previous to use. The best type of cream whipper is that known as the "turbine" beater which has a bladed wheel or paddle that spins on the bottom of the bowl. Beaters of this type whip the cream faster and stiffer than ordinary beaters.

Too much whipping is as bad as too little, so care should be taken to stop at the right point when the cream has reached a good degree of stiffness. Under ideal conditions this should be within two minutes. Properly whipped cream kept in a refrigerator should stay whipped for several days without any material change except possibly in flavor.

The New York Agricultural Experiment Station, Geneva, N. Y., has a brief circular on cream whipping which is free upon request.

Becoming Lines in New Styles

Directions for Ordering.—Give figure or figures of each pattern exactly as printed at beginning of each description. Give bust measure when ordering waist patterns, waist measure for skirt, and age for children's patterns. Address Pennsylvania Farmer, 261 S. Third Street, Philadelphia, Pa.

5913.—Seven sizes: 34, 36, 38, 40, 42, 44 and 46 inches bust measure. A 36-inch size will require 3⅞ yards of 40-inch material with ¼ yard of contrasting material for facing on collar, vestee and belt. Pattern, 10 cents.

5927.—Four sizes: 8, 10, 12 and 14 years. A 10-year size will require 2⅝ yards of 36-inch material with ⅝ yard of contrasting material for plastron, long sleeve portions and facing on collar, cuffs and belt. If made without the long sleeve portions ⅝ yard of contrasting material is required. Pattern, 10 cents.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

"I RECKON as how you might be a bit keerful too if folks were looking for you as hard as they are for the White boys. We'll just stay out here and act friendly and not too curious, and soon we'll get to talk to them. Jim's probably been sent for, and he'll tell 'em I'm all right."

"Tell who?" Carnes broke in. "There's nobody home but the woman."

Jennings laughed. "Don't look," he warned. "But there's two, three fellows watching us over in them vines yonder. They took out as soon as the hounds begun to give tongue. Don't get to acting hostile or you'll be picking lead out of your carcass. The White boys is good shots."

We sat there half an hour while the darkness came down. No one came near us. There was no sound of movement in the house. Finally there was a rustle in the woods to our right. We sat up.

"Jennings," called a sharp voice.

"Right here, Jim," responded the trapper. "Call your friends in. We want a pow-wow and durned quick."

Men began to shape in the dusk. I counted five. They approached silently, and their rifles were still ready.

"Jennings is safe enough," called the first one to reach us. "We'll chance his friends. Come in the house."

It seemed that the three White brothers had been visited by several patrols and had got pretty wary. Our visit had led them to get in two neighbors. In case we had been identified as Tryon's men they were of a mind to kill or capture us.

"That's the spirit," commended old Jennings, squatting before the fire with a bowl on his knee and a horn spoon in his hand. "Can you get two more like you?"

Two names were mentioned. The men lived close by. Jennings nodded.

"Go get 'em," he ordered. "And pick up two more rifles and a pistol or two. Now listen."

He told of the powder train and its fate. The five listened in silence. Then one of the neighbors spoke.

"I heard about them wagons. They come by south of here today. Likely they'll stop for the night up by Leinbacks."

"How far?" asked Jennings.

"Ten mile—maybe less."

Jamed White moved over to the fireplace. He took a charred brand out of the ashes, and then looked around.

"Mary," he said, "lend me that pan a minute."

He held the polished surface up before his face, then began to draw long black streaks with the charred stick down his face.

"War paint," he explained. "The rest of you better do this too. The men who do what we're going to do will be outlawed. No use letting the governor know who we are."

I began to perceive that this was to be a desperate business. Not only this trick of White's but his attitude in inquiring as to Carnes and me showed it. He was evidently not minded to take risks with men on whose courage and fidelity he could not rely. Carnes, with a wink at me, told at length of my duel and trip south. He said nothing of my protests of loyalty to the King, an omission for which I was grateful. Carnes, of course, as an agent of the Boston Sons of Liberty, needed hardly any further voucher. Fortunately, some papers were on him that proved his identity beyond doubt.

OF MY own feelings, it is difficult to speak. I was thoroly frightened at the idea of falling again into Fanning's hands. I hardly liked the idea of taking arms against agents of the government. Yet in spite of this, there was a certain curiosity, a lure of exciting enterprise, which drew me on despite my apprehension. I felt, however, some guilt on account of the capture of the powder. If I had used my head better and come south with better speed, the powder might have been safe in the Regulators' hands.

The others showed no doubt that I was a full-blown rebel. One found a pistol for me. Another equipped me with powder horn and bullet pouch. White himself daubed charcoal over my face till I looked, as Carnes said, with the white rims around my eyes, "like a badly scared nigger."

We set out, two by two, down the road an hour before midnight. It was fairly light, a fact that worried me first, till White declared that the timber by the probable camping place was so dense that the starlight would put us in no danger of discovery.

Two more men joined in after a mile or so. We were nine in all, not a great number to attack a troop of cavalry. Indeed it was hard for me to believe that we were riding on any such errand. There was hardly any wind; the fields to right and left lay quiet under the sky; even the woods we passed thru hardly rubbed boughs together or set their leaves to whispering. No one spoke, and, half dozing in my saddle, I thought for a moment I was back in Philadelphia riding home alone after an evening at a hospitable country house.

But the next instant, the man in the lead voiced a low warning as we turned off a new road. I saw a file of shaggy ponies ahead of me with a buckskin-clad rider on each. A blackened face showed as the rider ahead turned to pass the word on to me. I came to myself with a start. This was Carolina, and I was riding with the outlaws of the back country.

AN HOUR later we halted. There was a whispered consultation at the head of the line and a man went off to the left at a gallop. Another dismounted and worked his way cautiously along the road ahead. The rest dismounted and I followed their example.

Carnes came back to me presently. "This man White is a soldier," he declared. "One fellow goes up ahead to see if any reinforcements have come by for the train. The farmers along the road will know. Another is going to stalk them from here and lay out a path for us."

Word was passed back that White wanted a council. We tied our horses and came together.

"My plan is this," said he. "We attack with a rush, drive the guard away from the wagons. Then while the rest keep up the fight, two of us will lay trains to the wagons, give the signal and we'll all break for the timber. Ten minutes will do it or less; and it will take that long for them to find out how few we are."

But Carnes was on his feet and protesting. The Regulators needed powder, he swore. Had he come all the way from Boston to blow up what the Sons of Liberty had paid for? Drive off the guard, yes, but hook up the teams and get away to the west.

"Waddell is at Salisbury," White commented. "Even if we could get away, and that I doubt, he would have word in a few hours. By daybreak, a regiment would be hunting us. You cannot run a race with wagons."

I HAD been thinking and now spoke up rather diffidently. It seemed clear, of course, White was right, we could not carry off all the powder. But what if Waddell thought all the powder had been blown up? If we could make him think that, and still get a wagon away, the pursuit might not be so vigorous. He would send in pursuit of the wagon train, but, since the Regulators were gathering against him, would he go to much effort right now to try to find men who might be presumed to know the country and who would probably be safely hid?

On this the men were of two minds. There was much talk back and forth until someone whistled from the road and one of our men came in. It was the one who had been sent to scout the camp.

"Right where we figured," he exclaimed. "Everybody dead asleep, too, and so far as I could see, only twelve or fourteen men.

"Nearer twenty," Carnes expostulated. "There were that many in the troop that jumped me."

White, shrewder, asked about the presence of saddle horses. The scout said there could be only a few. The horses he had seen were hardly more than enough to handle the wagons.

Fifteen minutes later, the rider sent ahead came pounding back. "Fraser says fifteen or twenty mounted men went past about dusk toward Salisbury," he reported.

White gave an exultant laugh. "We've got them," he declared. "They figure they're close enough to Salisbury to be safe and the escort has gone on.

(To be continued next week)

Fruits—APPLES, bu bskt, N. Y. Wolf Rivers and Alexanders, $1.75@1.85; Kings $1.65@1.75; Twenty Ounce, $2. Mixed, Rhode, $2; Wealthies, $1.90@1.75; Penna, Yorks, $1.40@1.50; Ohio, Jonathans, $2@2.25; Va, unclassified, $1.50@1.75. GRAPES, N. Y. Concords, 4-qt, best, 25@27c; 12-qt bskt, 60@62c; few 65c; 24-qt bskt, 110@16c. Penna, 12 qts, 60@65c. PEARS, N. Y. bu bskt, Bartletts, No 1 best mostly $2@2.25; poor low as $1.75; choice, 200@$1.25; Seckels, large, $2.25@3.65. QUINCES, N. Y. bu bskt, No 1, $2@2.25.

LIVESTOCK

Hogs—Slow, around 10@25c lower; top, $11.80; bulk butchers, 180 lbs down, $10.50@11.25; packing sows, $10.30 downward.

Cattle—Nominal.

Calves—Slow, steady; best vealers, $17.50.

Sheep—Slow; about steady; top choice lambs, $14.25; good and choice, $12.50@14.25.

HAY AND GRAIN

Hay—No 1 timothy, $18@18.50; standard timothy, $16@17; No 2 timothy $14.50@15.50; No 3 timothy, $13@14; No 1 light clover mixed, $16@16.50; No 2 light clover mixed, $14@15; No 1 clover mixed, $17@18; No 2 clover mixed, $14@16; No 1 clover, $17@18; No 2 clover, $14@16.

Oats—No 2 white, 55@54c; No 3 white, 51@52c; No 4 white, 49½@50c.

Yellow Shelled Corn—No 2 yellow shelled, 95@96c; No 3 yellow shelled, 93@94c; No 4 yellow shelled, 90@91c; No 5 yellow shelled, 87@88c; No 6 yellow shelled, 83@85c.

PHILADELPHIA MARKETS

LIVESTOCK

Beef Cattle—Steers, good to choice, $13@14; fair to good, $11.50@13; common, $10@11.50; cows, good to choice, $6.75@7.75; fair to good, $5.75@6.75; bologna, as to quality, $2.25@3.25; bulls, good, $7@7.75; medium, $6@7; calves, choice, $18@18.50; fair to good, $15.50@16; common, $10@13; Tennessee, choice, $15@16; fair to good, $11@13; common, $6.50@8.

Sheep and Lambs—Shorn sheep, wethers, extra, $7@7.50; fair to good, $5@6; common, $2@3; ewes, heavy, fat, $5.50@6.25; lambs, spring, extra, $14.50@15; medium, $12.50@14; common, $8@11.

Hogs—Nearby handy weights, $12@12.25; heavy, weighing 200 lbs or more, $10.50@11.

HAY AND GRAIN

Baled Hay and Straw—Timothy hay, No 1, $18; No 2, $16@17; No 3, $15@16; timothy, clover mixed, No 1, $16.50@17; No 2, $15@16. Straw, straight rye, $19@20; wheat straw, $13@14.

Wheat—Car lots, in export elevators, No 2 red winter, $1.35½ bid; No 2 red winter, garlicky, $1.32½ bid; lower grades selling at the usual trade discounts.

Corn—Nominal.

Oats—No 2 white, 58¾@59¾c; some heavy stock commanded a premium; No 3 white selling at a discount of 1@2c from No 2 white.

DAIRY MARKET

Butter—Solid-packed creamery, in tubs, higher than extras, 51@54c; extras, 92 score, 50c; 91 score, 47½c; 90 score, 44½c; 89 score, 42c; 88 score, 41c; 87 score, 40c; 86 score, 39c.

Cheese—New York, whole milk, flats, fresh, 29½c; longhorns, round lots, 28½c; jobbing, small lots, 30@31c; single daisies, fresh, 28½c.

LANCASTER MARKETS

PRODUCE—CURB MARKET

Butter and Eggs—Country butter, 50@55c; creamery, 48@55c; fresh eggs, 55@60c doz.

Dressed Poultry—Chickens, $1@2.50 ea; springers, 50c@$1 ea; ducks, $1.50@2.25 ea; squabs, 25@45c ea.

Vegetables—Beans, string, 20@25c ¼ pk; beans, lima, 12@15c pt; beets, 5@5c bch; cabbage, 5@10c hd; carrots, 5c bch; cauliflower, 10@30c hd; celery, 5@15c bch or stalk; cucumbers, 5@10c ea; corn, 25@35c doz; eggplants, 10@25c ea; endive, 5@10c hd; lettuce, nearby, head, 5@10c hd; Iceberg, 10@20c hd; mushrooms, 25@30c pt; onions, 20@25c ¼ pk; Spanish, 5@10c ea; potatoes, 25@30c ¼ pk, $1.15@1.35 bu; sweet potatoes, 20@25c ¼ pk; parsley, 10@30c bch; peas, 35c ¼ pk; poke, 5@10c bch; radishes, 5c bch; spinach, 10@15c ¼ pk; tomatoes, 10@15c qt; turnips, 15c ¼ pk.

Fruits—Apples, 25@10c ½ pk; crabapples, 15@20c ½ pk; grapes, Concord and white, 20@25c 5-lb bskt; pears, 15@25c qt; plums, 10@20c qt; peaches, 25c qt; quinces, 25@50c ¼ pk.

LIVESTOCK

Review of local market for week ending October 22, 1927—Market active. Canadians and northwesterns in feeder fleshed steers, predominating in week's receipts; no grain-fed steers on market; compared with week ago, best steers strong to 25c higher, spots up more; top, $13; average weights, 1350 lbs; best yearlings, $12.75; bulk of sales, $10.50@11.50. Butts and heifers steady, cows sharing steer advance, all cutters steady; bulk medium bulls, $7.25@8.25; butcher cows, $5.50@7.50, cutters, $4.50@6; stockers and feeders strong to 25c higher, numerous loads $7.50@7.75 on quantities of 40 to 100 lots; bulk, $8.50@9.50; yards show good clearance. Calves steady; top vealers, $17.50, Hogs slow about steady with week's advance.

Receipts for Saturday's market: cattle, 26 cars; 31 Canada, 5 Virginia, 5 Ohio, 2 St Paul, 2 Tennessee, containing 178 head, 23 trucked in. Total cattle, 802 head, 15 calves, 232 hogs, 48 sheep. How Can I Get Rid of Red Mites?

Will you tell me what to use for red mites? We used oil on the roosts and walls but still seem to have them. I would like to use the material in a spray. What should we put on our four-month-old pullets?—Mrs. C. Y., Bucks County, Pa.

Red mites hide in the cracks and crevices of the hen house, especially about the roosts, dropping boards and nests, and come out at night when the hens are roosting and crawl upon them to suck their blood. If nothing but dressed well-matched lumber is used in the poultry buildings the mites have fewer opportunities to hide where they cannot be got at. In using waste crankcase oil, it should be diluted if necessary and painted on so that it will get in the cracks where these pests hide and kill them. We always whitewash the inside of our poultry buildings at least once a year with a mixture containing some sort of strong disinfectant, which not only makes the house clean and sweet, but fills up the cracks as well.

When we house our pullets, we dust them well with sodium fluoride, a white powder that is commonly used for this purpose of killing body lice on poultry. These lice stay on the birds all the time, and no amount of spraying and whitewashing the house will have any effect on them. This material costs about thirty-five cents a pound and a pound will dust at least 100 birds. Any poultry supply store or good drug store has sodium fluoride.

You must be taking very good care of your young stock from the high proportion that you have raised.—R. L. Scharring-Hausen.

Turkeys Have Blackhead

Can you tell me a cure for my turkeys? They appear well one day and the next day they droop around and soon die. The head is dark and some of them die in great agony. I have been told it is blackhead but don't know. Have lost a great many and it seems to be worse since September.—Mrs. H. N., Mercer County, Pa.

The symptoms you point out in your letter resemble those of blackhead as you suggest. This is the most serious disease of turkeys and has wiped out the turkey business in many sections. Unfortunately there seems to be no certain cure for this disease. In some cases the use of ipecac has helped. This is fed in the powdered form at the rate of a teaspoonful for each twenty turkeys in the mash twice a week, as a preventive. In treating sick turkeys, the fluid extract is used, as follows: first three days, ten drops three times a day; second three days, same dose twice a day; third three days, same dose once a day. Sick birds should be kept separate. In general, it is advisable to keep turkeys away from chickens and on clean ground as far as possible. I believe that the presence of certain intestinal worms renders the turkeys more susceptible to blackhead, and fowls may not only harbor the worms but carry the organisms of the disease as well.—R. L. Scharring-Hausen.

Chicken Pox Is Very Common

My young pullets and some of the yearling hens get sore around the neck and around the eye. White scale like at first and some hard knots.—Mrs. H. L. F., Centre County, Pa.

I am inclined to think from the symptoms you describe that your birds have the chicken pox which is very common at this season of the year. This disease is contagious and the thing to do is to separate the sick from the well birds. The scabs on the head can be removed and the sores painted with iodine. Unless roup develops, the sick birds will probably recover in a short time. Be sure to feed the flock well, keep the house clean and make sure that the buildings are well ventilated but free from drafts, in order to control the trouble.—R. L. Scharring-Hausen.

Nest Box Notes

THE Mercer County, N. J., Poultry Association, of which I am a member, will hold its annual poultry show November 15-16 at Hightstown, N. J., in conjunction with the Mercer County Pomona Grange and Annual Meeting of the Mercer County Board of Agriculture. This show will include Standard Bred and Production Classes, and cash premiums and special merchandise prizes will be awarded the winners. We always put on a good show and it is open to all. Anyone interested should write the Secretary, Mr. Ernest Groves, R. 5, Trenton, N. J., for a premium list. Entries close about November 10th.

• • •

This is the time of year to make a change of dealers if you are not satisfied with the way you are selling eggs. A buyer will "talk turkey" now when eggs are scarce when he wouldn't be interested at all in the spring. A slight advance over the market can be obtained by selling direct to a retailer, when it is not possible to retail the eggs yourself.

• • •

I recently had an inquiry about drooping combs in cockerels which causes losses of birds that are otherwise desirable as breeders. Birds raised in confinement are especially liable to this peculiarity. I have a notion that too much protein in the mash or too rapid development is largely to blame.

Test Many Flocks in New Jersey

NEW JERSEY'S blood tested poultry flocks now cover the state like a blanket, according to Albert E. Jones, chief in charge of this work for the State Department of Agriculture, Trenton. With the exception of Camden and Cape May Counties, this work has now been performed in every part of the state. A total of 106 flock owners have undertaken the work with nearly 100,000 birds enrolled.

A feature of the work this year has been the elimination of all cross breeds from the testing. In other years many flocks tested have been mixtures of breeds and the result has not been entirely satisfactory. With nothing but straight breeds entered and a general improvement in quality an advancement in poultry work is anticipated.—A. K.

What Makes a Good Dairy Ration?

Please let me know the best formula for dairy cows to make milk and keep the cows in condition. The roughage I use is corn stover twice a day and mixed clover and timothy hay once a day.—B. L. L., Lancaster County, Pa.

I would suggest the following mixture for your dairy cows to be fed with corn stover twice daily and mixed clover and timothy hay once a day: 100 lbs. of wheat bran, 100 lbs. of gluten feed, 100 lbs. of cottonseed meal, 100 lbs. of linseed oil meal.

Feed one pound of grain for approximately 3½ lbs. of milk if your cows are Jerseys or Guernseys; feed one pound of grain for approximately 4 lbs. of milk if your cows are Holsteins or Ayrshires. For instance, if your cows are Holsteins and are producing about 32 lbs. of milk per day per cow, each cow would be entitled to approximately 8 lbs. of grain per day, half of which could be fed in the morning and half in the evening.—A. A. Borland.

Will Not Permit N. Y. Inspection

THE New Jersey State Board of Health has refused to subscribe to the regulations demanded by New York City for the inspection and approval of dairies from other states from which New Jersey receives a part of its milk supply. The controversy is the result of New York City's cry over "bootleg milk" which is alleged to come from certain New Jersey dairies. The New Jersey Board of Health refuses to permit these dairies to be subjected to the provisions of the New York inspection requirements on the grounds that the cost would be burdensome and that milk should be bought on a basis of quality and purity. The imposition on the New Jersey dairies of the cost of inspection is more than the dairy business can stand, when it is considered that the milk now offered for sale has already passed certain tests for quality, purity and butterfat that are equal to those of any part of the country.—A. K.

Hort Society to Meet

THE annual meeting of the New Jersey Horticultural Society will be held in Atlantic City December 14 to 16th. This is one week later than usual and it will not be held in conjunction with the State Grange as in previous years. The Grange holds its meeting the first Tuesday after the first Monday in December.

The meeting will be held in Haddon Hall. Elaborate plans are being made for the staging of the fruit and vegetable show which has been growing in importance in recent years.—A. K.

Sue for Spoiled Fruit

SUITS totaling $89,000 have been filed in the Gloucester County, N. J., courts for losses on peaches placed in cold storage by growers whose fruit spoiled and rotted before it could be marketed.

Fourteen farmers have filed the suits basing them on the amount of damage suffered. A total of 115,000 baskets placed in one storage house turned soft over a week-end and a total loss resulted. Some of the losses run as high as $15,000 to $20,000 per farmer. Fruit placed in other storage houses stood up in fairly good order. It is thought the fruit was rushed into storage in such a large volume that the temperature could not be kept down.

THICK, SWOLLEN GLANDS

which make a horse wheeze, roar, have thick wind or choke-down can be reduced with Absorbine. Also other bunches or swellings. No blister, no hair gone, and horse kept at work. It is economical. At druggists, or $2.50 postpaid.

Horse book 3-S free.

A thankful user says: "Completely removed fleah growth on gland about 7 inches diameter. Sincerely thank you for good advice and Absorbine."

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of Collers Livestock.

Advice thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

GARGET.—I have a cow which is giving clotty milk from one teat. Cow calved in June so is not slacking off in milk. Cows broke out of field before I noticed bad milk but udder did not appear bruised. Have been feeding a 16 per cent feed ration using 200 pounds corn and cob meal to 100 pounds of 32 per cent special dairy feed. Feed about one pound of grain to three pounds of milk.—H. I. R., Westminster, Md. It is advisable to handle all cases of garget as tho they were caused by an infection. The animal should be isolated and fed a ration commonly fed to dry cows. Give one pound Epsom salts as a drench. The quarter should be milked frequently, every hour or two, and bathed with warm water several times daily. Do not hesitate to call your nearest veterinarian in case improvement is not readily noted.

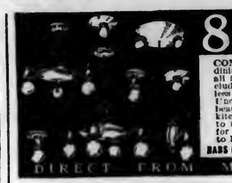
HYSTERIA OR RUNNING FITS.—While out hunting with a rabbit hound late in the afternoon of each day he takes a fit. I have been told that it is called a running fit, rolls around on the ground, froths at the mouth and finally as he seems to come out of the fit he starts to run away and sometimes runs for miles. It is impossible to get him back at the time but later he will return to the house. Will you please let me know what causes this and what I can give him to cure him of this disease?—A. H. J., Girardville, Pa. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet, and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni. Over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation may also result in this condition. The condition is probably due to the pastry which should be omitted and raw or cooked meat fed. Dogs need meat as that forms an essential part of the diet if dog is allowed the choice of feed. Your veterinarian should be consulted as foreign bodies or parasites may be the cause.

On Who?

"Say, Bill, you ought to pull down the blinds when you kiss your wife. I saw you last night."

"That's a joke on you. I wasn't home last night."

The older we get the more convinced we are that there are some things that even very young men don't know.



8 SPLENDID LIGHTING FIXTURES
Wired Ready for Installation. Special Price, the Set $10

COMPLETE OUTFIT FOR 8 ROOM HOUSE: living room, dining room, porches or hall bedrooms, kitchen and bath room; all fixtures completely wired and assembled (lamps not included); we furnish tape, wood screws, fastener and solderless connections—all you need is a screwdriver. How Can I Get Rid of Red Mites?

Will you tell me what to use for red mites? We used oil on the roosts and walls but still seem to have them. I would like to use the material in a spray. What should we put on our four-month-old pullets?—Mrs. C. Y., Bucks County, Pa.

Red mites hide in the cracks and crevices of the hen house, especially about the roosts, dropping boards and nests, and come out at night when the hens are roosting and crawl upon them to suck their blood. If nothing but dressed well-matched lumber is used in the poultry buildings the mites have fewer opportunities to hide where they cannot be got at. In using waste crankcase oil, it should be diluted if necessary and painted on so that it will get in the cracks where these pests hide and kill them. We always whitewash the inside of our poultry buildings at least once a year with a mixture containing some sort of strong disinfectant, which not only makes the house clean and sweet, but fills up the cracks as well.

When we house our pullets, we dust them well with sodium fluoride, a white powder that is commonly used for this purpose of killing body lice on poultry. These lice stay on the birds all the time, and no amount of spraying and whitewashing the house will have any effect on them. This material costs about thirty-five cents a pound and a pound will dust at least 100 birds. Any poultry supply store or good drug store has sodium fluoride.

You must be taking very good care of your young stock from the high proportion that you have raised.—R. L. Scharring-Hausen.

Turkeys Have Blackhead

Can you tell me a cure for my turkeys? They appear well one day and the next day they droop around and some of them die in great agony. I have been told it is blackhead but don't know. Have lost a great many and it seems to be worse since September.—Mrs. H. N., Mercer County, Pa.

The symptoms you point out in your letter resemble those of blackhead as you suggest. This is the most serious disease of turkeys and has wiped out the turkey business in many sections. Unfortunately there seems to be no certain cure for this disease. In some cases the use of ipecac has helped. This is fed in the powdered form at the rate of a teaspoonful for each twenty turkeys in the mash twice a week, as a preventive. In treating sick turkeys, the fluid extract is used, as follows: first three days, ten drops three times a day; second three days, same dose twice a day; third three days, same dose once a day. Sick birds should be kept separate. In general, it is advisable to keep turkeys away from chickens and on clean ground as far as possible. I believe that the presence of certain intestinal worms renders the turkeys more susceptible to blackhead, and fowls may not only harbor the worms but carry the organisms of the disease as well.—R. L. Scharring-Hausen.

Chicken Pox Is Very Common

My young pullets and some of the yearling hens get sore around the neck and around the eye. White scale like at first and some hard knots.—Mrs. H. L. F., Centre County, Pa.

I am inclined to think from the symptoms you describe that your birds have the chicken pox which is very common at this season of the year. This disease is contagious and the thing to do is to separate the sick from the well birds. The scabs on the head can be removed and the sores painted with iodine. Unless roup develops, the sick birds will probably recover in a short time. Be sure to feed the flock well, keep the houses clean and make sure that the buildings are well ventilated but free from drafts, in order to control the trouble.—R. L. Scharring-Hausen.

Nest Box Notes

THE Mercer County, N. J., Poultry Association, of which I am a member, will hold its annual poultry show November 15-16 at Hightstown, N. J., in conjunction with the Mercer County Pomona Grange and Annual Meeting of the Mercer County Board of Agriculture. This show will include Standard Bred and Production Classes, and cash premiums and special merchandise prizes will be awarded the winners. We always put on a good show and it is open to all. Anyone interested should write the Secretary, Mr. Ernest Groves, R. 5, Trenton, N. J., for a premium list. Entries close about November 10th.

• • •

This is the time of year to make a change of dealers if you are not satisfied with the way you are selling eggs. A buyer will "talk turkey" now when eggs are scarce when he wouldn't be interested at all in the spring. A slight advance over the market can be obtained by selling direct to a retailer, when it is not possible to retail the eggs yourself.

• • •

I recently had an inquiry about drooping combs in cockerels which causes losses of birds that are otherwise desirable as breeders. Birds raised in confinement are especially liable to this peculiarity. I have a notion that too much protein in the mash or too rapid development is largely to blame.

Test Many Flocks in New Jersey

NEW JERSEY'S blood tested poultry flocks now cover the state like a blanket, according to Alben E. Jones, chief in charge of this work for the State Department of Agriculture, Trenton. With the exception of Camden and Cape May Counties, this work has now been performed in every part of the state. A total of 106 flock owners have undertaken the work with nearly 100,000 birds enrolled.

A feature of the work this year has been the elimination of all cross breeds from the testing. In other years many flocks tested have been mixtures of breeds and the result has not been entirely satisfactory. With nothing but straight breeds entered and a general improvement in quality an advancement in poultry work is anticipated.—A. K.

What Makes a Good Dairy Ration?

Please let me know the best formula for dairy cows to make milk and keep the cows in condition. The roughage I use is corn stover twice a day and mixed clover and timothy hay once a day.—B. L. L., Lancaster County, Pa.

I would suggest the following mixture for your dairy cows to be fed with corn stover twice daily and mixed clover and timothy hay once a day: 100 lbs. of wheat bran, 100 lbs. of gluten feed, 100 lbs. of cottonseed meal, 100 lbs. of linseed oil meal.

Feed one pound of grain for approximately 3½ lbs. of milk if your cows are Jerseys or Guernseys; feed one pound of grain for approximately 4 lbs. of milk if your cows are Holsteins or Ayrshires. For instance, if your cows are Holsteins and are producing about 32 lbs. of milk per day per cow, each cow would be entitled to approximately 8 lbs. of grain per day, half of which could be fed in the morning and half in the evening.—A. A. Borland.

Will Not Permit N. Y. Inspection

THE New Jersey State Board of Health has refused to subscribe to the regulations demanded by New York City for the inspection and approval of dairies from other states from which New Jersey receives a part of its milk supply. The controversy is the result of New York City's cry over "bootleg milk" which is alleged to come from certain New Jersey dairies. The New Jersey Board of Health refuses to permit these dairies to be subjected to the provisions of the New York inspection requirements on the grounds that the cost would be burdensome and that milk should be bought on a basis of quality and purity. The imposition on the New Jersey dairies of the cost of inspection is more than the dairy business can stand, when it is considered that the milk now offered for sale has already passed certain tests for quality, purity and butterfat that are equal to those of any part of the country.—A. K.

Hort Society to Meet

THE annual meeting of the New Jersey Horticultural Society will be held in Atlantic City December 14 to 16th. This is one week later than usual and it will not be held in conjunction with the State Grange as in previous years. The Grange holds its meeting the first Tuesday after the first Monday in December.

The meeting will be held in Haddon Hall. Elaborate plans are being made for the staging of the fruit and vegetable show which has been growing in importance in recent years.—A. K.

Sue for Spoiled Fruit

SUITS totaling $89,000 have been filed in the Gloucester County, N. J., courts for losses on peaches placed in cold storage by growers whose fruit spoiled and rotted before it could be marketed.

Fourteen farmers have filed the suits basing them on the amount of damage suffered. A total of 115,000 baskets placed in one storage house turned soft over a week-end and a total loss resulted. Some of the losses run as high as $15,000 or $20,000 per farmer. Fruit placed in other storage houses stood up in fairly good order. It is thought the fruit was rushed into storage in such a large volume that the temperature could not be kept down.

THICK, SWOLLEN GLANDS

which make a horse wheeze, roar, have thick wind or choke-down can be reduced with Absorbine. Also other bunches or swellings. No blister, no hair gone, and horse kept at work. It is economical. At druggists, or $2.50 postpaid.
Horse book 3-S free.
A thankful user says: "Completely removed fresh growth on gland about 7 inches diameter. Sincerely thank you for good advice and Absorbine."

Veterinary

Conducted by Dr. J. F. Shigley
Associate Professor of Veterinary Science, Pennsylvania State College, and Veterinarian in charge of College Livestock.

Address thru this department is free to our subscribers. Each communication should state history and symptoms of the case in full; also the name and address of writer. Initials only will be published. We invite readers to make use of this service. Clippings from the column when properly preserved and classified, make one of the most valuable medical symposiums a farmer-stockman can obtain.

GARGET.—I have a cow which is giving clotty milk from one teat. Cow calved in June so is not slacking off in milk. Cows broke out of field before I noticed bad milk but udder did not appear bruised. Have been feeding a 16 per cent feed ration using 200 pounds corn and cob meal to 100 pounds of 32 per cent special dairy feed. Feed about one pound of grain to three pounds of milk.—H. I. R., Westminster, Md. It is advisable to handle all cases of garget as tho they were caused by an infection. The animal should be isolated and fed a ration commonly fed to dry cows. Give one pound Epsom salts as a drench. The quarter should be milked frequently, every hour or two, and bathed with warm water several times daily. Do not hesitate to call your nearest veterinarian in case improvement is not readily noted.

HYSTERIA OR RUNNING FITS.—While out hunting with a rabbit hound late in the afternoon of each day he takes a fit. I have been told that it is called a running fit, rolls around on the ground, froths at the mouth and finally as he seems to come out of the fit he starts to run away and sometimes runs for miles. It is impossible to get him back at the time but later he will return to the house. Will you please let me know what causes this and what I can give him to cure him of this disease?—A. H. J., Girardville, Pa. The causes of this condition are parasites, a dietary deficiency, such as excessive feeding of corn meal, a meatless or nearly meatless diet, and an excessive allowance of carbohydrates such as potatoes, white bread or macaroni. Over-loaded stomach, indigestible material, foreign bodies in the stomach or intestines and constipation may also result in this condition. The condition is probably due to the pastry which should be omitted and raw or cooked meat fed. Dogs need meat as that forms an essential part of the diet if dog is allowed the choice of feed. Your veterinarian should be consulted as foreign bodies or parasites may be the cause.

On Who?

"Say, Bill, you ought to pull down the blinds when you kiss your wife. I saw you last night."

"That's a joke on you. I wasn't home last night."

The older we get the more convinced we are that there are some things that even very young men don't know.

8 SPLENDID LIGHTING FIXTURES Wired Ready for Installation, Special Price, the lot $10

for easier Kitchen Work

The job of preparing three meals a day is not an easy one, and when you are handicapped for the lack of sufficient room or the right kind of cooking utensils, it is plain drudgery. Why do it? Present-day prices of cooking utensils in aluminum, graniteware and white enamel, are so low in comparison to the quality that you get that it is needless not to have plenty of things to work with. Spend an hour some afternoon at your nearest "Farm Service" Hardware Store and see what a fine assortment of pans, kettles, broilers and roasters you can secure for a few dollars. They will pay for themselves many times over. You can be absolutely sure of one thing too, and that is that the quality which you buy at these stores will be of the very best and that the prices will be as low as or lower than you can get for the same class of goods anywhere else.

Friendly Talks

By EDGAR L. VINCENT

THINKING back to the time we raised our big farm barn, with its heavy timbers hewed from trees that grew in our own woods, my mind turned to the slender strips of board which played such an important part in the work of getting the bents into their proper place. "Stay-laths" we used to call these bits of lumber. Any farmer who has ever put up one of these old fashioned farm barns will remember that after the first bent was up, while the pike poles were still holding it upright, the next thing was to nail a narrow piece of board from the post diagonally down to the sill for the purpose of supporting the bent till the next one had been lifted into place. Just a slender strip of lumber, with two or three nails at each end, but it served a splendid purpose. We could not get along without the "stay-lath."

Moral Support a Good Medicine

Well, from raising the big farm barn, I fell to thinking how many of us need at some time or other to be steadied and held up where we belong. I do not believe there is a man or a woman anywhere that does not at some time or other feel this need of support.

A good many years ago I was talking with a member of Congress, who had been a surgeon in the time of the Civil War, and who after the rebellion was over returned to his practice in a small country town. This doctor had a great fund of common sense; and he told me that often what people who thought they were sick most needed is moral support. "Many times," he said, "when I am sent for I sit down by these folks, talk with them about things that interest them, tell them a few stories, give them some simple medicine and go away leaving them feeling better. What they needed was not medicine so much as moral support."

We Need a Stay-lath Now and Then

Do we not all of us know something about this? Very few of us are so strong and independent that we do not now and then need a "stay-lath" till the blue spell passes away and we are ourselves again. A good many suicides take place in these periods of depression. If folks had a good friend just then to strengthen their faith and cheer them up, they would soon pass out of their trouble, and perhaps it never would come again.

Blessed is the man and the woman who has this faculty of staying other people up in times of stress! It often seems to us farmer folks that our place in life is pretty small. We do not cut much of a figure in the world. Our bank account never gets to be very large. Away back on the hills we may spend our days, quite unknown to the world surging a little way off.

Our Opportunity Is Here

But even in the quietest country home there are those that need comforting. Near by may be a neighbor who is having a hard time of it. He may struggle to keep his sorrows to himself. More brave men and women than we know anything about are fighting their battles thru life all unknown.

And yet, if you and I would take a bit of pains, we could find all about this; and if we only took time to sit down and speak a helpful word and do a kindly deed, we might bring new light upon a dark pathway. So many whose hearts are fairly breaking!

And it costs so little to give this help! Folks of the farm, let's try harder to give this good cheer, and do it now before it is too late!

Someone has estimated that 87 per cent of the men to whom statues are erected once were called cranks.

Hanes

shows that quality can be low in price

1 HANES Collarettes are cut to size. A 40 suit has a 40 collarette. Won't roll or gap open.

2 HANES Cuffs won't pull off. They snug the wrist. Reinforced on the end to prevent raveling.

3 HANES Elastic Shoulders give with every movement, because they're made with a service-doubling lap seam. Comfortable. Strong.

4 HANES Closed Crotch really stays closed. Crotch can't bind, for HANES is fitted by *trunk* measurement as well as chest.

5 HANES Elastic Ankles never bunch over the shoe-tops. No ugly pucker showing under socks.

HERE is a good, warm, snug-fitting underwear at prices that save you money—HANES. HANES is made right from start to finish. Guaranteed—every thread, stitch and button. Seams are smooth and flat. Buttons are sewed on to stay.

HANES material is soft and fine and elastic. It follows every move of every muscle. Can't wrinkle or bind anywhere. No wonder that HANES brings you longer wear. No wonder it stands more washing.

It's a fact, men, HANES brings you perfect underwear comfort, and the best value that you ever wore a coat over.

Made in a wide variety of styles and weights. For every season and every climate. From sturdy extra-heavy weights to light weights. Union suits priced from $1 to $1.50. Shirts and drawers at 75c and 85c the garment. Union suits for boys and children too, 75c to $1.

Ask for HANES at your regular store. If they can't supply you, write to us today.

They prepare for a cold snap

Do you know the fundamentals for a successful job of painting? Page 3.

for Christmas

"We have bought in the great stores—the savings are larger at Ward's."
Bringing to you lower prices than even the big city stores can offer, has been our work for fifty-four years.
We see more in any city where you the opportunity of saving on such complete assortment of the things you need.
MONTGOMERY WARD & CO
Catalogue Number 107 Fall and Winter 1927-28

Twenty complete Christmas Stores in your Montgomery Ward Catalogue

You can visit twenty complete Christmas Stores by merely turning the pages of your Ward Catalogue. A jewelry store, a complete toy shop, a dry goods store, everything twenty complete Christmas Stores can offer is to be found in your Ward Catalogue.

You can find gifts for every friend, every member of the family. You can choose at your leisure, and more important you can secure three gifts for the price of two elsewhere. Because—

There are no Christmas Profits in Montgomery Ward's Prices

Ward's prices on Christmas goods are all-the-year-round prices. There are no Christmas profits added. You can buy your Christmas gifts at Ward's at regular prices.

Thus your Christmas savings are almost doubled if you use your Ward Catalogue for every Christmas gift. Ward's Catalogue is a Christmas Gift Book. It is a dictionary answering every Christmas question of "What to Give." Merely to study its pages, and to turn through the index will help you solve every Christmas problem.

There are gifts for the children, a big assortment of Christmas toys, articles of jewelry, books, everything you can find anywhere for the boy or girl or infant.

Everything a man uses or wears, everything a woman needs or wants, is offered at regular all-the-year-round prices.

Remember Christmas is Just Around the Corner

The days slip by quickly. Start today making your Christmas list. Order early. Take full advantage of the big savings Ward's Catalogue offers you at Christmas time.

Quality is especially important in a Christmas Gift. At Ward's the quality, the reliability of every article is absolutely guaranteed.

Paint Wards Off the Foe–Decay

We Are Judged First by the Neat Appearance of the Buildings on Our Farm

S. R. MATLACK

NO PRACTICAL farmer would think of planting a crop until he had first prepared the ground, and a successful job of painting calls for the same care and attention. Before a good paint job may be done the surface to be painted must be properly treated and this is extremely important because even the best of paint applied to an improperly prepared surface will often result in a very unsatisfactory job. Very often the painter, however, will blame the paint when it is himself who is most to blame. Generally speaking, paint jobs fall into three classes. First, the painting of new work, second, the painting of old work, and third, the painting of metal, machinery, stone and cement. All of these three classes may be again classified under the general terms of outdoor and indoor work.

Plan First

In starting the job the most efficient way to begin is to determine definitely A— what you wish to paint, B—the amount of paint required, C—the brushes and other equipment necessary for the job, and D —the character of the paint best suited to the purpose.

The most satisfactory and simplest way of doing this is to take the dimensions, (or length, width and height) of the thing to be painted, and to look up a reliable paint dealer in your neighborhood. Give this man the facts. Tell him what you wish to do and you will be surprised at the amount of helpful advice he will be able to give you. He may even save you money by helpful suggestions and it is certain that he will save you both time and costly mistakes.

When Shall We Paint?

What is the proper time to paint? This question may be best answered by saying that painting may be efficiently done at all times of the year. This applies to all jobs that may be done indoors. In the case of outdoor work, however, this statement must be modified. Certainly no person of intelligence would attempt to paint on a rainy day, and it is just as foolhardy to paint in extremely cold weather or when the frost will affect the newly applied fresh paint. If, however, you will bear in mind these three principles there is little likelihood of trouble. Choose a dry spell for painting outdoor work—and see that the surface of the thing that is to be painted is perfectly dry. In the cold days of spring, fall and early winter, paint with the sun. In the extremely hot sunshiny days of summer it is best to paint away from the sun. Do not apply fresh paint to surfaces exposed directly to the rays of the boiling hot sun. It is always best to wait until this particular spot is cooled.

In the case of new outdoor work where the wood is to receive its first painting it may be neither necessary nor advisable to sand paper the surface unless the job calls for or necessitates a very smooth, fine finish. It will be well, however, to pay particular attention to any knots that may be found in the wood. Knots will, especially in some woods, exude sap, and to guard against this a good method is to use sand paper over the knot and paint over and around the knot with a good grade of shellac. Do this first before the priming coat of paint is applied and permit the shellac time enough to dry properly.

Directions for "the priming coat" as it is called, will be generally found on the label of any reliable brand of ready-mixed paint. The usual procedure is to take the paint as it comes from the can and thin it down with a certain amount of linseed oil and spirits of turpentine. This is called thinning and in the priming coat plays a particularly important part.

A coat of paint would not only cut down the barn repair bill but would add to the attractiveness of this farm.

Paint, in order to adhere or stick closely to the surface must thoroly penetrate into the fibre of that surface. The better the penetration of the priming coat the more efficient will be binding between the paint and the thing which is painted.

The addition of oil and turpentine in the priming coat accomplishes this desired result. It thins the paint so that the "vehicle" or oily portion of the paint seeps deeply into the wood. It makes a smoother and better surface for the succeeding coats of paint which must naturally follow, and if the priming coat is properly mixed and properly brushed in it will save money, time and labor. This is true because the succeeding coats may be brushed out much more thoroly and easily.

Do all your puttying or filling of cracks after the priming coat and before the succeeding coat is laid on.

In painting over old work, go over the surface thoroly with a scraper and break down any blisters that may be on the surface and remove any old paint that is loose or scaly. Usually on barns and outhouses there is no necessity for any other preparation. This being the case, it is simply necessary to give the job a priming coat, allowing it to dry well and then to follow with the second and third coat of paint used just as it comes from the can.

How much more prosperous this place looks than the one pictured above. This farmer keeps his buildings well painted.

For Indoor Work Prepare Surface Carefully

For indoor work, particularly on walls, window or door trims, etc., and floors, it will be found advisable to use considerably more care in the preparation of the surface to be painted. A good plan is to provide yourself with a scraper, some steel wool and some fine sand paper. If the surface to be painted simply needs a little smoothing the use of sand paper alone will probably be all that is necessary. If there are any blisters or check marks on the surface they should be carefully scraped and sand papered smooth.

On new work, particularly where the wood has never had paint, a good priming coat is most essential and after the priming coat has dried the nail holes and cracks may be filled with putty. On old work this priming coat is also advisable, followed, of course, by the succeeding and essential second coat as well as the finishing or surfacing coat.

If you prefer to use enamel for woodwork and trim the most satisfactory method is to use a standard ready-mixed undercoat. Apply this first, let it dry thoroly and then use a fine grade of sand paper to smooth out any pimples that may exist. Next apply a coat of good enamel.

In the case of floors, clean thoroly, removing if possible all spots or stains, and apply a good varnish, preferably two coats, allowing ample time between coats for thoro drying.

Dries in Four Hours

One of the most recent developments in the varnish and enamel field is what is known as a four-hour finish. This is produced in both floor finish and enamel and has to recommend it the fact that it dries in four hours. In other words, in the case of floors this varnish may be applied at night before going to bed and will be found in condition to walk upon in the morning. It flows freely, is waterproof and will not scar or mar white.

Where the walls of a room are to be painted (if they are of plaster) it is first advisable to apply a priming coat, using for this (to page 25)

Comments on the Week's News

THE industries have been enjoying a period of unpreecedented activity and prosperity for several years. The main indoor sport among the chiefs just now is in "guessing" whether or not that condition is to continue. There has been a gradual slowing down in many lines during the past few months, and the question is, will it continue, or is it only a seasonal slump?

The American Bankers' Association has been studying the matter closely, and has prepared a "symposium" of the opinions of its members. Ordinarily, bankers are in close touch with economic conditions and their opinions are based upon a wider knowledge of affairs than most other men have. The bankers' views do not coincide fully with the headlines editors usually put over them, and while there is a wide difference of opinion among them, they, too, evidently try to put the best foot forward. The general agreement is that business is about ten per cent off. Some state that, while business is lower, more people are sharing in the prosperity. Western bankers claim a decided improvement in farm conditions in their territory. Many of them prophesy a "quiet period during the coming months." Some of the leading bankers opine that most business is trying to do too much. Others feel that too much money is being invested in speculative activities. This tends to make money high for productive business. High money and high wages are given as the reason for much of the difficulty in making profits.

✦ ✦ ✦

Every once in a while we read the effusions of some pseudo-wiseacre to the effect that the farmers in the older sections of the country are "soil robbers" and are gradually reducing the productive power of their soils. B. O. Weitz, of the U. S. Department of Agriculture, has been delving into the figures on the subject, collected over a period of forty years, and they disprove the general belief on this matter. These figures show that the combined acreage of corn, wheat, oats and potatoes has been expanded about fifty-two per cent in forty years, and that the total production of these crops has been increased seventy-seven per cent in the same time. In addition to this, he finds that most of the increases have occurred in the eastern and older section of the United States. Let's hear no more about eastern farmers being poor farmers.

✦ ✦ ✦

Is the advice of "Poor Richard" out of date? Was the author, Benjamin Franklin, a false leader? Alexander Noyes, financial editor of Scribner's indirectly raises these questions in an article in the current issue in which he states that the new economic theory seems to be, "Spend, not Save." The question needing sober thought is, can prosperity be prompted and perpetuated by everybody's spending all (or more than all) their income? Possibly there is a happy medium in this matter between the penny-pinching practices of many in the old days, and the prodigal spending of every penny as fast as it is earned. And remember that there is a vast difference between spending and investing.

✦ ✦ ✦

To an interested spectator on the sidelines it would seem that enough has been printed to date to not only nominate Al Smith in the Democratic convention, but to elect him for the balance of his life. All depending, of course, on how effective modern newspapers and magazines prove to be in forming public opinion. It has been stated that the newspapers made Calvin Coolidge popular, and it is now being tried out in other directions. Republican leaders do not seem to have yet settled upon a particular individual, altho there is some personal and sectional propaganda being put out.

✦ ✦ ✦

Two national events important to livestock raisers are scheduled for this month. The American Royal Livestock Show will be held in Kansas City, November 12-19, inclusive. The International Livestock Exposition and Hay and Grain Show will be held at the Union Stock Yard, Chicago, November 26 to December 3rd. While these shows are held in and principally for western livestock raisers, they offer an excellent opportunity for farmers from every section to learn more about the industry, and also to buy breeding stock and feeders.

Keep Up the Milk Flow

IF THE dairymen in the eastern metropolitan district want to keep their home markets for themselves they must be able to supply all the milk that is needed. There are people who are looking for an excuse to widen the milk territory by going farther afield for supplies in the hope that prices may be kept down. If milk producers in this district allow their supplies to run low thru lack of proper care and sufficient high grade feed, that excuse will be furnished. The consumption of milk has increased faster in the metropolitan area than has its production, and the time is coming soon when the producing territory will have to be extended unless production within the present shed is increased. Keep the cows from debilitating exposure as winter approaches, and begin early to give full feeds of the best possible dairy rations.

Balancing the Farm Industry

A FEW people have recognized one of the fundamental questions affecting farm conditions and which helped to bring on the "depression" of the last few years. It is that the advancement which farmers have made in productive methods the past few years, and especially during the war, has enabled fewer people to produce the food necessities of the race. The number of farmers we had twenty, and even ten, years ago, is not needed to produce enough food products. The low prices resulting from having more than enough are forcing many out of the business into other lines. It is nothing more than the working of an economic law that a large number of farm people are leaving the farm. Cyrus McCormick, Jr., in an address the other day gave voice to the following:

"We need look no further than in the direction of coldly scientific economic law to confirm the forecast of better times ahead for the farmer. Population all over the world is balanced as between urban and rural dwellers not merely for the sake of convenience or on account of preference, but because of the actual facts of the struggle for existence. It is not only manifestly unfair but in the long run it is absolutely impossible for one great portion of the community to be at an economic disadvantage as compared with other portions. If continued disparity of farm income makes rural life too unprofitable many country dwellers will ultimately move to the city, and thus, particularly if volume of production be maintained by those who remain, the cash farm income fund will be apportioned eventually on a basis of better profit for the individual."

Nursery Stock Inspection

WE INADVERTANTLY omitted to state in our comment on the quarantine restrictions relative to shipping nursery stock out of the Japanese beetle district that shipments may be made after passing official inspection. Provision is made to provide certificates to those whose products are found to be free from infection.

Editorial Sidelights

THE failure of Uncle Sam's mail men to do what we expected of them resulted in the absence last week of the paragraphs of eight-point type that usually fill out this page of nonpoint.

The missing paragraphs were written in Pittsburgh where we spent three days attending the annual meeting of the North Atlantic Section of the American Society of Agricultural Engineers.

One seldom realizes what agriculture owes to the engineers until he stops to consider the change that has been brought about by them.

Tractors, binders, haying tools, milking machines, water pumps, concrete, sheet steel, tile, dynamite.—all of these have been designed or adapted to the use of farmers by agricultural engineers.

Here are some of the things to which the engineers assembled at Pittsburgh gave their attention: Machines which take in green alfalfa or grain crops or grass at one end and turn out dry feeds in bags or bulk. One of these driers is now in use in New Jersey and another in Delaware. They permit the haying to be done anytime, rain or shine. Tests of the protein content of grain dried immature and dried in this machine were a startling that chemists can hardly believe their own figures.

A process of passing electricity thru milk to kill germs. This is a substitute for pasteurization and is said to get some germs which frequently survive the vat method.

Highly-charged wire screens and traps that electrocute every fly that touches them.

Electric cooling units to be used in the ordinary concrete milk cooling tanks.

These are merely samples. We shall try to report more fully in later issues.

THE ARTICLE on Page Three of this issue recalls this statement by one of the engineers, a lumberman: "From one-half to two-thirds of the cost of painting is the cost of the labor. Good paint lasts twice as long as poor paint." The moral is obvious.

NOW WE SHALL mail these notes with the hope that they travel faster than last week's. We are writing in Harrisburg. The younger generation here is very busy with an advance celebration of Hallowe'en.

FARM GROUP DISAGREE

Will Continue Borer Research—Plan Cooperative Pilgrimage Next Year—Bonds Sell Rapidly.

Washington, D. C.

THE western farm group in Congress, whose voices have been heard longest and loudest for farm relief legislation, are evidently unable to get together upon a single proposition, one wing demanding the equalization fee or nothing, and the other wing as strongly opposed to any bill that contains the equalization fee provision.

Demanded Reduction Impossible

Senator Willis says the next Congress will do well if it succeeds in making a tax reduction of $250,000,000. "The demand of the United States Chamber of Commerce for an immediate reduction of $100,000,000 is impossible of performance and is made without understanding of the facts."

Borer Cannot Be Eradicated

The European corn borer cannot be eradicated, according to Department of Agriculture specialists, but with the active cooperation of farmers the government authorities can do much effective work in keeping the borer under control.

Secretary Jardine says that while the corn borer campaign will not be conducted next season on the same scale as last season, various lines of research will go on designed to develop effective methods of controlling the pest, and economic methods of farming under this handicap.

Pilgrimage Returns

The cooperative pilgrimage of farmers to Europe, headed by President Sam Thompson, of the American Farm Bureau Federation, has returned. It is considered such a success and was so valuable to those accompanying it that preliminary arrangements have been authorized by the board of directors of the American Farm Bureau Federation to have another pilgrimage next year.

May Use Invoice Prices

Invoice prices may be taken as evidence of foreign cost of production, according to a ruling of Attorney General John G. Sargent, thereby doing away with the necessity of the United States Tariff Commission sending its investigators abroad for its information on costs of production in competing foreign countries.

Favor Government Control

Sentiment in favor of a permanent policy of government ownership and operation of the merchant marine is growing in and out of Congress.

Senator Smith Brookhart, of Iowa, says that along with the enlargement of the merchant marine under goverament operation should come the enlargement of the facilities of the Inland Waterways Corporation now operating barge lines on the Mississippi River.

The railroads are fighting this development of the inland waterways navigation. They object to joint rates which would give the Waterways Corporation the same advantages that the railways now possess in joint rates and allocation of thru freight.

Consolidation Meets Opposition

Compulsory consolidation of railroads is meeting with considerable opposition among the members of the Interstate Commerce Committee in Congress. It is argued that railway mergers should be the result of natural economic laws and formed to meet actual consolidation needs. But such consolidation should be safeguarded by legislation designed to prevent over capitalization.

Issue New Bonds

A new $29,000,000 issue of Federal Land Bank four per cent bonds was sold at par in less than an hour's time. The bond issue will supply the Federal Land Banks with new money to extend additional credit to farmers, and will mean a reduction in the rate charged the borrowing farmers.

Since the Farm Loan Board was established it is estimated that the system has saved the farmers $100,000,000 a year in lower interest rates. This includes not only the saving on loans from the Farm Loan system banks, but from all sources as a result of the operation of the system.

Predicts Unemployment

A period of tremendous unemployment in the United States is predicted by Mary Anderson, director of the Women's Bureau, Department of Labor, as a result of the rapid increase in the use of labor-saving machinery in manufacturing.—E. E. R.

OFFICIALS WILL MEET

Corn Borer Quarantines to Widen—Observe Operators of Buses—Issue Motor License Notices.

Harrisburg, Pa.

OFFICIALS of the Pennsylvania Department of Agriculture in charge of the campaign against the pests afflicting the farms of the Keystone State this year will shortly have a meeting with federal officials in Washington to discuss plans for the 1928 operations, a conference which has taken on an important aspect owing to the discovery of the corn borer in widely separately districts of the state. An even closer scheme of cooperation is to be worked out and the vital necessity of calling attention of farmers and land owners generally to the menace of the borer and the Japanese and bean beetles during the winter will be considered.

Borers Stir States

Not only Pennsylvania, but New Jersey, Maryland and Delaware, have become aroused by the diffusion of the borer into eastern counties, specimens having been reported from Lackawanna, Luzerne, Monroe and Wayne Counties, as well as in Huntingdon, Somerset and Greene. This shows how the borer has spread out of the northwestern region. The new quarantine orders will show the greater part of the state placed under regulation.

Observe the Bus

State traffic officers have been making notes upon the way drivers of the various motor buses are observing the rules of the road and in some sections it is declared that they have been as troublesome as the truck drivers. Arrests of some moving van operators have been threatened if too much space is taken up. Rapid traveling in the middle of the highway is the chief complaint heard here against the bus driver.

Final Dog Round-up

Agents of the state have been making final surveys of conditions in regard to dog licensing with the idea of making reports on observance. More dogs have been registered than ever before and it is expected next year when new regulations go into effect there will be a gain. Half licenses have been abolished and the new kennel licenses are in effect.

Check Up on Eggs

As a result of the recent report of the Bureau of Foods on cold storage of foods officials plan a check-up on how the enormous amount of eggs now stored is put into trade channels. There is always a large amount sent out just before the holidays. Some complaints have been made in years gone by about eggs held in the state being sent to New York and elsewhere at that season of the year.

Auto Cards Out

State motor vehicle bureau officers have sent out the notices and cards for 1928 motor licenses, the aggregate being the greatest on record. Car owners are being urged to notify the Bureau if addresses have been changed so there will be no delays.

Potato Reports Vary

Statements to state agricultural officials on yields of potatoes indicate a wide range in this state. In some counties quality and quantity are fine and there is a demand from other states for prompt shipments. Potatoes are now being graded in southeastern counties to a greater extent than ever known.—T. C.

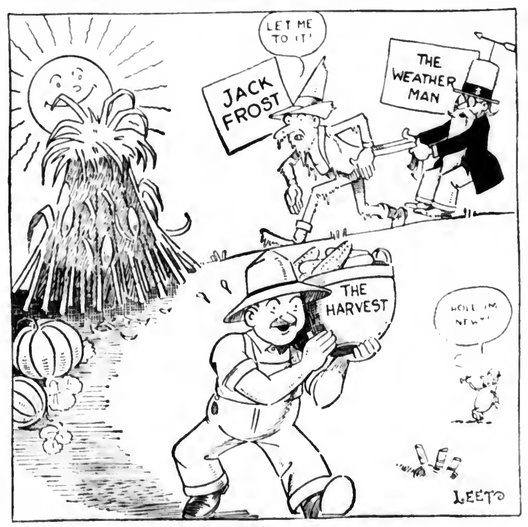
CANNING SEASON OVER

Will Hold Conference—Poultry Show Held by Gloucester County—Rule Out Use of Five-eighths Basket.

Trenton, N. J.

THE canhouse season in southern New Jersey, now over, brought to a close one of the most active seasons in the southern part of the state. With late stocks of canned tomatoes fairly well cleaned up, canhouse buyers were on the market actively and for a longer season than usual. Receipts at local canhouses in some instances doubled their average purchases.

IT WON'T BE LONG NOW



Grange Lecturers to Meet

The annual meeting of the New Jersey State Grange at Atlantic City, which this year commences on December 6, will be preceded on December 5 with the annual Grange Lecturers' Conference. Afternoon and evening sessions will be held and personal effort is being made on the part of the State Grange for a 100 per cent attendance of every Grange delegate or his official substitute.

Gloucester Holds Poultry Show

The Gloucester County Poultry Association announces December 8 to 10 as dates for its annual meeting this year. The affair will be held in the City Hall at Gloucester in Camden County, due to the fact that that there are not accommodations large enough to provide for a show of this size within Gloucester County's own limits. The committee in charge of the event consists of Carl Schoener, secretary, Woodbury; William P. Laing, Woodbury; A. P. Lee, Gloucester Heights; William A. Robinson, Gloucester City; James Donohue, Woodbury, and O. G. Brown, Woodbury.—F. H. B.

Will Hold Discussion Meeting

The New Jersey Horticultural Society has planned a novel program for its annual meeting in Atlantic City during December. Instead of holding sessions with set speakers on selected subjects, the meetings are to be turned over to the growers to discuss production and marketing problems that hit the producer of fruit and vegetables.

Poultrymen Meet

A meeting of the New Jersey Record of Performance Poultry Breeders' Association was held November 3 in Trenton. This new organization, fathered at the recent poultry convention in Atlantic City, has for its object the production of chicks with known pedigrees from stock having a record of 200 eggs per year.

Prohibits Use of Five-eighths Basket

The five-eighths basket, the market container on thousands of New Jersey farms, has been ruled as illegal and the new container bill now being prepared for presentation to Congress does not include this package. The bill prohibits the manufacture, sale or use of this package as a market basket.—A. K.

NAME CHANGED

Observe Farm and Home Week—Keep Own Records—Favor Gasoline Tax—Cattle Sales Price High.

Ithaca, N. Y.

DEAN A. R. MANN, of the New York State College of Agriculture has given due recognition to the College of Home Economics, which has figured so prominently in past Farmers' Weeks, by announcing that in the future the event will be known as Farm and Home Week. The new title will also recognize the equal importance of home topics with those of the farm.

A New Sort of Poultry Contest

The poultry department at Cornell is organizing a new egg-laying contest for farmers in which the owners keep their own records.

Farm Bureaus Favor Gasoline Tax

Anticipating that a tax on gasoline is sure to come in this state several regional farm bureau meetings have passed resolutions favoring such a tax if the income from it may be returned in a fair degree to the counties for upkeep of highways.

Cattle Bring High Prices

The buying at the ninth annual Holstein sale of the State Holstein Association, held at Earlville recently, was at the highest figures in several years. The average price for 168 animals sold was $205, including young stock. At a farm sale in southern New York the average price was around $200 for registered stock.—M. G. F.

If you want extra traction and long tread wear in addition to balloon tire comfort, be sure you get this quiet-running *new-type* Goodyear All-Weather Tread

"Let's look at it!"

Most of us like to *see* what we are buying, whether it be tires or anything else.

You can do that when you buy tires of your home town Goodyear dealer; he has *your* size in stock where it can be examined before you pay.

He will recommend the size and type of Goodyear Tire that is best for your car. He will mount that tire on the rim for you, and fill it with air.

All the time that tire is in your use he will help you give it the care it should have to deliver you the maximum results.

This service of the Goodyear dealer will prove a time-saver and money-saver for you. Test it once and see for yourself.

It is part and parcel of the traditional Goodyear policy: *to build the greatest possible value into the product,* and *to provide facilities so that users will get all that value out.*

Goodyear makes a tire to suit *you*—whether you want the incomparable All-Weather Tread Goodyear, the most famous tire in the world, or the lower-priced standard quality Goodyear Pathfinder

Goodyear Means Good Wear

GOODYEAR

Copyright 1927, by The Goodyear Tire & Rubber Co., Inc.

THIS has been a good season for celery,—at least it has at Neshaminy Gardens. It has made rapid growth and is of fine quality. The Golden Self Blanching, the earliest we have, blanches easily, and is crisp and tender. We handle celery but once. After it has attained nearly its full growth, we tie the tops together with Manila twine and this causes it to grow into a compact, straight bunch. Except the early varieties, we do not attempt to do much blanching in the row. Late celery will be trenched at the last possible moment.

✦ ✦ ✦

WE HAD sweet corn later this year than ever before. Golden Bantam was planted late in July, and while the stalks and ears were small the corn had a flavor which was sweeter and more delicious than any we ever tasted. People almost mobbed us to get it, but we could not accommodate them after October 24th. The warm season, no doubt, accounted for its success.

✦ ✦ ✦

SHOULD laying hens have free range during the winter? Many people are still undecided on this question. However, most of the big egg producers say they get better results when they do not run out, provided, of course, that sufficient floor space is provided. The argument is that hens will eat more when they are confined than they will pick up on the range, and that the exercise and exposure divert food which should go into egg-making.

✦ ✦ ✦

OUR poultry house is not large enough for 240 hens. It is 16x40 feet, hence has 640 square feet of floor space. Since each hen should have four square feet, the house has a capacity of only 160 hens. Because of this, we are planning to build a front sun parlor. It will be in the form of a lean-to on the south front, —about three and one-half feet high against the house, and sloping down to eighteen inches at the lower side. It will be nine feet wide and contain 360 square feet of floor space. It will be covered with one of the glass cloth materials so much advertised.

✦ ✦ ✦

COLONEL Charles A. Lindbergh, the world-famed flyer, has finished his 23,000-mile trip to the principal centers of the United States. The last public reception was held in Philadelphia on October 22, and the people made it a gala day. In spite of the strenuous efforts of the men to lionize him, and the women to kiss him, Lindbergh maintained his unusual poise and self respect. More wonderful than his successful flight across the Atlantic, and his 23,000-mile journey over land, is the fact that he remains the same unpretentious gentleman that he was before fame singled him out for unusual honors. We know lots of people who would have swelled up and burst long before this.

✦ ✦ ✦

HOW little it takes to make some people strut like a peacock, while really big people seem to be unconscious of their greatness. A goodly part of the slights, stings and heart aches from which the world suffers, as well as much of the silent mirth it enjoys, is derived from the efforts of little minds to appear superior. And it is all so useless. The world soon sizes up a man or woman at their true worth.

✦ ✦ ✦

WE HAVE not yet given up the idea of farming our thirty-acre place without the aid of horses, or at least with the necessity of keeping one or more all the time. But so far, we have not been able to find just what we need in the way of automotive power. We shall make further investigation the coming winter, and if anyone knows of any kind of tractor that will do what one horse will do and do it as well, please let me know. Keeping a horse twelve months for less than five months' occasional work is an expensive luxury.

The Cheerful Plowman

There Goes Lindy

THERE goes Lindy's flying plane, scooting thru the sun and rain! Gosh, all crickets, how he flies like an eagle thru the skies! In the city down the way folks have waited half a day just to get a glimpse of him, just to see him, long and slim, just to hear him speak a word—gosh, he's moving like a bird! Say, why is it, can you tell, that the kid is liked so well? Why does everybody say, "Lindy, Lindy! Hip, hurray!"

"Well, as it appeals to me there are reasons, one,—two,—three—. First, the fellow did his stuff with no show of boast or bluff, just packed up and started out—that's a reason who can doubt! Then, the rascal, I would say, wasn't really after pay, that was second thought, I know, 'twasn't pay that made him go! Next, he did the thing himself, wasn't backed by men and pelf, 'twas no company affair, no one helped to put him there!

Then when he had tried and won, when his stunt was neatly done, and the world began to raise million-throated songs of praise, Lindy didn't strut around like a king when he is crowned. Lindy's head did not expand, till it bursted hat and band. Lindy played the modest part, thus he won the public heart! Didn't boast before he went,—didn't aim to make a cent;—asked no odds from anyone;—didn't strut when it was done! Say, when I can find a man working on that kind of plan, four-square plan like Lindy had, bet your boots I'll hire the lad; he'll be worth ten times his pay any time and any day.—J. E. T.

Friendly Talks

By EDGAR L. VINCENT

GOING down the street the other day I met a little bit of a girl who was having a great time. Altho she had a pair of shoes of her own on her feet, somewhere she had found a pair that belonged to her mother. Right into these she had stepped. They were about ten sizes too big for her, but she was marching up and down the street, laughing away at herself as she heard the clump, clump, clump of the tall heels when they struck the pavement. They certainly made music to her ears.

Wearing mother's shoes!

I thought about it a good deal at the time and some way I have not been able to keep it out of my mind since. Before now have we not all seen little ones all dressed up in mother's clothes? And if boys can get even an old hat, no matter how tall, the taller the better, that belongs to father, it seems as if they are just fixed out for a good time. Parading around the house, walking out into the barn and back they go, all the time fancying that they are now "big folks," just like father and mother.

Will They Follow Us Then?

There is a funny side to this, and yet may we not let it have a deeper significance to us? We laugh now when we see the boys and girls doing their best to act like grown-ups. But do we not look on ahead a few years and see the day when our dear ones will be as tall as we are, and wearing big clothes such as we ourselves put on? It is coming, that day when our children will slip out and away from us, and coming all too soon.

But the serious thing about it is, will the boys and girls find as much joy by-and-by in doing as father and mother did as they do now when they dress up in our old clothes? Will the sound of the old shoes always be as sweet in their ears as it is now? Will father's old hat in memory make the boys straighten up to a higher manhood as it did in fancy in the long ago? Or will these sons and daughters be most glad when they turn their backs upon home and go away to seek happiness somewhere else?

Something about these thoughts sobers us and makes us long to live so that our dear ones will always like to think of us as the best parents in the world.

Greater Treasures Than Money

Many a mother's heart is at this moment well-nigh breaking because some boy or girl is away out in the world walking the way that leads to loss and shame. More than one father's pillow will be wet tonight when he thinks of the boy that is dearer to him than life itself, but who is now gone God knows where! We can endure much of the suffering, if need be, that affects the body, but there is no suffering like that which comes from the thought that the boys and girls no longer love and respect us.

But we can make our lives so good, so true, so kind that our boys and girls will always love us and try to shape their lives after ours. Men and women are doing it every day, and they are surely helping to make this a better world to live in.

It matters little that we may not leave our boys and girls a great deal of money. Money does not last. But treasures of love last away over into eternity!

Walking in mother's shoes! Living worthily because mother was so good! What better could we ask for?

Camel

The cigarette that leads by billions

Just to state a great truth in another way—Camel is so exactly what so many smokers want that no other brand is even a close second.

If all cigarettes were as good as Camel you wouldn't hear anything about special treatments to make cigarettes good for the throat. Nothing takes the place of choice tobaccos.

Trenching Celery Is Not Difficult

TRENCHING celery is now in full swing. The little sketch illustrates the system better than many words. The thing looks simple and is simple. Yet it is rather easy to have losses occur. In this operation, and in giving subsequent protection, there is no guide like experience. Plenty of good common sense freely applied is the best substitute while the experience is being gained.

It seems scarcely necessary to mention but the trenches must be located where water will not collect in them. And water, during the winter months, collects in some places that will surprise one who has not watched water levels the year around.

Also it is worse than a waste of time to put badly diseased celery in trenches. Nothing ever came out of storage better than it went in. Bad celery comes out very much worse.

Should Be Handled While Dry

A wide trench will hold lots more celery than a narrow trench but the danger of heating and consequent loss is serious. Very little more than a foot is enough. The depth need not be quite the extreme height of the celery. The sides should be perpendicular and the bottom square.

It is much preferred that the celery be lifted and handled while the foliage is dry. After it gets dangerously late in the season perhaps one had better go ahead, wet or dry.

In lifting the celery a "lifter," a sort of knife-like affair, running under the row may be used or sharp-edged shovels will also do the job nicely. A heavy file at hand to keep the shovel sharp will save energy. Do not cut too high. Save the roots. A liberal allowance of roots makes for better behavior during storage. Soil on the roots is not so important. The surplus may be knocked off. Pull off the outer leaves, the aged or diseased ones.

Feet Aid in the Process

In placing the celery in the trenches a common method is to use the heels and legs to keep that already set tight and upright, passing the stalks back between the feet and working forward. If placed too loosely wilting will follow, if too tight heating is likely to occur. Some consider it an advantage to have a little loose soil in the bottom of the trench. In case the trench is very dry it is often a good plan to run the trench partly full of water. After this has soaked away the celery may be placed.

Practices vary following trenching. Where twelve-inch boards are available it is an excellent plan to nail them together into inverted V's or saddles, placed over the trench as shown in the sketch. At this stage, if the weather turns warm it may be advisable to provide ventilation by raising the shady side of the saddle a few inches on stones or blocks.

Additional covering will not be required until real freezes are at hand. If the trenches are tightly filled and the boards rest on the ground at all points. An old grower once answered me, when asked for advice on this

question, "Much more trenched celery is ruined by too kind treatment than by too much cold." His plan was to have reserves of coarse barn manure piled within forking distance of the trenches. Only a short time was then required to apply as much protection as needed.

Storage Time Depends on Variety

The length of time celery may be stored to advantage depends primarily upon its condition when stored and whether the variety is yellow or green. Yellow celery, if partly blanched when trenched, may be ready in a few weeks. Very green varieties when stored without previous blanching may be kept until long after the holidays under proper conditions.

Trenched celery, we must remember, is living, growing celery, and so active as in the field, to be sure, but nevertheless, it is living and undergoing changes. If all is well no white rootlets are formed in abundance fairly soon after trenching. Watch for them. Hearts then begin to lengthen, blanching proceeds. The skilful manager so regulates ventilation, moisture and temperature that his stored celery plants do not suffer in any of these respects. His crop is real "comfy" down there in the trench. I remember once opening a celery trench when the temperature had been extremely low during a long period. A thermometer inserted eight inches into the mass of undisturbed plants registered 38 degrees Fahrenheit.—G. S. Watts.

World's Largest Produce Terminal Is Opened in New York City

THE world's largest produce terminal was formally opened by the Pennsylvania Railroad in New York City on October 22, with several thousand shippers, fruit and produce buyers, and representatives from agricultural institutions and organizations thruout the country in attendance. The new produce terminal consists of the three Pennsylvania piers, 27 to 29, located on the North River in the downtown wholesale produce section of New York City, and to which have been added extensive bulkhead constructions making available enormous floor space for the showing of carlot shipments.

In view of the increasing tendency of southern New Jersey and Pennsylvania shippers to market their perishables at New York City in solid cars, the opening of the new terminal is of special interest. Statistics on the terminal are impressive, in that for the first time in years there is now actual room and to spare for proper display of cars of fruits and vegetables and opportunity for rapid handling. The new terminal will also meet what the trade has classified as a growing monopoly to force farmers and shippers to dispose of their cars on the New Jersey side at a privately owned terminal rather than in New York City proper at the door to the large wholesale market district.

The three reconstructed Pennsylvania piers with their bulkheads which have concrete floors sloped for draining and flushing, provide nearly 400,000 square feet of floor space. The piers and bulkheads are entirely enclosed and heated to avoid damage from freezing. Eight auction rooms are provided right at the piers where the transaction of business in apples, vegetables, oranges and other products in car quantities. The piers themselves are slightly over 900 feet long and 72 feet wide. Twelve entrances are provided for trucks so as to eliminate traffic congestion and move shipments promptly to the members and retailers who break up the cars for consumer sale. The new facilities provide for the unloading at one time of 725 cars of produce, whereas formerly the Pennsylvania facilities at this location would accommodate only some 250 cars.

In completing the new Pennsylvania Produce Terminal, the railroad has also expanded and improved the Manhattan produce yards on the New Jersey meadows, across the river, so that 2200 cars may be handled at one time. Without question these auxiliary facilities for the produce terminal comprise the largest and most convenient produce freight yards in the world.

Chain Extends to Chicago

At the formal opening of the terminal on October 22, General W. W. Atterbury, president of the Pennsylvania System, said that the new terminal was the last link in a chain of such terminals extending to Chicago and St. Louis. The scope of the enterprise makes facilities in advance of the immediate needs or requirements of the market, but with the rapid growth in solid car shipments not only in the immediate eastern territory but in the South and the West, it is expected that the new terminal will be used up to its capacity within a reasonably short time.

Commenting upon the monopoly in New York City which has been felt for some time and which has been forcing carlot buyers to travel over to the New Jersey yards, President V. K. McElheny, of the Fresh Fruit and Vegetable Association of New York, said that shippers and members of the trade might well be thankful for the release from the bondage by the increasing monopoly which has been operating lately to their disadvantage.

Receipts Increased Rapidly

The opening of the new produce terminal with its facilities for auction selling is also in line with the very rapidly increasing practice of terminal auction sales. For example, in New York City on October 17, auction sales for the one day reached a volume of $13 carlots of perishable fruits and vegetables worth $1,125,000. On California grapes alone, receipts during one week in mid-October at New York City amounted to 3500 cars.

Touching upon this same point, President H. I. Rothman, of the United Fruit Buyers' Association, called attention to the fact that 300 cars of fruit are received daily in New York City, and that at the present rate some 500 to 600 cars may be expected daily in the course of a few years.—W. H. B.

Japanese Beetle Disappears Early

THE cold, wet weather of early September appears to have been responsible for early disappearance of the Japanese Beetle in New Jersey this year, which was more serious and destructive than at any time since its first appearance 16 years ago. As a result of the early disappearance the federal quarantine was lifted on farm products earlier than the prescribed date of October 15th. The treatment of roots and nursery stock with chemical preparation for the purpose of destroying grubs is, of course, continued and the State Department of Agriculture, cooperating with the federal government, has worked out a very far-reaching drive against the beetle for another year. New Jersey's cost in efforts to control the Japanese beetle this year amounted to $80,000. The federal government used an appropriation of $615,000 in the five states where the insect has been destroying farm crops, of which a considerable portion was spent by federal workers in New Jersey.—W. H. B.

A negro preacher was describing to his congregation the miseries and the penitence of the prodigal son.

"Dis young man," he said, "got to thinkin' 'bout his meanness an' his mis'ry, an' he tuk off his hat an' frowed it away. Den he tuk off his coat an' frowed dat away. Den he tuk off his vest an' frowed dat away. Den he tuk off his shirt an' frowed dat away, too. An' den, at last', he come to hisself!"

New Batteries will make your Light Plant New!

For every make of plant

You can have plenty of lights and plenty of power—all the convenience your light plant was built to give—if you give it strong dependable Universal "Nu-Seal" Batteries to work with.

Less care—long life

Big sediment space, visible charging gauge, extra thick plates, fewer fillings—all this saves you trouble, insures long life. "Nu-Seals" cost you no more now and much less in the long run.

For EVERY plant

These batteries—the *original* sealed glass cells—are made in every size and capacity for every light plant ever sold!—Yours! Any!

PAN-A-CE-A

starts both pullets and moulted hens to laying

ARE YOUR moulted hens back on the egg job?

Are your pullets laying?

Is their feed going to flesh or eggs—which?

What you want is to start the feed the egg way.

Do it with Dr. Hess Poultry Pan-a-ce-a.

Pan-a-ce-a is a tonic that puts the dormant egg organs to work.

That's when you get the eggs.

Add Pan-a-ce-a to the ration once a day and your hens will give a good account of themselves in the egg basket.

Costs Little to Use Pan-a-ce-a

The price of just one egg pays for all the Pan-a-ce-a a hen will eat in six months.

There's a right-size package for every flock.

100 hens the 12-lb. pkg.
60 hens the 5-lb. pkg.
200 hens the 25-lb. pail
500 hens the 100-lb. drum
For 25 hens there is a smaller package

REMEMBER—*When you buy any Dr. Hess product, our responsibility does not end until you are satisfied that your investment is a profitable one. Otherwise, return the empty container to your dealer and get your money back.*

DR. HESS & CLARK, Inc., Ashland, Ohio

Dr. Hess Instant Louse Killer Kills Lice

Roup Epidemic Killing Poultry

Birds sneeze, wheeze and choke. Throat rattles. Nose runs. Spreads rapidly. Act at once!

Readers who find colds or roup starting in their flocks will be interested in a letter written by Thomas Pulliam, Shiveley, Ky. He says:

"I have had birds with their eyes closed and every form of roup, and saved every one of them. Last winter I had a Barred Rock cockerel that was nearly dead. He had dropped from 7½ to 2½ pounds. I gave him Roup-Over and it worked like magic. In two weeks, he was back on the firing line and fighting every rooster on the place. I can't understand why people let their birds die with roup, when Roup-Over will save them."

It is amazing how quickly and easily colds and roup can be ended by this method. If the trouble is already started, a few drops of Roup-Over, applied in the nostrils, will usually banish every symptom in one day. Better still, a few drops used in the drinking water guards the whole flock against roup, colds, and other epidemics. A liberal supply of Roup-Over can be obtained by sending fifty cents (or $1 for large size holding 3 times as much) to The Burrell-Bugger Co., 511 Postal Station Bldg., Indianapolis, Ind. As Roup-Over is guaranteed to do the work or money refunded, it costs nothing to try. Readers will find it entirely different and much quicker in action than anything else ever tried for roup and similar infections.

Roup-Over
Stops Roup-Colds-Canker.

TIGHT BINDING

Help Yourself to More Eggs this Winter

Put your laying hens on Quaker Ful-O-Pep Egg Mash, *the economical feed,* and you'll get better eggs, and more of them, at the very lowest cost. Ful-O-Pep Egg Mash costs less because it goes farther; there are more eggs in every sack than you can get in any other way. The base of this famous mash is fresh, pure oatmeal. To it are added the very things that make eggs, including minerals and proteins, and *Cod Liver Meal* to make every ingredient "go right to the spot." It puts hens in the right condition and spirit for a winter of peak production. And it's actually cheaper to use! See the Quaker Feed dealer in your neighborhood. Get your flock off to a swift start for the winter months.

Chickens Have T. B.

We have been dressing hens this fall and kill only ones that look to K, but when we open them some have lumps as large as hickory nuts and smaller on the intestines. Others have spotted livers and small white spots just under the skin. We have lost a few hens. They had bluish combs. Can you tell me what it is and what to do for it?—R. R. Z., Centre County, Pa.

Nodules in the intestines or internal organs of a fowl are generally a symptom of tuberculosis, especially in case the bird is very thin. The lumps under the skin may be due to the same disease, altho there is a mite which also causes such lumps. Tuberculosis in fowls is hard to discover and impossible to cure. As a rule, old birds are affected rather than young ones and a good method for controlling this disease is to sell off the old stock after the yearling stage and replace with pullets. Some farmers keep hens until they are several years old, which is a mistake unless there is a special reason for doing so, as the older a hen gets the fewer eggs she lays in a year. It would pay you to go over your flock and dispose of all birds that are light, listless, or apparently ailing, and then give the house a thoro cleaning, followed by the use of a strong disinfectant and plenty of whitewash. Also, do not crowd the hens and be sure that the house is well ventilated without being drafty. —R. L. Scharring-Hausen.

Can You Disinfect Eggs with Alcohol?

Please tell me what kind of alcohol is used to disinfect turkey eggs to kill blackhead germs. How should it be applied?—G. Z., Washington County, Pa.

The use of alcohol for washing turkey eggs to kill blackhead germs is a new one to me, and I rather think that if eggs were washed in this liquid it would render them unhatchable. I believe that you would have a better chance with turkeys if you were to raise them on clean ground away from chickens or other fowls. However, blackhead has wiped out the turkey industry in a good many sections, and so far as I know there is no certain cure for it.—R. L. Scharring-Hausen.

Guineas Naturally Mate in Pairs

Will you kindly tell me how many guinea hens can be successfully kept with one guinea rooster?—Mrs. B. J. L., Franklin County, Pa.

It is customary to mate one guinea rooster with not over three or four hens. In the wild state they mate in pairs, and the eggs may be infertile if too many hens are put with one male.—R. L. Scharring-Hausen.

Pullets Caught Cold

About two weeks ago I bought 500 pullets which were shipped from Ohio. They had bad colds or roup when they arrived. I treated them for roup and see no signs of it now but after a few days they began to gape and hold their heads in the air. Their heads turn pale, they get very thin and die. On examination I found one with one lung clotted with blood and the other yellow but sprungy. The lungs of some other birds were yellow and dry, almost crisp.—M. L. H., Northumberland County, Pa.

I am inclined to think your pullets either had colds when they were shipped, or caught cold on the way. The latter is very probable. This has affected the lungs in the manner of congested lungs or pneumonia. If you have a brooder house with a colony brooder stove which you can set up it would pay you to put the sick birds there and give them a little extra warmth, especially at night. They should be taken away from the others at any rate. Add 1 pint of cod liver oil to 100 pounds of mash and feed the sick birds a warm, moist mash made with this at noon in addition to the regular feed. Better clean out and disinfect the house and replace with fresh litter, which will help to prevent the spread of anything contagious.—R. L. Scharring-Hausen.

Nest Box Notes

NOW that the corn is all cut and husking is under way, it is time to start fattening the geese on the nubbins. They should be started off gradually and then worked up to a full feed. Limited range on good pasture, or an artificial supply of greenstuff must be provided in addition. I always found geese to be in the best shape and in greatest demand around Christmas and New Year's, as people have their minds on turkey for Thanksgiving.

• • •

The changeable damp weather has caused colds in many flocks. We had a slight outbreak, but I am feeding a gallon of cod liver oil to 600 of mash and I think that the use of this oil stopped the colds.

• • •

Old hens are about thru laying for the season and are entering a period of rest thru which they will grow new feathers and improve in weight and general condition. In addition to mash they should be well fed on grain and receive cod liver oil, green feed and milk during the winter months, so that they will be in the best of condition after the first of the year, when they resume laying.

Breeding stock will be benefited by free range whenever the weather makes it possible.

N. J. Has New Baby Chick Association

THE Certified Baby Chick Association, representing the newest branch of agriculture in New Jersey, was organized at the Poultry Convention held in Atlantic City on October 13th. It was formed for the purpose of aiding producers of certified baby chicks by offering the buying public high quality chicks of a recognized standard. The new association is one of the first attempts of any particular group of agriculturists to form an organization to boost the quality and the sales of their product.

The membership of the organization will be made up from all of the leading poultrymen of the state, hatcheries, certified poultry producers and others who are specializing in day-old chicks.

The officers of the organization are: H. C. Demme, Sewell, president; J. H. Fox, Little Falls, second vice president; C. T. Darby, North Branch, first vice president, and Paul Smith, Vineland, secretary and treasurer.

The constitution and by-laws were drawn up by Prof. J. W. Thompson, Poultry Department, Experiment Station, New Brunswick.

A membership fee of $10 is provided for and a strict ethical code was adopted for the observance of its members. The object of the association is to put the baby chick business on the highest possible plane and to keep it at the point where the buyers can always have confidence in the members and their products. The rules provide for expulsion for violation of the regulations.—A. K.

"Shorthorns" at Penn State Lead in Their Communities

THE term "Shorthorn" has two distinctly different meanings at the Pennsylvania State College. The dictionary definition, "One of a breed of cattle having very short horns" is one meaning. In the beef cattle barns on the college farms many wonderful specimens of this breed of cattle are to be found. These animals have been the subject of numerous papers, but it is not concerning them that this article has to deal. The second way the term is used is not to be found in the dictionary altho any Penn State man, from the youngest freshman to the oldest "grad" is familiar with its meaning.

Early in the history of the Pennsylvania State College it was discovered that there was a demand for practical courses in agriculture by many persons who could not leave the farm except for a few weeks during the winter months. To fill this need the Winter Short Courses were established. These courses were of twelve weeks' duration for many years but recently have been cut down to eight weeks, running from early January until March.

The winter short course students, away back in the beginning, were dubbed "shorthorns" by the longer term students. The name stuck and to this day the campus name for winter course students is "shorthorns."

A dairy judging class at Penn State

The winter course students can no longer be told from the other students on the campus of the Pennsylvania State College. Most of them are products of the farm, altho always some city men and women whose interests are connected with agriculture are among those enrolled.

Members of the college staff, who meet the winter course students in the class room, agree that it is a pleasure to work with them. As a rule they are very easy to teach, in spite of the fact that the instructor faces a group representing all degrees of education varying from those who can just read, write and figure, to former college professors. These people know why they are in college. They have definite farm problems to solve and intend to go back home within a few weeks and put what they have learned into practice. In the class room questions come spontaneously. Every person is trying to gather up every crumb of information he can. As a result Penn State gives the best it has in the way of instructors and equipment to these students.

Shorthorns Are Progressive

Right now a survey is being conducted to ascertain the present status of the former "shorthorn" in his home community. This survey is by no means completed but already sufficient data are at hand to prove beyond a shadow of a doubt that the efforts expended on the winter courses are reaping a harvest. Residents of the Commonwealth which supports the Pennsylvania State College can rest assured that the appropriation devoted to the short courses in agriculture is money well spent. In order to prove this point let us glance at the evidence given below which is taken from recently collected data. These persons are all former winter course students:

Down in Bedford County we find A. R. Logue among the first big potato farmers to adopt efficient spraying practices. Neff Richards owns an excellent fruit farm, is active in his Pomona Grange, and, in addition, is president of the Bedford County Horticultural Society.

Daniel H. Brenner, of Beaver County, is a successful dairyman, operates a pasteurizing plant, a milk route and is a director of the Dairymen's Association of Beaver. In Delaware County a former winter course student, Arthur S. Linvill, has the largest peach orchard in the county and is one of the most progressive fruit growers. He is president of the Agricultural Extension Association and a member of the board of directors of the Delaware County Farm Products Cooperative Association.

Sheldon W. Funk, of Boyertown, had about 350 acres of bearing fruit and is president of the State Horticultural Association.

Going on down the list we find men who are in the 400 Bushel Potato Club; prominent cattle, hog, horse and poultry breeders; owners and managers of large creameries, etc. Thru all of these records these former students show that they are of greater service to themselves and their fellows because of their college training.

I am sure you will agree that the Winter Courses in Agriculture have proved themselves and that the Pennsylvania State College is justified in putting its best into them.—A. L. Patrick.

Exhibit Prize Winners at Penn State

ABOUT five hundred birds were exhibited in the fifth annual Pennsylvania State Standard Production Poultry Show at State College last week. White Leghorns and White Plymouth Rocks predominated.

C. S. Platt, a 1923 graduate of the Pennsylvania State College and professor of poultry husbandry at Rutgers University, was the judge. One hundred and five prizes, including silver loving cups, medals, rosette ribbons, cash, poultry equipment, books and magazine subscriptions, were awarded the winning exhibitors. Twenty of the highest producing hens of the Pennsylvania State College flock were displayed in an educational exhibit.

The State Poultry Association and the Pennsylvania Baby Chick Association held business meetings and a joint educational program during the show. Prominent poultrymen, officers of the associations and State College specialists appeared on the program.

The general farm flock is still the backbone of the poultry and egg industry from the standpoint of volume of production. More than 80 per cent of the total production of poultry and eggs comes from the small flocks on the general farm.

Only 3½¢ a square foot for genuine FLEX-O-GLASS

The only substance of Flex-O-Glass is not its name, nor as a glass substitute. You should use Flex-O-Glass in any building, coop or shed where animals, poultry or plants are housed because it

ADMITS ULTRA-VIOLET RAYS

Your own State Experiment Station has proved that from ½ to the limit to sunlight if aged indoors and at the same time exposed to Ultra-Violet Rays from the sun. Glass shuts these health giving, egg-making rays out. Therefore you must use Flex-O-Glass, as it is a double strength cloth base. Other uses listed below.

Use in a Scratch Shed for HENS! Gather Eggs All Winter! It's amazing the way hens lay in a Flex-O-Glass Scratch Shed. You will be astonished on subzero days when you find almost as many

What the American Medical Association Found About FLEX-O-GLASS

This great scientific authority tested Flex-O-Glass as you get in summer. Millions of yards of strong, durable, weather proof Flex-O-Glass, found it weather proof and ultra-violet ray transmitting. Thousands were sold for Scratch Sheds and Poultry Houses windows last year. 92,500 doctors to recommend it for Poultrymen everywhere doubled — some tripled — their profits. Thousands have written us telling of big egg production. Use 18 yards of Flex-O-Glass. After six weeks' half these under Flex-O-Glass for 100 hens. Then, one for baby chicks in Spring. Flex-O-Glass for 100 hens. Then, one for baby chicks in Spring. glass died. All but three under Flex-O-Glass were alive and each weighed one-third more than those under glass. This means you can raise twice as many chicks with a third more weight per chick at same cost. Take advantage of Special Trial Offer on the exact amount.

FLEX-O-GLASS Your whole Farm

Cut with shears, nail on. Lasts for years

Use it on POULTRY HOUSES *More Eggs—Stronger Chicks*

Use it on PORCHES *A Health Room—Cheaply*

Use it on HOTBEDS *Plants Grow Faster*

Use it on HOG HOUSES *Pigs Grow Faster*

Use it on WINDOWS *In factories, garages, schoolhouses, to diffuse sun glare. Makes room lighter*

Enclose Your PORCHES

Makes Ideal Storm Doors and Windows

Just tack on over screens on porches, screen doors and windows. Transforms porch from a snow trap into a warm oasis from flooded with invigorating, curative Ultra Violet Rays. Use no work or hooks, screws or rubbers to strengthen. Only 1-8 cost of glass and your better than glass. Keeps out flies, dust, storms. Rain will not wet screened. Stays new and clean many seasons. Very durable.

SPECIAL TRIAL OFFER

Big 15 yard Roll Postpaid for Only $2

A large roll of Flex-O-Glass 3 ft. wide and 15 yards long will be sent postpaid for only $2. Use it for 30 days and if not satisfied return the unused portion and we will refund your money without question. Size delivered 3 ft. wide by 15 yards long. Use it for 30 days and if not satisfied return the unused portion and we will refund your money without question. Offer—today.

Starts Hens Laying

Here's a New Way to Get Eggs in Winter. Costs Nothing to Try

A letter from Miss Dama Wright, Vernonia, Ore., has a real idea for chicken raisers who are not getting plenty of eggs. She says:

"Late in October, our fifteen hens were not laying at all. I started giving them Don Sung, and for ten days they still didn't lay. But on the eleventh day they laid thirteen eggs, and it is wonderful what Don Sung has done for our egg basket."

Don Sung, the Chinese egg laying tablets which Miss Wright used, are opening the eyes of chicken raisers all over America. The tablets can be obtained from the **Burrell-Dugger Co., 136 Postal Station Bldg., Indianapolis, Ind.** Poultry raisers whose hens are not laying well should send 50 cents for a trial package (or $1 for the extra large size, holding three times as much). Don Sung is positively guaranteed to do the work or money promptly refunded, so it costs you nothing to try. Right now is the time to start giving Doo Sung to your hens, so you will have a good supply of fresh eggs all winter.

Special Single Cash Trial Bag Offer! 100-lb. bag $3.25 f.o.b. Factory only.

Try this famous Egg Mash Judge it by results. If your dealer doesn't have it send $3.25 to factory for 100-lb. trial bag—today!

Blatchford's EGG MASH

Blatchford's 3 Steps to Poultry Success

1. **Chick Mash** Starts baby chicks off right. Reduces losses—most economical and best.
2. **Growing Mash** Low feed cost during growing period of non-production.
3. **Egg Mash** Recommended by poultrymen everywhere. Top layer. Low cost.

Send for **free envelope sample** (specify which mash) and valuable poultry information—**free.**

Fifteen C. T. A. Members Finish Second Year

THE Susquehanna-Bradford Cow Testing Association finished its second year July 1, 1927, with 15 whole-year members. In addition four men were only in the association part of the year. There were 419 cows in the association all or part of the year.

The result for the whole-year members is as follows:

The total average number of cows in the association..	289.08
Avge. per cow: Lbs. of milk	7971
Pounds of butterfat	311.0
Per cent of butterfat	3.9
Value of produce	$219.95
Cost of pasture	8.23
Cost of roughage	31.32
Cost of grain	51.51
Total cost of feed	91.06
Value of product above feed cost	128.89
Returns for $1 expended for feed	2.41
Feed cost per 100 lbs. milk.	1.14
Feed cost per pound fat...	.29

Following is a grouping of all cows producing over 300 pounds of butterfat. Group 1, above 500 lbs. of butterfat, 5 cows; group 2, between 400-500 lbs. butterfat, 31 cows; group 3, between 300-400 lbs. butterfat, 94 cows. Total number of cows producing over 300 lbs. butterfat, 130.

N. C. Dale, county agent; Richard Knowlton, tester in charge; figures compiled by I. O. Sidelmann.

Eight herds with an average of five or more cows exceeded an average production of 300 pounds of butterfat. A complete list of these herds follows:

Owner	Avge no. cows	Breed	Pounds milk	Pounds butterfat
R. L. Carter, Rush	17.00	G. G.	8163	409.4
F. & S. Kerrick, Towanda	18.17	Hols.	11,567	399.7
C. M. Miller, Towanda.....	15.00	Hols.	11,704	393.2
S. D. Warriner, Montrose	19.17	Ayrshire	8288	368.4
John H. Howard, Wyalusing	19.33	Hols.	9646	344.1
W. B. Kennedy, Wyalusing	21.75	Hols.	8753	310.1
L. M. Thompson, Montrose	25.50	Hols.	9079	309.2
Birchard Bros., Montrose	23.50	Jersey	5725	301.3

Dixie Host of National Dairy Show

IN ALL her charm, grace and attributes of profitableness, the dairy cow of the nation, collectively speaking, went avisiting to Dixie last week. And Dixie proved itself the same admirable host that tradition always has accorded the country south of the Mason-Dixon line.

To Memphis, where the twenty-first National Dairy Show closed last Saturday, the South sent its farmers by the thousands. Hundreds of club boys and girls, students of vocational agriculture, county agents, the cream of the nation's dairy animals, scores of manufacturers of dairy equipment, all these resolved themselves into what was said by the management of the show and the long-time exhibitors to be the greatest National Dairy Show that has ever been held.

One day's attendance at this year's show was equal to the entire week's attendance at Detroit last year—a comparison made with the intention only of indicating the reception which the South has given to dairying. The total for the week was close to 300,000—and it was a farmer crowd that came to see the cattle, watch the judging and throng the buildings the whole day thru.

Pennsylvania did not contribute as much in the way of entries this year as in years gone by, but at that the state was well represented. New Jersey was conspicuous, especially in the Jersey section, where Twin Oaks Farms, Morristown, made a remarkable record of showing both junior and senior champion bulls, which took with it accordingly the grand championship in the bull classes. This state also was represented in the Brown Swiss division by Suydam Farms, of New Brunswick. Maryland was represented in the Guernsey section by Dr. W. C. Easr, Cockeysville.

Uniformly high quality marked all divisions. Many southern Jersey herds contributed to make that breed have the largest number of entries. And the South did well in its winnings. The total number of Jerseys was 284. There were 126 Ayrshires, 86 Brown Swiss, 196 Guernseys and 216 Holsteins on exhibition. New York led all states in the number of entries, while Illinois stood second.

In the judging contests, Iowa State College students won first for the fourth straight time. In the 4-H demonstrations South Dakota's team was first. In the 4-H cattle judging Nebraska's team came out on top, while the vocational agriculture team that stood high in judging all breeds was from Missouri.

As usual the equipment manufacturers filled a large building with their wares. The feed manufacturers likewise were awake to their opportunities, the Wisconsin cheese manufacturers made a remarkably fine display, the usual good display of the U. S. Department of Agriculture drew its share of attention, so considering all these things there was nothing lacking to tell the entire story of dairying to those who came to see and learn.

To a northerner attending a show "down South" for the first time, the interest of the visitors was the most striking thing of the show, next to the quality cattle on display. There was no hurry-scurry hustle to see everything in a superficial manner. Mr. and Mrs. Southerner and their youngsters viewed the show in a leisurely fashion, intensely interested, and insisting, apparently, not to be rushed thru with their inspection trips. Breeders were unanimous in stating the show the best in their experience from an advertising standpoint. The same is true of the breed association workers who found nearly everyone anxious for more information.

Presents New Field for Breeders

The people of the South did not appear to be "in-love" with the dairy cow. They were, however, intensely interested in what the dairy cow would do for them. They showed little preference as to breeds, altho the Jersey has the largest representation at this time. It was indicated as might be expected that here was a new field for breeders and those promoting the breeds, and following this show a flood of literature and "follow up" material will be sent to Dixie.

No advertisement for the dairy industry could have reached so many of the South, nor in such a convincing manner, as this National Dairy Show of 1927 has done. A dollars-and-cents show it was—production records translated into cash—speaking a language that was not lost on the cotton farmer. Whether the Negro will team up with a dairy cow as he does with a mule is yet to be seen, but indications are that the effort will soon be tried as never before, and in addition the thousands of white farmers, it is certain, will find in better feeding, better cows and diversified farming a means to supplement the cotton crop in a most profitable way. All told the dairy interests of the nation could not have performed a finer service to the South than has been performed in holding the National Dairy Show at Memphis.

Vocational Boys Judge at Rutgers

ONE hundred and sixty vocational agricultural school boys of New Jersey spent three days at the Agricultural College and Experiment Station, New Brunswick, October 24-26th. These boys took part in the annual judging contests held at the college. Six classes of leading farm products were judged: apples, corn, potatoes, chickens, dairy cattle and swine.

In the hog judging contests a weighing demonstration was held. A part of the work was to judge the weight of the animals. They were butchered and again judged for weight. This gave the boys real training in judging the weight of hogs on the hoof and on the butcher's table.

In the poultry division, the boys were called on to select, dress and prepare the birds for the table. This feature in the culinary work was a novel training.

On the final day of the contests, the boys were the guests of Arthur C. Wadley, New Market, owner of Wendmere Farms, one of the fine Guernsey show places of the state. The Guernsey Cattle Club of New Jersey, under the supervision of William Nulton, secretary, staged one of its boy and girl cattle judging contests.—A. K.

She Led in Production

This registered Holstein was born July 2, 1916. During the Butler County Cow Testing Association year, 1926-27, she led all individuals with 19,600 pounds of milk and 666.2 pounds of butterfat in 322 days. She was milked three times a day for six weeks. H. P. Starr, Valencia, Pa. is the owner.

"Oh, yes! Of course I grind the grain." "Yes, I know, so do I."

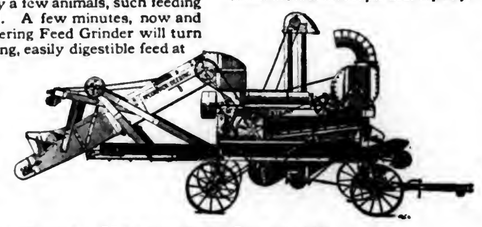
TWO FEEDERS were discussing their feeding methods recently when one broke in with, "Oh yes! Of course I grind the grain." And the other replied in a matter-of-fact tone, "Yes, I know, so do I." No disagreement on that score.

No matter how their methods varied in the matter of roughages and quantities, these successful feeders were fully agreed that *grain must be ground.* Neither would even think of wasting grain by feeding it whole. Both have learned through experience that the difference in digestibility, between whole and ground grain, may easily spell the difference between profit and loss on a year's feeding.

Save 12% to 26% on your grain bill

Actual tests with whole grain, fed to healthy, full-toothed animals, show an average loss of from 12% to 26%. In other words, out of every 100 bushels of whole corn fed, 26 bushels yield practically no nourishment. The unground oat diet shows a loss of 12 bushels out of every 100.

Even though you feed only a few animals, such feeding losses cannot be overlooked. A few minutes, now and then, with a McCormick-Deering Feed Grinder will turn the whole grain into nourishing, easily digestible feed at low cost. Your local McCormick-Deering dealer can show you the McCormick-Deering Grinder that meets your special requirements. His store is also headquarters for McCormick-Deering Shellers, Engines, and Tractors. Modern equipment for the modern farmer.



McCormick-Deering Feed Grinders
Built in three sizes from 6 inch to 10 inch, requiring from 3 to 16 h. p. according to size and type. Designed to grind various combinations of grains and forage crops.

McCormick-Deering Engines
Full-powered engines with removable cylinder, enclosed crankcase, magneto ignition, efficient fuel mixer, etc. Sizes 1½, 3, 6, and 10 h. p.

McCormick-Deering Tractors
Sturdy 4-cylinder tractors, built in two sizes, 10-20 h.p. and 15-30 h.p. Also, the all-purpose Farmall. Ideal tractors for winter belt work.

McCormick-Deering Corn Shellers
For every need; ranging from the 1-hole steel hand sheller to the power cylinder sheller of 350 to 400 bu. per hour capacity.

Good Health Follows Correct Food

The Child's Habits Make the Weakling or the Strong Man or Woman

EVERY child should be taken to a doctor once a year for a thoro physical examination, to detect any illness before it becomes serious, but the selection of right food will help to keep your child in health, or if he is sick, to make him well. Faulty diet causes or contributes to the cause of the diseases outlined briefly as follows.

Malnutrition

This is the "twilight zone" between good health and deficiency diseases. Its symptoms are pale, dry, rough skin; dull, watery eyes with dark rings below; colorless or pale mucous membrane; thin hair lacking in lustre and breaking at the ends; soft bleeding gums and poor teeth; shoulders sagging, abdomen protruding, back humped and chest sunken; dull, discontented facial expression; lack of ambition, or restlessness; constant activity and inability to concentrate. Poor posture is one of the sure signs of malnutrition, for while posture is partly a matter of habit, the physically fit child is usually erect.

Malnutrition may result from selection of foods not rich enough in vitamins. The appetite for wholesome milk, eggs, cereals, vegetables and fruits may be spoiled by indulgence in candy, sweets, pastries, especially when eaten between meals. Plenty of time for meals, enough sleep and exercise with the minimum of emotional excitement are essential, as well as the right kind of food, in counteracting the condition.

Anemia

Rosy cheeks are worth working for. Anemia shows not only in the skin, but in the dead-white or bluish color of the white of the eye, in the paleness of the lips and inside the mouth. Dark circles under the eyes, soft muscle tone and general lack of vigor may be accompaniments. The doctor may prescribe an iron tonic (which should never be given your child without his prescription) and he will undoubtedly prescribe cod liver oil, and foods rich in iron. The tonic does not do much good unless accompanied by food containing iron also.

On a diet of milk, cereal, white bread and milk desserts, your child would be lacking in iron.

After a baby is six months old, he should have one-third yolk of a coddled egg, also strained spinach juice. Gradually other vegetable purees are added to his diet.

Foods rich in iron are liver, kidneys, sweetbreads (for older children) spinach, cabbage, all greens, potatoes, lean beef, celery, beef broth, egg yolk, berries, tomatoes, carrots, peas, beans, beets, turnips, bread, grapes, onions, raisins, figs, oatmeal and prunes. Carrots, cabbage and celery, grated and mixed into salad or sandwich fillings are especially good.

Goitre

If your child already has goitre, take him to the doctor, and follow his orders. However, since this disease, resulting in the enlargement of the thyroid gland, is due to deficiency of iodin in the diet you should be able to save your child from it by including iodin foods in his meals.

Persons living near the sea seldom have goitre since they eat sea food often, and the soil contains iodin salt. The iodin supply of the world is in the sea. Anything edible coming from the sea contains some iodin, such as Irish moss to be made into pudding, agar-agar (taken as a laxative), shell fish, sea fish, cod liver oil. Salmon, tho caught in rivers, is a valuable source of food iodin after being canned. Sea food two or three times a week will be sufficient.

Or you may use iodized salt, rather than taking your iodin in some other form. It is good for the whole family, but especially needed by your children, for preventing goitre.

Eczema

This is not caused by faulty diet, yet right food plays an important part in its prevention and cure. Select plenty of laxative foods, green vegetables such as spinach, lettuce, celery, string beans and peas, also the vitamin-rich foods which are raw fruits and vegetables. Have your child drink plenty of water to help in elimination of waste matter.

Eczema is aggravated by a rich, oily diet, sweets, eating at bed time, sluggish bowels and kidneys. It may result from infected tonsils or teeth or sinus infection.

Planning Daily Meals

Check over your family's health and food habits, to be sure they are right, for the prevention of disease and for maintenance of the highest degree of health and happiness. You may obtain a free food-selection score card from the New York State College of Agriculture, Ithaca, N. Y. Ask for Bulletin 70. When writing for this, also ask for the food-value chart, Bulletin 71, which lists all foods, telling their composition and their vitamin value.

"Food for the Family," is another bulletin which you need. Besides giving excellent food suggestions, references are given for further study of foods. Ask for B 53, from the Extension Service, A. & M. College, College Station, Texas.—Doris W. McCray.

Fashion's Trend

MRS. GRIEBEL, clothing specialist in N. J. State Extension work, gave style helps when addressing four hundred women in Trenton recently. Her discussion of colors indicated that black leads for smartness, with browns and biege close seconds. Blues, especially king's blue, are good, and reds and greens are worn, too.

Fabrics are soft and lovely for draping. Printed velvets, soft metal cloths, velveteens, flat crepes, satin-faced crepes, wool georgettes, crepe de chine and chiffon georgettes were used in the dresses which illustrated her talk. Wool crepes and wool jerseys are also very fashionable.

Style Lends Itself to Makeovers

"It is a fine season for makeovers," says Mrs. Griebel. If you have a velvet jacket, purchase material for a plaited skirt, and wear it with a blouse of metal cloth.

Hats are soft and mostly of the beret type, needing draping after being placed on the head.

Biege stockings and gloves head the list, altho greys are being worn also. Dress trimmings are not so necessary, as bows of the material itself are used a great deal.

The middle-aged woman may need a soft collar, or vest and collar, to enhance her dignity, but dresses for youth are collarless. Diagonal lines are beautiful and slenderizing.

Mrs. Griebel appeared on the stage in the cambric permanent pattern which is the foundation of all her work. Following this appearance, she wore a peach-colored Chinese damask gown, made exactly according to the lines of the pattern. A shirred apron of the same material snapped on in front and fastened around the waist with a picoted girdle which tied at the side.—Edith R. Dilts, N. J.

PINK APPLESAUCE

Give variety to applesauce by adding a few cinnamon candies when you are sweetening the hot apples. This gives a pretty pink color and piquancy of flavor. When making extra smooth sauce, I find the strainer is very handy.—Mrs. Corey C. Garey, Pa.

The Woman Who Is Much Alone

MOST women have to face the problem of being alone in the house a great deal. When the children are small the young mother has her time and thoughts fully occupied, but later the house seems very empty and the loud ticking of the clock is enough to drive her distracted some days.

Some women flee to the telephone and stand long periods talking with any acquaintance or friend they can get on the wire. Others fall into self pity and tears, reproaching neighbors and busy friends for not calling them on the telephone or calling in person. Still others form the habit of carrying on long conversations with themselves, and one often sees a lonely woman who does not know she is observed, talking back and forth, or else setting forth her views quite as if in company.

But the better way, and the way many farm women who are much alone have adopted, is to enter actively upon some enterprise that requires thought and silence. Then the time passes too rapidly and the mind is enriched, making middle age and old age profitable and enjoyable. Many grandmothers are taking up music for their own pleasure and for club work. At a recent meeting a woman of seventy played the accompaniment for her middled aged daughter's solo and was warmly applauded for her skill.

The farm clubs for young people are feeling the need of trained sympathetic leaders who have passed the bloom of youth. One woman took up leadership work to fill in her lonely moments and found it most fascinating. She is in demand to speak before country gatherings and to help other women organize clubs.

"Keep Busy" Is the Secret

One formerly lonely lady exhibits fancy work at county fairs, enjoying the premiums and the work equally well. Her stitches are true and firm, and her taste good. The hands that were once occupied with patching and darning for a large brood now handle the things that she longed for all her life, and she is not lonely. There are women who paint for pleasure, women who read and study, women who teach in the Sunday school and bring to the work the rich harvest of a well thought out study of the text, and women who carry on little agencies at home thru the medium of the mails.

"It's all in keeping busy at some congenial employment," says one woman who was rescued from the "dumps" by a lecture on the subject of banishing loneliness. "It is good

(Continued on page 16)

Cracked Heads Become Sauer Kraut

WHEN you are storing away the winter's supply of cabbage in pit or cellar, do not discard the heads that are cracked and bursting. They make delicious sauer kraut. Cut the cabbage as you would for cold slaw, or perhaps a bit coarser. Pound it thoroly with an old-fashioned wooden potato masher. Juice will soon be running near the bottom of your bowl. Pack cabbage and juice in jars, add one teaspoon salt to each quart and fill the jar to overflowing with cold water. Seal and store in the cellar. Next winter you will have perfect sauer kraut at a moment's notice.

The Woman Who Is Much Alone

(Continued from page 14)

for one's health and also good for the pocketbook to keep busy. Self pity destroys health and happiness and most lonely women pity themselves into ill health."

There is a good deal to it. Occupy your mind and hands and time passes rapidly. Furbish up the talent you had to hide in the days when children, cooking, cleaning and threshing made you forget it. Make the most of your skill and your powers for thinking clearly and success will be yours. No woman wants to get old before her time. Choose your employment, a thing that will take brains and hand work, and you are on the road to success and happiness tho forced to be alone in your home many hours each day.—Hilda Richmond.

Our Library Offers Diversion

If you are one of the women much alone, you may profit by reading "The Woman of Forty." This volume was written by a famous doctor for women who have always been very active. Now the family has grown up and they are not only lonely, but needing exactly such advice as she knows how to give. We have this book in Our Home Page Library.

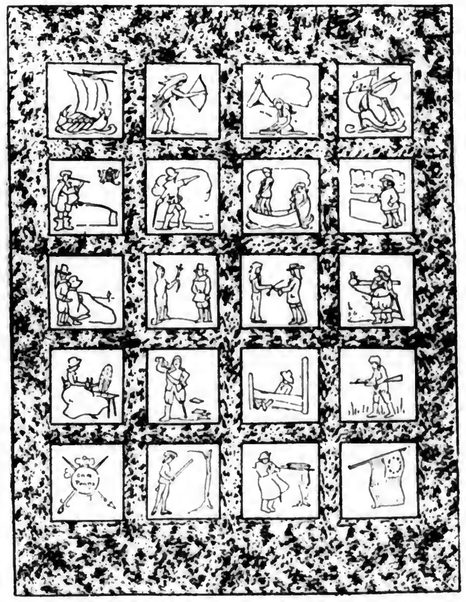
There are several other books full of suggestions for the woman Hilda Richmond has just described. "101 New Ways for Women to Make Money" has helped hundreds of folks, and it may be just as useful to you. If you like cooking better than any other thing, then you should study "Cooking for Profit." If hand work and crafts are your strong points, you should borrow, "More Baskets and How to Make Them" and that other more general book on "Home Handicraft for Boys." (Good for mothers and fathers, too.)

We have quite a few volumes for the busy mother, too. She should study "Getting Ready to Be a Mother," "Your Child Today and Tomorrow," "Child Training" and "Feeding the Family."

Any one of these books may be borrowed for two weeks by sending fifteen cents to cover postage and mailing charges. Order from Home Page Library, Pennsylvania Farmer, 261 South Third St., Philadelphia, Pa. If you have a second choice, I advise you to name it in case your first desire be out.—Gertrude S Stewart.

The Colonial History Quilt

You Will Enjoy Making This for a Child's Bed



THIS picture shows the Colonial History Quilt in miniature. In actual size, each block is 8 inches square and the 20 set together in "sashwork" as shown, make a quilt just the right size for a crib bed. If you want it for a larger bed, set them together with alternate plain color blocks in checkerboard fashion.

The 20 blocks are on hot-iron transfer patterns, all enclosed in one package with instructions for making and ready to be stamped on squares of white muslin. Then each character is easily embroidered in outline stitch and the blocks set together to make the most cunning little quilt imaginable.

The Colonial History Quilt will afford pleasant pick-up sewing for girls of eight years up as well as to their mothers and grandmothers. The quilts make up into delightful gifts for any of the youngsters.

The 20 hot-iron transfer patterns with complete instructions will be mailed postpaid on receipt of 50 cents for the complete quilt set. Either stamps or coins will be acceptable. It will require about a week to deliver the patterns. Send orders to Editorial Department, Pennsylvania Farmer, 261 South Third St., Philadelphia, Pa.

DEMAND BAYER ASPIRIN

The whole world knows Aspirin as an effective antidote for pain. *But it's just as important to know that there is only one genuine Bayer Aspirin.* The name Bayer is on every tablet, and on the box. If it says Bayer, it's genuine: and if it doesn't, it is not! Headaches are dispelled by Bayer Aspirin. So are colds, and the pain that goes with them: even neuralgia, neuritis, and rheumatism promptly relieved. Get Bayer—at any drugstore—with proven directions.

Physicians prescribe Bayer Aspirin; it does NOT affect the heart

Aspirin is the trade mark of Bayer Manufacture of Monoaceticacidester of Salicylicacid.

Better Prices for Your Butter

"Dandelion Butter Color" gives that Golden June Shade which Brings Top Prices

Before churning add one-half teaspoonful to each gallon of cream and out of your churn comes butter of Golden June shade. "Dandelion Butter Color" is purely vegetable, harmless, and meets all State and National food laws. Used for years by all large creameries. Doesn't color buttermilk. Absolutely tasteless. Large bottles cost only 35 cents at drug or grocery stores. Write for FREE SAMPLE BOTTLE.

Wells & Richardson Co., Inc. Burlington, Vermont.

Send 10c in silver or stamps for our up-to-date fall and winter 1927-1928 Book of Fashions.

Why Is Soap White?

DEAR MRS. STEWART:—Can you tell me why soap made at home often turns brown, shrinks and gets very hard when dried in the attic? Also tell me why some soap remains white, but gets light in weight and seems to waste away very rapidly in using.—Mrs. A. L. H., Pa.

The white color of soap is due largely to the fact that it contains both water and air bubbles. When the water content evaporates, as it will do in time and exposure, the soap becomes more compact, and the color darkens.

Color is affected also by the grade of fat used, and the kind of vessel in which it was made. If the fats are largely tallow, this soap will waste faster than if hard fats had been used. Also, if soaps contain soda and borax, they are more quickly soluble and waste away faster.—G. S. S.

Need Better Light?

Here You Are!

TWO lights that best serve every lighting need—indoors or out! They're time-tested and popular Colemans—now used in more than 3 million homes. They're always ready with a flood of steady, pure white brilliance—more light than 20 old-style oil lamps or lanterns.

The Coleman Quick-Lite Lamp—Just the light for reading, sewing and for the family-circle hour after supper. Saves work—no wicks to trim, no chimneys to clean, no daily fillings. Makes and burns its own gas from clean gasoline. Safe—can't spill fuel even if tipped over; can't be filled while lighted. Listed as standard by the Underwriters Laboratories. Economical—over 40 hours brilliant service per gallon of fuel. Handsome in design. U. S. Price $9.00.

The Coleman Quick-Lite Lantern—Operates just like the Coleman Lamp. Finest light known for the farm—always ready for any job any night. Use it for chores around your barns, sheds, feed lots, granaries and for night hauling, feed grinding and repair work. Makes it easier to do better night work quicker. All enclosed, has mica chimney—is wind-proof, rain-proof, and insect-proof. Prices in U. S.: with separate pump, $7.50; with built-in pump, $8.50.

Your Dealer will show you Coleman Quick-Lite Lamps and Lanterns. If he is not supplied, write us and we will send you descriptive literature and see that you are taken care of promptly. Address Dept. Pa.-26

TIGHT BINDING

OUR YOUNG PEOPLE'S FORUM

Letters From Forum Members and Friends

Dear Forum Friends:—I live on a farm and find it a most beautiful place to live because of the pretty scenery.

I am going to send a recipe for a cake I bake.

PLAIN CAKE

¼ cup butter
1 cup sugar
2 eggs
½ cup milk
½ cup flour
2 teaspoons baking powder
Sprinkle of salt
½ teaspoon of vanilla
¼ teaspoon spice

Many other kinds of cake may be made by varying this recipe. Spices and fruit, or chopped nuts may be added, or the mixture may be used for layer cake and marble cake.—Eugenia Williams, (X), Clinton County, Pa.

Dear Forum Editor:—I received my pencil box. It is surely a grand pencil box. Every one thinks it so nice and tells me that I was surely a lucky girl to win it. I will send my thanks. Many thanks for it. It will often come in handy in my school work, as you wrote about in Pennsylvania Farmer. —Clarabelle Chambers, (X), Chester County, Pa.

Dear Forum Friends:—We have several chickens. We keep them shut up most of the time because if we don't they will eat the tomatoes in the garden.

I have two pets, Betty Gene and

AFTER SCHOOL
Dorothy Grim, (X), Greene County, Pa.

Billy. We have a rabbit dog and we also have two goldfish. I am ten years old and in the sixth grade.—Dorothy Grim, (X), Greene County, Pa.

Dear Forum Editor:—I live on a farm of 84 acres and I can work a team of horses to a harrow. We have five chicken houses with old chickens in and three with young ones in. My father has seven incubators holding 2000 eggs altogether and he also sells baby chicks.

I have ten pairs of Silver Mondaine pigeons and seven English White Leghorn chickens. I am thinking about getting some White Mondaine pigeons, too.

I go to Mt. Union School.—Reginald T. Rippeon, (X), Carroll County, Md.

I'm sure the Forum boys and girls would like to hear more about your chickens and pigeons.

THE FORUM EDITOR.

Dear Forum Friends:—I have been reading the Forum page for some time. I think it is very interesting. I live on a large farm. We have cows, chickens, horses, pigs, Muscovy ducks and wild ducks. I can ride a bicycle now.

Here are some riddles:

1. When is a horse like a house?
2. What is it that no one wishes to have, yet no one wishes to lose it?
3. At what time of the day was Adam born?
4. What contains more feet in winter than in summer?—Gertrude D. Bogar, Salem County, N. J.

Dear Forum Editor and Readers:—Is there any room for me in your happy circle? I am eleven years old. I help to work on the farm. Every summer I ride the horse for plowing corn. I am sending you a picture of my oldest sister in the hay field.—

HAYING TIME
Josephine Bertovich, (X), Fayette County, Pa.

Josephine Bertovich, (X), Fayette County, Pa.

There's always room for one more, Josephine. I'm making you a Forum member.

THE FORUM EDITOR.

Dear Forum Editor:—I was thinking of writing long ago but did not have time. I must help mother and watch cows. I am ten years old. I often get lonesome as no small girls live near me. I am very fond of drawing. Sometime I will draw a picture for you. I am also fond of music. Mother is giving me lessons. I can play a few pieces.—Edith Irene Hoffman, Union County, Pa.

Whenever you are lonesome, Edith, just sit down and write to your Forum cousins. They're always glad to hear from you.

THE FORUM EDITOR.

Dear Forum Editor:—I have a recipe I thought you would like so I am sending it to you.

PRIZE DEVIL'S FOOD CAKE

½ cup butter or substitute
2 cups brown sugar
2 eggs
2¼ cups flour
¾ teaspoon salt
½ cup sour milk
½ cup boiling water
1 teaspoon soda
1½ square chocolate or ½ cup of cocoa
1 teaspoon vanilla
1 teaspoon baking powder

—Florence E. Jacox, Butler County, Pa.

Dear Forum Friends:—For pets I have three kitten and two puppies. The puppies are only five months old and are not very big yet. We have been taking Pennsylvania Farmer for about two years and I like to read the Forum page and so do the rest of the family.

I am going to send a taffy recipe that I think you will like. We made some on Saturday night and all liked it. Here it is:

TAFFY

2½ cups sugar.
1-3 cup vinegar and fill up cup with water

Cook until brittle when dropped in cold water and pull and cut off one inch at a time. I think it is very good and hope you do, too.—Gladys Poorman, Centre County, Pa.

This is a very easy recipe, Gladys, and I'm sure many of your cousins will want to try it.

THE FORUM EDITOR

Dear Forum Friends:—I am going to tell about my trip to Harrisburg and Hershey. We went by way of Gettysburg. When we arrived at Harrisburg we went to the Capitol and a guide took us thru and explained everything which was very interesting.

We then drove on to Hershey where we ate dinner and went in bathing. We came home by way of Steelton, Elizabethtown, Lancaster and York. We arrived home about 10 P. M.—Dorothy V. Myers, Carroll County, Md.

That was quite a long drive, Dorothy. I'm sure you were tired out by the time you reached home.

THE FORUM EDITOR.

What Do You Think of This?

DEAR FORUM BOYS AND GIRLS:—So many contest letters arrived at the very last minute I'm unable to tell you the prize winner this week. When you turn to the Forum page next week tho, you'll find a list of those who attended the party and then you'll find a smaller list giving the names of the winners. If I may judge by your letters all of you had a very good time at our Make Believe Party.

And now I suppose you're wondering about our next contest. I'm wondering about it myself. Would you like a drawing contest for a change, a treasure hunt, a picture title contest or have you another preference?

THE FORUM EDITOR.

Dear Forum Friends:—We have 400 little chicks. Mother hatched them all with hens. I am sending a picture of my brother and his calf. Here is a recipe for molasses candy that Ethyl Gicker wanted.

MOLASSES CANDY

3 cups sugar
½ cup molasses
Two-third cup water
Whites of 2 eggs
½ teaspoon salt
1 cup chopped nuts
1 teaspoon vanilla

Boil sugar, water and molasses till it forms a soft ball in cold water.

BROTHER AND HIS CALF
Florence Eppley, (X), Cumberland Co., Pa.

Pour slowly onto the whites of eggs beaten with the salt. Continue to beat till nearly stiff enough to hold its form, add the nuts and flavoring and turn into brick-shaped bread tins. When cold turn onto waxed paper and cut in squares.—Florence Eppley, (X), Cumberland County, Pa.

DEAR LITTLE FOLKS:—Since a number of you have been asking, I may as well tell you that my birthday comes on May 11—which is a long way from now. I'd like to tell you, too, that it is certainly fine to hear from so many of you so often and to find new friends each week.

The ladder in today's puzzle will be perfectly safe for you to climb, because, even if you missed a step, you will fall no farther than the bottom of the page and you could easily pick yourself up and start all over again. This is how to begin your climb. Change one letter in the word "FOOT" on the lowest step of the ladder, and you will have a word meaning something to wear on your foot. Write that word on the second step of the ladder. Change just one letter in the word you got for Step 2, and you will have the name of something which travels over the water—that will be Step 3. Now change one letter in the word and you will have another word meaning to strike—that is Step 4. Change one letter in that word and you will have a word meaning the Indians used to be very fond of and when they had a lot of them strung on strings and wore them around their necks. (You don't have to be an Indian to do that, tho.) Now you have Step 5, and to reach Step 6 you change one of the letters in the word you found for Step 5. When you have the ladder worked out from "Head" to "Foot" or from "Foot" to "Head," send it in to me on a postcard or in a letter, so that it reaches me by November 12th. Remember to tell me how old you are, when your birthday comes, your name, your post-office address and in what county you live. The prizes go to the ten children, sending in the correct answer, whose cards are the best in grammar, spelling, punctuation, penmanship and general appearance. Address all puzzle answers to The Puzzle Editor, Pennsylvania Farmer, 261 South Third Street, Philadelphia, Pa.

The answer to the mixed sentence puzzle in the issue of October 15 is: COLUMBUS discovered America in 1492. EDISON invented the phonograph. HENS lay better if their houses are well lighted. PEACHES are covered with a soft fuzzy skin. WASHINGTON was called the "Father of His County." HOGS supply us with pork, ham and lard. CHESTNUTS are covered with prickly burs.

The prize winners are: Evangeline Barnes, age 10, Monroeville, Md.; E. Miller Garrison, age 10, Elmer, N. J.; Floyd D. Keefer, age 12, Union Bridge, Md.; Myra S. Klinefelter, age 11, Barnesville, Pa.; Paul Meyer, age 9, Hellertown, Pa.; Dorothy Rutledge, age 11, Rockville, Md.; Helen Sigety, age 12, Mineral Springs, Pa.; Woodrow W. White, age 8, Aberdeen, Md.; Floyd S. Wolf, age 9, New Freedom, Pa.; Elsie Zillefor, age 10, Dufflow, Pa.

3.—Lined up in a street in Notre Dame, France, ready to charm tourists into buying one of these trained dogs.

4.—The twin of the German torpedo that sunk the Lusitania and brought the United States into the World War was presented to the Army War College, Washington, by the British Staff College.

5.—The start of a greyhound race at Potsdam, near Berlin, Germany.

6.—The Bolshevist leaders in Russia pursue the policy of converting and holding the youth of the country to their principles. Recently a Communist Youth Week was staged in Moscow. The crowds shown here are emerging from the Red Square and rounding the Kremlin along the Moscow River.

TIGHT BINDING

THE ROAD TO CAROLINA

A Tale of the Colonial Pioneer and the First Battle of the Revolution

By A. E. DEWAR

Continued from last week

The Story Thus Far

"BOY, I'm your uncle," he said. How I stared at the roughly dressed backwoodsman who had forced his way into the house. I reckoned myself a young gentleman of Philadelphia. Could kin of mine be nothing but a trader of the frontier?

It was true enough. Worse yet, it was he who had supplied my income since my aunt died. And he planned to take me back with him some time to Carolina.

Circumstances made it necessary for me to leave Philadelphia sooner than I had ever anticipated. Within a few weeks from the time of my uncle's unexpected visit I was well on my way to Carolina, with a message to Hunter, Chief of the Regulators. Krafft, a friend, handled me roughly during a narrow escape from the king's soldiers and I became angry.

I finally decided to leave Krafft and travel the remainder of the journey alone. I did not, however, travel any great distance by myself. It was two days later I came upon Zion Alexander who quarreled with one of Governor Tryon's men and for several days after we kept to the side roads. After parting from Alexander at Fort Lewis, I met another traveler, Haddock by name, who was in sympathy with the Regulators, and Jim Butler, a friend of Haddock.

That night a group of Colonel Fanning's men seized Butler on a charge of treason. Haddock and I escaped and gathered together about forty Regulators who followed Fanning's men to Jackson's place where they were resting for the night. They released Butler. After I received a fresh mount I continued on to Bethabara where I was captured by Fanning's men.

Fanning ordered my execution but Major Dunston, whom I thought I had killed in a duel in Philadelphia, appeared and stopped it. Later, because Fanning had offended him, he helped me escape.

I rode toward Cross Creek, hoping to find Carnes and get some word of my uncle. On the third day I met Jennings, a trapper. Shortly afterward, we found Carnes. His train of powder had been captured by the Governor's men. Jennings planned to recapture the powder and led us to the farm of the White boys.

Jim White called out his friends and we rode on towards the camp. Scouts were sent out and plans laid to fire part of the wagon train while the rest of the powder was saved.

THEN we can try Craig's plan. We'll all get as close as we can. Craig, Jennings, Carnes and I will fire at the campfires. That will start 'em running. We don't want to do any killing if we can help it. The rest of you hold your fire and rush them Get them down the road if you can, and hold them. Craig and Jennings will hook up four horses to the last wagon in line and turn back south to this point. Then head west. Carnes and I will get trains laid to each wagon. We'll give the signal to you before we fire them. Then all fall back to this point, get your horses and follow the wagon."

We set out. It was a hot night for May and the mosquitoes down on that low ground were vigorous. I remember feeling the sweat running down my face in streams and my annoyance because I could not wipe it off on account of the charcoal.

We left the road shortly and took to the timber. My eyes, by this time, were fairly adjusted to the darkness. The trees were dark columns, the brush an irregular blur and the leaves and branches up above almost gray as the light filtered thru. We went in single file, with the scout and White ahead.

Suddenly the column halted. Without command we spread out to the right and left. Some distance ahead a light flickered among the trees.

"There they are," whispered Jennings in my ear. "Now go careful. If you go rooting thru here like a hog and wake 'em up, I'll lift your scalp."

I had no confidence in my ability as a woodsman and kept back, following in Jennings' footsteps. It seemed to me at the moment most important that I should make no misstep, not so much because that might mean disaster to the venture, but it should disclose me to the members of my party as a blunderer and a boy who did not deserve a part in the affairs of men.

FORTUNATELY the woods were fairly free of brush. I wormed thru at Jennings' heels, putting my feet almost where he put his and testing each bit of ground before I gave it my weight. Once somebody stumbled, and it seemed as if the whole wood rang with the noise. Then the whole line was still as death for what seemed hours, tho I suppose five minutes would be a good estimate. Yet nothing stirred ahead and we went on.

Presently the trees began to thin out and I could see what lay ahead of us. Straight to the front of me was the dull glow of a campfire; behind it at some distance I could make out the solid sides of canvas-covered wagons. There were dark mounds around the fire that I supposed were sleeping wagoners. Farther to the right and obscured by the trees another fire glowed. Toward this Jennings now turned and I remembering we were to be ready to make a dash for the wagon that stood farthest to the south, followed him as before.

Three other men came with us, the others going straight ahead. It was only a few steps until we could see this second fire clearly and more mounds of sleeping men around it. Jennings counted them; I could see his fingers move as he tallied them.

"Sen," he whispered with his mouth up against my ear. "That's easy. Now down on your belly and crawl."

DOWN we went and with Jennings in the lead, inched forward. I had never before realized how many sticks and stones there were on the surface of the ground and how many prickly weeds. My pistol, stuck in my belt, caught at the grass as I moved and I finally pulled it out and held it in my right hand. And once Jennings hit my head a sharp thump as a hint to keep it down below the grass level.

Finally he paused and motioned to the rest of us to come up even with him. When I lifted my head from the tall grass, I felt a sudden shock of alarm to see how close we were. The nearest sleeper was only five yards away, and I could hear one man snoring and another mumbling away to himself in his sleep.

Still flat on his stomach, Jennings brought his rifle up to his shoulder. He glanced over his shoulder at me, and I swung my pistol out with the muzzle straight at the camp fire.

"Stick with me," he murmured, and then with a yell—

"Now!"

The two reports sounded almost at once. Around me men leaped to their feet. I heard a volley to my left and more yells. Then I was on my feet and running after Jennings' thin figure.

Even as I ran I could see that the wagoners at our camp fire were not making a stand. I went past one, tangled in his blankets and half awake, who struggled up to one knee and held his hands high. Others were diving between wagon wheels or plunging into the woods on the other side.

I plunged into the darkness again, and newly blinded by the light I had just been staring at, found the last wagon by falling over the tongue. It seemed as tho my left leg was broken, but I found myself able to stand on it and so guessed it nothing worse than a badly barked shin.

"This way, younker," came Jennings' voice, and I found him struggling with two big horses. The shooting and the noise had driven them to a rare pitch of excitement and Jennings, with a hand on each halter, was in a fair way to be torn in two.

I got hold of one and managed to calm him down, the more easily because the fighting was drifting farther away. Only an occasional shot came and I was heartened by the belief that these were from our men and were intended only to keep the wagoners on the run.

"Bring him along," panted Jennings. "The harness is by the wagons. Of course, the collars won't fit, but we can't wait to monkey."

STRANGE harness, haste and darkness make a poor combination. It seemed like a puzzle at first, and I was in despair. The light harness of driving rigs I was used to, but not equipment of this sort. Jennings was thru first and gave me a hand, and after that I managed to do fairly well. Even at that, Jennings had his second horse hooked up and the lines straightened out before I had got the tugs fastened on my side.

"Wait a bit," he ordered when I would have jumped on the seat. "We'll look them over first. Better a minute now than a runaway later." And so, to my consternation, he spent several minutes testing my work before he gave the word to start.

Meanwhile I had time to glance to the north. Two men, whom I knew to be Carnes and White were working like beavers. The first fire they had stirred up again and they had piled blankets on top of the brush. Now they were bending over the ground, in somewhat the intent attitude of a man sowing, only they kept closer to the ground and swung their arms little.

"READY," cried Jennings, and swung the team around to the south. The wagon began to roll unsteadily over the rutted road. As we turned, Jennings pushed his head out to the side and yelled back.

"We're gone! Let her bust!"

I saw Carnes wave and then turned back to devote all my attention to holding on, for Jennings was leading the horses to a gallop and the wagon was rocking back and forth over the rough road like a ship in a gale.

It was only a second later that Jennings gave a sharp exclamation and thrust the lines into my hands.

"Forgot something," he cried. "Going back. Keep 'em going."

He would be blown up, I told him panting, as I tugged at the lines and tried to pull the horse in. Yet he did not wait for the pace even to slack to a walk. Even as I expostulated with him, he dived over the wheel and the wagon rattled past him.

As I watched the back road, there was a flare far off in the trees. On its heels came a sharp explosion and then a roar that split the night.

The next instant I had my hands full with the team. Already skittish and nervous, the explosion sent them off again. By the time they were sobered down once more, I recognized the road near our meeting place and drove slowly up to where the nine mounts were pawing and whinnying under the trees.

Nobody was there. I could gain nothing by waiting. If Jennings were alive, he could get his horse and follow. So I drove on past, and walking alongside, found shortly the slightly worn track of the western road. There I turned the team under low branches whose leaves brushed the leader's heads and riding in almost complete darkness under the trees, let the horses have their heads and nose out the road ahead.

I had come out of the timber into a stretch of open road on the upland when I heard the drum of hoof beats behind me. Five minutes later the party rode up, White in the lead.

"Where's Jennings?" he demanded.

I told him what I knew. He shook his head. The raid had been mightily successful. Nobody hurt, all safe and the powder gone skywards. Better than that, the routed wagoners were scared enough, so it was likely they would report that a big body had attacked them and Waddell might be slow to detach a large enough troop in pursuit. But Jennings—what happened to the man? If he was back there, he was afoot. His mount and mine had been brought along.

"Somebody's coming," called a man behind.

The Regulators scattered to right and left. At White's order I whipped up to get out of gunshot if trouble was coming. Before I had gone far, I heard a yell behind me. There was a babble of talk and then someone came rushing up alongside and clambered in beside me.

"Where's my rifle?" asked Jennings accusingly.

It was where he had left it, behind the seat. What had happened to him? He had forgotten about the wagon horses, hobbled close to the powder wagons.

"Might've got blown to bits," he complained. "Too few good horses in these parts anyway."

So back he had gone, cut hobbles and ropes, mounted one and herded the rest out of the danger zone before the explosion came. Then he had come on to the meeting place, found his mount gone, and followed after on the heavy draft animals.

The job was done and successfully. The little group was almost hilarious, particularly Carnes, who had felt the capture of the powder from Boston as a personal disgrace. By morning we were only five, the rest having dropped out to return home. The Whites, Carnes and Jennings were to stay by till the finish. And I, having nowhere else to go, came along perforce.

IT WAS barely light when Carnes gave his mount to one of the others to lead and climbed in beside me. I took the occasion to ask him where he thought I might find my uncle.

To my surprise, he was almost surly, a great change from his mood of an hour back. He said he had no idea, and that my uncle would doubtless come to me in his own good time. Idly I noted that the right leg of Carnes' breeches, next my left, was quite wet. I said something about a heavy dew, to which he returned no answer. Only presently he rolled over against my shoulder and lay there, quite heavy and inert.

We had him on the ground in a second. Ripping up his small clothes we found a bad crease across his thigh and his clothes soaked with blood. We bandaged him after a fashion, and after he had come to and cursed feebly at us for a bunch of old maids, put him back in the wagon.

This incident—Carnes had been caught by a stray bullet thru the fight—made us all the more anxious to find shelter. Being so close to the scene of the raid, we thought it wiser to lay up for the day and go on the next night. Jennings again served us and presently led us up thru a pasture and a wood to an old shed where sheep had once been housed. There we kept under cover for the morning while John White visited a farmhouse some miles away and brought back food.

Carnes had been restless all this while.

"There are Regulators over at Salisbury or near there," he declared. "They ought to have a few barrels of this."

White bade him lie still, that it was too dangerous to venture abroad right now, and that we might get in touch with them next day. At this Carnes grumbled but dropped the subject. Later I heard him asking Jennings about the route north and saw the trapper tracing the roads out in a map made with a ramrod on a piece of bare ground.

I napped after that, but was awakened by White's voice calling for Carnes. We all got up and looked, but he was nowhere about. His mount was gone.

"The stubborn fool," White swore. "He's gone to Salisbury—to be hanged."

White was wrong. About four the next morning as we were pulling up a long hill some miles north there came a little troop of riders to meet us, Carnes, like a corpse on horseback, rode at their head. A couple of carts trailed along behind them.

They brought good news. Waddell was at Salisbury with about three hundred men. But there were twice as many Regulators in front of him and he dared not advance. There were rumors, too, that a good many of his men were on the point of deserting. The men who came with Carnes swore that with a few barrels of powder to help out their stock they would guarantee that Waddell would never join Tryon.

They rode back, with the carts rattling behind them, and we went on with a lighter load. Next day we heard more. Waddell had indeed advanced as far as Potts Creek, thought better of it and fallen back to Salisbury to fortify himself. Apparently he was out of the campaign.

I began to think for a moment that the Regulators might win. Waddell was the ranking officer in the colony and an Indian fighter of note. If he failed to join Tryon, would the governor dare to join battle?

Carnes, feverish and irritable, would have none of this philosophy.

"Tryon will fight," he declared. "The only question is, will the Regulators up north do as well as they have here? I don't like this man Husband. Too much of a Quaker. This is our chance. A victory here and all the colonies will wake up. Revolution— a republic—"

"YOU are mad," I cried. "The folks on the seaboard will not support any scheme like that."

"They don't matter," said Carnes stubbornly. "The back country folks are America. Over on the seaboard they think of North Carolina, or Virginia, or Massachusetts first. Here they don't know what colony they belong to. Virginia, North Carolina —it's all one to them. The seaboard is a dozen nations, the back country from New Hampshire south is one.

It sounded like folly to me, and I said so. But Carnes grew sullen and would talk no more.

Meanwhile we were changing our course to the east again. Word had come to us that Hunter and other leaders of the Regulators were over somewhere on Sandy Creek in a last conference before they met Tryon. We made as fast time as we could, each day fearing to hear that battle had joined and we were too late.

Yet finally we came to a low and fertile valley, the farms well improved and more livestock than I had seen yet. We held past a meeting house—and came at last to a farm where the wheat stood high, and a dozen head of cattle shoved inquisitive heads over the fence of the pasture on the roads either side. Beyond this in a little hollow by a spring was a big house, of three or four small cabins joined together. There were a dozen saddle horses in the yard. As we drove in, a rather stooped man, with a long face like a horse and a quantity of tangled hair hanging down over it stepped out of the doorway. White nodded to Carnes, and the Bostonian spurred up ahead and dismounted before the man.

"MR. HUSBAND," I heard him cry as I drove up. "With the compliments of the Boston Sons of Liberty, I deliver to you and Mr. Hunter enough kegs of powder to blow Governor Tryon to Kingdom Come."

Husband jumped as if someone had thrown cold water on him.

"No violence," he stammered, "no violence. The governor will not fire on peaceful citizens assembled to petition him."

Carnes stared.

"Blast you for a bloodless louse," he cried. "Show me Hunter."

There were half a dozen men in the door by this time and one of them now stepped forward. He had as mild an air as Husband, but his words were different.

"You have done well," he said heartily and took Carnes by the hand. "I shall tell our friends in Boston so. And tho I hope it may not come to fighting, still it may, and the powder will not be amiss."

Carnes was still a bit warm. "Give me a receipt then, that I may show it to those who sent me," he asked shortly. "From this time on, I am relieved of responsibility. The powder is yours, and you may use it to blow up Tryon or this snivelling fellow here, as you please."

There was an uproar at that, but Carnes stood his ground. Hunter went into the house again and presently came out with a paper which he gave to Carnes.

"We are about to talk over the situation and what is meant to be done," he said somewhat chidingly. "I have asked Mr. White to be with us. If you can remember that Mr. Husband is one of our trusted leaders and can keep a moderately civil tongue in your head, we shall be glad to have you with us."

"You need someone who had been blooded," said Carnes, not a whit abashed. "I'll come and I'll talk straight to you."

(To be continued next week)

An Unwilling Pupil

"What is all that racket about out there in your barn?" asked a neighbor.

"Ma's trying to set a hen," replied a small boy who was swinging on the gate, "and you know pa's county agent and he's tryin' to tell her how."

The candidate had completed a full course of study in veterinary surgery, but had never practiced. He branched out into politics. During a meeting his political enemies referred to him as "the vet" and in a heated debate one of them asked: "Are you really a veterinary surgeon?"

"Why do you ask?" queried the quick-witted politician. "Are you ill?"

A young doctor has prescribed castor oil for the baby.

"But, Doctor," protested the young mother, "castor oil is so old fashioned!"

"Madam," replied the doctor, "babies are old fashioned things."

"Next," called the barber, and a flapper, be-rouged and with stockings rolled low, took her seat in the chair.

"What'll it be?" asked the man with the shears.

"Shingle—high up," replied the flapper.

"She needs a shingle all right, but it should be applied lower down," sniffed the old fashioned man, in a loud aside.

The teacher asked little Ruth what her father's name was.

"Daddy," she answered.

"Yes, dear," said the teacher, "but what does your mother call him?"

"She don't call him nuthin'," Ruth answered earnestly. "She likes him."

Florian—Chief, ah needs protection! Ah done got a unanimous letter this mornin' which says, "Nigger, let mah chickens alone."

Chief of Police—Why protection? Just leave the chickens alone.

Florian—Dat's all right, boss, but how does I know whose chickens I's to leave alone?

Montgomery County Poultrymen Visit New Jersey Farms

Sixty three people from Montgomery County, Pennsylvania, were present at a bus tour to New Jersey, September 28th. The picture was taken at the Poultry Administration Building, New Jersey Agricultural College at New Brunswick. Professor L. M. Black, head of the Poultry Extension Department, New Jersey, arranged for inspections at the College Plant, Forsgate Farm at Jamesburg and Dembro Farms at Sewell. The tour was arranged by M. M. West, President of the Montgomery County Poultry Association.

At Our Risk

Dr. Clark's PURITY Milk Strainer is the only strainer on the market that is *guaranteed to remove all the dust, dirt and sediment from your milk.*

Unless milk is clean, it won't test Grade "A" regardless of the percentage of butter fat—that's why thousands of farmers and dairymen who use PURITY strainers get more money for their milk. Dr. Clark's Purity Strainer is simple to use—strains quickly and is easy to clean, saves time—saves labor—insures absolutely clean milk. Made in two sizes—10 qt. and 18 qt. Sold by good dealers everywhere.

Write for 10 Day Test Offer

Send us your name and address and we will send you descriptive literature and full particulars of our "10 Day Test Offer"—an offer that enables you to prove the value of PURITY strainers with a money back guarantee if it fails to do all we claim for it. Write today. (6)

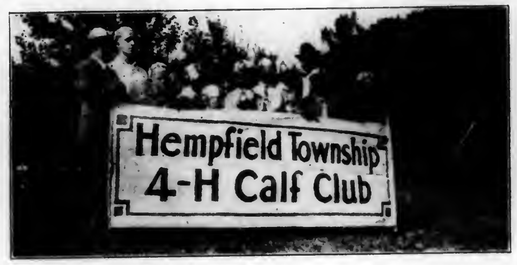
4-H Dairy Calf Clubs Focus Attention Upon Better Cattle

THE Hempfield 4-H Dairy Calf Club of Westmoreland County has just completed its second year of work. The accompanying picture shows the boys and girls at the time of the round-up. County Agent George Cole, president; Luther Zundel, vice president, and John Ginter, secretary-treasurer.

The lower picture was taken on the same day and it shows a larger group of dairy calf club members.



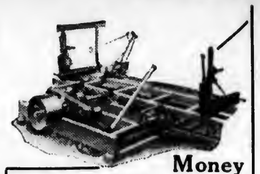
"Bill" Treager, the man who is largely responsible for their success, is shown in the background of the picture.

The first year the club had nine members. This year the membership has been increased to twelve. Their round-up and show, which was held

Therein lies a story. It seems that the Bellhanna community, in Westmoreland County, seeing what had been done in the Hempfield section, desired to do likewise. They formed a Holstein club of six members and are now going on their second year of work.

at the Westmoreland County Farmers' Picnic, was very successful, and over 4000 people viewed the proceedings. The club members had elected their own officers and have become quite adept at running their own meetings. The officers are

These clubs have done much to focus the attention of Westmoreland County dairymen upon the value of good dairy cattle as well as to impress upon them the desirability of interesting the young folks in the dairy business.—J. A. F.



Money In Accurately Sawed Lumber—

Farquhar Newly Improved Sawmill has proven a Big Money Maker because it cuts **Accurate** lumber rapidly. Built in sizes for tractor or steam power. Equipped with every modern device for rapid accurate sawing—Log Beam Carriage for long, slender logs; Head Block for Standard Sawing—any type of dog, Chain Oiling or Roller Bearings, Power Recoder, Quick Acting Geared Set Works.

Simple—Strong—Dependable. Easily operated and quickly moved to new location. Has large capacity and long life. Let us send you new Bulletin just off the press.
